V. 20 - 2 - 2 REMOTE STORAGE
UNIVERSITY OF ILLINOIS

National FARMER

Vol. XX. St. Louis, Mo., July, 1908. No. 1.

1908.

Dietz Lanterns—especially for farm use. See to it that you get the right make.

An elegant Subscription Proposition is advertised on page 23.

The Chicago International Show is preparing for business. See page 23.

A nice lot of Poetry will be found on page 26.

Universal Magazine advertising is on page 31.

The Twice-a-Week Republic is advertised on page 30.

A sample of Roofing and a Book of Information can be had by addressing Barrett Manufacturing Company. See address on page 3.

Nitrate of Soda, in original bags. Note advertisement on page 2.

Well-drilling Apparatus advertised in this paper on two pages. There is money in them.

All the Farm Telephone advertising is out except one on page 6.

Ohio Carriage Manufacturing Company are making a big cut in price of their Split Hickory Buggies and Harness. See page 6 and read all the advertisements.

The Twice-a-Week Globe-Democrat is advertised on page 6.

The Chatham Fanning Mill comes in all right. See page 7. Clean your grain before you sell or sow it.

Stack your Hay with up-to-date tools. See page 7.

Portable Gasoline Engines are now the right thing. See pages 7 and 10.

Low-wheel, wide-tired, handy Wagons illustrated on page 11.

Horse Remedies are advertised on page 14 in this edition of The National Farmer and Stock Grower and elsewhere.

Flint Coat Roofing. Sample and booklet free. See page 18.

Cooper's Dips and Tablets are advertised on page 18.

A sheep article by the editor is to be found on page 18.

Three high-class Farm Wagons are advertised on page 10.

Don't throw money to the pigs. See page 11. Get all the profits.

THE GREAT RECORD OF THE ST. LOUIS LIVE STOCK MARKET AT THE NATIONAL STOCK YARDS.

The picture presented herewith represents seventeen head of native beef steers averaging 1,548 pounds and sold at $8.25 per 100 pounds, realizing the magnificent total of $126.71 per head. These steers were from the pens of James Patterson, of Callaway county, Missouri; were shipped to market by Bailey & Atkinson; were sold by the Bright-Coy Commission Company of the National Stock Yards; were bought by the United Dressed Beef Company of New York City, and the price was the highest paid on the market for beef cattle in seven years. At the time these cattle were sold the Mississippi river was out of its banks and the market was in danger of being flooded. Notwithstanding this unfavorable situation the National Stock Yards received 49,304 head of cattle in one week, surpassing all previous records by 8,435 head. The quarantine division alone received 1,231 cars of Texas and Southern cattle, or 3,835 head in excess of the best previous record. The most remarkable feature of this week's business was the fact that the highest prices were paid during a week in which the receipts were the largest. A good run of hogs, the largest weekly sheep receipts in the history of the market, and the best run of horses and mules in five weeks, were disposed of in a remarkably active manner. Other notable cattle sales during the week included 1,435-pound native steers at $8.00 per 100 pounds; 1,340-pound Missouri-fed Texans at $7.70; the best Texas grassers at $6.00 to $6.25; Missouri yearlings, 601 pounds, at $6.65 per 100 pounds; Iowa yearlings, 767 pounds average, at $6.50; Missouri steers, 839 pounds, at $7.50 per 100 pounds. In fact, the excellent sales on the St. Louis market are too numerous to mention. This week's great record substantiates the statement that a large supply at St. Louis always brings about the greatest competition.

1908.

Send to the German Kali Works, Monadnock Building, Chicago, and ask for a free copy of the New Farmer's Note Book. It contains the A, B, C of farming.

The hay crop is one of the best and one of the least troublesome. Hay Presses of best makes are advertised in this paper.

The Book of Practical Barn Plans is advertised in this paper on page 3.

We are glad to furnish The National Farmer and Stock Grower three years for one dollar on credit. See subscription blank on page 20.

Any farmer who will read this paper through and through will be all the better for it.

Send to National Lead Company, St. Louis, Mo., or Chicago, Ill., for Test Equipment No. 30. You will then learn something about paints.

Stoddard's book, "A New Egg Farm," advertised on page 23, is the first poultry book we ever advertised, and it always gives satisfaction.

Our breeders on page 12 offer good stock, which it will pay our readers to become interested in.

The St. Louis market is one of the best in the country, especially for sheep and lambs. It will pay all farmers in St. Louis territory to raise sheep.

This paper contains some splendid poultry articles. See page 22.

Do not forget to write Sharples Separator Company and ask for Catalogue No. 232. See page 10.

Practical Farming and Gardening, advertised on page 5, is a splendid book.

[illegible] National Stock Yards [illegible] great records. See pages 16 and 17.

Did you say Scissors? If not, look on page 24.

A few Land Advertisements will be found on page 8.

The U. S. Cream Separator is advertised on page 11. The world's record claimed for clean skimming.

The Domestic Sheep, a practical book, is advertised on page 9.

The best service a friend can do for us is to send us in a new subscriber.

5 Cents a Copy. Published Monthly by The Hale Publishing Co. 50 Cents a Year.

and Stock GROWER

POTASH

Look at your wheat—study it well before you cut it.

Too much stalk and leaf in proportion to your grain, means *too much* nitrogen in your soil.

But don't salt to stunt the straw.

Next time—*this* Fall—increase the Potash—makes a *stronger* stalk, and a heavier head.

Most fertilizers are weak in Potash. Make them *complete* by adding Potash—6 per cent—or 15 pounds Muriate of Potash per hundred.

Complete fertilizer (2-8-6) means best crops and biggest profit.

Every agent sells phosphate. Few carry Potash in stock. Arrange for Potash *now*. *Potash is profit.*

Send for **New Farmer's Note Book**, containing *facts* about soil, crops, manures and fertilizers. Mailed free.

Pushing the Corn Fields.

It will take persistent work up to July 15th to make the next corn crop. Corn generally has started well, and with favorable weather during July and August it will come out all right. In some sections of Indiana it has been too dry, while in Illinois it has been too wet. Fortunate is the man who understands just how to handle his ground under these conditions. Let nothing now interfere with the cultivation of the corn fields. While it will not do to cultivate when the soil is too wet, yet keep the cultivators going every hour when the ground will turn nice and mellow. Keep down the weeds. A weedy corn field never yields much of a crop. We will have to forget all about laying by corn this season on July 4th. If we can do it by the 15th of the month we will stand a good show of a normal crop. Push the work in the corn fields [illegible] on without [illegible]. Brown.

[illegible] farmer in Missouri should learn the value of cowpeas. The best way to do this is to grow a crop or two of them; and right now is the time to do it. The cowpea lends itself to a greater variety of conditions and uses than most any other legume that may be grown in the state. At present clover is perhaps the standard and alfalfa is most important where it is adapted, but there are many soils in the state where clover will not grow and still more that cannot be made to grow alfalfa. Most all of these will grow cowpeas. Worn-out soils or soils that are too thin to get a stand of clover on will produce a fair crop of cowpeas. Such soils may be built up with cowpeas so that clover will grow on them.

As land increases in value the more essential it is that the soil be kept busy with a well-considered rotation. Where a short intensive rotation is wanted the cowpea is of immense value because of its rapid-maturing habits and ease of cultivation. Regardlesss of its fine physical effect and fertilizing value the cowpea is one of the best catch crops that can be grown. It is possible in some parts of the state to grow cowpeas between wheat crops where the land can be plowed immediately after harvesting the wheat. The peas will leave the soil in such a loosened condition that the next crop of wheat may be drilled in as soon as the hay is removed without further preparation.

For this purpose quick-maturing varieties should be planted. There are varieties varying in maturity from sixty to one hundred and twenty days. The New Era, Warren's Extra Early or Warren's New Hybrid are the three early varieties.

In a rotation of corn, wheat, clover or corn, oats, clover, a catch crop of cowpeas may be grown very well in the corn by sowing two to three pecks at the last cultivation. The pea may be sown broadcast or drilled in with a one-horse drill, putting four or five rows of peas between each corn row. Where grown in the corn the yield of corn will most likely be decreased two or three bushels per acre, but the value derived from the cowpeas more than makes up for the loss in corn. By pasturing the corn and cowpeas off together the fertility is practically all saved; in fact, it may be increased in this way. Or the corn may be gathered and the stock allowed to run in the stalk field.

Where a rotation of corn, wheat, clover is practical it is impossible to keep up the fertility and remove the clover crop, the wheat and the corn. A catch crop of cowpeas grown in the corn and turned under or pastured off will come very near to maintaining the fertility. Thus no crop need be lost any year to maintain the productiveness of the soil.

Where the cowpeas are grown alone as a main crop, the purpose of the crop should be considered in selecting a variety. It is found that the more prolific seed-bearing varieties are the easiest to cure for hay, while the late-growing, vining varieties, producing little seed, are better adapted for paturing or green manuring. The time of planting and the nature of the season have a great deal to do with the seed production. If planted late or the season is dry [illegible] to mature quicker [illegible] [illegible] other than the difficulty of curing the hay are, the cost of seed and the difficulty of threshing and handling the seed. The prices have been higher the past few years than ever before, on account of the great demand and the inefficiency of the supply, though the facilities for threshing and handling have been much better than in the past. At present there are machines on the market that will thresh the cowpea successfully. There is no reason why the seed should be so high-priced if the farmers would all grow some peas and save their own seed where possible. If a number of farmers in a community would go in together and buy a cowpea thresher, the saving in cost of seed would soon pay for the machine.

The price of the seed is usually lowest just after they are harvested, for then most farmers that grow the seed to sell want to get rid of them before the weevil gets in. The damage in storage from weevil may easily be prevented if the seed are placed in a close-covered bin and a dish of carbon bisulphide is placed on top of the seed.

The carbon bisulphide evaporates rapidly and the heavy fumes sink into the mass of seed and destroy the weevils. The operation should be repeated several times during the season if the seed are to be kept free from the weevil.

One pound of the liquid carbon bisulphide will treat thirty bushels of seed. This amount can be obtained at from fifteen to twenty-five cents. The carbon bisulphide is very poisonous and inflammable, so it must be handled with care.

If weevils are kept out and the seed are dry, the vitality may be retained two or three years.

The value of the cowpea may be overestimated by a few of its enthusiastic supporters, but it is undoubtedly a crop that is bound to have a more important place in Missouri agriculture.—E. H. R., in Missouri Agricultural College Farmer.

Alfalfa Pasture For Hogs.

Mr. E. S. T., of Mexico, Mo., writes: "Will it pay to run hogs on alfalfa pasture, or would it be better to cut the alfalfa and feed it green to the hogs?"

No doubt a greater tonnage of green stuff can be secured by cutting it daily and carrying out just what the hogs will clean up nicely, but I would favor pasturing in Missouri rather than green feeding. The hogs seem to do better. They like to get their noses into the ground in search of roots; and while they may do a little damage in turning up the turf, let them go. I put alfalfa as our very best pasture crop in making pork cheaply. It comes on earlier, makes rapid growth and stays with us later than red clover. By all means grow alfalfa, if you can, and give the hogs a chance to turn it into pork.—L. C. Brown.

HAY PRESSES

Of best makes; durable and of great capacity, for horse or other power. Sold at very close net prices above cost. Bale Ties, of best quality, always in stock. Full description and prices on application.
Weber Implement Co., 415 N. Main Street, St. Louis.

Quick Work in Hay Making.

All practical farmers know that it is almost impossible to put up two stacks of timothy hay which will feed out with the same results. There is just one best time for cutting timothy hay, hence the nearer we can put up our entire crop to this stage so much better will be the quality of our hay. Timothy cut when the head is in full blossom makes the best quality of hay and produces the greatest amount. At this stage the leaves have attained their full size and they have not advanced far enough to weaken and fall readily from the stalk. Also, at this stage the nutritive matter which has been elaborated in the plant to form seeds remains pretty evenly distributed throughout the stalks and leaves. So at this particular stage of growth no one part of the plant has been developed to the detriment of any other part. While it may not be practicable to mow any considerable size field at just this stage, it would be unwise to wait until the flower has fallen before we start the machine. Many prefer later cutting, claiming they get more hay, also that the crop is more easily [illegible]

Rusty Milk Cans.

Of the many things which affect the quality of cream, rusty milk pails and milk cans are the worst It is not uncommon to see a creamery patron deliver his whole milk to the creamery early in the morning, fill up his cans with skim milk and let them stand around two or three hours while he does his shopping. Then the cans are taken home and are not emptied until the milk is wanted for feeding. No wonder these cans become rusty. These cans should be emptied at once, washed with warm water, scalded and then put out in the sunlight where they can air. Don't leave the cans sitting around from ten to eighteen hours and then try to clean them up with soap. Scour with salt occasionally and see that the seams are thoroughly cleaned.—L. C. Brown.

PRACTICAL BARN PLANS.

This is the name of the best book out. Every farmer needs it. No matter what kind of buildings he may have on his property, he needs it anyway. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.

A Practical Farm Barn.

Each and every plan in the book is accompanied by a lengthy written description explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

Any carpenter or builder, or even a farmer himself who is handy with tools, can take our "New $5,000 Barn Book" and put up many of the buildings.

A Valuable Work.

We hope we have impressed you with the value of this book and that the nominal price asked is nothing by which the practical value of the book should be measured. This book is 8x10½ inches, contains 156 pages, is handsomely bound in cloth, stamped in two colors, and printed on fine glossy paper. Order to-day while you are in the mood. That's what to do. **Price, $1.00, Prepaid,** including one-year's subscription to this paper.

Clean the Grain Fields.

With all our pains in selecting seed grain, many weeds and other obnoxious plants persist in showing up along about harvest time. The only way to get rid of these pests is to go through the fields now and pluck out the individual plants. The plan is perfectly practicable, if one has been careful in cleaning his seed grain, for only a very small percentage of these foreign seeds will have remained with the grain. Watch out for mustard and wild oats. The mustard plant, if allowed to mature, will make no end of trouble; but if the fields are gone over just as the mustard blossoms show, it will not be a very big job to clean them out. With wild oats the situation is different. It resembles the cultivated oat in some respects, but it has large, drooping spikelets. Some claim they do not fear wild oats in the Central Western States, as a short rotation of crops will rid the fields of it. But it is a big mistake to allow it to get a foothold anywhere. Keep it out. The very first question I would ask were I buying seed oats, would be whether it contained wild oats.—L. C. Brown.

Helping Out August Pastures.

I have never known a season when some good green crop did not come in good play during August. Along in June, when cows have been wading in clover up to their knees, we are apt to overlook the usually dry August, with its scant pastures. For early fall feeding sweet corn will give good results. From the time this corn reaches the milk stage up to maturity, it feeds out fine, and it requires only a few acres to carry the stock through August. Rape sown in corn at the last cultivation comes in very nice, and most all stock like it. Some few farmers have tried plowing stubble right after harvest and sowing a mixture of oats or rye with peas for later field pasture. Rye sown alone makes pretty good late fall picking and fine early feed in the spring. For any of these quick crops good, strong land should be used, and the crop given every opportunity for a quick start and rapid growth.—L. C. Brown.

Early Cultivation of Corn.

This has been a season when the ordinary steel-tooth harrow has done good work on the corn ground. Other implements have been tried in cleaning fields and keeping the top soil nice and mellow. But the harrow beats all of them. Good farmers have learned to slant the teeth backwards, so that the tooth will not catch hold of trash or an old stalk and tear up the hills of corn. Those who commenced by using the harrow this spring, just as the weeds were starting, and then kept on using it until the corn was big enough to cultivate, have clean fields and mellow fields. This has been a bad season for ground packing and baking, with the result that those who have neglected their fields now find them almost as hard as a public road. After seeing several fine fields of corn this week where the harrow was used two and three times over, I say, stick to the smoothing harrow, and you will have to "show me" before I will believe there is anything better.—L. C. Brown.

One of the recent quotations on the St. Louis market: Arkansas squash, $3.00 per barrel.

THE first ready roofings, made some thirty years ago, lasted a very short time.

Then manufacturers improved the goods and smooth surfaced roofings of various kinds were developed that would endure fairly well **if the top surface was given a coat of heavy waterproof paint every two years.**

Now comes Amatite—with a mineral surface which requires no painting and which will last longer **without painting** than the other kind did **with constant painting.**

The top surface, being mineral, is unaffected by weather or climate. It really protects.

The waterproofing material in Amatite is pitch—**the best resistant to water known.** Water will in time dissolve or disintegrate almost anything, but it is powerless against pitch.

Roofings of twice the price often do not protect as well because they are not waterproofed with pitch.

Amatite is easy to lay—any one can do the work. We furnish you free nails and liquid cement for laps.

Investigate the cost of Amatite in your locality. You will be astonished at its low price.

Samples and illustrated Booklet **free** on request to nearest office.

[Please mention National Farmer and Stock Grower.]

LADY SEATON—Dark bay Hackney mare, with white hind feet, five years old, and stands 15.1 hands high. Bred by Albert Walker, of Seaton Ross, England, and imported by Mr. Wm. H. Moore. LADY SEATON was discovered in the English pasture and purchased when she was unbroken for $3,000. Upon being shown to harness she immediately took the first prize. The best authorities upon show horses, such as L. M. Newgass and M. H. Tichenor, say that she is not only the finest Hackney, but she is the finest harness horse of any breed they ever saw. The magnificent illustration of LADY SEATON is from a photograph by Schreiber & Sons, animal photographers, of Philadelphia, Pa.

Seed-bed For Wheat.

With our Corn Expositions, Corn Schools and Corn Contests, we have nearly lost sight of our great small grain crops—wheat and oats. The result is, we have been losing ground in the growing of these very important crops. We might as well face the situation sensibly. If we are to grow profitable crops of wheat we must give attention to varieties and methods of culture which will insure the largest quantity of high-grade wheat from our individual field. Many wheat growers are satisfied with a yield of eighteen to twenty-five bushels per acre, and really grow it for the benefit of a proper rotation. We can readily see whether these minimum yields can be increased by looking around the neighborhood and noticing what the best growers are doing. I do not believe there is a township in the winter-wheat-growing belt where one will not find some good farmer who is making a big success of growing wheat. The thing to do is to observe his methods and go and do likewise. The man who has handled his soil to make it produce profitable crops of wheat has gone at the matter thoroughly. He has studied the requirement of his crop; he has looked after the drainage, and he has kept his soil supplied with enough humus to keep it in proper physical condition to produce strong straw and well-filled heads of grain.

The seed-bed for wheat should be well pulverized and more compact than for any other grain crop. When the soil is left too loose, wheat is apt to come up rather thinly and it will not be firmly rooted. Another thing: In a loose soil, wheat sown in September will grow downward eight to ten inches and then become firmly fixed in the subsoil. With the heaving of the surface soil these roots are broken and many of the plants are broken off right where the shoot started. With a well-firmed subsoil, and with sufficient mellow surface soil to cover the grain well, the roots are more apt to spread out, where they are not injured by the heaving of the crust, as they rise and fall with the soil. The time of plowing has much to do in making a good seed-bed. The earlier the ground is plowed the better. Give it all the time possible to become well settled before seeding begins, but keep the harrow going, to conserve moisture, keep down weeds and make a fine surface soil.

The time of seeding, rate and depth of seeding are all factors which, more or less, must be governed by local conditions. In localities where the fly is troublesome it is best to defer seeding as long as possible, until, say, the last of September or the first week in October. From four to six pecks per acre is the amount of seed usually sown. But on a well-prepared seed-bed, where the grain is evenly distributed and covered, less seed is required. Also less seed is necessary for moderately early seeding than for very late seeding. All of these things are essentials and factors in producing profitable wheat crops, and I believe it is high time we were paying more attention to them.—L. C. Brown.

Feeding Corn With Clover.

An Indiana subscriber asks me whether pigs can be profitably raised on good clover or alfalfa pasture for the first five months.

While clover and alfalfa are mighty good crops for young stock, yet they give best results when fed with corn. Corn and alfalfa alone are not much more than a maintenance ration. With corn at 75 to 80 cents per bushel, it may be cheaper to carry young hogs along awhile on pasture until other grains can be had. But with corn around 60 cents a bushel, we should feed a medium ration of corn.—L. C. Brown.

Make Your Crops Fit Your Soil

The biggest mistake one can possibly make is growing crops haphazard; that is, crops which are not adapted to local conditions. Some years ago reports went out that a variety of corn had yielded nearly 150 bushels per acre in one of the Eastern States. And it was a fact. At once many Western corn growers sent for some of the seed, but, alas! they found that it was not anywhere near so great a producer under our soil and climatic conditions. In some sections Durum wheat has given wonderful cops, but it would not be wise to grow that variety of wheat when other better milling sorts will do well. In some sections of Minnesota farmers have found that bearded spring wheat will do better than Blue Stem of Fife, and they are growing it extensively, although it is not as good a milling sort as the others, and, consequently, sells for two or three cents less per bushel. The thing to do is to study our local conditions and grow those crops which are the best money makers and the least exhaustive to our lands.—L. C. Brown.

Winter Oats.

There are a great many inquiries about winter oats. I have never tried them, nor do I know of any being grown in Northern Illinois. But I believe that the winter oat belt can be pushed northward as fast as new varieties are found which will meet our conditions. At present, the latitude of St. Louis is about as far north as they have been grown successfully. Some failures have been recorded in Central Illinois and Indiana. But I believe these were due to the fact that the change of seed was too sudden and the different conditions were too violent. Here is a field well worth some good, thorough work. In localities where spring oats have been going backward, try five or ten acres of some good winter variety. Winter Turf and Virginia Gray are good sorts. These stool abundantly, and, when sown early in the fall, I believe they could be pastured without any injury to the crop in Illinois..—L.C.Brown.

General Notes.

"It is safe to cut alfalfa the first time, when the first heads come into bloom. Under no circumstances should the crop be allowed to come into full bloom before it is cut. From this time on the time of cutting is not so important, just so it is not cut too late in the fall. Alfalfa hay should be handled the same as red clover. The main thing is to handle it so that the leaves are not shattered and lost."—Indiana Farmer.

Cantaloupes from Georgia were selling in New York City during the last full week in June at $1.25 to $1.75 per crate; but several fine lots from California sold at $3.00 per crate. Watermelons were being sold to dealers at $125 to $200 per car-load. Retail prices—Cantaloupes, 10 to 15 cents each; watermelons, 50 to 80 cents each.

ECONOMY PUMPING ENGINES
Run By Heat.

Best thing in the world for pumping water from deep or shallow wells for live stock and domestic purposes. No waiting on the wind. No explosion, exhaust or noise. No boiler. Easy to start and run. Never fails to go. Operated in connection with overhead or pressure tank, insures fire protection and running water for the home. Write for free book.

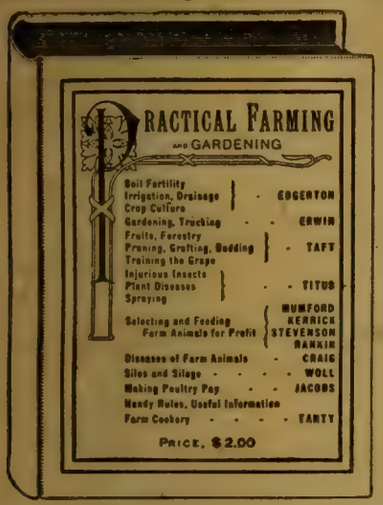
ROCKFORD WELL DRILL CO., • Rockford, Ill.

Practical Farming and Gardening is a book that weighs thirty ounces ready for mailing. It is a book of 500 pages 6x7¾ inches to the page. It is a complete farmer's instruction book. The feeding chart, which is the frontispiece, is worth more to a stock farmer than any publication heretofore issued. It is worth a ten-dollar bill to any stock farmer. The book itself is a wonderful production. Soil fertility, irrigation, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant-diseases, spraying, cattle, hog, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. Eleven of the top-notch stock and



agricultural experts compiled this book. They did the work so that farmers and farm boys could understand it. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. We buy large quantities at one time. We obtain this book for a very low price considering its value. Send One Dollar and we will send you Practical Farming and Gardening, postage paid, and The National Farmer and Stock Grower for one year. This is a grand offer. Address, Hale Publishing Co., 3550 Vista avenue, St. Louis, Mo.

Alfalfa Palace is Planned.

While "Corn is King," alfalfa is undoubtedly "Queen" in the Western States and to his queen King Corn is to build a palace in Omaha which will be one of the special features of the National Corn Exposition to be held there December 9th to 19th.

The "Alfalfa Palace" is being planned by the Directors of the Corn Show because of the increasing interest in the crop and its growing importance as a food for cattle. The palace is to built of bales of alfalfa and lined with exhibits of alfalfa and other grasses. Valuable premiums are to be offered for the best types of the alfalfa plant, and many growers will secure hay presses and modern machines for baling the alfalfa.

Much attention is to be given alfalfa at the National Corn Exposition, as it is now recognized that it is a necessary food for stock. The best authorities have demonstrated that cattle cannot use to advantage all the carbohydrates and oil in corn without a protein ration. It is a waste to feed straight corn to stock in preparing them for market, and big packing houses are now paying better prices for the stock fattened on a mixture of corn and alfalfa.

Then the mixture is cheaper. Few feeders are still of the opinion that they can afford to feed straight corn worth 60 to 65 cents per bushel to cattle for which they receive from $6.50 to $8.00 at the outside. For this reason those interested in agriculture are to secure exhibits and give demonstrations of interest to every grower or feeder of alfalfa when the big palace is opened at Omaha in December.

Be Your Own Veterinary.

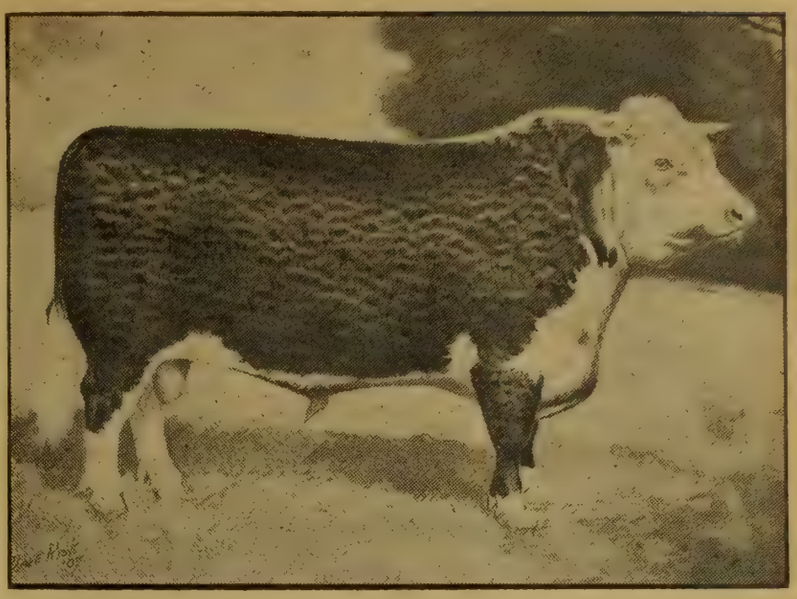
It is surprising how many dollars can be saved which are expended for veterinary bills and lost in feeding horses which are in no condition for work, by procuring a good antiseptic healing oil. This is the latest and best known surgical dressing and is used extensively by surgeons, veterinarians and stock owners with remarkable results in all diseases of the skin of man or beast, and is especially adapted to saddle galls, spavin, wire cuts, scratches, cracked heel, rope burns, old sores, inflamed or swollen joints, blood poison, thrush, mange, ring worm, and as a liniment for pains, rheumatism, cuts, bites, aches and sprains it is invaluable. A large bottle which will last for months and save many dollars can be obtained by sending One Dollar to the Veterinary Supply Company, St. Louis. This is a profitable investment, as it will save many times its cost as a veterinary help and household emergency remedy.

Watch Your Clover Field.

If you find a yellow vine squeezing and sucking the life out of patches of your clover or alfalfa, you are pretty safe in concluding that you have a genuine case of dodder. It is really alarming to find so many dodder-infested fields. Where does it all come from? In the seed, of course. Right now is the time to hunt for dodder and stamp it out. You can't mistake it. It is a leafless, yellow vine, which twines around the clover or alfalfa plant. Don't try to pull it up by the roots, for it hasn't any. That is, after it has firmly taken hold of its host plant, it decays and breaks from the ground and lives entirely off its host. It sucks the very life out of plant after plant, spreads quickly, and, if left, it will fill the ground with seeds. It is one of the meanest pests we now have to fight. Cut it and burn it—host plants and all—and make sure that you do it before the dodder matures its seed.—L. C. Brown.

St. Louis Wool Market.

Messrs. A. J. Child & Sons, 511 North Main street, St. Louis, Mo., are handling a large number of wool shipments. This firm is well and favorably known amongst wool growers and to-day is probably receiving more direct consignments from growers than any other house in the trade. This is because they satisfy their customers. The recent advance in wool prices is very largely due to their special efforts. They issue current quotations, showing every change in the market. They are now watching the London sales and will use every effort to obtain good prices. If you have wool to ship, it is absolutely to your advantage to ship to A. J. Child & Sons. Write for their wool market report.



PERFECTION FAIRFAX, 179,767—Hereford bull at head of the Dale Stock Farm, owned by A. C. Huxley, of Bunker Hill, Indiana. PERFECTION FAIRFAX was dropped October 1st, 1903, and is a son of the champion Perfection and grandson of the champion Dale. The winnings of this great young bull are too numerous to mention. As a calf he won first prizes at ten great Fairs and several championships; as a two-year-old he includes first prize at the American Royal and several grand championships. He was not shown as a two-year-old. In 1907, in his three-year-old form, PERFECTION FAIRFAX was a straight winner of firsts and championships, including first in class at the American Royal Show and senior grand championship at the Chicago International. Out of possible twenty-nine firsts he won twenty-eight and one second. No other Hereford bull has equaled his record at this age. One reason for publishing this picture is to invite attention to the large number of young "baby beef" steers sold recently at extraordinarily high prices on the St. Louis market and mentioned in a short article entitled "High Prices For Light Cattle." A majority of these young steers and heifers were Herefords—all good, blocky, early-maturing favorites with the butchers. The St. Louis market is distinguished above all others for the sale of handy, fat, young cattle that are classed as "baby beef." The Hereford breed of cattle has had considerable influence in making it possible to produce fine beef cattle at an early age.

I WANT MY SCALE ON EVERY FARM
And I want to tell you why you should own a scale and do no more guessing. I want you to feed your stock by weight. I want you to buy and sell by weight. I also want you to have my offer before buying. I am fighting the scale trust. I was the first man to sell to the farmer on trial, and to ask no pay until my scale was tested. I was the first to pay freight. I was the first to pay the freight. I am today making a reliable, high grade, warranted Pitless Wagon Scale, sold at a low price, on free trial and easy terms. Write me for my "Reasons Why I Should Buy a 'JONES' Scale." I will send it free.

Put Up Cheap Feed.

The cheapest feed the stockman can put up is sheaf oats and corn fodder. For young stock, especially, these are much better than the threshed or husked grain. Sheep, calves, colts and cows will all do well on these feeds, providing, of course, the grain is cut at the right stage. Sheep will eat the grain more evenly out of the bundle than they do threshed grain, and they use up both grain and straw. Feed more oat hay and bright corn fodder. In Wisconsin, where farms are not so large as they are in the corn belt, dairymen have learned the big value of sheaf oats and corn fodder. Here they feed a great deal of what they call oat hay, and cows, horses and hogs all get some nice, bright corn fodder twice a day. What's the use of threshing grain and even grinding some of it? Put it away in a palatable form and the stock will do all this work for you. Try a good supply of both sheaf oats and nice fodder this season.—L. C. Brown.

Handling Wet Land.

Mr. T. B., of Hersher, Illinois, writes: "I have a slough on my farm which I would like to get into some kind of grass that will make hay."

I should use some kind of a disc or harrow to smoothe down the bogs on this low land. Then if there is fairly good drainage there will not be much trouble in getting a stand of grass. If the field is to be mowed, have it drained first. Red top and alsike clover will no doubt do well here. It is quite a job to reduce a very low, boggy piece of ground,but it is worth the expense, and in two or three years it should bring good hay crops. Keep the weeds cut down and mow the land clean, hauling off all the stuff, even if it is half weeds. Many go at a job of this kind half-hearted, with the result that the ground goes back to a worse condition than it was first.—L. C. Brown.

Timothy and Alsike.

A subscriber from Morgan county, Illinois, writes: "I have a bottom field which has been giving me a great deal of trouble on account of overflow. How would it do to seed this to timothy and clover for a permanent meadow?"

In the first place, I would not sow red clover on this ground with the timothy, because it would die out in two or three years. Clear timothy will command a better price on the market than mixed hay; but if the hay is to be fed up at home, I should sow alsike with the timothy. This will keep the timothy from becoming sod-bound and it will increase the yield of hay. Alsike makes a growth of fine leaves, and when mixed with timothy I know of nothing that suits all kinds of stock quite so well.—L. C. Brown.

The Twice-a-Week GLOBE-DEMOCRAT

is a magnificent newspaper, containing all the latest home, foreign and political news. It is undoubtedly the best Republican newspaper in the United States. It is published at $1.00 per year, and is worth the price.

The National Farmer and Stock Grower is a nice, clean, general farm monthly publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. It is published at 50 cents a year, or three years for one dollar.

COMBINATION OFFER.

On account of the interest in the present political campaign we are able to combine both of these papers for the price of one.

SEND US ONE DOLLAR

and we will mail to your address **The St. Louis Globe-Democrat Twice-a-Week Edition** for one year; also **The National Farmer and Stock Grower** for three years.

Address,

Important Things in Drainage.

[Written specially for this paper.]

One of the very important things in the laying of tile drains is to get the drains deep enough. The tile, if porous, should be laid below the line to which the frost penetrates the soil. This fact was not made enough of till after the year 1898 and 1899. In that winter the ground froze deeper than usual, and a good many drains were found not to be working in the spring.

Many of these tile drains had to be dug up, and it was found that the frost had pulverized them. The water had filled the porous tiles, and on expanding in freezing had broken the tiles into many pieces. Where glazed tiles had become filled with water, they, too, had been broken by the expansion of the water in them.

It was found, too, that there was a great difference between tiles lying below thick sod and tiles lying below a plowed surface. Where the surface had been plowed, the tiles were more generally pulverized than elsewhere.

It is now advocated to lay tiles deep, so that they cannot be reached by the frost. In many sections of the Northern States this means placing the tiles at least three feet deep. This should be done where possible, though it is always a hard thing to accomplish. There are many fields where an outlet cannot be placed lower than three feet, and of course the upper ends of the laterals must be much nearer the surface of the ground to get the proper fall of water.

Another important point in tiling land is to use large tile instead of small tile. There was a time when tiles two and a half inches in diameter were looked upon as the proper thing for laterals and three-inch tiles were considerd large enough for the main lines. But long experience showed that a great mistake had been made in laying tiles of this size. In times of freshets the stream of water flowing through the lines of tiles was too small to make any appreciable difference in the water supply for days at a time. One has but to think of the size of the stream flowing through an open ditch at such a time to appreciate how little a two-and-a-half-inch stream would affect freshet water.

Now four-inch tile is considered to be small enough for the laterals, and larger tile is used for the main lines. This greatly facilitates the drawing off of the water after a long rainy spell, which is the time when tiles are most useful.

In the laying of tiles there is one plan that is worth considering where the water must run into an open ditch extending across the lower part of the field. That plan is to have the tiles run parallel to each other and all empty into the open ditch. This makes each line of tile a system by itself. There are no laterals and therefore there is no problem concerning the joining of the laterals with the main line. If one line of tile becomes clogged up there is no question as to which line is affected.

One of the very important things in the laying of a system of drains is to make a map of the drainage system and put it in a place where it cannot be lost. A duplicate of this plan should be made and nailed up in some place in a barn or shop where it will be always in evidence. Otherwise the plan may not be available when it is most wanted.

Diluted Milk For Infants.

There is a general opinion amongst dairymen that the tuberculosis racket is nothing but a racket. "If half of the dire and dreadful results that have been laid at the door of raw milk were true, the entire human family would long since have been extinct." That sentence appeared in the Washington Herald of April 28th by a writer on the milk subject who asserted that the tuberculosis campaign was conducted in the interest of the pasteurizer, which kills the wrong germs; also in the interest of the infant foods of which Dr. Wiley says: "Nearly all of them are as bad as anything that could be given an infant," and in favor of the condensed milk man, "whose product is unfit for any but the strongest stomach."'

The fact remains, but it is seldom stated,that the safest food for infants other than mothers' milk is good, healthy, fresh cows' milk, unpasteurized, diluted one-third with pure water and a small amount of sugar of milk added. Milk containing four and five and six per cent. butter-fat will kill more infants in three months than the worst diluted or adulterated milk ever offered in the market.

When to Plow Clover Sod.

A Morgan county, Illinois, correspondent says some of his neighbors claim that the best way to handle clover is to take off a crop of hay and then plow under the second growth. He asks whether it would not be more profitable to take off both a hay and seed crop.

I should by all means take off both crops. By doing this we allow the clover roots to make their fullest development. We should get around two tons of hay per acre, besides the seed crop, which ordinarily is worth much more than the green plants. It has been found that clover roots contain a larger percentage of nitrogenous matter when left to mature seed than when the crop is removed earlier, or when the field is pastured after the first cutting. Many lose sight of the fact that it is the clover roots that distribute the nitrogen most evenly through the soil.—L. C. Brown.

In the middle of June, New York was receiving the largest supply of peaches it had in ten years, and it was only the commencement of the bumper crop that is ripening in the South. One hundred and fifty carloads arrived on which was practically the first week. Early Belle, then selling at $1.75 per crate, was the favorite. Other Georgia varieties were selling at $1.00 to $1.50 per crate; Florida and South Carolina peaches were selling at 75 cents to $1.50 per crate.

Sunflower seed is selling in St. Louis at about 2 cents a pound; castor beans at $1.45 to $1.50 per bushel; sorghum cane seed at $2.25 to $2.50 per 100 pounds.

Keeping Up Rented Farms.

A thorough-going farmer of Iroquois county, Illinois, who, by the way, is a renter, raises a question which is of great importance to both landlord and tenant. How are we going to keep up our farms under the present method of tenantcy? Instead of co-operating with tenants in producing maximum crops with the least expenditure of soil fertility, many landlords put a premium upon poor farming by raising rentals whenever a tenant secures more than an ordinary crop yield. Our correspondent says that he has farmed these lands as carefully as he would if he had owned them; he has rotated crops, kept the manure cleaned up and really he has steadily increased his crop yield. He has paid cash rent. Now the landlord has given notice that the rent will be increased next year one dollar per acre, claiming that the increased yields of his lands warrant the increase of the rental. The outcome, of course, will be that our correspondent will quit this farm, and some one will be found who will be willing to pay the increased rental. But what a foolish policy. We dislike sometimes to call people by their right names. The landlord who is short-sighted enough to crowd a good tenant off his land by asking unjust and exorbitant demands will soon see his mistake. Whether cash rental is paid or grain rental is given, it is poor policy to make a bargain with a tenant which virtually compels the tenant to sell every bit of land fertility he can coax into his growing crops. Be fair, not only with your tenant, but with your lands; and if you are fortunate enough to get hold of a tenant who is increasing his crop yield by increasing the fertility of your fields, stick to him; but don't be hog enough to try to increase your own revenue from his capital.—L. C. Brown.

The Hard-working Farm Wagon.

It should not require argument to convince anyone that it is economy to buy a good wagon. It is in use almost every day in the year. It has to endure all kinds of treatment, carry all kinds of loads, often over roads and through sloughs and along hillsides which should be considered impassable, and is necessarily exposed to all kinds of weather. The wagon is expected to stand all this, and to be found doing duty after a long term of years. It is a trying service. Naturally, only the wagons that are built with scrupulous honesty are equal to the duty.

Among the wagons that have proved their worth and given long, satisfactory service is the line manufactured by the International Harvester Company. These are the Weber, the Columbus and the New Bettendorf. Each of these wagons is of proven quality, standing up year after year under the most trying tests that wagons are ever subjected to.

The name Weber is familiar to wagon users everywhere. It is a synonym for wagon excellence. It is in use practically all over the country. Not less can be said of the Columbus, a wagon admirably adapted to farm uses and built by the best of skilled mechanics from thoroughly good materials. Both the Weber and the Columbus are high-class wagons.

The New Bettendorf differs from the Columbus and Weber in that the front and rear gears are made of steel. This adapts it to use in any climate. There can be no swelling or shrinking and drying apart, and it is a wagon that can be relied upon to carry any load the average farmer has occasion to haul.

These several makes of wagons are sold by different International local dealers. Booklets and all particulars may be had from them or correspondence direct with the main office at Chicago will receive prompt attention.

Horse Parade and Competition.

At Columbus, Ohio, once a year, they do honor to the horse by an annual horse parade. Some friend has kindly sent us a copy of the Ohio State Journal of June 3d, containing illustrations of the affair.

The list of prizes is too long for our columns, but we will mention a few of them:

Class A—Old horses, property of present owner at least ten years. First, Doc, bay gelding, seventeen years in service of the Hoster-Columbus Associated Breweries Company; William Sipple, driver. Second, Bob, twenty-five years old, nineteen years in continuous service on the streets of Columbus; property of the Buckeye Transfer and Storage Company; William Heid, driver. Third, Dick, gray gelding, seventeen years in service; Joseph Schonthal Iron Company; A. E. Pittiford, driver. Fourth, Babe, brown mare, seventeen years in service; Joseph Schonthal Iron Company; Mike Subridish, driver.

Class B—Single draft gelding or mare, weighing 1,500 pounds and over. First, George, black gelding; Joseph Schonthal Iron Company.

Class C—Pair draft geldings or mares, weighing each 1,500 pounds and over. First, Mike and Dexter, black geldings, weight 1,800 pounds; seven and one-half years on the streets of Columbus, every day but Sunday; ages, eleven and twelve years; Armour & Company.

Class D—Pair light draft geldings or mares, weighing 1,300 to 1,500 pounds. First, Jeff and Dick, gray geldings; Hoster-Columbus Associated Breweries Company.

Class E—Four draft geldings or mares. First, Mike and Dolly, Dick and Jim; Peruna Drug Manufacturing Company.

Class F—Single express gelding or mare, weighing 1,200 to 1,500 pounds. First, Richter, roan gelding; Adams Express Company.

Class G—Single light delivery gelding or mare, weighing under 1,200 pounds. First, Prince, gray gelding; W. A. Snyder.

Class H—Pair mules. First, Doc and Charlie, brown pair, Ohio State University.

Class I—Special class for Columbus city departments. First, Tag, Tony and Buster, bay geldings, Fire Department, Engine No. 2.

Two teams for show but not for competition—Three-horse hitch of Jay Trowbridge; twelve-horse hitch of Buckeye Transfer and Storage Company.

Winners of Humane Society's Medals—For horse in best condition and longest in service on streets of Columbus, Diamond, twenty-seven years old; Buckeye Transfer and Storage Company; horse longest under care and control of one driver, showing most humane treatment, Dick, Joseph Schonthal Iron Company.

Cull Live Stock Now.

Unless culling is done right when the matter is fresh in our minds, we are apt to forget a good many things. With live stock an unproductive animal is always an unprofitable one. Why some animals are kept year after year, with nothing to show for their keep, is hard to understand. When one commences to cull he must keep uniformity in mind. A ewe, for instance, may be a good breeder, but if she brings lambs of a different stamp than the run of the flock, better discard her. Of course, all animals of weak or ailing disposition should be gotten rid of. A runt or weakling of any kind is not worth bothering with. Some stop with their culling process right here. But there is another class of animals that should go, and the sooner the better. These are the animals that are usually the pride of the eye, but, alas! they do nothing. They are great eaters, but they are not producers. That big, fine-looking sow that never raises more than two or three pigs had better go; the ewes that never seem to have any luck with their lambs, and the cows which are good lookers, but nothing more—all had better be put off before another feeding season comes around.—L. C. Brown.

I'll Give You Plenty of Time to Prove that the CHATHAM Fanning Mill is the Best Seed Grader and Cleaner Made

Clean your grain—before you **sell** it—or before you **sow** it. **$1,000,000** lost by Farmers in every state each season by selling **dirty grain** is a low estimate. You are "docked" on the price because of **dirt** in every bushel. Pay me on time for a **CHATHAM Fanning Mill. Cleans** wheat for market. Takes oats, cockle, garlic, mustard and chess out of wheat. Cleans red clover—takes out buckhorn plantain. Cleans alsike clover and alfalfa. Cleans beans, oats, barley. Grades corn. Cleans timothy seed. **CHATHAM FREE BOOK** tells 100 ways you'll profit by having a Chatham. Illustrated—gives terms and low factory prices—full particulars. 30 Days' Trial without any advance payment, to prove it will do what we say it will. 250,000 sold already in U. S. and Canada. HERE'S THE BEST WAY

To Get Your HAY Into The STACK

THERE'S A DAIN STACKER & RAKE FOR EVERY REQUIREMENT

Dain Junior Stacker

WHAT you want is the quickest and easiest and best way of putting-up hay. And that's what we've got for you—Our **Dain Stackers** and **Rakes.**

We make **seven** different Dain Stackers, and **five** different Dain Rakes, each specially adapted to different hay-harvesting requirements; each **best** for its particular purpose. Each of these Dain tools works in a way that makes the hay **easy-to-handle;** easy on the men; easy on the horses.

The hay is delivered on-the-stack straight and even—just as it falls-in-the-swath. It isn't rolled; or tangled; you can build a better stack that way—with less work; a rain-proof stack, too; the hay will **keep** better.

Take the **Dain Junior Stacker;** made with a double-A frame; that gives plenty of pulley-purchase; leverage; the load **"Hoists"** easily because the **draft** or **pull** is the **same** from the ground to the **highest** point of elevation; just a steady pull; the double-A frame equalizes the **strain,** too.

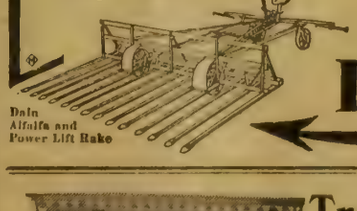
The large compression **springs** return the stacker-head from the dumping to receiving position; that takes up the rebound; prevents jerking; steadies the stacker. Another thing—instead of rolling off the stacker-head, the hay is given a pitched-effect by these springs, and falls in a flat mass that's easy to handle.

With **most** stackers the horse holds the load, but on the Dain Stackers, the pitcher-teeth can be "set" to automatically hold the load while topping-out the stack.

All our Dain stackers are light-draft; all simple; all **more** than strong enough to stand the severest strain.

All our Dain Rakes are so made that the **horses** do the work; **light** on the horses, too; the driver always has full control of the Rake-teeth; lowering and lifting them easily from-the-seat; the rakes get all the hay, too—either out of the swath, the windrow or the shock. We make the Dain Power Lift Rake, the Dain Alfalfa Power Lift, the Dain Truss Frame Rake, the Dain Three-Wheel Sweep Rake and the Dain New Idea Sweep Rake.

Your implement dealer will show you how these Dain tools are made—how they "work"—Or write us—we'll tell you all about them—we'll mail you free full descriptive literature. Address,



Dain Alfalfa and Power Lift Rake

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published Monthly
By THE HALE PUBLISHING CO.
Philip H. Hale, Managing Editor.

Charles H. Hopkins, 150 Nassau street, New York City, Eastern Representative.

Entered at Postoffice at St. Louis, Mo., as second-class matter in January, 1901.

Subscription Price in the United States, 50 cents per year, or three years for one dollar.

Office of Publication, 3550 Vista avenue, (corner of Vista avenue and Carr Lane avenue), St. Louis, Mo. Bell Telephone: Grand 400.

In ten months ending April, 1908, the United States exported mowers and reapers to the amount of nearly twelve million dollars; plows and cultivators to the amount of two and a half millions; and six million dollars' worth more of miscellaneous implements. Russia, Argentina and France were the largest buyers. Germany and Canada came next.

We wish to obtain an agent at every postoffice in the United States. One who can stick up a sign where people will see it, saying: "Subscriptions to The National Farmer and Stock Grower taken here."

According to the United States Department of Agriculture, the boll weevil pest in cotton is not so bad as it was. The difference is not so much, but it is favorable to the cotton grower. The early frost last year is credited with having caused the change.

On page 18 will be found an article on lamb raising. There is a splendid market and growing demand for spring lambs at St. Louis, and it ought to be supplied. The way to supply this demand is indicated in the article.

Some day the people who are asking laws to restrict production will find themselves in the middle of high-priced markets with nothing to sell. By the time they grow a crop the market will be down again. Most of this restrictive business is for the purpose of restricting other people. It is not the way to have good markets. Markets grow and thrive, and good prices come from workshops that are running full time. Restricted production only helps those who do not restrict.

The Eastern reports concerning the beef trade have for some time been much the same. On the one hand a scarcity of choice cattle and choice cuts have enabled the retailers to demand and obtain extreme high prices for a fraction of the supply, but without support from the families consisting of people of moderate or small means. By slaughterers it is characterized as an uncertain and dangerous situation. The prices of all cattle are comparatively high and the demand is economically small. The live stock shippers complain of the uncertainty of the market, and wtih good reason—the buyers are trying very hard to keep in the business without loading themselves up with supplies which they cannot sell.

Our Seed Premiums.

The National Farmer and Stock Grower sent out as subscription premiums many pounds of Pascal's Grand Champion Yellow Corn, also Clore's Grand Sweepstakes White Corn and of Garton's Regenerated Seed Oats. We offered a number of cash premiums which we will be glad to pay if any of the product of our premium seed shall win a prize at any State or National Shows. We hope to hear from the seed which we sent out and to pay many premiums. Later on we will call for reports from those who received premiums.

Record of the Hackneys.

Hackneys won more blue ribbons than all other breeds combined in open harness classes at the Philadelphia Horse Show in May. In twenty-nine competitions for singles, pairs, tandems and four-in-hand teams, fifteen first prizes fell to the Hackney-bred high steppers, as against fourteen to other than Hackneys.

The marked success of the Hackneys in harness at Eastern Shows is giving the breed a boom in this country. In 1897 only three stallions and six mares were imported from England into the United States and Canada. Ten years later, in 1906, the number of registered English Hackney stallions imported had grown to 123 and of mares to 155, thus making a total of 278 Hackneys brought to America in one year.

The number of registered Hackneys in the United States is now more than 3,000, according to Gurney C. Cue, of 308 West 97th street, New York, Secretary of the American Hackney Horse Society. The third volume of the Stud Book, just published, contains 1,482 pedigrees, or nearly 50 per cent. more than the first and second volumes combined. Entries for the fourth volume will close on July 1st, and the book will be published in December.

It is very surprising to us that in the Eastern shows a majority of all the prize winners are Hackneys. We look for German and French coach horses and Cleveland bays and don't find them. We find the American trotting horse acting cleverly as a coach horse. We occasionally find an American saddle horse taking Eastern prizes; but under saddle, as ponies, as cobs, as every kind of a harness horse except the roadster, we find the Hackney. The question naturally arises, where are the offspring of all the French and German coach horses which farmers have been buying for twenty years?

High Prices For Light Cattle.

Not many years ago beef cattle had to weigh 1,600 to 1,800 pounds to bring top prices. The tendency has been towards reduction in weights, but it is an extraordinary market that pays eight cents a pound for steers weighing 834 pounds, and that is what was done at St. Louis. Recent sales of butcher steers at the St. Louis market included 851-pound steers at $6.00; 873-pound steers at $6.15; 970-pound steers at $6.35; 533-pound steers at $6.55; 907-pound steers at $6.75; 840-pound steers at $6.75; 853-pound steers at $7.00; 1,151-pound steers at $7.25; 798-pound steers at $7.25; 1,157-pound steers at $7.50; and 834-pound steers at $8.00 per 100 pounds. In the line of butcher heifers, sales included 698-pound heifers at $6.40; 767-pound heifers at $6.50; 672-pound heifers at $6.50; and 601-pound heifers at $6.55 per 100 pounds. All these are extraordinary prices for baby beef and consisting of calves and yearlings. These represent high-quality fat cattle. There is hardly a stock farmer who cannot raise such cattle, and yet the St. Louis National Stock Yards never receives enough of them to supply the trade. A stock raiser who never could raise and fatten a 1,600-pound steer can easily produce two of these 800-pound steers. The above prices were paid at the St. Louis National Stock Yards during the week in which the largest number of cattle were received in the history of the trade.

SHIPPERS AND SELLERS
—of—
STOCK AND FEEDING CATTLE
are reminded that the
ST. LOUIS
NATIONAL STOCK YARDS
furnish by far the best market for their stock.

The cattle feeders of the states of Missouri and Illinois are large buyers on the St. Louis market and furnish a demand for more and better cattle all the time.

The Wabash Eastern Railway, the Chicago & Alton R. R., the Vandalia Line, the Big Four Route, the B. & O. Southwestern Railway, the Clover Leaf Route, the Chicago,Peoria & St. Louis R. R., the Chicago and Eastern Illinois, and the eastern branches of the Burlington System, all start out from the

NATIONAL STOCK YARDS,

and their lines traverse a magnificent country, in which live stock feeding is a leading industry. On their valuable lands the stockmen on these lines cannot raise cattle cheaply, but they can feed them profitably. The stockmen of Indiana and Ohio are specially referred to.

• • •

The best market for all these successful stock feeders is St. Louis. They have short runs, favorable rates, quick service, small shrinkage. These people get their cattle home in good shape. There is never a glut of stock cattle at St. Louis. Western shippers of stock cattle can get their stock to the St. Louis market just as easily and as cheaply as they can to any inferior far West market, and at St. Louis there is quicker sale,

better results, and in the shipping in, concentration, sale and outward shipment there is less expense, less shrinkage and less loss to come out of the cattle.

The market values advance and decline, sometimes in favor of the buyer and sometimes in favor of the seller; but the center in which all can be brought together and distributed at the least expense to all concerned is the best market of all.

THE BEST MARKET FOR ALL—UNDER ALL CIRCUMSTANCES—IS ST. LOUIS.

On July 1st, at the St. Louis National Stock Yards, nineteen head of little baby beef steers and heifers averaged 752 pounds and sold for 7 cents a pound. Here is $52.64 paid by butcher for calves and yearlings. They were choice little, high-bred cattle, and on the same market common steers, same weight, sold for $21 per head.

FARM AND RANCH LANDS.

CENTRAL MISSOURI FARMS.

For farms and homes that will prove satisfactory and profitable write for our new illustrated list. One hundred farms described and priced. **Geo. W. Hamilton & Son, Fulton, Mo.**

Mississippi.—Northern Mississippi, on the line of the Southern Railway, presents some first-class opportunities for young men who have had an agricultural education. A few splendid tracts of cheap land for sale; 120, 240 and 280 acres. Address, **J. W. Jourdan,** care National Farmer and Stock Grower, 3550 Vista avenue, St. Louis, Mo.

MISSOURI. 800 ACRES. MISSOURI. The best bargain. Adjoins railroad station. Two hours from Kansas City; six hours from St. Louis; twelve hours from Chicago. The land will grow 60 to 80 bushels of corn to the acre; 40 acres winter apple orchard. Improvements worth $15,000. It is just the farm for an Illinois man who is used to good land. Too fancy to describe. Price, $65 an acre; one-third cash, balance long time, six per cent. Also smaller farms. Write for particulars. **J. H. LIPSCOMB,** 306 Fidelity Trust Bldg., Kansas City, Mo.

MISSOURI.—A Fine Farm. 180 acres. 3½ miles from Marshfield. Most all valley. 35 acres good timber. Good six-room house with cellar; well on porch. Several springs, with running water. Barn, 30x60. All necessary buildings, as granary, cribs, sheds, poultry and hog houses. Fruit. Model stock farm. Good, level roads. Price only $37.50 per acre. Send for price lists. **Wright & Waterstripe,** Marshfield, Mo.

MISSOURI. 11,000 ACRES. MISSOURI. About 125 miles southwest of St. Louis, in Shannon county. Will sell 11,00 acres. About 40 or 50 per cent. of this land will grow corn, wheat and oats in abundance. It is rolling land, some rough land and a little waste land. Well watered by limestone springs and branches. No swamp land. It is open white oak timber with a heavy growth of bluestem prairie grass. The oak timber will more than pay for the land, fence it and pay for the buildings. It is the finest stock proposition. The climate is the best. Only four miles to railroad station with 700 people. It rains 44 inches per year. It will sell for $25 to $40 an acre in 10 years, and if handled properly will produce a big annual income. Only $4.50 per acre. One acre of this in its native condition will grow more grass than 10 acres of Western Kansas or the Pan Handle of Texas. Investors look up. **J. H. LIPSCOMB,** 306 Fidelity Trust Bldg., Kansas City, Mo.

New Mexico. 22,000 Acres New Mexico.
PANHANDLE RAILROAD LAND at PORTALES, NEW MEXICO, on Santa Fe Railroad. SOIL, rich, black, sandy loam. **WATER,** in unlimited quantities at from 10 to 50 feet. **RAINFALL,** average for last ten years, 24 inches. **PRICES,** $9.00 to $20.00 per acre. **TERMS,** one-third cash, balance in from five to ten years.
Excursions leave Saint Louis JULY 7th and 21st. For full particulars write
MONTGOMERY & FISHER,
Times Building, SAINT LOUIS.

Texas.—For Sale: 160-acre farm, 2½ miles from Fort Worth Stock Yards and packing plants. High prairie land. 115 acres in Johnson grass, balance in pasture; fenced and cross fenced. Two average farm houses. One large combination barn. One small barn. Good surface well; surface tank in pasture. Two tons of hay per acre; first cutting this year. Ideal place for feed pens, dairy and poultry farm. $65 per acre, net. Address, **J. B. Buchanan,** North Fort Worth, Texas.

CASH FOR YOUR FARM OR BUSINESS,
no matter where located. If you want to buy, sell or exchange any kind of real estate or business, anywhere, at any price, address,

For Sale **Saw Mills** and Saw Mill **Engines**
Weber Implement Co., 413-415 N. Main st., St. Louis.

MILK PRODUCERS TO MEET

To Prepare For the Fall and Winter Campaign.

We are requested to announce that the next meeting of the Directors of the Milk Producers' Association of Missouri and Illinois will be held at the office of Mr. W. A. Fischer, Secretary, 409 Franklin avenue, St. Louis, Mo., on Monday, July 27th, at one o'clock p. m. It is especially requested that each Delegate will bring in with him the statement of all shipments on his route, giving the number of cans of milk or cream, the price paid and to whom it is shipped. These statements upon the regularly-printed slips furnished by the Secretary are necessary in order to prepare for the fall campaign.

Acting as the Milk Committee in behalf of the association, Hon. D. I. Furbeck, the President, visited the dairies in the city with a view to agreeing upon a price for uncontracted milk for the month of June, and his report was 11 cents a gallon or better. In this connection it must be understood that there is considerable milk delievered under individual contracts between milk producers and dairy distributors, much of it at 12 cents a gallon for six months and 16 cents a gallon for the other six months. These contracts were made during the period of scarcity and call for a guaranteed product.

During May and June the milk production in St. Louis territory was very heavy and the market was oversupplied; nevertheless St. Louis distributors are paying slightly higher prices for milk than at either Chicago or New York.

Inasmuch as there are several important legislative questions and a proposed advance in freight rates requiring immediate attention, it is hoped that Directors will make a round-up to secure additional members and report them at the July meeting. Remember the day, Monday, 27th, at one p. m.

Clean Your Own Stables.

Dairy farmers are advised to guarantee their products and to place them above suspicion and then contend against increasing the ever-growing crop of public officials.

There are too many different governments in this country passing laws in conflict with each other, and each government is collecting taxes for the purpose of hiring inspectors and detectives to chase around the country seeking something to condemn under their different conflicting laws.

For every first-class dairy farm in the country to-day there is probably one government, state or municipal inspector or dairy detective. We have no doubt that there are more dairies than inspectors, but the dairy-farmer crop is not increasing and the detective crop is getting larger at every opportunity, and when once an office is created, it hangs onto the business better than does the dairy farmer. The inspector is sure of his pay and the farmer is not.

The reason that the crop of inspectors is great is because there are a few dishonest dairymen, and because many of the laws are oppressive, unjust and unreasonable. This is a broad assertion to make, but it is perfectly true. The people who should have an opportunity to pass upon laws to govern the dairy interest are the dairymen themselves. Legislative bodies pass municipal ordinances, state laws and national laws all different, and many of the provisions are difficult and some impossible to comply with, and if anyone objects, the answer is: "You are in favor of adulteration."

The fact is that about two-thirds of the state, municipal and national laws affecting the dairy interest could be repealed for the advantage of all concerned, and the crop of spies and inspectors could be cut down materially, if not entirely done away with, and the industry be all the better for it.

What we need is a dairy interest that keeps its stables clean; that produces a perfect product and which is able to defend itself from all criminal charges. The dairy interest is the one that is vilified and libeled more than any other. A doctor will drop in on a community, and the first heard of him is that ninety-five per cent. of the cows are suffering from tuberculosis and only ninety-four per cent. will be misrepresentation. Another will discover the most filthy cow in the country and publish it as the source of our milk supply.

Milk producers will have to organize against misrepresentation, and cannot do so unless they also organize to perfect their product. The man who puts water in his milk is not in a position to correct unjust laws; the man with a dirty stable has to hide himself when the inspector comes around; but the maker of a perfect product is the man who can say: "We are governed too much and too expensively." Therefore, clean your stables; it will be cheaper than to hire government inspectors to do it for you.

CRAFT'S DISTEMPER CURE
deserves a place in the equipment of every horse owner. It is effectual if used as a tonic regularly to prevent colds, epizootic, catarrhal affections, influenzas, pinkeye, etc., in horses, sheep and dogs, and is a guaranteed cure if used faithfully after these troubles are contracted. To accommodate owners of one horse or of several, it is sold in 50c. and $1.00 bottles by druggists or sent by mail to out-of-the-way stockmen direct by the Wells Medicine Company, 17 Third street, Lafayette, Ind., who guarantee the remedy both through the druggist and when sent direct. Many of uor readers are already familiar with this excellent remedy, which is endorsed and recommended by many veterinarians.

The Sharples Cream Separator.

All farmers should write the Sharples Separator Company at Chicago or at West Chester, Pa., for Catalogue No. 232. It will be sent promptly, also a fine work entitled "Business Dairying." Every farmer should own a first-class cream separator, and surely the Sharples Tubular is first-class. We have seen and read hundreds of testimonials from farmers who date the time they first had clear money of their own from the day they first separated the sweet cream from the sweet milk. Send a postal card, address as stated and ask for Catalogue No. 232.

A Roller-bearing Manure Spreader.

What seems to be a most important improvement on manure spreaders has lately been made on the old reliable Success Spreader. Its manufacturers have made it a roller-bearing spreader. In this particular at least no one can deny that the Success is in a class by itself. It is the only roller-bearing spreader.

The advantages of this improvement can hardly be overestimated. Manure spreaders have hard work to do. They must haul heavy loads over rough ground and they must be in operation. They must, therefore, be made strong and heavy. This accounts for the heavy draft and the hard running that characterize all spreaders. By this single move the Kemp & Burpee Manufacturing Company have greatly reduced the draft of the Success Spreader and have at the same time made a remarkably easy operating machine.

There are seven sets of these roller bearings, as will be noted by the illustration. They are placed in the wheels, on the cylinder ends and in the driving mechanism. The effect is, as can readily be seen, to make all parts "run easy." Less power is required, there is less pressure and less strain, consequently there will be less wear, and, with the far-famed strength of the Success Spreader, breakage is almost an impossibility.

Other things that make the Success smooth and easy operating are its remarkable simplicity, its positive workings and its direct application of power. The worm and gear, part of its admirable driving system, run in oil. There is a notable absence of gear wheels. Power is applied by an unbreakable steel pinned chain. Nothing could be more direct.

No fault is ever found with the Success Spreader on the ground of strength. Extra strong wheels, steel axles, staunch oak and ash frame, panels of box bolted to uprights with strong flat-headed bolts—these indicate the materials and making of the whole machine. An excellent feature is that all pressure and strain on the cylinder by reason of driving machinery is upon the strong rear axle. It is not upon the box.

We believe it is to every farmer's interest to investigate the Success fully before buying a spreader. It is a machine that bears investigation. The new roller-bearing features are bound to make it more popular than ever. This, especially, should be borne in mind in choosing a spreader. A card to the Kemp & Burpee Manufacturing Company, Syracuse, N. Y., will bring all desired information.

Dairy and Creamery Notes.

Bunker Hill, Ill., on the Big Four Route, shipped 129 to 160 cans of milk a day to St. Louis, or a total of 4,620 cans during the month of June. These figures were furnished by Mr. S. R. Winchester, member of the Milk Producers' Association.

Elgin quotation for choice creamery butter on Monday, June 29th, was 23 cents, against the same quotation the previous Monday; 24 cents a year ago; 20 cents two years ago; and 20 cents three years ago. This is from the Elgin Dairy Report.

The dairy distributing houses of St. Louis includes the American Dairy Company, Edward T. Brown, Secretary and Manager. The establishment is located at 4958 Suburban Tracks, where they have an up-to-date plant of moderate dimensions and distribute all their milk in bottles. The milk supply is at present all from Missouri. The company is making contracts at 13 cents seven summer months and 16 cents five winter months. It looks like a reliable concern, run on business principles, and can take on a few more shippers of guaranteed product.

The Union Dairy Company of St. Louis has now twenty-one country receiving stations, where the milk is received from the farmers. It is claimed by the manager that it is the only sure way of doing the business right. At the same time the Union Dairy Company is receiving an amount of milk and cream bought from shippers under contract or upon the open market.

Elementary Principles of Agriculture.

We desire to acknowledge receipt of a copy of a work entitled as above, prepared for use as a text book in the common schools. This is one of the most comprehensive books on the foundation and principles of agriculture, and we feel assured that it will serve a good purpose. If agriculture is taught in the grammar schools with such a work as the chief guide, many young men will start out in life with a knowledge of agricultural pursuits which will be of more value than all a farmer can learn in a lifetime by practical conduct and cultivation of a farm. Every branch of agricultlure is made clear by the necessary explanations.

The work is by A. M. Ferguson, of the Texas Seed Breeding Farms, and Dr. L. L. Lewis, of the A. & M. College of Oklahoma, and we hope that it will find ready sale. It is a splendid book for the farmer also and ought not to be monopolized by students.

BETTER CISTERNS --- WHY?
To protect the health of every member of your family. Medical experts have pronounced the brick and wood cistern to be the cause of many cases of sickness.
A Cistern to be perfectly sanitary must be made so tight that no impurities can possibly get through. This can only be accomplished by using the Steel Cistern.

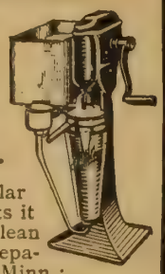
The Name
"TUBULAR"
on a Cream Separator
Stands for the Same as "Sterling" on Silver—
THE BEST MADE.



What the Tubular does in the dairy puts it foremost—twice as clean separating as other separators at Fairmount, Minn.; twice as clean at Kendall, Wis.; six to ten times as clean at Scotsburn, N. S.; fifteen times as clean at Gananoque, Ont.

But these competitions were far away from your home? Well, try it out in your own dairy and see whether the Tubular is sterling, whether it will do better for you, with your own cows, than any other process or separator. No cost to you. Just write us you want to know what the Tubular can do for you. Ask first for Catalogue No. 232, it's a good introduction.

RAILROAD RATES ON CREAM.

A Communication From the St. Louis Colonial Creamery Company.

Editor National Farmer and Stock Grower:

In view of the pending action before the United States Interstate Commerce Commission of the allied creamery interests of the country against the railroads in their attempt to increase rates on cream, I feel it is highly important that one fact be brought to the attention of your readers generally throughout the country.

It is well known that the railroads have through their efforts arrayed the small creameries of the country against the large centralizers, claiming that under the old rates the centralizers were getting a big advantage over the small creameries, and also claiming that the new rates proposed to be put in by the railroads would discriminate against the centralizers and be in favor of the small creameries.

One fact alone will disprove these claims absolutely and settle once and for all the question as to the sincerity of the railroads in their endeavor to array these interests against each other. This fact is simply this, that the rates for the shorter distances for hauling cream have been increased to a far greater proportion than the rates for distances up to 125 miles. In other words, the rates for distances up to 30 miles have been increased from 15 cents, the old rate, to 25 cents, the proposed new rate, an increase of 67 per cent., while in no case does this rate of increase apply as strongly for distances from 30 to 125 miles.

If the railroads are sincere in their claims that they want to favor the small creameries, they should have allowed their old rates to remain and raised the rates on the long haul. Instead of that they made a universal higher rate for tariff purposes only and have applied the heaviest increase on the small distances, which will hit the small creameries the hardest.

It is time your people should be aware of this fact, to the end that they may see the purpose of the railroads, which seems to be merely that they may use the small creameries to "pull their chestnuts out of the fire."

Hoping you will give this matter due publicity, that justice may be done, I am Yours Truly,

J. H. CURRAN.

Butter Too High in Color.

The following is by a butter solicitor in the New York Produce Review:

"Concerning the coloring of butter I desire to say that since May 1st I have been in a great many creameries through this country and in each one examined the butter, especially the color, and have said to a geat many: 'You are too high in color.' Time and again in reply they have said: 'We are not using a bit.' Some creameries, especially in Southern Iowa, around May 10th, were not using a bit of color, and their butter was a brick red. In my twenty-seven years' experience I do not recollect the time when the grass made the butter so yellow as it is this season, or at least it seems that way to me. As the consumers of butter are demanding such a light shade, if any man can invent something to make a lighter shade of butter than the grass naturally gives it, I believe he would make as large a fortune as did the man who first invented something to color the butter. In closing, I beg to state I know there are not one-tenth of the creameries that are using a bit of color."

I never have had anyone suggest the possibility of making a lighter shade of butter than the natural color, and yet I am aware that the milk from some cows produces a darker shade than others. It is unreasonable, however, to ask for lighter colored buter than that which is produced in the natural way without any artificial coloring. What I said two weeks ago was to put the buttermakers on their guard and to remind them that the time had come to discontinue the use of all butter color during the summer. Sometimes the importance of these matters is not fully realized until some damage is done to the butter."

The Summer Milk Ration.

There is a time during the summer months when the average pasture is very short. During this time the milch cows must be fed something in addition to grass. Many farmers consider that a ration of grain will do this better and more economically than anything else. As a rule, this is not true. There are conditions under which grain very largely has to be relied upon for supplementing the pasture, but under average farm conditions it has been demonstrated that the feeding of grain during the summer months is not usually a profitable proposition. Green forage crops should be raised. In other words, summer pasture should be provided. Fodder corn makes an excellent feed during the early fall months. Pumpkins may often be raised to advantage. Succotash, a mixture of barley and oats, often makes a desirable summer pasture, and experiments indicate that such pastures are more economical than grain feeding.

Some years ago the Kansas Experiment Station allowed one lot of cows the run of a pasture without grain. Another lot was pastured and fed six pounds of a mixture of grain composed of one-third wheat bran, one-third corn meal and one-third ground oats. At the end of the test it was found that the cows at pasture, receiving no grain, gave larger net returns than those fed grain in addition.

At the Cornell Experiment Station, New York, cows at pasture were fed six to nine pounds daily of a grain mixture composed of 100 pounds of wheat bran, 100 pounds of cotton-seed meal and 15 pounds of malt sprouts. Several tests of this kind were made and the conclusions drawn therefrom were that the feeding of grain did not yield increased net returns.

A number of other tests might be cited, but the conclusion would not be changed. This does not mean, of course, that when the pasture is unable to supply an abundance of food for the stock that it is not better to feed grain than to allow the cows to run down, but it means that pasturing, even if annual pasture crops must be used for tiding over the season of short pastures, is more economical than grain feeding or partial grain feeding. It must be borne in mind, however, that unless cows giving a very heavy flow of milk have an abundant supply of good, nutritious grass, they will not be able to get the required amount of nutriment. In such cases some grain should be fed in addition.—Farmers' Tribune.

The Petaluma Poultry Journal says "The average weight of hens' eggs runs from 15 to 24 ounces per dozen. A weight of 22½ ounces may be taken as a fair average for good-sized eggs, although a weight of four ounces is not unknown for single specimens."

Why Break Your Back?
when a
Fairbanks-Morse Gasoline Saw Rig

Will do your work quicker and better than a dozen men at a small part of one man's pay. Then by sawing your neighbors' wood the outfit will often pay for itself and yield a handsome profit the first season. You would be surprised to learn how cheaply it will do chores for you, such as pumping, churning, grinding, etc. Made in either Portable or Stationary Types. Operates on gasoline, kerosene or distillate.

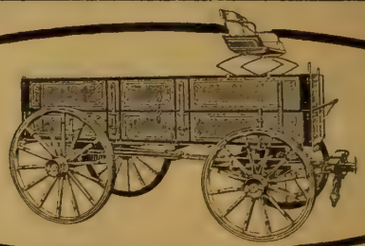
THREE HIGH CLASS FARM WAGONS



A FARM wagon has much hard work to do. It must haul heavy loads, travel over rough roads and be out in all kinds of weather. When you buy a farm wagon you want to get many years' service from it.

You will not be disappointed if you buy any one of the three wagons described below.

The 63-Year-Old Weber

The King of all farm wagons. Only the very best and most thoroughly seasoned wood is used; ironed to make a wagon that lasts a lifetime. Light running, convenient and a wagon of fine appearance.

The Popular Columbus

Built in a factory where most exacting conditions are enforced: Air seasoned wood stock, ironing which gives great strength and durability, workmanship by thorough mechanics and every part thoroughly tested.

New Bettendorf Steel Gear Wagon

Front and rear gears made of steel. Parts riveted together, not bolted. A wagon that is proof against breakdowns. Nothing can work loose or rattle, and there can be no warping, drying apart, shrinking or rotting.

You should remember above everything else that a cheap, poorly constructed wagon is dear at any price.

Before you buy any wagon call on the International local agents and learn all the superior points of the Weber, Columbus and New Bettendorf wagons. They will show you the wagons and hand you printed matter giving all particulars Or if you prefer write direct to the home office.

(Incorporated)

Selecting the Dairy Cow.

[Written specially for this paper.]

The selection of the dairy cow appears to be an easy matter, but it is a difficult one. It is regarded as easy because most of the people that buy cows are not very particular as to the kind of a cow they select. If she has the reputation of being a "good cow" she sells readily at about the uniform figure paid for "good" dairy cows.

The man that is trying to build up a good herd will succeed to the extent he becomes wise in the choosing of cows. One of the things that is now generally overlooked is the pedigree. Most people buy cows on what they consider as their merits, and say they have no regard for the pedigree of the cow.

The pedigree of a cow is worth something, for it indicates the kind of ancestors she has had and tells much of the bundle of influences she has within her. But we are now getting a better class of pedigree in some of our dairy breeds. The Advanced Registry promises to do very much to improve the dairy cow, and the man that selects a cow for his herd should want to know whether or not the cow is in the Advanced Registry.

As yet the aggregate number of cows in this registry is small, so that no man can hope to secure very many such cows; but it is safe to predict the coming of a time in the near future when the Advanced Registry will mean a big price on the head of the animal that has it. The man that is selecting a cow can afford to pay a big price for a cow belonging to such a registry.

In the near future, the man that selects a dairy cow will be able to choose some having good advanced registration and with the additional credit of being from dams and granddams that were also in the Advanced Registry. This means an increasing influence in the direction of bundles of influences in favor of large milk yielding. If our cow buyers will pay more attention to this now, it will help the movement along, and the movement is greatly to the advantage of the dairy interests.

One man known to the writer went out into the country to select a cow. He was so determined to have a good one that he would not buy from a herd that did not consist of pedigreed animals. Then he began the investigation of the milk yield of the dam of the cow and of her sisters and calves. He searched through several counties before he found the cow he could have faith in. The chief obstacle in his way was the fact that few people keep records of the milk production of their cows.

He finally found a locality in which the weighing of milk has been popular for a long time and where records were kept of the butter made from the milk of each cow. There he found the cow he wanted and purchased her at a high price. She has calves now and they sell at a high price for breeding purposes.

If a man wants a cow merely to produce milk, he need not pay much attention to pedigree, but if he wants her for breeding he cannot afford to buy a cow merely on her individual performance. Such cows sometimes produce worthless calves.

Summer Troubles With Butter.

Mrs. J. F., of Milford, Ill., writes: "I am having more trouble with my butter this season than ever before. I can't get rid of the white streaks in it, and it is not as firm as usual."

I suggest that our correspondent change her brand of salt. Streakiness in butter is usually caused by the uneven distribution of the salt; that is, the salt will not dissolve and work into the butter. Work your butter a little longer. There is no general rule about the time butter should be worked, but work it until the salt has penetrated the whole mass evenly. The finest quality of dairy butter I have tasted in a long while is made by a woman who churns with the old-fashioned dash churn and works her butter in a wooden butter bowl. She churns about five pounds at a time and works her salt in with a ladle. There is not the least sign of streaks in it, but she takes infinite pains with it, and she never allows a pound to leave her hands showing either white specks or streaks.—L. C. Brown.

Two Great Cow Questions.

The Farmers' Union Advocate of New Zealand very properly says that a cow's record for producing milk must always be considered in connection with their feeding. Cows that have good records have been known to be such heavy feeders that there was no profit in keeping them. Another animal with probably a similar good record for yield will be a comparatively small feeder. Whatever she eats above the food of support goes into milk or butter-fat. A record of milk yields without a record of the dairy feeding is of little value to anyone. The two questions cannot be separated.

Get the Silo Ready.

Lucky the man who had a well-filled silo to feed from the last spring! It saved some big feed bills and the food was first-class. By following some well-tried-out practice there is not much chance of loss. The corn should be well matured; that is, all the ears should have glazed. Of course, corn cut when in roasting ear is much more palatable, but it is much more difficult to preserve than corn cut at the glazing stage. Don't hurry the job of filling the silo by cutting the corn in two-inch lengths. Finer silage may be had by cutting in one-inch lengths, or even under. Half-inch would be best, but that makes rather slow filling. Use a big machine and a good-size engine. A dinkey four-horse engine is not worth bothering with. Use a fourteen or sixteen-horse-power engine and then you won't have to stop to divide the bundles. Use the modern elevator with hood attachment. In this way the silage will be thrown against the sides of the silo and fall and pack much more evenly than if all was dumped in the center. Keep a man in the silo, and see that the outer side is well tramped and the coarser material is worked towards the center.—L. C. Brown.

Dairy and Creamery.

At a meeting of a co-operative creamery in Jutland, Denmark, recently, it was decided by a very large majority vote that the noon and evening milk must not be above 58 degrees Fahrenheit. If it is, a fine of 13½ cents per 100 pounds is enforced. The creamery supplies the patrons with scrubbing brushes and a thermometer.

At the Hood Farm sale of Jerseys, held June 3d at Lowell, Mass., prices were desperately low, due, 'tis said, to the hard times. Imp. Golden Leda's Belle, winner of a certificate of merit on the Island, made 1 pound 2½ ounces of butter in a day with her first calf, sold to N. Thayer, of Worcester, Mass., for $470. The five-year-old cow Figgis, 17th, and bred to the famous bull Torono, sold for $270 to the same buyer. A bull calf—son of Hood Farm Pogis, 9th—sold at $300 to Ford & Graham, of Washington, D. C.

The Milk Reporter says: "Two sentences of eighteen years each in the government prison at Atlanta, Ga., to run concurrently, in addition to a fine of $7,500, was imposed in the United States Court at Wilmington, Del., by Judge Bradford, as the penalty upon Hugh I. Armour, who had been convicted of violating the oleomargarine law. Armour was charged with being the head of an oleo syndicate which operated in Wilmington, Philadelphia, Atlantic City and other places."

Many a good cow is condemned for not giving enough milk, when the main reason is that she is not receiving enough of the right kind of food. A cow that is expected to give five gallons of milk a day will not do it on her breed alone. The dairyman needs a silo from which to feed his cows in winter. He should also have some soiling crop for summer.

The Milk Reporter says: "Fighting the tuberculin test is a waste of time. Until something better is firmly established it has come to stay, and is the only recognized test by the authorities that ought to know."

The first certified milk was sold on April 13, 1893, by Stephen Francisco, of Essex county, N. J., and the certificate was issued by a medical commission organized at Newark, N. J. The words "Certified Milk" were coined by a Dr. Coit and patented. They cannot be used except under proper authority. We understand that the original certified dairy is now producing 6,000 quarts of certified milk a day.

DON'T THROW MONEY TO THE PIGS

The mine owner gets his gold mixed with rock and combined with other metals. He gets out all the gold and then makes in addition what he can from the lead and silver, the "by-products."

The dairyman's gold is cream; the skim-milk his principal "by-product." To get all the profit he must use an

IMPROVED 1908 U. S. CREAM Separator

With this Separator he gets out all the cream, and then uses to best advantage the skim-milk. He can't afford to feed cream to pigs.

Our Catalogue No. 125 tells why. Let us send you one.

VERMONT FARM MACHINE CO., Bellows Falls, Vt.

Distributing warehouses at: Chicago, Ill., La Crosse, Wis., Minneapolis, Minn., Kansas City, Mo., Omaha, Neb., Toledo, O., Salt Lake City, Utah, Denver, Colo., San Francisco, Cal., Spokane, Wash., Portland, Ore., Buffalo, N.Y., Auburn, Me., Montreal and Sherbrooke, Quebec, Winnipeg, Man., Hamilton, Ont., Calgary, Alta. 497

Mr. E. Sudendorf, Secretary, reports that at a meeting of the Executive Committee of the National Dairy Show Association, held June 6th, it was decided that the Third Annual Show of the association shall be held at the Coliseum in Chicago, beginning in December, 1908. The committee also appointed A. J. Glover, of Fort Atkinson, Wis., General Manager, and Mr. Rawl, General Superintendent of the Live Stock Department.

Shippers to Chicago.

If one must go to Chicago, why not consign cattle, hogs and sheep to a first-class commission firm? The firm of Shinn, Fry & Co., Union Stock Yards, secure high prices in the interest of their customers and furnish them good information as a guide to making shipments. Address, Shinn, Fry & Co., Union Stock Yards, Chicago, Ill.

Recent St. Louis quotations for gumbo: Arkansas one-third-bushel boxes at 25 to 40 cents; Mississippi four-basket crates at 50 cents; and Alabama one-fourth-bushel baskets, large anr coarse, at 3 0to 35 cents.

The above sketch shows Mr. Oliver Harris, hauling a load of hay across his marshy meadow. He writes The Electric Wheel Co., Quincy, Ill., that this is the first load of hay ever hauled over this meadow in April as he could never get through the mud with his high wheel, narrow tired wagons. With a low wheel, wide tired Handy Wagon such as The Electric Wheel Co. make, he finds it an easy job and claims he saves $23.00, the price of this wagon, in horse-flesh alone, every year.

Our readers with muddy meadows or soft roads will be interested in a catalogue of these wagons which the above company sends free for the asking. Address, Electric Wheel Company, Box 222, Quincy, Ill.

DISPERSION SALE OF REGISTERED
SHORTHORN CATTLE

AT PUBLIC AUCTION,
ON THE CLOVER STOCK FARM, OBION, TENNESSEE,
WEDNESDAY, AUGUST 12th, 1908.
Write for Sale Catalogue. This Advertisement will not appear again.
H. C. DAVIDSON, Proprietor, OBION, TENNESSEE.

Blooded Stock.

A sale of Tennessee Shorthorn cattle is announced to take place on August 12th by Mr. H. C. Davidson, of the Clover Stock Farm. The herd is finely bred, including strong proportion of Young Abbotsburn blood, something few herds can boast of. The herd bull is a fine, massive, four-year-old, bred by N. H. Gentry and sired by Victor Butterfly. The sale offerings will be eleven cows, seven heifers and five bulls. We strongly advise our readers to send for the sale catalogue and to study it. All the mature cows are in calf. The sale will be held on a credit of twelve months with 8 per cent. discount for cash. Address, H. C. Davidson, Obion, Tenn.

From a paper sent us giving results of the auction of Hood Farm Jerseys, we learn that the World's Fair grand champion Jersey cow Figgis is now seventeen years old and has recently milked 57 pounds in one day. Our friends who have a copy of our Book of Live Stock Champions will find Figgis on page 174.

E. L. John, of Broadway, Maries county, Mo., has Shropshire sheep, Berkshire swine and Barred Plymouth Rock poultry and aims to excel in each line of breeding. His Berkshires are the English, large, early-maturing kind.

It is a good herd of milking Shorthorns which Mr. H. C. Davidson will sell at auction on August 12th. The N. H. Gentry bull Dale's Victor, 237,577, is sire of a number of the heifers, and Gay Abbotsburn, 195,428, is sire of several. Eleven mature cows of strong milking strains are very desirable. Write for catalogue and address Mr. H. C. Davidson, Obion, Tenn.

Late in May, an auction sale of Aberdeen-Angus cattle was held by H. J. Hess at Waterloo, Iowa. Eleven bulls sold averaged $160, the top price being $360, paid by E. T. Davis, of Iowa City, Iowa, for Eglamour of Quietdale, a three-year-old. The female average was $245.30, the top price being $500 for the yearling Kindness of Quietdale and bought by Chas. Escher & Son, of Botna, Iowa.

The sale of Aberdeen-Angus cattle held at Botna, Iowa, by Chas. Escher & Son, May 28th, resulted in an average of $172.50 for fourteen bulls and $281.90 for forty-three females. The top-price bull Even Eric, calved March 12th, 1907, sold at $510 to Robinson & Chappell, of Maryville, Mo.; but the top price of the sale, $515, was paid by M. H. Donaho, of Holbrook, Iowa, for the female Klingma Klondyke, calved October, 1905.

A remarkable sale of Jersey cattle was held by T. S. Cooper & Sons, of Coopersburg, Pa., on May 30th. The average for 112 head was $354.55. Dr. C. E. Still, of Kirksville, Mo., paid $2.000 for Majesty's Lady Houpla, and another cow, Gamboge's Queen, sold at $1,100, went to A. B. Lewis, of Fredericksburg, Va. Royal Majesty, a bull, was sold to Willowdale Farm, Vandalia, Ill., for $1,000. Fifteen bull calves under a year old averaged $207. Forty mature cows averaged $505. Heifer calves averaged $175. The yearling and older bulls averaged $404.

D. F. Beauchamp, breeder of Poland-China swine at Meredosia, Morgan county, Ill., has made a slight change in his advertisement. He has a fine lot of pigs on sale of his own breeding, and he has not yet learned how to charge too much for them.

M. E. Jones, of Williamsville, Ill., sold Shorthorns at auction June 3d, 1908. His average for eight bulls was $185, and the female average was $331 for thirty-six head. Cherry Grove Banff, 45th, calved May, 1907, sold to C. D. Robertson, of Anita, Iowa, for $300, topped the bull sales; but Lady Violet, 3d, a daughter of Choice Goods, sold to Howell Reece, of Pilger, Neb., for $1,000, and Imp. Cherry Marengo, by an English champion Marengo, and with a bull calf at side, sold at $980 to D. W. Helm, of Metropolis, Illinois.

At Rochelle, Ill., J. A. Countryman sold Shorthorns with an average of $134 for thirty-seven females and $120 for fourteen bulls. The top price for a bull was $225, paid for Steadfast Lad, calved October, 1907, sold to L. D. Pope, of Lamoille, Ill.; and the top price for a female was $485, paid by Carpenter & Ross, of Mansfield, Ohio, for the cow Mary Ann of Riverdale and heifer calf.

At a sale of Polled Durhams and Shorthorns held by Chas. Wright, of Paris Crossing, Ind., on June 2d, the average for forty-seen head was $113.40. J. H. Miller, of Peru, Ind., paid $225 for a bull calf, Erin's Trojan, X, and he topped the females by paying $495 for Fair Helen, X. He also paid $475 for Imp. Mountain Mist, an aged cow with a bull calf. and W. R. Moorman, of Glendale, Ky., paid $355 for Buttonwood Lassie, 2d, and a heifer calf, sired by Grand Trojan.

On June 3d, at Alta, Iowa, A. C. Binnie & Son sold three Aberdeen-Angus bulls at $1,335 and thirty-seven females at an average of $241.80. The bulls were few and nothing special, but the heifers were great. Erona of Alta, 2d, an Erica heifer, topped the sale at $800, going to M. H. Donahoe, of Holbrook, Iowa. Blackbird Lady, 3d, with heifer calf, sold for $675 to H. L. Cantine, of Quimby, Iowa.

On June, at Creston, Ill., Stanley R. Pierce sold sixteen Aberdeen-Angus bulls at an average of $198, and seventy-nine females averaging $207. Black Ito of Woodlawn, calved in 1903, topped the bulls at $575, and sold to A. B. Atwater, of Robbins, Iowa. Blackbird, 35th, calved March, 1905, topped the females, selling to J. S. Goodwin, of Naperville, Ill., for $725.

At New London, Iowa, June 16th, A. W. Holland, breeder of Poland-Chinas, sold forty-three head at an average of $50.97. C. T. Coats, of Cleveland, Okla., paid $202.50 for the yearling Chromo by Impudence, and the sow Dream Away by Keep On Meddler, sold to A. Petsinger, of New London, Iowa, for $101.

Matthews Bros. & Hufford, of Ellettsville, Ind., held a good sale of Poland-Chinas on June 10th. Twenty-three bred sows sold at an average of $68.28. The top price was $250, paid by Mrs. A. N. Elrod for Forada by Jubilee.

On June 5th, H. L. Cantine, at Quimby, Iowa, sold Aberdeen-Angus cattle at an average of $182.25 per head. A black Woodlawn Blackbird heifer topped the sale at $500, going to Mr. C. M. Russell, of Carroll, Iowa. Imp. Blackbird Beauty of Advie went to Mr. James Williams, of Marcus, Iowa, at $435, and Mr. E. T. Davis, of Iowa City, Iowa, secured the Blackcap yearling heifer at $355.

See blank for three-year credit subscriptions on page 13. Kindly ask your friend and neighbor to sign and send one in.

O. I. C. FOR SALE.
Pairs and trios not akin a specialty at weaning time. Open and Bred Gilts. Prices right. **LLOYD & SON, Box 162, Kansas City, Kas.**

SAFE HERD OF LARGE ENGLISH BERKSHIRES. Herd is headed by an excellent son of the St. Louis World's Fair Grand Champion. I have bred Sows for sale, also bred and unbred Gilts that are hard to beat, and fifty head of early Pigs. Can furnish pairs not akin. I also have S. C. W. Leghorns, Barred Rock Chickens and M. B. Turkeys. Eggs for sale and a few pairs of Peafowls. The breeding of this stock and poultry is the best and will be sold at prices in keeping with the times.

100 TAMWORTHS. 100
The bacon hog—the largest and most prolific breed. Early to mature, economical feeders and unsurpassed as a range hog. Boars, Gilts and Pigs from the best strains of the breed.
CHARLES FORD,
Mortonsville, Woodford County, Kentucky.

We find it best to grow a crop the year previous to setting plants in spring, which has had a thorough cultivation; or, if we set plants in early fall, we use ground wh.ch produced an early crop, requiring much attention in order to eradicat; the grass and weed seeds which are exceedingly annoying to strawberry growers.

In April we bought and set about two thousand strawberry plants in soil used in growing early cabbage last year. Since putting these out, however, we have decided to enlarge the plot, and not being able to obtain more of the growers, we shall get the supply from those already set.

You must know, of course, that the soil of this strawberry plot is quite rich, for, although the crop is not an exhausting one on land, yet on account of the plants' rapid growth and the early maturity of the fruit, an abundance of fertilizing material is required.

We consider stable manure, if thoroughly rotted, one of the very best strawberry fertilizers. If used alone, however, we find that it contains too much nitrogen in proportion to phosphoric acid and potash, so we either drill these mineral fertilizers in, or apply them along the rows and work them in with a wheel or hand hoe. A strawberry fertilizer which we have found is especially good when a manured crop was previously grown on the land, contains the three principal plant foods in about the following proportions:

Ammonia, 2 per cent.
Potash, 9 per cent.
Phosphoric acid, 7 per cent.

We put about 500 pounds on each acre. If we apply a thoroughly-90 pounds sulphate of potash.

250 pounds acid phosphate or 225 pounds dissolved bone.

This must be mixed very carefully before using; it may be obtained also from the manufacturers. These minerals are very important, and, if not generously supplied, the fruit will lack firmness and bright color.

If practicable, invest as soon as possible in as many two-inch pots as you desire plants. These should not cost more than $3.50 per hundred. As the healthy plants throw out runners, the joints will take root and send up leaves. It is than we sink the pots filled with rich earth well into the ground and carefully place into them a tiny plant, firming the soil well. It is sometimes best to place a small stone on the pot to keep the plant in position until well rooted. The runners should not be cut from the parent plant until sure that the young plant has grown strong roots. We believe that the nearer the mother plant the more vitality the runners have. About the middle of August, or a little later will do, we remove the young plants from the pots without disturbing the roots and immediately set in the field, where they are ready for producing the next season without a check in growth if the soil is very fertile.—M. Merrywell, Madison, O.

CREDIT SUBSCRIPTIONS.

Three Years For One Dollar, Payable at the End of the First Year.

The publishers of **The National Farmer and Stock Grower** will be glad to furnish the paper three years for **One Dollar**, the same to be payable at the **end of the first year.** This edition is a fair sample of the paper. It is interesting and instructive. Those who read it over will find that it is a help to them in the conduct of their business. All who receive a sample copy are invited to send in a subscription on the following blank form, unless they prefer to pay in advance, thereby securing a premium.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista avenue, St. Louis, Mo.:

Gentlemen: — You are hereby authorized to enter my name as a subscriber to **The National Farmer and Stock Grower** for three years. At the end of the first year I will pay **One Dollar** for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

Name.....

Postoffice.....

The Farmers' Market.

The first car of new wheat was sold by auction on the St. Louis Merchants' Exchange, Friday, and brought 86 cents a bushel, about five cents under the cash market for old wheat of the same grade. The wheat came from Charleston, Mo. It graded No. 3 red and tested 57 pounds to the bushel. The George T. Plant Milling Company bought the car. Fifty years ago this firm bought the first consignment of new wheat that came to the city. Last year the first car brought $1.25 per bushel.

At St. Louis, on June 30th, No. 2 red wheat sold at 90c. a bushel, delivered on the west side; No. 3 red, new, sold at 85 to 87c.; old at 86 to 89c.—the latter being choice; No. 4 red, old, at 80 to 83c., and choice new at 83c. These are actual transactions where grain was delivered.

Corn prices on the St. Louis cash market, June 30th, were as follows: No. 2 mixed, 73¾c.; No. 2 yellow, 73¾c.; No. 2 white, 78 to 79c.; No. 3 mixed, 73c.; No. 3 yellow, 73c.; No. 3 white, 75 to 77c.; No. 4 corn, mixed and white, 70c.

St. Louis root quotations on July 1st: Golden Seal, $1.30 to $1.35 per pound; Ginseng—Wild at $5.00 to $5.25, large more; cultivated at $4.75 to $5.00; Lady Slipper, 18c.; Seneca, 35 to 36c.; Pink, 28 to 30c.; Black, 7 to 7½c. for clean dry—damp and dirty less; May Apple, 3c.; Snake, 29 to 31c.—white, 3c.; Angelica, 5c.; Wahoo—Bark of root at 15 to 18c.; bark of tree at 5c.; Blood, 4 to 5c.; Blueflag, 5c.; Sassafras—Bark of root, 6c.; Wild Ginger, 10c.; Spikenard, 4c.

On June 30th, at St. Louis, the following were butter quotations: Creamery—Extras at 22 to 22½c.; firsts at 20 to 21c.; seconds at 18 to 19c.; ladle-packed extra, 19 to 20c.; country-made, in pails and rolls, 15½ to 16c.

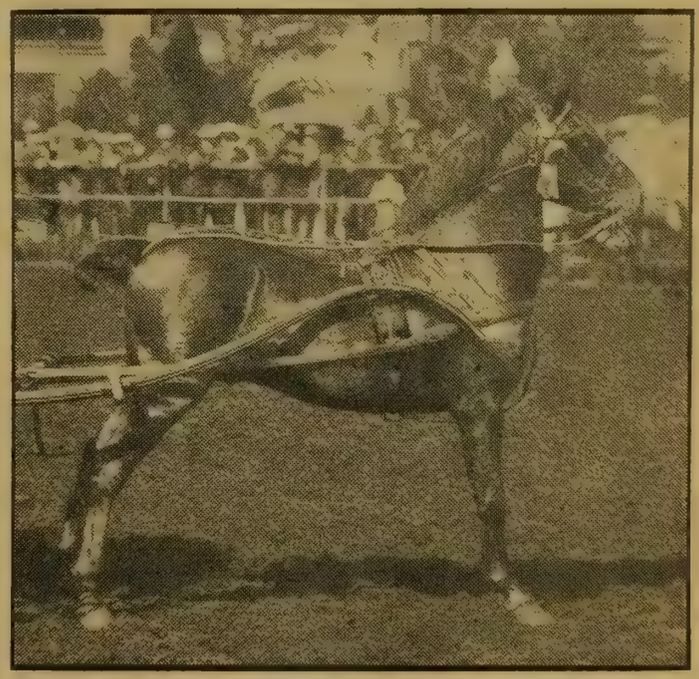
COX & NEEL STEEL TANK CO.,
2334 SULLIVAN AVE. - ST. LOUIS, MO.



BERKLEY BANTAM.—High-stepping and phenomenally fast pony stallion. His early appearance in this country was at Philadelphia in 1905, where he won first premium in class for ponies not to exceed 12.1 hands. At the same show of 1908, just held, he was awarded first prize for ponies in harness. This picture is presented in order to show what the market calls for. The importing price of BERKLEY BANTAM was $8,000, and he is noted for extreme brilliancy, accuracy in action, and is in fact an all-round pony wonder. Photograph by Schreiber, of Philadelphia.

At the St. Louis market, July 1st, cheese was being sold as follows: Northern Twins, 12¼c.; Daisies, 12½c.; Young Americas, 12½c.; Longhorns, 12¾c.; Limburger, 10 to 11½c.; Swiss—Choice, 17c.; No. 2, 9 to 11c.; Brick—Choice, 11 to 11½c.; seconds, 6 to 8c.

June 30th wool quotations at St. Louis, Mo.: Missouri, Southeast Iowa, Wisconsin, Northern Arkansas, etc.—Medium (fleeces), 20c.; medium (short), 19 to 19½c.; braid and coarse, 18 to 18½c.; slight burry, 15½ to 16c.; hard burry, 10½ to 11c.; light fine, 16 to 16½c.; heavy fine, 11 to 12c. Texas, Indian Territory and Southwestern—Medium (twelve months), 18 to 19½c.; medium semi-bright, 15 to 17c.; medium (four to six months), 15 to 17c.; coarse and low, 14 to 15½c.; light fine, 14 to 15½c.; heavy sandy, 9 to 11c.; hard burry, 9 to 10c. Southern — Medium (fleeces), 19 to 19½c.; medium (loose), 16 to 17c.; slightly burry, 14 to 15c.; hard burry, 9½ to 10c.

Bone Spavin

No matter how old the blemish, how lame the horse, or how many doctors have tried and failed, use

Fleming's Spavin and Ringbone Paste

Use it under our guarantee—your money refunded if it doesn't make the horse go sound. Most cases cured by a single 45-minute application—occasionally two required. Cures Bone Spavin, Ringbone and Sidebone, new and old cases alike. Not used on soft bunches. Write for

Fleming's Vest-Pocket Veterinary Adviser

Best book on blemishes, and we send it free. Read it before you treat any kind of lameness in horses. 192 pages, 69 illustrations, durably bound in leatherette.

FLEMING BROS., Chemists, 218 Union Stock Yards, Chicago, Ill.

Summer Care of the Horse.

[Written specially for this paper.]

Many farm horses as well as city horses are ruined by being cared for in a careless manner. The summer care is no less important than the winter care, though many people seem to think that any kind of treatment will do the horse in snmmer.

Do not allow the horse in the hands of inexperienced hired men, green boys or other persons that do not understand the care of horses. Much importance exists as to how much a horse will stand. As an illustration of this, the writer remembers an incident that occurred many years ago in the locality in which he lived.

A minister hired a horse for a long journey across a hilly country. As remembered, the distance was about seventy miles. The minister was a perfectly well-meaning man, but he knew nothing as to the capabilities of horses. He put his horse at his best paces from the first and kept him going to his limit. It is needless to say that by the time the horse had covered twenty miles he was badly worn out. But he was urged on to the end of the journey, which was made in less than the time between daylight and sunset. The man that made the journey was boasting of his great feat to the people with whom he was stopping, when a man came in from the stable and said: "Sir, your horse is dead."

This is an extreme case, but it illustrates how far ignorance may go in ruining a horse. Another illustration that came to the attention of the writer some years ago was that of a fine horse that was left in charge of a young city man, while the owner and his wife went on a visit of some weeks. Though the young man had been instructed not to use the horse more than to give him some light exercise, he could not resist the temptation of taking several long journeys to see his best girl.

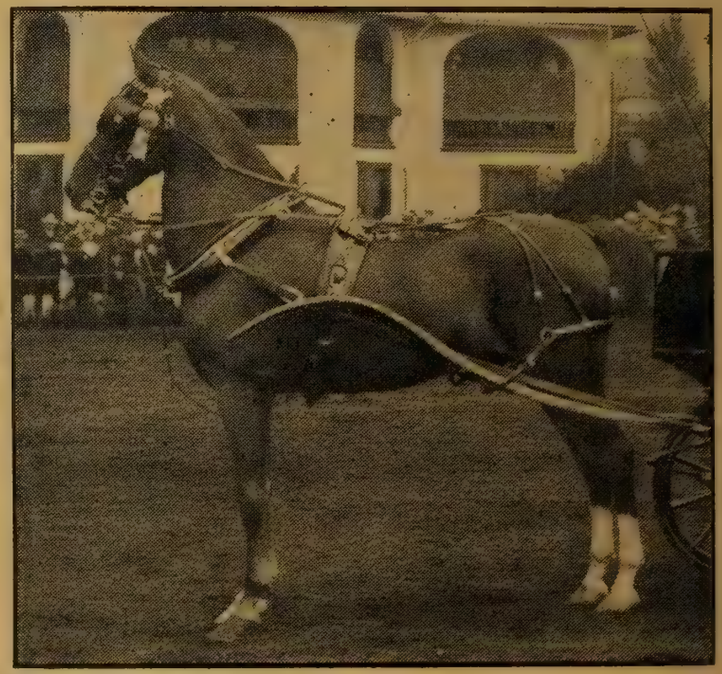
He figured that no one would be the wiser for it and that he would not do any damege to the horse. To make his trips without notice by other people he waited till dusk and then drove furiously. The horse was left sweaty and unblanketed before the house where the young man paid his visit. The cool night air blowing on a warm, sweaty skin gave the horse a serious cold from which he had not recovered when the owners returned. The owners were able to divine the cause and charged the young man with it, eliciting a confession—another case of ignorance.

Horses should not be watered or fed when they are dusty and hot from a long journey. They should be allowed to cool off gradually and should be kept out of drafts. If they are wet with perspiration, they should be dried with towels or wisps of hay. The stomach of the horse is not in a condition to receive food till the temperature is normal.

As soon as the animal is at rest, the lungs that have been burning up energy to go off in muscular action create energy to recuperate the wasted nerves. This recuperation is very rapid, and explains why it is that one may recover from extreme exhaustion in a very short time. Therefore a tired horse should be rested before being fed.

At the International Horse Show class for trotters with record of 2:30 or better, the first prize went to Bluebell, exhibited by Mr. Gavin Shanks, of England. Bluebell was bred by Mr. H. W. Meek, of San Lorenzo, Cal.

TYPICAL MINING MULE.—The illustration presented herewith is of a roan mare mule taken at a disadvantage when her coat was not smooth. She was five years old, 15.1 hands, and weighed 1,300 pounds. At the St. Louis National Stock Yards, where 5,000 to 10,000 mules are on feed and sale all the time, this mule outsold the average mule of her class and height by $50 to $75 because she was practically the best all-purpose mule on the market. Many people know good mules when they see them, but others do not. This picture is published because it does actually and positively represent a good mule. The picture was furnished The National Farmer and Stock Grower by Mr. Joseph A. Maxwell, a pioneer mule dealer at the St. Louis National Stock Yards. This mule was sold as a miner and went to Ohio. In this connection it is proper to say that the St. Louis National Stock Yards is the largest and best mule market in the world. Any number of mixed or well-graded mules can be sold quickly at fair prices to the dealers, and these dealers will fill any large order for mules of any grade in half the time it will require to collect the same number at any other market.



DR. SELWONK—Chestnut Hackney gelding, over 15.3 hands high. At the Philadelphia Horse Show, exhibited by Reginald C. Vanderbilt, he won first in every class in which he was shown and the harness championship. Best authorities say that he is the most brilliant big horse ever seen at Eastern shows, and in addition to being suitable for all other classes of vehicles he is a real sporting gig horse.

Western Horse Raisers

LIVELY BEESWING—The newest champion in Hackney mare breeding classes—light chestnut with half-moon star on face and white ankles behind. She is three years old and unbroken to harness, and stands 15.2 hands. Said to be the highest-priced Hackney mare ever imported from England. Photograph by Schreiber & Sons.

The Horse, as Seen by An Automobilist.

In the July American Magazine, Octave Mirbeau describes an automoblist's experiences with the beasts of the road, horses, cows, chickens, dogs, geese, mules—and men. His comments are wonderfully interesting and amusing and A. Poppini's illustrations are clever.

Of the horse M. Mirbeau says:

"Buffon called the horse 'the most noble conquest of man.' I call the horse a fool.

"A horse will see his team-mate fall and die at his side without being disturbed, but if he passes a wagon from which the four hoofs of a deceased companion protrude, he begins immediately to tremble, shiver and rear. The great naturalists declare that one cannot see in this excitement the manifestation of an altruist sensibility nor the selfish fear of death. It is only an olfactory protest. The horse is afraid of odors. He is afraid of colors, light, shade; of his shadow and the shadow of the person who leads him. He is afraid of a piece of paper, of a fallen sack of oats, of a piece of glass that shines, of a ray of moonlight in a puddle of water, of the shadow of a leaf that moves. The horse has all the phobies. He even has 'autophobia,' and to a degree of morbidity that, perhaps, only Monsieur Emile Loubet has attained — Loubet, who with such exquisite judgment and such prophetic earnestness fulminated against automobiles, just as M. Thiers hurled maledictions against the introduction of railroads. Ah! these great men!"

Keeping the Hired Man's Horse.

I was talking with an extensive Illinois farmer the other day about his hired men. He has five men with him now. These are engaged the year around, and if there happens to be a month when there is not much to do, the men's wages go on just the same. With so many men the horse question was worth thinking about. It has become almost a custom now, in some sections at least, for each hired man to have his own driving horse. This farmer agrees to furnish horses for his men. He finds that much better than boarding horses owned by the men themselves. He places every man upon honor, and tells him to take a horse whenever it is necessary. The result is the men rarely leave the farm oftener than once a week. The horses are well cared for and are on hand for other driving or farm work. Of course this calls for some extra horses, for the regular work teams are never driven, but it was claimed that it is cheaper to furnish five horses for two or three hours once or twice a week than it was to board five horses, with the temptation for the men to ride off nearly every day, if for nothing else than to exercise the horses.—L. C. Brown.

Moon Blindness in Horses.

It has been found that moon blindness is most apt to affect the horses of low, wet or malarial districts. It has been a common disease of new districts prior to thorough farming and drainage of the soil and is happily becoming less common under improved methods of farming. But the tendency to contract the disease is hereditary. There can be no doubt as to that. It is induced by mating sound mares with stallions affected with periodic ophthalmia, or blindness or cataract due to that disease, or by using affected mares for breeding purposes. The presence of "wolf teeth" has nothing to do whatever with eye disease of any kind, common belief to the contrary. Any cause of irritation or inflammation will be likely to bring out any disease to which the horse has a hereditary tendency, and when he is rising three or four he is cutting a large number of molar teeth which cause him no end of misery, and it is at this time that moon blindness is more apt to show up for the first time. Teething irritation does not cause eye disease; it merely causes the apparance of a trouble toward which there is an inherited weakness of the parts attacked, but the owner looks in the mouth about this time and discovers a couple of wolf teeth and blames them for the eye disease. These wolf teeth are small, rudimentary, insignificant, harmless teeth located just in front of the first upper molar teeth. They are all that remain of what millions of years ago were large molar teeth (seventh premolars) of the prehistoric horse. They are not found in all horses, and hundreds of horses have periodic ophthalmia, but no wolf teeth, and as many have wolf teeth, but no disease of the eyes. If the wolf teeth happen to interfere with the bit they may be extracted; otherwise they may be let alone and will never in any way affect the eyes. What the horse breeder and owner should understand is that eye diseases are mostly contracted by using breeding stock affected with like eye diseases and that the disease need not be prevented if sound stock is bred from and maintained in sanitary conditions and surroundings.—Spirit of the West.

Trotting-bred Coachers.

Speaking of the victory of L. W. Winans, of Brighton, England, in winning the Belgium Gold Cup for the best pair of horses at the Brussels Show with a pair of American-bred trotters, the Horseman says:

"This is only another evidence of the fact frequently set forth that the large specimens of our national horse are in many instances ready-made coach horses. All throtting-bred horses of large size are not good coach horses. Many of them are lacking in that high action desired in a coach horse. They have other trotting-horse inheritances which are not needed in the coach horse. Still, we find the American trotting-bred horses such frequent winners in coach-horse classes, it must be plain that through the means of selection alone a fine group of trotting-bred horses could soon be had from which a coach horse bred could soon be developed."

At the International Horse Show held at the Olympia, in London, there were 2,500 entries of horses, compared with 1,833 last year, and the exhibits ranged upward from a costermonger's donkey to a millionaire's team valued at $25,000. The show lasted nine days, the last day being June 27th.

The Horseman says that Invader, 2:10, by Jay Bird, king of the New York speedway, was formerly owned by E. D. Pendleton & Sons, of the National Stock Yards, Illinois.

Be sure to attend the sales of Western range horses to be held at the National Stock Yards July 14th and 28th.

The Army Horse.

From the New York Herald of June 14th, 1908: "Though an army horse is not always a thing of beauty, Uncle Sam is one of the most exacting buyers with whom the purveyors have to deal. He will not have a gray, white or cream-colored horse at any price, nor will he knowingly buy one younger than five or older than eight years. For the cavalry service he rejects all mares, however perfect, and all geldings under 15.1 hands, or more than 16 hands; likewise all whose weight is less than 950 pounds or more than 1,150 pounds. And even if a horse meets all these requirements he will not be enlisted if he is not sound and free from all vices and bad habits; intelligent, docile and showing prompt, free action at the walk, trot and gallop."

THE VERY BEST MARKET,
THE MOST CENTRAL
HORSE MARKET
ON THE
FACE OF THE
EARTH

—is at the—
ST. LOUIS
NATIONAL STOCK YARDS
in Illinois,
right opposite the city of St. Louis.

St. Louis Hog Prices.

On Tuesday, June 30th, at the St. Louis National Stock Yards, the top of the hog market was $6.65 per 100 pounds for a load averaging 237 pounds. Quite a number of loads of good hogs, 225 pounds and upwards, sold at $6.50 to $6.60 per 100 pounds. The bulk of all the good hogs sold at $6.35 to $6.55. A few loads of light hogs sold up to $6.50, but most of the light and mixed loads, 150 to 190 pounds average, sold at $6.30 to $6.45. There are always a considerable number of loads containing pigs which range all the way from 80 to 150 pounds. The prices paid for them were $4.00 to $6.37½ per 100 pounds. By way of showing how good a market St. Louis is, attention is invited to the bulk of sales at different markets. At St. Louis the bulk sold at $6.35 to $6.55; at Kansas City, $6.00 to $6.15; at St. Joseph, $6.10 to $6.20; and at Omaha, $6.00 to $6.05. St. Louis has competition such as the other markets never heard of.

Stock Cattle Quotations.

At the National Stock Yards, the closing days of June, fair to medium stock heifers were quotable at $2.75 to $3.25; good stock heifers at $3.30 to $3.75; choice stock heifers, $4.00 to $4.25; fair to medium stock steers, $3.00 to $3.90; good to choice stock steers, $4.00 to $4.50. A fair to medium class of feeders were selling at $3.85 to $4.50, and good feeding steers at $4.50 to $5.00 per 100 pounds. Stock cows were quoted at $2.50 to $3.00.

June receipts at the St. Louis National Stock Yards: 134,527 cattle, 218,563 hogs, 95,546 sheep, and 5,620 horses and mules. Cattle, hogs and sheep show considerable increase over June of last year.

At the St. Louis National Stock Yards, July 1st, the best price for native steers was for forty-one head, 1,360 pounds average, at $7.40 per 100 pounds. A load of 1,172-pound steers sold at $6.65, and a load of 1,287-pound steers sold at $6.40 per 100 pounds.

First Range Horse Sale.

At the St. Louis National Stock Yards, on Tuesday, June 30th, the first range horse sale of the season was held by Campbell & Reid and Western Sale Stables Company. About 1,200 head were on sale, and the result was a decline of $10 to $15, compared with the same time a year ago. The top price was $95 for a bunch of 1,150-pound geldings and mares; and the next was $91 for a lot not so desirable but weighing 1,200 pounds. The sale included a bunch of three-year-olds, 1,000 pounds, at $75; another of three and four-year-olds at $70.50. A bunch of two-year-old mules sold at $70. Other sales included three and four-year-olds, 800 pounds, at $51.50; broke horses, 900 pounds, at $50.50; 900-pound mares and geldings at $50; three and four-year-olds at $38.50; mares and colts at side at $37; 900-pound mares and geldings (thin) at $36.50; 800-pound mares and geldings at $36; 800-pound mares and geldings at $35; 800-pound mares and geldings at $27; 700-pound mares and geldings (thin) at $25; yearlings at $24; mares with colts at side at $22.50; yearlings and two-year-old colts at $22; mares and geldings (poor) at $18; yearlings and two-year-olds at $17; tailings at $12.50.

James H. Campbell,

National Stock Yards, Ill.

EQUALLY EXPERT SERVICE IN EVERY CLASS OF STOCK—SHIP US YOUR CATTLE, HOGS AND SHEEP.

Southern Cattle Quotations.

On the St. Louis market, June 30th, the folowing was the basis of the Southern cattle trade: Choice to prime fed steers, $5.75 to $6.50; good to choice fed steers, $5.00 to $5.75; good to choice grassers, $4.75 to $5.50; medium to good grassers, $4.00 to $4.75; common to medium grassers, $3.00 to $4.00; good to choice cows, $3.25 to $4.25; fair to medium cows, $2.50 to $3.15; cutters, $2.25 to $2.50; canners, $1.50 to $2.25; bulls, $2.50 to $4.00; good to choice vealers, $4.50 to $5.75; fair to choice heavy calves, $3.00 to $4.50; yearlings, $1.75 to $2.75—all quotations being at the price stated per 100 pounds.

The Monday Horse Auction.

The McFarlane Commission Company hold horse auction every Monday in the year at the St. Louis National Stock Yards. This is their statement in regard to the auction held on Monday, June 29th: "The horse market was only moderately good. The run was light and the quality, as a general thing, of the common variety. Good, big draft horses were snapped up without reserve. The prices for the good ones were always satisfactory, but the common, thin, pluggy stuff did not fare so well. They sold, but they sold lower."

The Largest Hog Receipts.

Six-months' hog receipts at the the St. Louis National Stock Yards—1,329,416 head—surpass all previous records. St. Louis is gaining all the time because the Eastern shippers get their hogs home from St. Louis in short time and at economical rates. They are willing to divide the advantages with the country shipper, and have to do so whether they are willing or not. St. Louis is the best market for hogs, and it will pay all Missouri, Kansas and Iowa shippers to forget that there is any other market.

Contract For Mules.

There is a government contract at the St. Louis National Stock Yards for 360 mules, which must be filled in the next sixty days, consisting of 186 wheel mules, 16 hands high, and to weigh 1,150 to 1,200 pounds; the rest pack, saddle and swing mules, 14 to 15½ hands high, and to weigh 850 to 1,050 pounds.

Butcher Cattle Prices.

At the St. Louis National Stock Yards, on June 30th, the following were quotations for native butcher cattle: Choice to fancy heifers, $6.25 to $7.00; good to choice heifers, $5.50 to $6.25; medium to good heifers, $4.00 to $5.50; fancy beef cows, $5.25 to $5.75; good to choice cows, $4.25 to $5.20; medium to good cows, $3.00 to $4.25; cutters, $2.40 to $3.00; canners, $1.50 to $2.25—all quotations being at the price stated per 100 pounds.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' interests ARE OUR INTERESTS, and our rapidly-increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

Try us once. We can keep you posted. We have a great and expanding Market at St. Louis.

Evans-Montague Commission Company

Box 68,
NATIONAL STOCK YARDS, ILL.
FORT WORTH, TEX., and at
KANSAS CITY.

McFARLANE COMMISSION COMPANY. . .

HORSE and MULE COMMISSION SALESMEN

AUCTION EVERY **MONDAY** IN THE YEAR.

These Monday sales at the St. Louis National Stock Yards are the best attended of all sales and produce the most satisfactory results for the shipper.

We also solicit consignments of Mules to be sold by the most competent salesmen on the best market in the country.

MULE DEPT.—W. R. McFarlane, Lan B. Morris.
HORSE DEPT.—E. L. Hawkins, S. B. Howell, Eddie O'Connell.
OFFICE—Frank Mulholland.
AUCTIONEER—Col. I. H. Howard.

YOUR CONSIGNMENTS ARE SOLICITED.

Write for Weekly Market Report.

McFarlane Commission Company
NATIONAL STOCK YARDS, ILL.

James H. Campbell,

Expert commission salesman, is now at the head of his own organization, with headquarters at the St. Louis market. He is one of the few who were at the opening of the National Stock Yards and is one of the most active men on the market right now—an enthusiastic worker, knowing that he has a good market to back him. Thoroughly competent and with a splendid expert organization, he is holding his own customers by splendid sales and making new ones all the time. Mr. Campbell issues a circular every week of his own composition containing his advice to intending shippers. Write for information to James H. Campbell and consign cattle, hogs and sheep to Campbell Commission Company, National Stock Yards, Ill.

At the sale of polo ponies by Mr. Foxhall P. Keene in New York recently, nine head averaged $1,003, and Express, the top seller, brought $3,000. Blue Peter, another polo pony, sold for $2,500. As in many cases in selling horses, the advertised top notchers did not bring the most money.

Sheep and Lamb Market.

The last two days of June the sheep market at the St. Louis National Stock Yards was not so strong as it had been. The best price for lambs was $6.65 per 100 pounds for Tennessee lambs averaging 68 pounds. Other lambs, strictly inferior to good, sold at $3.00 to $6.60. All the good, fat lambs sold at $6.00 and upwards. Medium grades sold at $5.00 to $5.85. Mutton sheep sold at $4.00 to $4.25 per 100 pounds. Common to good stockers sold at $2.70 to $4.25. The market was 15 to 25 cents lower than during the previous week on all except stockers. Spring lambs in July are not worth so much as in March, April and May.

On June 30th, the St. Louis market received 800-pound steers from Mississippi, which sold at $3.75 per 100 pounds. They were poorly bred and underfed. Fat natives of the same weight and well bred sold at $7.00 per 100 pounds. Mississippi can raise light, handy cattle as well as any other state, and we hope to live to see it done.

Horses That Are Wanted.

From the circular of the McFarlane Commission Company, holding auction every Monday at the St. Louis National Stock Yards: "The market is paying strong prices for good, big, useful work horses, right out of harness, also for chunks, drafters and nicely-turned harness horses. Little light-weight, useless things can be sold, but only at a low price. For good horses, showing they can do an honest day's work in a big city, the market was never better."

St. Louis Mule Quotations.

Mules of the same height and age can sell an hundred dollars apart because of difference in condition and quality. Fourteen-hand mules are quoted at a range of $80 to $140; very few sell below $120. Fourteen-and-a-half-hand mules range from $90 to $150. Fifteen-hand mules sell variously from $100 to $170; very few under $150. Fifteen-and-a-half-hand mules sell at $115 to $185, and sixteen-hand mules sell at $150 to $225 in car lots from the country. These figures are only given approximately and subject to change hourly and daily.

Tenth Range Horse Season.

The Tenth Range Horse Season conducted by Campbell & Reid and the Western Sale Stables Company at the St. Louis National Stock Yards opened June 30th. July sales will be on the 14th and 28th. August sales will be on the 11th and 25th. September sales on the 8th and 22d. October sales will be on the 6th and 20th, and the last sale of the season will be on Tuesday, November 3d. All sales are held on Tuesdays. Particulars can be had by writing J. J. Searcy, Secretary, National Stock Yards, Ill.

Native Cattle at 8¼ Cents.

The native cattle at $8.25 per 100 pounds and illustrated on the first page of this paper were sold by Mike Bright, of the Bright-Coy Commission Company, to the United Dressed Beef Company of New York City. This firm does a first-class business at the National Stock Yards, with expert salesmen in every department. The veteran Abner C. Cassidy is Manager of this firm, and it is with absolute certainty that a high degree of efficiency is kept up. This applies to every branch of the trade—native cattle, stock cattle, Texas cattle, calves, hogs, sheep and lambs. If in need of market information, address Bright-Coy Commission Company, National Stock Yards, Ill.

On July 1st, at the St. Louis National Stock Yards, the best hogs, 242 pounds average, sold at $6.50 per 100 pounds, and were from Saline county, Missouri. Kansas City top was $6.15; Omaha, $6.05; St. Joseph, $6.20.

On July 1st, at the St. Louis National Stock Yards, native bulls sold at $2.75 to $4.50 per 100 pounds. The top price was for one bull weighing 1,300 pounds. A 1,620-pound bull sold at $4.10 and another, 1,590 pounds, at $4.00. Other heavy bulls not so desirable sold at $3.75 per 100 pounds.

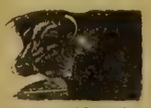
Milkers and calves are selling at the St. Louis National Stock Yards all the way from $20 to $60. Strictly good milkers, $40 up.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. Every courtesy known to the trade is extended. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their customers. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Illinois.

Stock and Feeding Cattle.

Stockmen in St Louis territory are specially reminded that there is always a good demand for young stock cattle of good breeding. Those who have large pastures of cheap lands have two sure roads to wealth. One is to improve their grasses, and the other is to improve their cattle. Any pasture owner can improve his grass. Take the average of the United States and there is hardly a perfect pasture to be found. Ninety per cent. of the pastures can be improved three to one. Three blades of grass can be grown where one grows now. In eighty per cent. of the pastures the quality of the cattle can also be doubled up. Many a cheap dogie yearling sells in market at 2½ cents a pound, whereas if it were a half breed, sired either by a pure-bred Aberdeen-Angus, Hereford or Shorthorn bull, the price would be 4½ cents instead of 2½ cents. The recent developments, indicating strong and permanent demands for light, young, well-bred cattle, are worth more to stockmen than they can estimate. Any kind of a cow will do to breed to, but the calf to grow to be a good stocker or fat steer or heifer must be sired by a pure-bred bull. A pure-bred bull of either of these breeds will not cost much more than he will sell for after he has sired a thousand calves and is sent in his old age to market. There is no opportunity in the past history of the cattle business to compare with it. To obtain a good price per pound for a steer used to require corn feeding for one or more years, whereas to-day all that is necessary is a little grass and well-bred cattle. It is useless to bank on the ignorance of the market. The buyers do not pay high prices for common cattle; neither will stockmen buy common stock cattle to feed unless it be at a common price.



All this applies to the stock cattle trade at St. Louis. Every fine red, black or white-face heifer or steer is quickly sold. The demand is greater than the supply. The cry is for quality. Can you furnish it?

On July 1st, at St. Louis, a lot of 106 to 170-pound bucks sold at a uniform price of 3 cents a pound.

Best price for native lambs at St. Louis, July 1st, $6.75 per 100 pounds, for 116 head averaging 73 pounds. On the same day, 130 Tennessee lambs, 67 pounds average, sold at the same price.

The market for stock and breeding ewes advanced on the July market, selected lots selling at $4.00 to $4.35, previously quoted at $3.50 to $4.00. Inferior stock ewes, $3.35 to $3.50; fair, $3.60 to $3.90.

The McFarlane Commission Company of the St. Louis National Stock Yards report that mule receipts are exceedingly light. Nicely turned mules, fifteen hands up, sell readily at what seems to be high prices.

The Horse Market.

At the St. Louis National Stock Yards, so far this year, 61,381 head of horses and mules were received, and 56,341 were sold and shipped out, leaving 5,040 for St. Louis use. At the present time the market is considered quiet, but there is a cavalry-horse contract in the market. Southern horses sell at $65 to $110 and are classed as fair. Extra Southern horses at $115 to $135. Eastern chunks are quoted at $110 to $155, but some selections sell higher. Drafters of the lighter kind sell at $140 to $195, and good drafters at $200 to $285. Extra drivers are quoted at $165 to $245.

During the month of June, 1908, the M., K. & T. Railway delivered the most cattle to the National Stock Yards; the C.. B. & Q., West, delivered the most hogs; the L. & N. Railway delivered the most sheep; the C., B. & Q., West, delivered the most horses; and the Frisco System delivered the largest number of cars.

FIVE TO TEN THOUSAND FULL AGE MULES

—can be purchased at the—
ST. LOUIS NATIONAL STOCK YARDS
any business day in the year.

Many, immense, substantial, well ventilated barns contain every commercial or military grade of Mules, which can be purchased and shipped on short notice.

THE ST. LOUIS MARKET WAS ALWAYS FIRST IN THE MULE TRADE, AND NOW IT IS GREATER THAN EVER.

EWES AND LAMBS FOR MARKET.

A Way to be in the Sheep Business Eight Months in the Year.

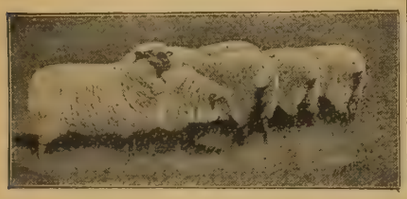
An Experiment That Can Be Conducted With a Few Sheep or a Few Thousand Sheep.

Farmers Have an Opportunity of Creating an Industry That Will Pay Good Dividends and Enrich Their Farms.

We have been requested by some of our subscribers to suggest a plan whereby they can get a start in the sheep business and obtain quick results. The questions come to us in many different ways, and when those questions are answered by letter they generally come back again and again in different form. We have therefore determined to submit a suggestion which all can understand and which all can adopt on as small or large a scale as they see fit.

The method we are about to suggest is not new, neither is it our own idea. The suggestion is for the individual farmer to buy a number of ewes in the fall to breed them so as to have lambs come as early as he can safely raise them, then feed and force the lambs to suitable weight as fast as he can and ship them to the St. Louis market and afterwards shear the ewes and sell the wool at the proper time and then ship the ewes to the St. Louis market and get through with them.

This is an easy proposition from beginning to end. If the ewes are good and healthy the farmer ought to have no difficulty in carrying them on very little pasturage until lambing time. Farmers will differ very much in their methods; one will have his ewes covered with burrs and



another lot will not have a burr on them; but even the burry lot will pay out if the range or pasture is good. If the ewes have good pasturage in a moderate climate, feeding the ewes any amount of grain before lambing will not be necessary; it is altogether necessary, however, that the ewe be in good condition at lambing time and that the lamb have a good start. The ewe must be able to give plenty of milk, because a vigorous lamb demands it and he needs a full ration.

In a very large section of country tributary to St. Louis there is pasturage all the year round. Many sheep and lambs actually come to market that have never had anything to eat except grass, but this experiment requires that the lamb shall be fed grain and fed all he can eat. It also includes the final fattening of the ewes with something besides grass, and nothing fattens easier than a ewe in spring that has just weaned her lamb, as weaned it should be when it goes to market.

Professor Craig, a sheep expert, when in Wisconsin, began feeding lambs when they weighed 19 pounds and forced them along until they weighed 62½ pounds at a cost for feed (in addition to ewes' milk and what grass they could get) of 18 cents a head. This proposition of ours includes feeding each of the lambs about 18 cents' worth of bran, corn meal and cotton-seed meal—whatever is good for them at the time.

Mr. Joseph E. Wing, another expert, says that there is often danger of the ewes drying up and fattening too soon, therefore no one need be afraid of their not fattening in the end. As a matter of fact, if the ewes are properly handled, they will often sell for enough more in the spring than they cost in the fall to pay all expenses charged up against them and their lambs, leaving the wool and lambs as clear profit. As the lambs at 60 pounds weight ought to sell at $5.00 a head or better, it will pay to give each of them the 18 cents' worth of feed which he needs.

The principal difficulty in this experiment is the care of the flock during the lambing season. This to one man or woman is a pleasure and to others a burden. Lambing, however, is a chapter by itself. Another difficulty is dogs, and that is another chapter by itself.

One thing to avoid in this experiment is the Merino buck. We have nothing against the Merino as a wool-growing sheep, but for raising a quick lamb, Cotswold, Hampshire, Dorset, Lincoln, Leicester, Southdown or Shropshire

bucks are better; in fact, absolutely necessary. The ewes might have a little Merino blood and be satisfactory; but a good, large ewe is what is wanted. The purpose is to buy the stock ewes as cheap as possible consistent with getting a good mother.

Stock ewes are for sale at all great markets. At this time at the St. Louis National Stock Yards stock ewes fit for such an experiment are seling at about 3½ cents a pound, and fat ewes at about 4¾ cents a pound. The market may change at any time, but these prices would be all right. There would be a freight bill to get the ewes home.

This method of lamb raising for the spring market is a sure winner in the country tributary to St. Louis. St. Louis is becoming more important as a sheep and lamb market every year. The lambs sell according to weight and quality at 7 to 12 cents a pound. Sixty-pound fat lambs arriving on the April and May markets average from $4.20 to $7.20 per head, as the case may be, and the ewes' fleece ought to bring $1.50, and does so, one year with another.

The method suggested originated on the outskirts of the city of London. The farmers there never raise lambs to be a year old. They do not even keep bucks on their premises, as the ewes are bred in the western counties and then driven and sold to farmers of the counties of Kent, Surrey and Middlesex, where they are expected at the proper time, and each farmer buys a few ewes, knowing that he will have one or more lambs in addition to the mother ewe to sell in the spring. The English farmers produce lambs for the London market weighing 80 to 120 pounds, but we do not have to make them so heavy.

Farmers on railroad lines entering St. Louis can get their supply of ewes at the stock yards. or if the stock yard supply is short, they can buy them upon the sheep ranges. On railroads that have one end at the market and the other end on the sheep range, this opportunity stands out very clear. The Cotton Belt Route, for instance, approaches the St. Louis market through Alexander, Union, Randolph, Jackson, Monroe and St. Clair counties, Illinois, and in all these counties there are but 15,000 sheep, whereas there are 250,000 sheep within the borders of the six counties adjoining that of Coryell, where the road terminates in Texas.

There is no better country for our lamb-raising method than the 200 miles between St. Louis and Springfield, Mo., through which the Frisco road runs. All the counties—seven of them—contain 65,000 sheep, whereas in Texas, at Brady, the end of one of the branches of the system, there are a half million sheep in seven or eight counties. If one asks, where can the ewes be obtained? this furnishes the answer to the question.

To return to the main subject again we desire to say that any farmer who desires to add to his income will find it to his advantage to study this simple proposition. One great advantage is that it does not require so much pasturage as where the ewes are kept all the year round. Eight months is all the time required. One week to receive and breed the ewes, twenty-one weeks before the lambs arrive, and in ten to twelve weeks thereafter to market the lambs, the wool and the ewes. From September 1st to May 1st is all the time necessary, except it may pay to hold some of the slow-growing lambs a little longer.

It is a simple experiment to buy the ewes in the fall, breed the ewes to lamb as soon as possible after the opening of the new year; give special care to the lambs that they may grow quickly to the marketable age; shear the ewes; sell the wool; fatten the ewes as well as you can and send them to market so that no sheep remain on the farm except the bucks, and the bucks will pay their board bill with big fleeces.

Note by the Editor.—If any of our friends and patrons decide to conduct such an experiment, we hope to be informed of it in advance, so that we may have the opportunity of noting the progress. The experiment can be conducted with either five ewes, fifty ewes, a car-load or a dozen car-loads, just according as the circumstances permit and there is safe pasturage for them. Let a few careful farmers' sons or farmers' daughters start off this special manner of handling sheep and we will be able to sell millions of lambs and ewes each year at a good price.

Sheep Notes.

New York receives a large number of lambs which are weaned in October and November, and they are marketed on through the winter. The lamb raisers always use bucks of the mutton breeds, and because they cannot get ewes of the mutton breeds they use Merinos, although the lambs are not so good. When the ewes are sold, the deficiency in the mutton is made up by the increased weight of the fleece.

The Shepherds' Criterion says: "While the expense of maintaining a flock of sheep is hardly noticeable, the addition to the income from a few lambs and the animal fleeces are very welcome."

The Sheep Breeder says: "Tar is one of the best friends of the shepherd at this season of the year. Rubbed on the nose, it aids in warding off the attack of the gad-fly; rubbed around the root of the horns of the ram, it acts as a preventive against the blow-fly."

The Shepherds' Criterion says: "The sheep raiser who puts his dependence in the best breed rather than in the tariff, and goes ahead to produce a valuable mutton carcass and a good fleece of wool, is pretty sure to come out all right."

FLINT-COAT ROOFING

See Our Roofing on the Minnesota State Fair Buildings.

YOU WILL SAVE 50 PER CENT.

1-ply Flint Coat Roofing	$1.50
2-ply Flint Coat Roofing	1.90
3-ply Flint Coat Roofing	2.20
4-ply Flint Coat Roofing	2.60

The Best Roofing on Earth. That's all we Claim

EVERY ROLL GUARANTEED PERFECT

Above prices are for one roll of 108 square feet, delivered at your railway station, all ready to lay. Can be laid by anyone. Special prices quoted west of Mississippi River. Nails and Cement with each roll. Our roofing costs less than shingles; lasts longer; can't rust like iron or steel. Water, Wind, Hail and Fire Proof. Recommended by leading architects, largest railroad companies and corporations in Northwest. Samples and Booklets FREE.

ROCK ASPHALT ROOFING CO., ROOM 1010, Y. M. C. A. BLDG. CHICAGO

DIP YOUR SHEEP

Stockmen and farmers who use the Cooper Dips have healthier animals—get more wool and better prices. More than half the cloth and flannel of the world is made of Cooper dipped wool. Tanks supplied at cost to all users of the Cooper Dips.

COOPER'S POWDER DIP

The leading sheep dip for 65 years. Used on over 250 million sheep every year. Kills ticks, lice, nits and eggs in one dipping. Does not stain the wool, but increases the yield and improves the quality. Price—25 gal. pkt. 50c; 100 gal. pkt. $2.00.

COOPER'S FLUID DIP

for all animals. A highly concentrated, non-poisonous fluid dip of marvelous strength. Mixes readily with cold water, whether hard, brackish, or salty. The only pure liquid dip—no sediment. Goes farther than Coal Tar dips and therefore cheaper. Positive remedy for scab, mange, ticks, lice ringworm, eczema, sores, bites, stings, etc. One gallon makes 200 gallons for general dipping, or 300 gallons for disinfecting. Price—Qt. can 60c; ½ gal. can $1.00; 1 gal. can $1.75; 5 gal. can $8.50.

COOPER'S WORM TABLETS

A sure remedy for intestinal worms in Horses, Sheep, Cattle and Hogs. These tablets offer the great advantage of correct doses and certain results. Dose—one tablet for lamb or shoat; two for sheep or hogs; three for horses and cattle. Price—10 tablets 20c postpaid; box of 100 tablets $1.50 postpaid.

COOPER'S "LAVENE"

The most effective skin dressing for Horses, Cattle and Dogs. Cures worst case of Mange and Ringworm at one dressing. Searches the skin and attacks the disease at its root. Improves the coat and renders hair soft and glossy. Is used by many of the best breeders in preparing animals forshow. Price—Quart can $1.00; gal. can $3.00.

COOPER'S TREE SPRAY

Fluids V1 Winter and V2 Summer have caused a revolution in tree spraying. These new and scientifically prepared spray fluids stand alone for the absolute destruction of all living insects, eggs, fungi, etc. One gallon makes 100 gallons of wash. Price—Gallon can, $3.00.

WHERE THERE IS NO DEALER

If you live where there is no dealer who can supply you with the Cooper preparations, order from Wm. Cooper & Nephews, 177 Illinois St., Chicago, and deduct 10% from any of above prices (Worm Tablets excepted) for freight account.

Faxon & Gallagher, Kansas City, Mo.

Some Clover Questions.

A subscriber at Star City, Ind., writes: "We are hearing a great deal about alsike clover. Is it as good as the common red clover?"

Let us set it down, there is no clover so valuable to the farmer as the common red. Alsike can be grown under conditions where common red clover will not thrive. But alsike is not a great land improver like red; it is more of a surface feeder, and for that reason does not store up so much nitrogen in its roots. Alsike makes fairly good pasture and hay when sown with timothy. It makes a thick, leafy growth and it has the advantage over red clover in that it will thrive on rather low ground. But wherever red clover can be sucessfully grown I would not bother with alsike.—L. C. Brown.

Unthrifty Fruit Trees.

The physical condition of the soil has much to do with the unthriftiness of many fruit trees. To make fruit growing a success there are two great essentials in getting the ground ready for setting out the young trees: The ground must be properly drained and it must be in good physical condition. Some hardy trees may live for a long time on undrained ground, but it is only a question of time when they will die out. I believe that underdraining will pay with all kinds of fruits. It warms the soil and frees the subsoil of all excess water, and in this way liberates much plant food which otherwise would not be available to the feeding roots. On thoroughly drained soil the root system of the trees is healthier and they are ready for work earlier in the spring. As trees become larger and come into bearing they need larger feeding grounds; so it is essential that the ground be thoroughly cultivated, both before the trees are planted and afterwards. If trees are properly put out and carefully cultivated the first two or three years, the roots will penerate deeply and seek larger feeding grounds. On the other hand, if no cultivation is given the ground, the roots grow near the surface, where their feeding ground is soon limited and where they are the most likely affected by dry weather. It is obvious, then, that so many miserable failures of orchards are due to the lack of these two factors—drainage and proper physical condition of the soil. I saw an orchard a few days ago which had been set only nine years. In many places there were great cracks in the soil about the trees and between the rows. I would not give 25 cents a bushel for the apples gathered from that orchard this year. You simply canot grow fine specimen apples under such soil conditions, and it is a waste of time to attempt it.—L. C. Brown.

The Citizen Farmer.

[Written specially for this paper.]

The farmer must more and more recognize his duty as a citizen, if the country is to prosper. Whatever we may say about the advantages and disadvantages of country life as contrasted with city life, we must recognize the fact that the country life makes strong bodies and clear minds. Whether those clear minds be filled with all the information they ought to have is another question.

The rural populations have been in all ages of the world the greatest factors in the life and strength of nations. The Latin poet Horace in one of his poems refers to the greatness of the Roman people and asks whence came that greatness and who fought the battles of Rome? He says that the warriors that won the great victories for Rome came not from the effeminate cities but from the rural sections of the country. He declares that even the sailors that won the sea fights were brought up not by the seashore but on the farms, where they had tended sheep and tilled the soil.

So much was this recognized to be the case that the tiller of the soil and the herder of sheep were in great repute. Cincinnatus, after ruling his country well, went back to the plow, and it was from the plow that he was called again to be dictator. The farmer has always had the strong muscle and healthy nerve that have made him the backbone of every nation.

But he has generally left to others the directing of the course of political and social life. This has been because he was not so well versed in books as the city man and was not so ready to analyze a situation and take advantage of it.

Happily that condition is slowly wearing away, and the time will come when the farmer will be as highly educated as the city man and at that time will be more influential.

To-day the duty is upon the farmer in this country of being a greater factor than he has ever before been in the political life of the nation, the state, the county, the township, the school district and the precinct.

Our public policies are as yet clouded in darkness. The concentrated political forces in the cities dominate all because they are able to "get together." Who does not know that some of these dominant political forces are controlled by the baser elements of society, by people who are too worthless to engage in any respectable calling, but who live like parasites on the people? Should such people be permitted to shape the policies of the commonwealths? Yet they are often so well organized and so powerful in their control of votes that the public official is afraid of them and has to make concessions to their known opinions.

The farmer-citizen is the only antidote to this condition. He is out of the range of their influences. If he will study the numerous public questions that affect him he will be able to take an influential stand in regard to every question of public policy.

We need cleaner politics, and the farmer can help make them cleaner. We need not quite yet look for perfection in anything, but the farmer is able to play more effectually than he has ever before done the role of influential citizen.

New Tale of Napoleon.

A new anecdote, illustrating the lighter side of Napoleon's character, comes from an old lady who knew the daughters of Sir Hudson Lowe.

The Misses Lowe were young girls at the time of Napoleon's imprisonment at St. Helena, and were sometimes admitted to his presence, when he would chat pleasantly with them. On one or two occasions, when in a specially good humor, he drew his sword, and gallantly presenting it to one of the girls, said: "Now, young lady, is your chance; you have to kill the Corsican ogre!"

He would then throw himself into position and defend himself with his walking stick.

You Can Own A Factory Like This

WE START YOU In A Business Of YOUR OWN Right In Your Home Town

We will start you in the canvas glove business, show you how to develop it into a hale, hearty business, make its product, sell its goods and bring its profit to you, and last, but not least, make one dollar grow rapidly into two.

Never before in history of business has help like this been offered to ambitious men.

Here is brought to your home and placed in your very hands the accumulated wisdom, the priceless experience and proven plans of the glove business. Here is spread before you the vivid drawings and information, the actual working details needed in the glove business.

We are making you this offer, we want you to start a factory, to become prosperous. We want to show you how this can be done on little capital (from $30 to $145), with the possibility of making thousands of dollars.

We do all this for you, start your factory, simply with the understanding that you buy supplies and goods from us so long as our prices are as low or lower than you can get elsewhere.

This is not a speculation in any sense of the word. It is a sound, permanent and highly profitable business. The money to be invested is spent entirely for the necessities of the business; there is no waste material, no dead stock—every yard of cloth can be turned back into cash at a moment's notice.

This valuable book contains a great deal of information about the secrets of the glove business and how any one with a capital of from $30 to $145 can make money, right from the start. Send for it right now, today.

WE WILL SEND FULL INFORMATION

about the business and how we will assist you to successfully start a factory. If you would like this information it will cost you only one cent (a postal card) to get it.

There is no class of goods for which there has been such an unsatisfying demand as there has been for cloth gloves and mittens. Every body uses them—the farmer, the mechanic, doctor, lawyer and the merchant in all sections of the country.

We want to prove to you that those in the Glove Business are successful and build up a large business. Those who have had the nerve to start and have thrown their brains and energy into the work get along well and have factories in two or three years.

Write us today, start now, do not let the golden opportunity slip by. We will help you to success, help you in every little detail; help you to succeed. Don't miss this opportunity even if you have to borrow the money to start with; in three months' time you should pay it back and have money of your own to do business on.

We Expect to Start Only a Few of These Factories

One can be started in any spare room at home or small store room and be enlarged as the business requires

This is simply an opportunity to go into the manufacturing business, which, with a reasonable amount of work and attention to business will make a man or woman a prosperous factory owner in a reasonable time.

We Can Give You a Start where you can make thousands of dollars a year, and not blister your hands with a pickax either.

We expect to start a few of these factories, protect their interests, and give them our valuable assistance. We hope to make our profit from the cloth we sell, and if our prices are not as low or lower than others, we do not even ask you to buy from us. By this arrangement we'll get a small profit and a few people will get a start in a manufacturing business that in time should be a huge manufacturing plant employing many people.

The two brothers of The McCreery Manufacturing Company started only a few years ago absolutely broke, actually borrowed $100.00 to start with. At first only had two girls working and have risen to be worth thousands of dollars, do an enormous business, own their own large factory and have valuable interests in others, all in a remarkably short time. If a factory will do this for us, it will do the same for you. Don't miss this offer. First come, first served. Write today for free book and full information.

THE McCREERY MANUFACTURING CO., 644 Dorr St., Toledo, O.

The great man would then smile, and say, condescendingly: "Well, ladies, you can boast that you have fenced with the great Napoleon."—London Times.

How to Keep Juice in a Pie.

Anyone who has ever had the juice from an apple, rhubarb or other pie run all out into the oven while baking knows just how annoying it is. I have overcome the difficulty by taking a strip of clean white cloth, about an inch wide and long enough to lap when put around the edge of the pie plate, wringing it out of hot water, doubling together lengthwise, and pinning tight around the edge of the plate. When the pie is baked, take off this rim, and you will find the juice in the pie instead of in the oven.—Woman's Home Companion for June.

The Silent Witness.

A good story has recently been told in the fleet of an incident which happened when Admiral Evans was in command of the Indians. An old-time blue jacket was at the mast before Captain Evans, charged with getting food out of a mess chest outside of meal hours. This getting of food for night watches is a common and strong desire on the part of most men aboard ship.

Captain Evans asked the man what he had to say, and the man, sizing up the delicate situation, said:

"Captain, I didn't take no food outer that chest. Why, Captain, there weren't no food in that chest! I looked in that chest, and, Captain, I met a cockroach coming out of that chest with tears in his eyes."—Philadelphia Record.

Did Not Keep His Job.

"Thomas," remarked a Scotch lady, "I wonder you don't get married. You have got a nice house and a comfortable situation, and all you want to complete it is a wife. You know Adam, who was the first gardener, had a wife."

"That's quite richt, mum," replied Thomas," but Adam didna keep his job lang after he got a wife."—Holland's Magazine.

Handling Brood Sows.

The success which one breeder may have over another is the logical result of methods. There is a law which must govern every act; find the law and do things right, and expected results must follow. The success in raising pigs depends very largely upon starting right with the brood sow. She should be of a prolific strain and come of a family which produces large, uniform litters. While all general farmers may not want to stock up with pure-bred sows, yet the nearer we can get to it the more certain will be success in getting uniform, thrifty litters. I do not believe it pays to fool with mongrel sows. Start right—with high-grade or pure-bred, thrifty sows. Keep them in good, thrifty condition all the time. Many believe that brood sows should be kept thin until after they have farrowed their litters. That is all wrong. The brood sow has a double task imposed upon her—she must sustain and develop her own body and at the same time must supply the necessary material for the development of the litter. Feed the sows well, so that the pigs may be well born. If sows have been fed liberally right up to farrowing time they will then be in fit condition to stand a little crowding to meet the increased demands of a big, lusty litter of pigs. When I advise liberal feeding I do not mean feeding sows all the corn they will eat. Feed oats, bran and middlings along with the corn, and have plenty of clover or alfalfa pasture for summer, and some nice hay of the same crops put up for winter feed for the sows. I have never found any food that will take the place of alfalfa hay as a conditioner of brood sows. Now is the right time to develop the sows which will be used to bing next season's pigs.—L. C. Brown.

Vissering's Mastodon Hogs.

J. P. Vissering, of Godfrey, Ill., an old-time breeder, writes: "If you are sick of the ball-shaped, fine-boned hogs, write me for some facts about my big-boned, stretchy Poland-Chinas. They are sired by such boars as 'Ideal Jumbo,' 'Piasa Highwave,' 'Jim Dandy,' King Mastodon,' etc., all 1,000-pound boars with a 10½-inch bone. But while I breed for extreme size, I do not neglect short, wide heads, good ears, wide sprung ribs and straight, black coats with white points; in fact, the good old kind with modern style and finish, of which I never raise enough to supply the demand. I am also offering three Angus bulls and a few elegantly-bred heifers. If my stock does not fill your eyes on arrival, you cannot lose out, because you can send it back."

The Gasoline Saw Rig.

The Fairbanks, Morse & Co. Gasoline Saw Rig is described in Catalogue H F 692. If you write for this catalogue, please be particular in describing it. The outfit will pay for itself very soon. A good saw rig in the country is worth a house and lot in town. It yields a profit every year. Address, Fairbanks, Morse & Co., St. Louis, Mo.

Feeding Barley to Hogs.

The feed-lot results of a Wisconsin breeder, with barley in feeding hogs, show that barley and milk beat corn all to hollow. The barley was ground and was fed with skim milk. There was a greater proportion of lean meat than with corn-fed hogs. The hogs made quicker and heavier gains than any lot fed on corn on this farm, and when sold they topped the market. Some breeders are slow to take up barley. Corn has always been held as the ration par excellence for hogs, and not many are willing to try anything else. If you have a field of barley coming on, throw some in sheaf over to the hogs; give the pigs a chance at it; and if you can supplement this with some skim milk and the run of a clover field, you have a combination hard to beat.—L. C. Brown.

BIG MONEY SAVED CLEANING AND SEPARATING GRAINS.

Here's the New Book Sent Free by the Chatham Fanning Mill People.

Every man who raises wheat, oats, barley, clover seed, timothy seed, seed corn, or any kind of grain, ought to have the new Free Book about the Famous Chatham Fanning Mill in use by over 250,000 progressive farmers and planters all over America.

The Chatham is the world standard grain grader, separator and cleaner. Does scores of different things to save and make you more money on your crops. By sowing dirty grain, the farmers of any state lose more than $1,000,000 each year, and this free book tells you why. Just write a line for it to the factory or to the office address nearest you below. Any time you want a Chatham you get it direct from the factory at the wholesale factory price or from one of the factory's branch warehouses nearest your address, shipped promptly on thirty-days' free trial and freight prepaid to you. Try it and if you don't find it most satisfactory, you don't have to keep it. In fact, the company knows that every man who has use for a Chatham Fanning Mill is a man who must be satisfied and one who is to be trusted to pay for what he wants, even though he may ask for time. So investigate this year's improvements and learn how much a Chatham will make and save you in actual cash, year in and year out. Now is just the time. Write for the Chatham Free Book to address nearest you from the makers whose name is so well known all over America. Address the Manson Campbell Company, 536 Wesson avenue, Detroit, Mich.; 1308 West 11th street, Kansas City, Mo.; 82 East 3d street, St. Paul, Minn.; Dept. 1, Portland, Ore., or Dallas, Texas. The company has twenty-four Branch Warehouses, and makes prompt shipments.

Recent quotations for feathers on the St. Louis market: Prime white live goose in small sacks at 54c. and large sacks at 52c.; prime gray do. at 39c. in small and 37c. in large sacks; old white, 38 to 42c.; x, 30 to 36c.; xx, 22 to 25c.; xxx, 12 to 15c.; xxxx, 5c.; tare, 10 per cent. on small sacks and 6 per cent. on large. Duck — White, 39c.; dark, 38c. Chicken—Prime dry-picked, body, at 3c. Turkey—Prime dry-picked, body, 5c.; wing, tail, pointers, mixed, at 10c.

GUARANTEE THEIR RINGBONE PASTE.

There is a prevalent belief that if the lameness attending bone spavin or ringbone is not relieved by firing, nothing more can be done to effect a cure. This theory, however, does not hold good according to the claims made by Fleming Bros., who have advertised in this paper for a number of years. They guarantee to refund the cost of their Spavin and Ringbone Paste if it fails to cure the lameness, and there are no restrictions whatever. They say that when treated by their method, the old cases that have been fired unsuccessfully are practically as certain to yield as the recent ones. Fleming's Vest Pocket Veterinary Adviser, a book of 192 pages, is sent free to interested persons. Address, Fleming Bros., No. 218, Union Stock Yards, Chicago, Ill.

I Want to Loan You a Pair of TRUSIGHT SPECTACLES on Six Days Trial

FREE!

My Free Offer: I want to introduce Trusight Spectacles to every reader of this paper. To do this I am making a **special one-third price.** I want to send you a pair of genuine Trusight Spectacles in a **Gold Filled Frame, guaranteed for ten years, on 6 days free trial.**

Send Me Your Name I will send you my perfect Trusight Eye Tester with which you can test your own eyes as well as the most skilled optician. When you return the tester with your test I will send you a pair of **Genuine $5.00 Trusight Spectacles, that will surely fit, on 6 days free trial.** I won't ask for a cent of money—no deposit—not even a reference. You wear the glasses in your own home for six days and if perfectly satisfactory **in every way**—if they are the best glasses you ever saw **at any price**—send me only $1.65 and the glasses are yours. If the glasses, for any reason, do not suit you—if you don't believe them to be the best bargain you ever had—return them and you are out nothing.

THIS CASE FREE

This is my famous Orient Case; it is made of metal covered with seal grain leather and has a patent spring fastener. This is a very attractive case and will outlast any other case on the market. Ask your local optician if he will sell you such a case as this for less than $1.00. By my special plan this case will be given free to every body who answers this ad. right away and takes advantage of my special offer. Address

E. O. KOCH, Pres., TRUSIGHT SPECTACLE CO.,
1605 Friend Bldg., Kansas City, Mo.

Send No Money.

Just sign your name and address on the Coupon and mail it to me. I will send you my Trusight Eye Tester by return mail. **Do this TODAY** and secure the beautiful **Orient Spectacle Case** which I give you FREE merely for promptness.

TEAR ON THIS LINE.

E. O. KOCH, Pres., Trusight Spectacle Co., Kansas City, Mo. **1605**

Please Send me without cost your Trusight Eye Tester and valuable booklet.

NAME

P. O.

STATE

IF I CAN LIVE.

If I can live,
To make some pale face brighter, and to give
A second luster to some tear-dimmed eye,
Or e'en impart
One throb of comfort to an aching heart,
Or cheer some wayworn soul in passing by.
If I can lend
A strong hand to the fallen, or defend
The right against a single envious strain,
My life, though bare,
Perhaps, of much that seemeth dear and fair
To us on earth, will not have been in vain.

The purest joy,
Most near to heaven, far from earth's alloy,
Is bidding cloud give way to sun and shine;
And 'twill be well,
If on that day of days the angels tell
Of me, she did her best for one of thine.
—Helen Jackson Hunt.

THE EDITOR'S SONG.

How dear to my heart is the steady subscriber,
Who pays in advance, without skipping a year;
Who lays down his dollar, and offers it gladly,
And casts 'round the office a halo of cheer.
Who never says: "Stop it; I cannot afford it!"
Or: "Getting more papers each day than I read;"
But always says: "Send it, the whole outfit likes it,—
In fact, we regard it as a business need."
How welcome is he when he steps in the sanctum,
How he makes "our heart" throb; how he makes "our eye" dance!
We outwardly thank him—we inwardly bless him—
The steady subscriber who pays in advance!
—American Printer.

NEITHER A BULL NOR A BEAR.

Senator Gilchrist, discussing in Albany his insurance bill, said of speculation:

"Speculative features, uncertainties, ought to be removed from our life as much as possible.

"When I think of speculation I think of a man I know.

"This man, a conservative, suddenly took to stock gambling. At the end of a flurry I met him one afternoon and asked:

"'Well, were you a bull or a bear to-day?'

"'Neither,' he answered, giving me a sour smile. 'I was an ass.'"—Albany Journal.

Asthma and Hay Fever are cured by Asthmacuru, manufactured by S. S. Crooks Mfg. Co., St. Paul, Minn.

EARLY HISTORY OF FARMING.

Beginning With the Christian Era and Continuing Until After the Discovery of America.

The following items gathered at odd times represent very much of the early history of agriculture and live stock raising. These items for the most part have appeared in a work entitled "The Date Book History of Live Stock and Agriculture," published by The National Farmer and Stock Grower. Each item being brief and to the point, and there being so many of them, an index appears to be impractical. Attention is therefore invited to the boldface type whereby the subject of the item appears more distinctly than the other words in the sentence:

Year.

40 A. D.—An interesting and valuable item appeared in the "Acta Diurna," a record kept in Rome during the reign of the Emperor Caligula and reproduced later by Petronis Arbiter in his work entitled **"The Supper of Trimalchio."** It seems that Trimalchio was a farmer near Cumae, in Italy, and it appears that his farm occupied an immense extent of territory. The work referred to says: "On June 25th, **on Trimalchio's farm** by Cumae, were born seventy children, of whom thirty-six were of the male sex. The same day fifty thousand modii of wheat (about one thousand gallons measure) were removed from the thrashing floor to the granaries; five hundred young oxen were broken. The same day one of the slaves, named Mithridates, was executed by crucifixion, because he had cursed the sacred name of the emperor, and lastly ten millions of sesterces (about four hundred thousand dollars) were deposited in the safe."

50—About this time Lucius Junius Moderatus Columella, a Roman citizen, wrote **twelve books on agriculture,** one of which on gardening, entitled **De Re Rustica,** is in verse. His works are still extant, translations being available.

50—A supposed **improved variety of cherry** was introduced in Britain about the middle of the first century.

51—In the reign of Emperor Claudius, Columella, a distinguished agriculturist, introduced many of the Tarentine breed of **sheep from Italy into Spain,** which country was under Roman dominion at that time. He also was a general improver of sheep and became the principal originator of an immense **fine-wool sheep husbandry,** which through Spain has enriched three continents—Europe, America and Australia.

64 — Poppaca Sabina, wife of Nero, Emperor of the Romans, is reported to have paid a sum equal to American four cents a quart for **asses' milk** to bathe in.

75—In Pompeii, an ancient city of Naples, afterwards destroyed by an eruption of Mount Vesuvius, " is stated that a six-ounce **loaf of wheat bread** cost a sum equal to three cents of the present day.

77—Pliny, the Elder, Roman author, born A. D. 23, left a work entitled "Natural History." In his writings there is the first account of **a machine for reaping grain.** He says: "In the extensive fields in the lowlands of Gaul, vans of large size, with projecting teeth on the edge, are driven on two wheels through the standing grain by an ox in a reversed position; in this manner the ears are torn off and thrown into the van."

280—It is generally believed that about this time Emperor Probus encouraged the **planting of vineyards** in Britain.

325—Included in the writings which assert that Egypt, Nubia, Assyria and Persia all **had horses before Arabia,** is the assertion that the Roman Emperor Constantine presented the Arab Sheiks of the tribe called Yemen with 200 well-bred horses from Cappadocia, in Asia Minor. Constantine died in the year 337.

732—The battle of Tours, in which Charles Martel defeated the Saracens, is considered as contributing to the establishment of horse breeding in La Perche and Normandy. On distribution of the spoils of war many Saracen horses went to these provinces, where they were crossed upon the mares of Brittainy, and on the luxuriant pasturage developed a draft horse of great excellence, **the Percheron horse** of France.

895—King Alfred the Great of England encamped his army near London to **protect the harvest reapers** while gathering their crops against excursions of the Danes.

936—About this time, according to Whyte, in his History of the British Turf, the **earliest mention of race horses** in England, called running horses in those days, was when Hugh Capet, founder of the royal house of that name in France, sent horses as a present to King Athelstane, whose sister, Ethelswitha he was soliciting in marriage.

1016—Poitou **Jacks of France** mentioned in literature.

1040 (about)—**First windmills** erected in Europe.

1066—**Horse shoeing was introduced into England** from Normandy by William the Conqueror.

1100—The Japanese court ladies as early as this date prepared a favorite perfume from the **Ramanas rose.**

1150 (about)—**Cotswold sheep** imported into England from Spain. This is not quite authentic. A century later Cotswolds were a well-known breed in England.

1150—**Smithfield,** in the center of London, first mentioned as **a live cattle market.**

1158—In the accounts of the British government of 1158-9 occur mention of payments to the **vine dressers of Windsor.** It appears also that the gardens at Windsor were enclosed by a ditch.

1165—The **earliest** drawing or view of a **monastic garden** in England was that of Canterbury, and was drawn by the Engineer Wibert. It is now preserved in the library of Trinity College, Cambridge. The plan records the trees and vines, fish ponds, etc.

1175—Early evidence of the **existence of orchards** is a Bull of Pope Alexander, III., issued in this year, confiscating the property of the monks of Winchenley, in Gloucestershire, England, with the "town of Swiring and all its orchards."

1185—The **manufacture of wool** first mentioned in England.

1199—King John of England **encouraged horse breeding** by importing Flemish stallions—origin of the English draft horse.

1236—At this time **a hen in Paris** was generally sold for an amount equal to American two cents.

1249—A Scottish history mentions **black (Galloway) cattle** as being reared in great numbers.

1259—Henry, III., of England made extensive alterations at the palace of Westminster, and among payments to carpenters and other workmen was an item of payment to laborers for **leveling the area of the garden with a roller."**

1274—In this year, in Venice, it is recorded that **a pig sold** for the equivalent of fifty cents in American money.

1290—The **first importation of oranges** into England in a cargo of assorted fruit from Spain.

1292—The only kind of apple specially noticed in England at this time was the "Costard." This variety has been preserved in history by the word "Costermonger," the name by which the sellers of this fruit were known. **The Costard apple** was the most popular for several centuries. The Rejul pear and the Calluewell pear were also early fruits.

1305—In the time of Edward, I., King of England, the **"acre" as a land measure** was reduced to a standard.

1317—According to the New International Encyclopedia, in August of this year, in England, **wheat** was twelve times as **high in price** as in the following September. It was a period of alternations of indolence and bustle, of feasting and semi-starvation. Rye was the breadstuff of the peasantry. Little manure was used. Oxen, not horses, were used for teams.

1337—Edward, III., in order to improve the **breed of horses,** prohibited exportation.

1340—**First "worsted" manufactured** at Worsted, in Norfolk, England. Worsted is spun wool manufactured into cloth.

1346—First authorization in England for the **erection of toll-gates** under King Edward, III.

1369—About the earliest account **books of farming operations** were kept and preserved at the Norwich Priory and Abingdon Abbey, in England. These acounts show the receipts and expenses of the garden operations, but not the plants that were grown or the processes of cultivation.

1380 (about)—Richard, II., King of England, **compelled horse dealers** to limit their prices to a fixed maximum.

1402—Sir William Clopton, an Englishman, granted to Thomas Smyth a piece of ground, called Dokmedwe, in Houstede, for **the annual payment of a rose** to Sir William and his heirs, the demand for roses being so great in those days that bushels were frequently paid by vassals to their lords, both in England and France.

1430—In this year it is said that England **imported raw cotton** from the Levant, which includes Egypt, Asia Minor, islands and countries east of Italy, in or bordering on the Mediterranean Sea. It was then named cotton wool.

1446—In England the **tenant** was for the first time **secured in possession,** during term of lease, against a buyer of the land.

1467—Permission granted by King Henry, IV., of England to **export** a few **Cotswold sheep** to Spain.

1469—In England the **tenant farmer** was first protected from having his property carried off for the **landlord's debts,** beyond the amount of rent due.

1472—In this year, in Venice, Jensen, a publisher, **printed the existing works of Columella** on agricultural subjects which were written in the first century.

1845—Previous to the reign of Henry, VII., King of England, which began in this year, **there did not grow** in that country any vegetable or eatable root, such as carrot, parsnip, cabbage, etc.

1488—In England a law was passed to **stop laying arable land to pasture** and suffering farm houses to fall to ruin. Owners were required to till a portion of the soil and keep the farm house in repair.

1493—**Sheep** of Spanish origin **brought to the United States** by Christopher Columbus.

1493—First **cattle introduced into America** by Columbus from the West India Islands.

1493—**Hogs brought over** by Christopher Columbus on his second voyage, landing at Hispanola.

1493—**Indian corn** (maize) first taken to Europe.

1494—In this year Henry the Seventh of England passed a law that no one should **export a horse or mare,** or carry it beyond sea except for his own use. With this exception, that any mare of three years old and upwards, whose price was not above six shillings and eight pence, might be exported; the owner, however, was compelled to sell her at the port to any person who should pay him seven shillings.

1500 (about)—In reign of Henry, VII., gelding or **castrating horses** first practiced in England.

1509—The common garden or **bush bean first cultivated** in England.

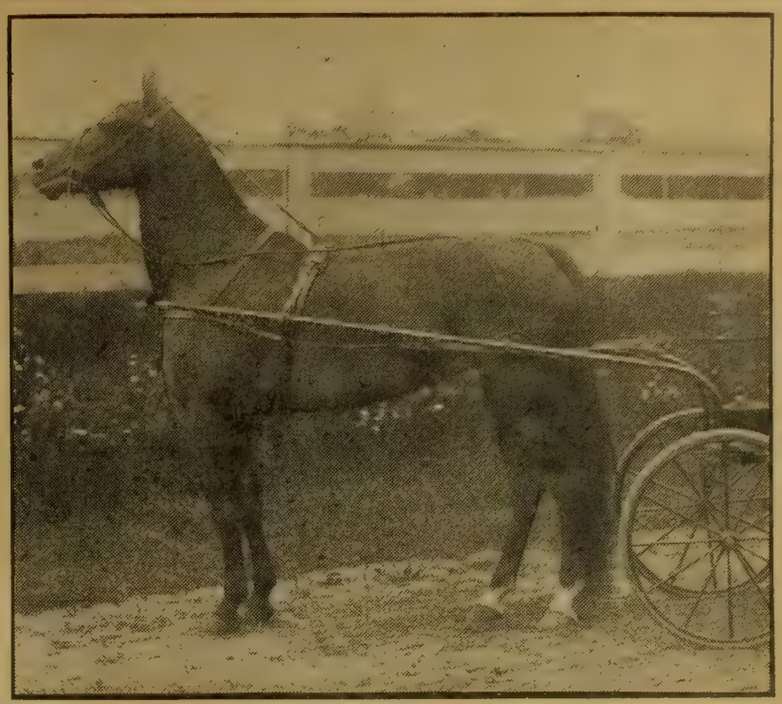
1520—**Hops** first cultivated in England.

1521—Cortes, Spanish commander, entering Anahuac, the Aztec capital of Mexico, **discovered buffalo** in the menagerie of the king, Montezuma.

1522—**Rice culture successful** in Lombardy, Northern taly.

1523—In a letter written to friends in Europe, Alejandro Geraldine, then Bishop of Santo Domingo, **mentions turkeys.** He is regarded as the first author who refers to this fowl.

1524—According to C. L. Bonaparte, in his Natural History of Birds, turkeys arrived in England in this year from Spain. Although **turkeys were originally from the American islands and continent,** the English supposed or were told the birds were originally from Turkey, which gave them a satisfactory name, although they were not entitled to it. At this time all commerce between America and Europe was with Spain.



LUCIE G., 2:22—Trotting roadster. Exhibited by E. T. Stotesbury, of Winoga Stock Farm, Chestnut Hill, Pa., and winning a blue ribbon every time she entered a ring at the Philadelphia Horse Show. This picture is presented for the inspection of our readers for the purpose of showing a most perfect and up-to-date show-ring roadster. When she was sold at S. T. Harbison's sales last year her description was given as follows: In offering LUCIE G., record 2:22, as the highest type of the American trotting horse, we do so with a full knowledge of the best and finest light harness show horses that have appeared in the last ten years. Her color (seal brown, with tan points) is very popular; her size (15 hands 2½ inches) could not be improved upon; her conformation and quality, almost beyond criticism; beautiful head, thin, well-set and properly-carried ear; clean-cut, graceful neck; magnificent full back; long, gracefully-set tail, full, set high and properly carried without artificial stimulants; dry, fluted, flat legs, with solid, horny feet. Faultless natural style, most attractive action. The critics say, perfectly gaited, a balanced horse when in motion; has very fine turn of natural speed; is steady and perfectly tempered. City broken and afraid of nothing. When rigged with a set of plain light harness (no patent appliances of any kind), shod lightly and hitched to a fine rig, no finer or handsomer show mare has yet appeared before the American public. We offer her as the finished product and predict many coveted rosetes for her bridle in the show ring.

$4.95

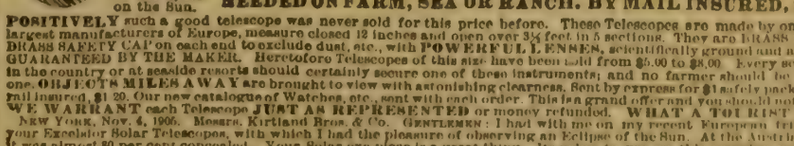
A GENUINE 23 JEWELED R. R. WATCH

costs from $50 to $100 in a retail store. Why pay such a price for a R. R. watch. For the next 60 days only we will send to any address by express C. O. D. subject to examination, for only $4.95 a genuine Engine Special R. R. watch in heavy 3 oz. solid one-silver dust proof screw case, both case and works guaranteed for 20 years. You examine it at your express office and if you consider it equal in appearance to any 23 jeweled R. R. watch you ever saw pay express agent our reduced price $4.95 and express charges and it is yours. Send this advertisement to us with your name, post office and express office address and watch will be sent at once. Address R. E. CHALMERS & CO., 356 Dearborn St., CHICAGO.

20 Year Guarantee

SPECIAL 60-DAY OFFER TO INTRODUCE OUR LATEST LARGE, POWERFUL ACHROMATIC TELESCOPE, WITH SOLAR EYE-PIECE

FACE TO FACE WITH THE SUN!



See the Spots on the Sun. NEEDED ON FARM, SEA OR RANCH. BY MAIL INSURED, $1.20

POSITIVELY such a good telescope was never sold for this price before. These Telescopes are made by one of the largest manufacturers of Europe, measure closed 12 inches and open over 3½ feet in 5 sections. They are BRASS BOUND, BRASS SAFETY CAP on each end to exclude dust, etc., with POWERFUL LENSES, scientifically ground and adjusted. GUARANTEED BY THE MAKER. Heretofore Telescopes of this size have been sold from $5.00 to $8.00. Every sojourner in the country or at seaside resorts should certainly secure one of these instruments; and no farmer should be without one. OBJECTS MILES AWAY are brought to view with astonishing clearness. Sent by express for $1 safely packed; if by mail insured, $1.20. Our new catalogue of Watches, etc., sent with each order. This is a grand offer and you should not miss it. WE WARRANT each Telescope JUST AS REPRESENTED or money refunded. WHAT A TOURIST SAYS: New York, Nov. 4, 1905. Messrs. Kirtland Bros. & Co. GENTLEMEN: I had with me on my recent European trip one of your Excelsior Solar Telescopes, with which I had the pleasure of observing an Eclipse of the Sun. At the Austrian Tyrol it was almost 80 per cent concealed. Your Solar eye-piece is a great thing. Its value to me on this occasion was many times greater than the entire outlay for the Telescope. Yours truly, L. S. HENRY

KIRTLAND BROS. & CO., DEPT. N. S. F., 90 CHAMBERS STREET, NEW YORK.

Australian Egg Laying.

At the Hawkesbury Agricultural College, Australia, an egg-laying contest has been going on for six years. The last year forty pens of hens, six hens to a pen, were carried over from the previous year for the purpose of comparing the second year's laying results with the first.

The best two-year results were from a pen of six Chinese Black Langshans, producing 1,481 eggs the first year and 1,006 the second year; or nearly 247 eggs per hen the first year, and 168 per hen the second year. In these calculations we are using the nearest whole numbers rather than fractions of eggs.

A pen of six Black Orpingtons produced 1,247 eggs the first year and 1,054 the second year; or nearly 208 eggs per hen the first year and 176 the second year.

Another pen of six hens, White Leghorns, produced 1,437 eggs the first year and 841 the second; or about 240 eggs per hen the first year and 140 per hen the second.

The pen making the least two-year showing produced 898 eggs the first year and 484 eggs the second; or 150 eggs per hen the first year and 81 eggs per hen the second year.

This comparison, one year with the other, clearly demonstrates that the pullet year is surely the best laying year.

The contest between sixty pens of pullets, six in a pen, for one year, produced the remarkable result that the twelve pens with highest scores were White Leghorns, each averaging 200 eggs per hen per year or better. These six records ranged from 1,210 eggs per pen, or 202 eggs per hen, to 1,474 per pen, or 246 eggs per hen per year.

In considering this subject our readers are reminded that there is no such thing as training hens for a contest; all that can be done in the way of selection for such a contest is to obtain good, likely specimens from known egg-laying families. Pullets from hens known to have large egg-laying records and males of equally well-known egg-laying families can be mated together to good purpose. A few contests are necessary before good selections can be made. The Australians have taken the lead in practical and popular egg-laying demonstrations.

We will refer to this subject again when the bulletins of the Hawkesbury Agricultural College arrive, containing full particulars of the 1908 contest. In the first contest the winning pen lay 185 eggs per hen per year, and at the fifth contest the winning pen lay 247 eggs per hen per year. The average of the 100 pens in the first contest was 130 eggs per hen per year, and the average of the fifth was 171 eggs per hen per year.

Small Chicken Farms.

In this paper we have several times mentioned the poultry-raising community at Petaluma, California, as one in which all people who contemplate going into the poultry business ought to be informed. Mr. W. S. Harwood in World's Work for May, 1908, gave his report of a visit to Petaluma. He divided the community into three classes, one the people with houses and small lots, who sell a few dozen eggs a week to help out the income from other sources. He next mentions the zone about three miles wide given over to chicken ranchers, who have from three to five acres of their own and who keep from 1,000 to 1,800 chickens on hand at all times. He mentioned in particular one man as a sample, having 1,500 hens, which produced net over and above all expenses $1.30 per hen per year. Mr. Harwood also mentioned the larger ranches, from forty to fifty acres, and even up to 400 acres, where the chickens range from 3,000 to 10,000, and even up to 15,000 on one farm.

Mr. Harwood concludes his favorable report by asking why cannot this be done anywhere and everywhere? The answer is that it can be done. Small places is what the country is coming to. An acre in fruit, an acre in vegetables, and three acres in poultry will suport any small family, each member to be a worker. Poultry farms should be arranged together. Three miles of five-acre farms on each side of a road may well make a very presentable community on any route to a good city, and there is hardly a piece of upland in the country that, so arranged, will not outclass the same quantity of land devoted to any other agricultural purpose. Every section of 640 acres will support 128 families.

Observations on Poultry.

[Written specially for this paper.]

"Try all things and hold fast to that which is good" applies as much in poultry raising as in ethics. There are a great many notions current as to what different things will do in the feeding and treatment of poultry, Just because an idea has been handed down from past generations is no reason for attaching importance to it.

It is quite widely believed that salt is injurious to hens. This is because some hens have eaten rock salt and been killed. Well, consider the size of the hen as compared to the amount of salt she would be likely to eat when finding it in the form of crystals. When hens are ravenous for grit and find rock salt, it is not surprising if they eat enough of it to kill them. If a human being ate a like proportion of salt, nothing could save him.

Fowls need salt in their food, and without a proper amount of salt digestion is impeded. The amount of salt to use in the food can be told by the taste better than in any other way. At one of the Experiment Stations tests were made to find out how much salt it was safe to feed hens per day. The experimenters came to the conclusion that to a flock of 100 hens half a pint of salt could be fed daily without injurious results.

Sulphur is one of the things that occupies a large place in the poultry education of some of our people. They have been taught that the burning of sulphur will result in the destruction of mites and of all disease germs. The fact is that sulphur is a very uncertain means of destroying either insects or fungous growths.

The efficacy of sulphur depends on the combination of sulphur fumes with moisture in the air in sufficient quantities to produce a poison, which in turn destroys the parasites, animal and vegetable. But who can tell when the moisture in the air is sufficient to make that combination possible?

Some that have looked into the matter very thoroughly say that steam needs to be generated at the same time the sulphur fumes are in the air to give enough of this moisture to make the combination. It explains why some of our poultry raisers that have tried the sulphur fumes for the destruction of lice and germs have found it ineffective. It is a poor sort of remedy to depend on, for the reason that its effects are not positive enough.

Some old-fashioned people also feed sulphur to the fowls, especially in the seasons of the year when they imagine the fowls should have their systems cleaned out. But the effect of sulphur is to open the pores and make the fowls subject to colds. It is doubtful if it is wise to take the chances that must be taken if sulphur is fed. If it is fed at all it should be given in very small quantities.

The feeding of pepper is advisable only to fowls that are sick. It may do them some good. To healthy fowls it is not a necessity nor an advantage. If their organs are all working normally there is no reason to stimulate them by the feeding of pepper or anything else of a stimulating nature. It is better to feed nutritious food, with all the grit, oyster shell, meat, ground bone and lime they will utilize, and leave the pepper out.

Feeding Chickens.

At Kilkenny, in Ireland, 120 pullets and cokerels were put up to feed. In fifteen days the 487 pounds of chicken gained 142 pounds, at a cost of about 6 cents a pound. The increase weight was valued at 18 cents a pound, therefore the net gain was 12 cents a pound. One of the chickens died on the 13th day, which knocked the profit of one of the hens, but the loss was charged up to them all the same.

So far as fattening goes, in the first seven days the gain was 102 pounds; the next four days the gain was 24 pounds; and the next four days the gain was only 14 pounds, but here the weight of the dead bird was deducted. They put the fowls up to feed at 4.06 pounds, and in fifteen days they averaged 5.225 pounds. Each chicken made about a pound of gain, after allowing for the dead loss of one chicken.

In another test they put up twenty-four cockerels, 70 pounds 12 ounces. and brought them to weigh 79 pounds 6 ounces in twelve days, or a gain of 8 pounds 10 ounces. In this test they were Leghorns and Anconas.

In another test, thirty-six cockerels, weighing 161 pounds 8 ounces, increased to 198 pounds 2 ounces in fifteen days, a gain of 37 pounds 4 ounces. This gain cost about 7 cents a pound.

These experiments were very short. It appears, however, that the profitable period for poultry fattening is short. The American packers who make a business of feeding chickens of all ages for market allow, say, a fattening period of 21 pounds and expect to add 40 per cent. to the weight. These chickens, averaging a little over 4 pounds in the beginning, gained 28 per cent. in fifteen days.

Poultry Notes.

Hens that are allowed to set and raise a brood or two of chickens are records; but pullets put up for egg laying as a business and which do not lay 144 eggs a year, are laying below the farmer's average.

In the Australian egg-laying contest, last year, the twelve pens making the highest score consisted of the winning pen of Langshans, two pens of Wyandottes, four pens of Orpingtons and five pens of Leghorns. This year the twelve pens showing best results are all White Leghorns.

It is just as cheap to make a pound of chicken as it is to put a pound of gain on a beef steer. The steer feeder knows when his cattle are fat, but the chicken feeder usually does not.

According to the experience at the Arkansas Agricultural Experiment Station, one male to fifteen females of Plymouth Rocks, Wyandottes, Orpingtons or other general-purpose breeds; one male to twenty-five female Leghorns, Andalusians, Minorcas and other light breeds; and one male to ten females of Brahmas, Cochins, or heavy breeds. This is given as about right to insure strong, fertile eggs, but depends to some extent upon the individuals.

At the Arkansas Agricultural Experiment Station their pen of Plymouth Rocks averaged 141 eggs a year; the pen of Wyandottes averaged 110.16 eggs a year; the pen of White Leghorns averaged 109.45 eggs a year; and the pen of Buff Orpingtons averaged 108.12 eggs a year. The average of thirty-one hens was 120 eggs per hen per year. From the record it appears that the Wyandottes were not old enough to lay eggs the first month. The eggs cost about 7 cents a dozen, which looks like profitable business.

Don't Sell Your Eggs

When they are cheap; pack them with my new method—will keep two years—will be as fresh as new laid eggs. No special place required to store them. Cost only ½c. per dozen to pack them. Write me for circular.
MRS. B. F. WILCOXON,
Ft. Des Moines, Ia. Box 50.

A NEW EGG FARM.

Stoddard's book entitled **A New Egg Farm**, is, in our estimation, the best book for a young poultry raiser to study. It shows the way to profitable production of eggs and poultry. He compares the best locations for the business. Tells how to build the houses for layers, breeders, sitters or chicks, adapted to the colony system, the yard system and other methods. How to breed and manage. How to breed and select. Choice of breeds and crosses. Management for mild or severe climates. How to feed fowls and keep them at exercise without hard work. How to manage hundreds of sitters with little labor. How to raise brooder chicks and keep them alive and growing. There are 320 pages of useful, attractive, illustrated information. The book is nicely bound, and we will send this book by mail, postpaid, and include a year's subscription to **The National Farmer and Stock Grower**, for one dollar. Address,

How to Fail With Poultry.

P. H. Jacobs, poultryman and editor, gives a few ways to insure failure in poultry keeping:

1. Endeavor to keep two fowls where room for one only can be obtained; that is, saving expenses by cheapening the cost of houses and space.

2. Buying fowls from other farms and thus bringing disease and lice into the flock.

3. Overfeeding, the fowls being supplied with the greatest abundance under the supposition, "the more feed the more eggs."

4. Cold drafts over the fowls at night, with a view of supplying fresh air, when the thermometer is low.

5. Wasting time with sick fowls, instead of destroying all birds that can not be quickly cured.

6. Disregarding the breeds by keeping anything that is a fowl.

7. Lack of exercise, the fowls being idle, discontented and consuming food because they have nothing to do.

8. Failure to provide sufficient warmth in winter, a season when eggs are highest.

9. Feeding three times a day, the result being indigestion and the introduction of disease in the flock.

10. Lice, both mites and the large lice that are found only on the bodies of the fowls and at all seasons of the year.

Poultry and Pet Stock.

No one can learn from books and papers how to raise chickens. The "hang" of it comes only through experience. This does not mean, however, that some hints cannot be picked up on the side that will be of value.

Very often a serious mistake is made in putting new birds in the flock before they have been quarantined. It is always best to keep new stock separate for several weeks until it is proved that they are in good, healthful condition. Disease is apt to be introduced to a flock of healthy birds when this is not done.

Costly errors are often made in careless methods. One cannot give this business too close attention. This is particularly so in the matter of feeding. Beginners are apt to be irregular in this. They do not have any set hour. It is important. The stock will soon learn to know when their feeding hour arrives and will be in more or less anxious state until they are fed.

Appetites must be studied. Fowls differ in this as much as do human beings. A feast to-day and a famine to-morrow are also likely to upset the appetite. Give each day what is actually needed; no more, nor no less.

Carelessness is also shown in cleanliness. The filth is allowed to collect in the houses for weeks. It is impossible to have healthy stock under such conditions. Clean up daily. If veterans in the business find that it pays them to do so, it certainly is profitable for the beginner.

The poultry business would not have the standing that it has to-day were it not for incubators and brooders. But before a beginner tries to run an incubator he should know how to set a hen.

Before one attempts to raise chickens in a brooder he should take lessons from the mother hen. True, books have been written on the subject and directions accompany the machines, but unless one has some knowledge of the work, all he reads will be Greek. We can profitably use a great deal we read on the subject, if we use common sense in the application.

THE CHICAGO INTERNATIONAL.

This Great Show Will Be Held as Usual—The Directors Have Started to Work.

The Dates This Year Will Be From Saturday, November 28, to Thursday, December 10.

The classification, with a few minor changes, will be the same as for the 1907 Exposition.

Cattle.—Polled Durham cattle were given a junior and senior classification.

Car-load Classes.—Entries in these classes will close November 21st, one week prior to the opening date of the show, and the animals must be in place not later than noon, Saturday, November 28th. The animals exhibited will be judged on the following Tuesday and remain on exhibition until December 3d, 1908.

Carcass Classes.—A separate classification was adopted for the live animals entered in the carcass classes, the latter to be judged on hoof as well as on the block.

Short-fed Special Classes.—Additional special inducements will be offered to exhibitors in these classes.

Sheep. — The Hampshire-Down, Dorset and Lincoln sheep were given increased appropriations.

Sales.—Hereafter all sales of pure-bred sheep will be conducted under the auspices of the different Registry Associations, consignments to be accepted only from "International" exhibitors.

Sheep Entries.—In the future the number of entries will be limited to three head in any one of the ram, and to four in any one of the ewe classes. Animals brought in excess of this number will be placed in such pens as the Superintendent of the Sheep Department may designate.

College Classes.—It was decided to have but one team from each Agricultural College take part and go through the entire work of judging instead of two, one for horses and another for cattle, hogs and sheep, as in the past.

Corn Judging. The Corn-judging Contest was eliminated from this show.

Ponies. — Shetland Ponies were given a special classification for the 1908 Exposition.

An Out-door Card Party.

A simple but unique morning card party may be given by the hostess who has a lawn or large porch on which to entertain her guests. Cover the tables with green cheese cloth in a pretty shade. For tally cards use leaves from the oak or maple tree, as these are good shape and do not wither easily. Gold paper stars or circles are used to keep score, and may be had at any stationer's. The prizes may be a dainty white fan with possibly a suggestion of green for first prize, and a huge palm leaf with a bow of green ribbon for the booby. The refreshments are sandwiches of lettuce, olives, nasturtium or any other delicate green filling, and iced tea served with lemon and long stalks of mint. After this, ices with mint cherries served in white paper cases, with little wire handles wrapped in green paper. On each handle fasten a white butterfly cut from paper and marked a little with water-color paint. Plain white and green iced cakes may be used, or a white cake with a touch of pistachio in the filling. Green and white peppermints may be served during the game or after the ices.—Woman's Home Companion for June.

Definition of "Grass Widow."

This story is told of the late Bishop W. W. Duncan, of the Methodist Episcopal church:

When Bishop Duncan first went to Texas to preside at a conference there, he was suffering severely with hay fever. He was of a nervous disposition and referred to his malady with such frequence that it became a bit tiresome to the preachers. A brother got up to make a report, and in the course of it he used the term "grass widow."

"Grass widow!" cried the Bishop. "I've heard that expression used half a dozen times since I've been here. I never heard it before. Will you please tell me, sir, what a grass widow is?"

The offending brother looked as calm and as serious as an undertaker during the storm of laughter which the Bishop's speech had developed. When things quieted down he said, very gently:

"A grass widow, Bishop, is a woman whose husband has died with hay fever!"—Macon Telegraph.

Woman's Promise to Obey.

Dr. Ethelbert Gilbert, of Duluth, is willing, in marriage ceremonies, to omit, whenever requested to, the obnoxious "to obey."

One of Dr. Gilbert's parishioners took him to task about this matter the other day.

"What right have you," he said, "to tamper with the marriage ceremony?"

Dr. Gilbert, not at all perturbed, laughed easily.

"Oh, well," he said, "that 'obey' is a dead letter anyway. The very best woman in the world promised to obey me eighteen years ago, but she hasn't to this day."

Not Bay Rum.

"Mamma, is that bay rum in the bottle on your table?"

"Mercy, no, dear!" she replied. "That is mucilage."

"Oh!" said little Johnny, "perhaps that's why I can't get my hat off."—The Methodist Recorder.

MOST BEAUTIFUL PICTURES.

Combination Subscription Premium With The National Farmer and Stock Grower and the Universal Magazine.

We have just received five thousand sets of beautiful pictures. They are called the Asti-Heads, being reproductions from paintings by the famous artist, A. Asti. These pictures are 8½x11 inches and reproduced in the richest and most delightful colors. Properly framed, they constitute beautiful adornments to any room in the finest houses. They represent four types of womanly beauty. This is the finest premium we have ever offered. For sixty cents we will send one set of these four pictures. We will also send **The National Farmer and Stock Grower** for one year. We will also send for one year our elegant, sixty-eight-page monthly publication, the **Universal Magazine.** This is the grandest combination ever offered to our patrons. The **Universal Magazine** is full of interesting stories; **The National Farmer and Stock Grower** is the best monthly farm paper, and the pictures alone are worth the subscription price.

SUBSCRIPTIN BLANK.

Please mention Nat. Farmer and Stock Grower.

A New Cure.

The Rev. Anna Shaw, President of the American Women Suffrage Association, said in an address in Chicago:

"An excellent cure for false pride is a little college settlement work. By false pride I mean the belief that the poor regard one as noble and fine because one happens to be rich. Servants and dependents have to encourage this false pride in us, but a little settlement work soon undoes the mischief.

"I know a Philadelphia woman. She is proud because her great-grandfather, a carpenter, happened to own land that is now worth millions. In her haughty way she did some settlement work during Lent.

"There was an old woman whom she visited every few days. She carried the old woman jellies, tea, olives and such like luxuries. And she was secretly pleased with the attention she attracted as she passed up and down the narrow, squalid street.

"'Your neighbors stare at me a good deal,' she said, complacently, one morning.

"'I'll be bound for that,' said the old woman.

"'I suppose they are inquisitive, eh?'

"'They certainly are, the busybodies,' the old woman grumbled.

"'No doubt they question you about me a good deal?'

"'Indeed they do, mum.'

"The visitor smiled again.

"'And what do you tell them?' she asked, sweetly.

"'Oh,' said the woman, 'I just say yer me dressmaker, and let it go at that.'"—Holland's Magazine.

A Courteous Repulse.

There was an ignorant man who once applied to President Lincoln for the post of doorkeeper to the House. This man had no right to ask Lincoln for anything. It was necessary to repulse him gently and whimsically, without hurting his feelings, in this way:

"So you want to be doorkeeper to to the House, eh?"

"Yes, Mr. President."

"Well, have you ever been a doorkeeper? Have you ever had any experience of doorkeeping?"

"Well, no—no actual experience, sir."

"Any theoretical experience? Any instructions in the duties and ethics of doorkeeping?"

"Um—no."

"Have you ever attended lectures on doorkeeping?"

"No, sir."

"Have you read any text-books on the subject?"

"No."

"Have you conversed with anyone who has ever read such a book?"

"No, sir; I'm afraid not, sir."

"Well, then, my friend, don't you see that you haven't a single qualification for this important post?" said Lincoln, in a reproachful tone.

"Yes, I do," said the applicant, and he took leave humbly, almost gratefully.—Tit-Bits.

The Soft Answer.

Senator Tillman, at a banquet in Washington, said, in humorous defense of outspoken and frank methods:

"The people who always keep calm fill me with distrust. Those that never lose their temper I suspect. He who wears under abuse an angelic smile is apt to be a hypocrite.

"An old South Carolina deacon once said to me with a chuckle:

"'Keep yo' tempah, son. Don't yo' quarrel with no angry pusson. A soft answah am allus best. Hit's commanded, an', furthermo', sonny, hit makes 'em maddah'n anything else yo' could say.'"—Washington Star.

The Twin Sisters.

"Your wife's twin sister is so like her that I wonder you can tell them apart."

"Well, when I meet either of them, I kiss her. When she slaps my face I know it isn't Bertha."—Meggendorfer Blaetter.

Doubly Useful Mucilage.

"If you make your own mucilage (one heaping teaspoonful of gum arabic to an ordinary mucilage bottle gives it pure at a cheaper rate than that bought ready made), you can dispense with court plasters, liquid or otherwise, except where an antiseptic is necessary," says Woman's Home Companion for July. "Ordinary cuts can be coated with this quite as effectively as with the patent preparation. Two coats thoroughly dried will stand the application of water better than anything but the adhesive plasters doctors use—an inconvenient, expensive luxury."

What is a Million?

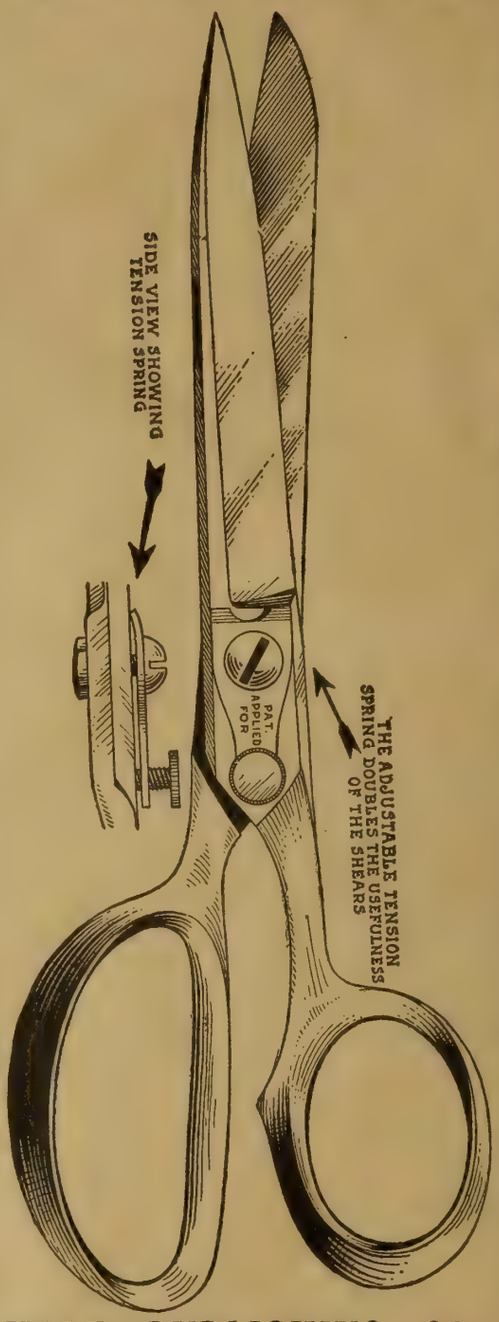
When Willie returned from school he sought out his elder brother with tears in his eyes.

"I got kept in for an hour in school to-day," he said, "and it was all your fault."

"My fault," echoed his brother, "and how was it my fault?"

"Well," said Willie, "you told me yesterday that a million was a thunderin' lot, and when teacher asked me this afternoon what a million was, I told her it was a thunderin' lot, too, and then she kept me in for an hour."—The Furrow.

SEND US A DOLLAR.



The Hamilton Steel Spring Tension Shears

offered as a premium for those who pay One Dollar in advance to our great monthly paper,

The National Farmer and Stock Grower.

Send One Dollar

and you will receive the best monthly farm paper for three years.

You will also receive as a free premium this pair of always sharp

Eight-Inch Patent Tension Spring Shears.

Guaranteed for five years.

The Shears are manufactured of the very highest grade steel, perfectly tempered and heavily nickel-plated on a highly-polished surface. The patent tension spring takes up all the wear on the rivet, so that the cutting edges will never wear dull. A simple turn of the little thumbscrew will adjust the blades to cut anything from the thinnest and most delicate fabric to the heaviest material. Every woman who has had the exasperating and trying experience of attempting to cut with a dull pair of Shears will appreciate the value of this new invention.

HALE PUBLISHING CO., 3550 VISTA AVENUE, **ST. LOUIS, MO.**

Filling Cracks in Wood.

White tissue paper is steeped and perfectly softened in water by thoroughly kneading with glue, transformed into a paste, and by means of ochers (earth colors), colored as nearly as possible to the shade of the wood. To this paste calcined magnesia is then added and it is forced into the cracks or holes. This cement attaches itself very firmly to the wood and after drying retains its smooth surface.—Scientific American.

Profitable Pecan Tree.

A twenty-one-year-old pecan tree bore a crop of 638 pounds of pecans, which sold for 17½ cents a pound. The tree commenced to bear at nine years old and averaged $50 a crop for tweive years. This tree was grown in Florida by Mr. W. A. Lindsay, near Monticello, Florida.

Twelve principal State and County Fairs have adopted the United States Bureau of Animal Industry classification for American carriage horses.

An Iowa man has invented a machine for paraffining butter tubs and boxes.

DON'T BUY GASOLINE ENGINES UNTIL YOU INVESTIGATE "THE MASTER WORKMAN," a two-cylinder gasoline, kerosene or alcohol engine, superior to any one-cylinder engine; revolutionizing power. Its weight and bulk are half that of single cylinder engines, with greater durability. Costs Less to Buy—Less to Run. Quickly, easily started. Vibration practically overcome. Cheaply mounted on any wagon. It is a combination portable, stationary or traction engine. SEND FOR CATALOGUE. THE TEMPLE PUMP CO., Mfrs., Meagher and 15th Sts., Chicago. THIS IS OUR FIFTY-FIFTH YEAR.

Why Her Boarders Did Not Return.

Mrs. Ezra Jewell was mistress of a roomy, old-fashioned farm house, situated on a hill and surronded by a large lawn, much shrubbery and many trees and vines. It was a place attractive to look upon.

The idea came to Mrs. Jewell when she heard that her cousin over in another county had been making a neat little sum for several years by boarding city people during the summer months. There were only her husband and the hired man beside herself, and she knew of a girl who would be glad to come and help her with the work for two and a half a week. So the plan looked quite attractive.

She advertised and within a few days had accepted her first paying guests.

She had agreed to meet them at the depot at four forty-five. They waited until five thirty and then hired a livery rig, for which they paid three dollars to take them out. Had this been the only time Mrs. Jewell missed an appointment, they would have forgotten all about it; but before the end of their stay they discovered that it was Mrs. Jewell's habit to miss appointments. She generally appeared about an hour after the appointed time, always with profuse apologies. Of course, they forgave her, but they didn't always forget it.

When the guests first saw the place they invariably exclaimed over its beauty. But once in the parlor, the front hall, or the upstairs rooms, the exclamations changed to "Phew!" "Mold!" "Give us some air!" for Mrs. Jewell had for years zealously excluded all the light and air she could from her best rooms. You know light has the reputation of being bad for carpets. But once in their appointed rooms, it took not long to open long-closed windows and send fresh air circulating through them.

At night another discovery was made. At some of the windows there was no mosquito netting or screen of any kind, and at others where a netting was still up, it had so rotted away that there were big tears all through it. There wasn't much sleep to be had at night with a thousand mosquitoes (more or less) buzzing about one's ears and feasting generously off one's person.

Mrs. Jewell spent a great deal of work and also money in trying to set a good table for her boarders. But she was naturally a poor cook and her idea of a good meal might have been amusing had it not been rather sad to those who were compelled to partake of it. Meat in some form was served three times a day. But she did not understand the selection of the different cuts of meat, nor did she know the A, B, C of meat cooking. Her vegetables were mostly canned and of a cheap variety. Lettuce, radishes, green onions, asparagus, string beans, green peas and all the other green things for which the boarders looked eagerly in their season were not forthcoming. Her large vegetable garden was more barren of fresh vegetables than many a city back yard plot of twenty-five feet square.

The desserts were usually some heavy sort of pastry. Her eggs were fresh, and the only fault was that she never served them in any style except soft boiled. The oatmeal was abominable, lumpy, not well done, and was eaten with very thin cream or milk. Cream was neither rich nor abundant there, for they shipped their milk.

Many of her guests were business people, and they were all city folks. They didn't want a big fuss made about them, but they wanted the real country, with all of its fresh air, night and day, and plenty of fresh milk and cream and eggs and fresh vegetables and fruits right from the garden. Simple food was what they wanted—the simple life in every way—that was why they answered her advertisement, because it seemed to promise them that.

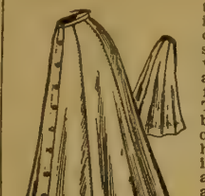
Her boarders left disapointed. They hadn't slept well and they hadn't eaten well. They went back to their work, feeling that they had been cheated out of their summer's rest. Of course they didn't come back the next year, nor did they advertise the place to any of their friends.

According to her knowledge, Mrs. Jewell had done her best, and she is at a loss to account for her failure.—Janet Thomas Van Osdel.

Eight-gored Skirt.

This is May Manton Pattern No. 5955. It is an eight-gored skirt. To be made with inverted plaits or habit back in round or walking length.

The plain gored skirt is an unquestioned favorite of the season and has many qualities to commend it. It is very generally becoming, it is most satisfactory to the wearer and it is adapted to almost all fashionable materials. This one is novel, being closed by means of buttons and buttonholes at the front, and is admirably well adapted to linen, pique and the like as well as to wool and to silk. The buttons, besides serving a practical purpose, make an exceedingly effective trimming. In this instance the lower edge is finished only with a hem stitched with Belding silk, but while this plain, simple style is much used, one wide band above the hem also is in vogue, and again there are a great many skirts made with applied bands, or hems, at the lower edge that are of contrasting material or color.



The skirt is cut in eight gores and can be made with inverted plaits or habit back, also it allows a choice of round or walking length.

The quantity of material required for the medium size is 10⅝ yards 24, 8⅝ yards 32, or 5¼ yards 44 inches wide, if material has figure or nap; 8⅝ yards 24, 5⅝ yards 32, or 3¾ yards 44 inches wide if it has not.

The Pattern No. 5955 is cut in sizes for a 22, 24, 26, 28, 30 and 32-inch waist measure, and will be mailed to any address on receipt of 10 cents; or, if you send 25 cents, we will send the pattern and the interesting, illustrated sixty-eight-page **Universal Magazine** for one year. Address, Hale Publishing Co., 3550 Vista avenue, St. Louis, Mo.

Ought to Live Forever.

A Washington man tells of a dinner he once had at a farm house in Virginia, on which occasion the principal dish was a particularly tough chicken.

Among the others at the table were the farmer's two young sons. These, as well as the Washingtonians, were struggling unsuccessfully to make some impression on their respective portions of the aged fowl, when the youngest boy turned to his companion and observed:

"Tom, somehow I kinder wish old Dick hadn't a-died; don't you?"—Harper's Magazine.

The Condemned Pigs.

A very religious and highly educated mother was explaining to her children the chapter from the Bible wherein is related the incident of the evil spirits being driven into the swine.

Having encouraged perfectly spontaneous remarks from her children, she was not astonished when Gwen, aged ten, remarked that she was surprised to hear the Lord would waste all those pigs when He could do anything, and might just as well have thrown the evil spirits into the sea.

Kathleen, a little older, and a child possessing a rare imagination, took it upon herself to defend the situation by saying: "The Lord did perfectly right. Those pigs had been wandering around eating anything; and if they had been done into sausage, hundreds of people might have died with ptomaine poisoning, so the Lord just destroyed the bunch."—Holland's Magazine.

An Unfortunate Loan.

"Lend me your dress suit? Not on your life!" replied Chief Clerk Moale, of the Transportation Department of the Southern Pacific. "And get it in the neck the way Corrigan did, eh?"

"What happened to Corrigan?"

"Well, two years ago a fellow whom he knew slightly borrowed Corrigan's dress suit to go to a dance. Next thing Corrigan heard was that the fellow had dropped dead of heart disease. Corrigan went to the funeral to do the right thing. When he peeked into the casket he noticed the deceased had on his dress suit. The undertaker had picked it out because it was the only dark suit in the fellow's wardrobe. Corrigan wept real tears when he saw them lowering the coffin into the grave. That was his first and last dress suit. He vowed he'd never get another."—San Francisco Chronicle.

James Jones Escaped.

One day a tall, gaunt woman, with rope-colored hair and an expression of great fierceness, strode into the office of a County Clerk in West Virginia.

"You are the person that keeps the marriage books, ain't ye?" she demanded.

"What book do you wish to see, madam?" asked the polite clerk.

"Kin you find out if Jim Jones was married?"

Search of the records disclosed the name of James Jones, for whose marriage a license had been issued two years before.

"Married Elizabeth Mott, didn't he?" asked the woman.

"The license was issued for a marriage with Miss Elizabeth Mott."

"Well, young man, I'm Elizabeth. I thought I oughter come in an' tell ye that Jim has escaped."—Harper's Weekly.

The Seven Prophets.

"The late Duke of Devonshire," said a diplomat at a recent dinner here, "kept a stud and took a calm and ducal interest in the races.

"There was a certain sporting paper that kept a large staff of prophets and always prophesied the outcome of important races. The Duke, for some reason, put great reliance in these prophets and their prophecies. He always read the paper, and he continually recommended it to his friends.

"But once at Goodwood, at the day's end, a man came up to the Duke and said:

"What of your paper now? Did you see it this morning? Six prophets prophesied that different horses would win, and here only seven ran, and the winner was the seventh, which no prophet had selected. Well, what have you to say now?'

"'All I have to say,' the Duke answered calmly, 'is that there's room for another prophet on that paper.'"—Washington Star.

A Girl's Overdress.

This is May Manton Pattern No. 6021. It is a girl's dress to be worn with any guimpe. Every variation of the guimpe dress is being worn by school girls, and some very pretty and novel effects are shown. Here is one that is trimmed to give the Princesse lines and which is charmingly attractive, while it is absolutely simple and youthful. The dress is made with the blouse and skirt. The blouse consists of the fronts and backs and narrow Mandarin sleeves. It is tucked becomingly and is gathered at the lower edge and joined to a belt. The skirt is straight and laid in backward-turning plaits, the closing being made invisibly at the back.

The quantity of material required for the medium size (twelve years) is 5¾ yards 24, 4¼ yards 32, or 3½ yards 44 inches wide, with 1 yard 32 inches wide for trimming.

The Pattern No. 6021 is cut in sizes for girls of eight, ten, twelve, and fourteen years of age, and will be mailed to any address on receipt of 10 cents, or, we will send the pattern and our nice, sixty-eight-page monthly **Universal Magazine** for one year for 25 cents. Address, Hale Publishing Co., 3550 Vista avenue, St. Louis, Mo.

Was Entitled to Trouble.

Lord Palmerston, Prime Minister of Great Britain, and Sir J. Paget, who told the story, were walking down Bond street. A man came up and saluted the statesman.

"How do you do, Lord Palmerston?"

"Ah, how do? Glad to see you. How's the old complaint?"

The stranger's face clouded over and he shook his head. "No better."

"Dear me; so sorry; glad to have met you. Good-bye."

"Who's your friend?" asked Sir James, when the stranger was gone.

"No idea."

"Why, you asked him about his old complaint."

"Pooh, pooh!" replied the other, unconcernedly, "the old fellow's well over 60; bound to have something the matter with him."—London Globe.

How to Keep Water Cold.

"Having tried it, I recommend the following mode of keeping ice water for a long time in a common pitcher," says a writer in Woman's Home Companion for July. "Place between two sheets of thick brown paper a layer of cotton batting about half an inch in thickness; fasten the ends of the paper and batting together, forming a circle, then sew or paste a crown over one end, making a box the shape of a stovepipe hat minus the rim. Place this over an ordinary pitcher filled with ice water, making it deep enough to rest on the table so as to exclude the air, and you will be astonished to see the length of time that the ice will keep and the water remain cold after all the ice has melted."

Watermelons at St. Louis.

Car lots on track at $130 to $150 for twenty-pound to $225 for thirty-pound melons in well-loaded cars. Jobbing sales in wagon-load lots at 65c. for small to 75c. for large melons per 100 pounds delivered. Sales—Four loads twenty-five-pound Georgia Kolb Gems at 65c. per 100 pounds delivered; two loads thirty-pound and over Alabama and one load thirty to thirty-two-pound Georgia at 75c. per 100 pounds delivered.

THE BALTIMORE GREYS.

Ah! well I remember that long summer's day,
When round about Richmond our broken ranks lay;
Week in and week out, we had been at the front,
And borne without flinching the battle's fierce brunt,
Till, shattered and weary, we needed repose
Ere we met, in death struggle, our numberless foes.
Our knapsacks were empty, our uniforms worn,
Our feet, from long marching, were naked and torn;
But not a man grumbled in rank or in file,
Our hardships we bore with a joke and a smile,
For Stonewall was with us, and under his eye
Each soldier determined to do or to die.
That evening old Jack had us out on review,
When a glance down the line showed us all something new;
Eighty-seven young boys, from old Baltimore,
Who had run the blockade, and that day joined our corps,
Their clothes were resplendent, all new, spick and span,
'Twas plain that a tailor had measured each man.
When we learned who they were what a shout we did raise,
How we cheered our new allies, "The Baltimore Greys."
There were Lightfoots and Carters and Howards and Kanes,
The grandsons of Carroll, the nephews of Gaines;
And as the brave boys dressed up in a row,
You could see the pure blood of Huguenot proud.
But we were old vets of Stonewall's brigade;
We had been fighting so long that war seemed a trade.
And some of us laughed at the youngsters so gay,
Who had come to the battle as if coming to play,
And through all the camp you could hear the rough wits
Cry: "Hello, young roosters," and "dandified cits,"
But the boys took it bravely and heartily laughed
At the hungry Confeds, by whom they were chaffed.
'Till one ragged soldier, more bold than the rest,
Fired off this rough joke, which we all thought the best:
"Boys, you had better go home, 'tis getting quite late,"
When the girlish-faced Captain spoke up and said: "Wait."
They didn't wait long, for the very next day
We were ordered right off to the thick of the fray,
For early that morning we heard the dull roar
Of the guns of our foemen on Rapidan's shore,
And all of us knew, with old Jack in command,
If fighting was near, he'd at once take a hand;
And, sure enough, soon marching orders we got,
And we swung down the road in "foot cavalry trot."
The boys were behind us. I fell to the rear,
To see how the youngsters on march would appear.
Their files were close up, their marching was true.
I reported to Stonewall: "Yes, General, they'll do."
In a few minutes more the action began:
We met the first shock, for we were the van;
But we stood to our ranks like oaks of the field,
For Stonewall's brigade never knew how to yield;
Upon us, however, a battery played,
And huge gaps in our ranks were now and then made,
'Till Jackson commanded a charge up the hill.
We charged. In a moment the cannons were still.
Jackson said to the "Greys:" "Such valor you've shown
You'll veterans be ere your beards are full grown;
In this, your first action, you've proved yourselves bold."
Then the girlish-faced Captain, so straight and so tall,
Saluted and said: "You'll here find us all.
For wherever stationed this company stays."
How we laughed, how we cheered the bold Baltimore Greys.
But the red tide of battle around us still flowed,
And we followed our leader as onward he rode;
Cried: "Good-bye" to the boys, "take care of your guns;
We'll relieve you as soon as the enemy runs."
Ah! Yes, indeed, soon the boys we relieved,
But not in the manner we all had believed.
Alas! the sisters who weep and the mothers who pine
For the loved and the lost of the Maryland Line.
By some fatal blunder, our left was exposed,
And by thousands of Federals the boys were enclosed.
They asked for no quarter—their Maryland blood
Never dreamed of surrender — they fell where they stood.
We heard in the distance the firing and noise,
And double-quicked back to the help of the boys.
The guns were soon ours; but, oh, what a sight!
Every Baltimore boy had been killed in the fight,
Save the girlish-faced Captain, and he, scarce alive,
When he saw us around him, he seemed to revive,
And smiled when we told him the field had been won,
And the Baltimore Greys had saved every gun.
Then Stonewall rode up and endeavored to speak,
But utterance was choked, and down his bronzed cheek
The hot tears were flowing as he gazed on the dead.
"God pity their mothers and sisters," he said.
Then, dismounting, he knelt on the blood-sodden sand,
And prayed, while holding the dying boy's hand.
The gallant young hero said: "General, I knew
That the Greys to your orders would always be true.
You'll not miss a Grey from our final roll-call;
Look around you, my General, you'll here find us all."
Blood gushed from his mouth; his head sunk on his breast,
And the girlish-faced Captain lay dead with the rest.

—War Poem.

FAREWELL! IF EVER FONDEST PRAYER.

Farewell! if ever fondest prayer
For other's weal availed on high,
Mine will not all be lost in air,
But waft thy name beyond the sky.
'Twere vain to speak, to weep, to sigh;
Oh, more than tears of blood can tell,
When wrung from guilt's expiring eye,
Are in that word—Farewell! Farewell!
These lips are mute, these eyes are dry;
But in my breast and in my brain
Awake the pangs that pass not by,
The thought that ne'er shall sleep again.
My soul nor deigns nor dares complain,
Though grief and passion there rebel;
I only know we loved in vain—
I only feel—Farewell! Farewell!

—Lord Byron.

JIM HAYSEED ATTENDS A BALL GAME.

Jim Hayseed hoofed it into town
To see a game of ball—
To see the cranks jump up and down,
And hear the women squall.
He hardly knew just where to go,
Or where to find the pen,
Wherein he'd see the base ball show,
The women and the men.

He lookd around and saw a crowd
Of fellows on the cars,
Who smoked cigars and talked so loud
You'd hear them up at Mars;
The cars that smoothly run along
Without a horse or mule,
With jingle-jangle on the gong,
Just like a boy from school.

Jim got inside the great big fence
And gazed upon the crowd,
That didn't seem to have much sense,
And there he felt right proud.
He thought he'd like to hear the band
Play some camp-meeting tune—
Something about "the golden strand,"
Or, "Roll on, silver moon!"

The day was hot as harvest time,
And everybody cussed
About the dirt, the heat, the grime,
About the awful dust.
Jim never saw a base ball game,
Nor understood the way
The lusty rooters ran the same,
And worked so hard to play.

Now Hayseed did not know the game,
Nor could he tell who won;
But then he thought that all the same
He'd have a little fun;
And when the men jumped up and down
He'd also try a jump;
That while he was in the old town
He'd make the old thing hump.

He saw a slugger swat a ball—
Some others jump and shout,
And then the girls set up a squall,
But Jim said: "Oh, git out!"
Another rooster called out: "Foul!"
(Jim thought it looked right well,)
And then the crowd set up a howl,
And right there just raised hell.

Just then a slugger knocked a ball
Clean out of any reach,
Whereat the noisy crowd would squall,
Send up a mighty screech,
And yell until their throats were sore
Enough to make them sick,
And then begin and yell some more
About some dirty trick.

The heelers then just ripped and squealed
And slung their hats on high,
And scampered wild about the field
When some one caught a fly.
The small boy walked upon his hands,
Or stood upon his head,
Or "turned a wheel" about the sands
Till he was nearly dead.

Jim stepped up to a slugger and
Said he could sling a stick,
And volunteered to take a hand
To show them some new trick.
A small boy shouted: "Put him out!"
A girl said: "Give him taffy!"
Another called him country lout,
And said he must be daffy.

Then the boss rooster of the show
Told him to stand aside—
That there were things he did not know,
That he had better slide.
In fact, he bucked up rather hot
As though he wanted fun.
And when old Jim gave him a swat
The game had just begun.

A police Irisher came up
To try and stop the fight;
But Jim called him a dirty pup,
And led off with his right,
With such a jolt that he went down
And tumbled in the dust;
"Come on," said Jim, "the whole durn town,
And I'll trim off your rust!"

It took the crowd to pacify—
Make plain the thing to Jim—
Who, when he got up on a high
Was rather hard to trim.
His horny fist was like a rock,
His muscle like a trap,
And when he struck there was a shock
As of a thunder clap.

A small boy squealed a squeal at Jim,
And called him country Jake,
Said his supply of sense was slim—
That he had better take
A dose of pills and go to bed
And sober off his drunk—
That he was empty in the head
And gawky in the trunk.

The pretty girls all laughed at Jim,
And offered him a fan,
Said that his hat they'd like to trim,
Make him a handsome man.
One offered him a nice bouquet,
With just the sweetest smile—
Told him that he was on the way
To learn to put on style.

Here even Jim was forced to smile
And bow to all the girls;
He thought the sex was free from guile;
Sweet faces and bright curls.
He wished that he again was young,
And in his youth's bright prime,
He'd sing to them a song he sung
Of rosy summer time.

—D. E. S., in The Farm.

BY THE SUMMER SEA.

"I thought I had surely conquered and lived
down this sharp, old pain,
Till the mighty voice of the ocean wakes it
to-night again,
Makes it throb and torture, to burn with its
fires anew,
As I sit on the sands, Oh, Philip, and long
and yearn for you!

"There are fancies strangely bitter in the
surge of this restless sea,
And hopes and dreams and memories all
rising mournfully;
The waves that are softly breaking, with
starry luster kissed,
Summon a host of phantoms out of the
ocean mist.

"In the years that have fled forever since
you and I first met,
The long years of hopeless passion, the long
years of vain regret,
I have fondly dreamed, Oh, Philip, that I
had mastered quite
The heart that rises up once more in bitterness to-night.

"I have thrust away in silence each loving
thought of you;
I have laid to rest each memory, so tender
and so true;
I have prayed upon my bended knees for
power to forget,
And the answer to that prayer is this—I
love you, love you yet.

"You put me from you sternly, in those
bitter words which said
'That love for me was hopeless, since trust
in me was dead.'
I am nowise better, Philip, than I was so
long ago,
But I love you more, my darling, than you
can ever know!

"Is love so very plenty in this world of pain,
That you cannot let all else go by and trust
me once again?
I would never wrong you, Philip, nor ever
pain you more—
You see, I cast all pride away, here on this
ocean shore.

"My heart seems breaking, Philip, as I
linger, all alone,
And there comes no sound of comfort, save
the ocean's restless moan,
I stretch my arms to heaven, and pray for
your return,
But the hope that dies and the love that
lives can only pant and yearn.

"The cruel sea's between us, with its ceaseless ebb and flow,
And I sigh and wonder and question, will it
be ever so?
Will the distance loom, my darling, ever as
great as now,
When time has left her silver threads
athwart my pallid brow?

"Will there come no end, Oh, Philip, to the
weariness and strife?
Will there dawn no day of gladness upon
my saddened life?
Will the sun go down in darkness, and
peace be only given
When the aching heart is laid to rest and
the sinful soul is shriven?

"You cannot blame me, Philip, that I remember still,
For they err who tell us all things are possible to will!
I would gladly crush forever the heart
which madly clings,
Dog-like, unto the cruel hand that only
strikes and stings!

"But love which is only bitter is very
mighty, too;
And faith is like a magnet—to its needle
ever true!
I would fain be fickle, Philip, and false as
false can be,
As I sit alone and desolate beside the
summer sea.

"But the past is here beside me, in the
purple, starry night,
And her great eyes shine upon me with
tender, mournful light—
Sweet eyes, so full of gentleness, so lovely
in their pain,
That I clasp her back, Oh, Philip, to my
faithful heart again."

—Christiana Reid.

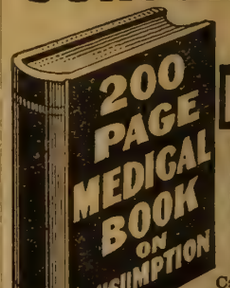
CANCER CAN BE CURED

My Mild Combination Treatment is used by the patient at home. Years of success. Hundreds of testimonials. Endorsed by physicians, ministers, etc. The local application destroys Cancerous growth, and the constitutional treatment eliminates the disease from the system, preventing its return. Write for Free Book "Cancer and Its Cure." No matter how serious your case, no matter how many operations you have had, no matter what treatment you have tried, do not give up hope, but write at once. DR. JOHNSON REMEDY CO., 1233 Grand Ave., Suite 103, Kansas City, Mo.

Consumption Book FREE



This valuable medical book tells in plain, simple language how Consumption can be cured in your own home. If you know of any one suffering from Consumption, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you to a cure. Even if you are in the advanced stage of the disease and feel there is no hope, this book will show you how others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.

Write at once to the Yonkerman Consumption Remedy Co., 2512 Water Street, Kalamazoo, Mich., and they will gladly send you the book by return mail free and also a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful cure before it is too late. Don't wait—write today. It may mean the saving of your life.

In the Home Garden.

A dust mulch is the best antidote to drouth. Keep the hoe busy and you will be surprised at how well keeping the soil loose serves in lieu of moisture.

Nip the ends from the melon vines if you would have early melons. If the plants show a tendency to become spindling, give more nourishment in some form. A convenient and effective method is to dig a deep hole between each four hills and fill in half a pailful of poultry droppings or barn-yard fertilizer. Cover well. When it rains the rich drainage will go down to the roots, inducing a rich growth.

The treatment above outlined is excellent for cucumbers and will keep them bearing large finely-flavored cucumbers all summer instead of retrograding into one-sided, bitter fruits not fit for use.

A piece of poultry netting will sometimes save several times its value in garden products and patience. If you have not a good fence, make an extra effort this year to raise enough surplus of some garden product to buy one, and insist that the allowance be used for this purpose.

A few rows of celery planted in the trenches formed by hilling up the early potatoes will be more easily blanched than if planted on level ground, and the land will thus yield two crops in the season. Celery seed germinates so slowly that it is more profitable to buy the plants than to try to raise them from seed. —Bessie L. Putnam.

AN EXCELLENT ATLAS

Offered as a Premium to be Selected by Those Who Pay One Dollar in Advance For a Three-year Subscription to The National Farmer and Stock Grower.

The subscription price of The National Farmer and Stock Grower is fifty cents a year, or one dollar for three years. We are glad to obtain subscriptions on credit, payable at the end of the first year, but we are better satisfied if the dollar is paid in advance; therefore we offer premiums to induce advance payments.

OUR MOST VALUABLE PREMIUM.

Our very best premium for the purpose of inducing the three-year subscription to be paid in advance is **HAMMOND'S HANDY ATLAS OF THE WORLD,** and it is remarkable what this wonderful book contains.

HAMMOND'S HANDY ATLAS OF THE WORLD consists of 107 pages, 6x8 inches; is printed in colors and is bound in a durable red-cloth cover, just as shown in the illustration. It contains seventy full-page maps of every state and territory, with new railroads and towns.

Every country in the world is shown by maps from the latest plates.

All maps are carefully printed in colors on best cream-laid paper, boundaries distinct, names of towns in graded type, indicating their size. A work of rare beauty and usefulness.

This Atlas contains arranged lists of cities, giving the latest census figures of all states and territories and foreign countries.

The chapter on the United States Reclamation Service, illustrated with a comprehensive map, gives latest and most complete data in regard to irrigation in our Western States.

A detailed description of the final plans for construction of the Panama Canal, accompanied with a profile and complete map of the Canal, is given.

Among other valuable features is a condensed biography of each of our Presidents, with likenesses in half-tone.

The National Farmer and Stock Grower is a nice, clean, general farm monthly publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers.

OUR SUBSCRIPTION OFFER.

We will send you **The National Farmer and Stock Grower** for three years and send you absolutely free, prepaid, **Hammond's 1908 Handy Atlas of the World, all for One Dollar.**

SUBSCRIPTION BLANK.

National Farmer and Stock Grower, 3550 Vista avenue, St. Louis, Mo.:

I enclose One Dollar to pay for my subscription to your paper for three years in advance, on condition that you send me, free and prepaid, one copy of **Hammond's 1908 Handy Atlas of the World,** as per your guarantee above.

Magic Polishing Cloths.

Mix two pounds of whiting and one-half ounce of oleic acid with a gallon of gasoline. Stir and mix thoroughly. In this compound soak flannel rags of the desired size, then wring out and hang up to dry, being careful to keep them away from a fire or open flame. These cloths will give a fine gloss to silverware, will not soil the hands and will preserve their polishing qualities indefiniely. —Woman's Home Companion for July.

Cleansing Silk Fabrics.

"Silk of any kind or color may be cleaned in the following manner," says Woman's Home Companion for July: "For every quart of water to be used in washing a dress, pare and grate one large potato. Put the grated potatoes in the water, which must be cold and soft; let stand two days without being disturbed in any way, then very carefully pour off the clear liquid from the sediment into a large, convenient vessel, into which dip the pieces of silk up and down. Of course, the silk must not be creased by wringing; let it hang and drip nearly dry, then lay it flat on the table and wipe it first on one side and then on the other. If necessary to press it, do so between flannel with a moderate iron."

A Good-Wish Rose.

"A clever idea was carried out at a recent 'shower' for a bride-to-be," says July Woman's Home Companion. "In the invitation each guest was requested to send in, prior to the party, a wish for the bride. The hostess made a beautiful large white paper rose, and before putting it together she wrote on each petal a wish and the name of the wisher. As is usual in most cases, some of the guests forgot to send in a wish, but brought one with them, and others wrote them after they arrived. For this purpose a large paper rosebud had been made, into which the wishes were slipped, and the bud twisted up again. The guest of honor was charmed with the rose and rosebud, and said that she should always keep it as a pleasant reminder of her friends, whom she was soon to leave for a new home in a distant city."

Cushions and Covers.

A nice way to utilize old ribbons and scraps of silk goods is to cut them into fine, even strips as for carpet rags; then sew them neatly together and crochet or knit them into coverings for floor cushions. The material should be cut into short pieces not over a foot in length and sewed hit-or-miss style. Some of the covers are knit on needles the size of a lead pencil and others are made in short crochet stitch, working back and forth across the cushion. If you will save all the turkey and chicken feathers you may have nice down cushions for your covers, but these should not be used for floor cushions, as excelsior or cotton filling is better for these. Save only the small soft feathers and wash them in strong suds, but they should be put in a thin muslin bag before washing; then they should be thoroughly dried near the stove before using. In buying material for covers, it is wise to select fabrics that will wash well, and any of the cotton fabrics or the pretty wash silk covers can be washed without losing any of their beauty by stirring enough Pearline in warm soft water to make a good suds and then washing the covers quickly through the lather. After a careful rinsing they should be hung in the shade, then they should be ironed on the wrong side, and it takes only a short time to launder a number of covers and keep them fresh and new looking. Make two covers for a feather cushion, as one is not sufficient for confining the feathers. Turn the first tick wrong side out, rub beeswax all over it, then iron with a hot iron, and the feathers will not work out. A very good substitute for feathers can be made by cutting up clean, old soft pieces of cloth into quite small pieces, and, after fraying a little with the fingers, fill the cotton ticks with them, and good filling can be made by cutting soft paper into strips three or four inches long and then curling them with a knife or one blade of a pair of scissors.—M. A. T.

The Kansas fruit crop is not very promising, according to reports received and compiled by the Kansas Horticultural Society. The report shows the following percentages for the state: Apples, 39; pears, 26; peaches, 51; plums, 38; cherries, 44; grapes, 62; strawberries, 48; raspberries, 63; blackberries, 70. These percentages are based upon the average crops and are made up from reports from the growers.

Simpson-Eddystone
Zephyrette Ginghams

These remarkable fast-color Zephyrette Dress Ginghams are the result of our new scientific process. Unusually stylish, durable and economical.

TRUST-BUSTING LEGISLATION.

Where It Has Done More Harm Than Good.

(Address by Mr. E. E. Overstreet, of the St. Louis market, before the meeting of the National Live Stock Exchange at Omaha, June, 1908.)

Mr. President and Gentlemen of the National Live Stock Exchange:

I will have to submit this paper with apologies to those who have not had sufficient of what is now familiarly called "trust-busting legislation." I think the country has had enough of it and that we are entitled to a good, long rest. I realize that no matter what may be said here in regard to the injury done by continuous and injudicious trust-busting legislation, it will be unacceptable in certain quarters. It will naturally be displeasing to those who are engaged in the misdirected occupation of hitting at imaginary trusts and in the persecution of business interests for revenue only. And there are such people, and we know it, because we have had experience with them.

It is very difficult to separate the good from the bad in legislation, and even to-day, by reason of new conditions and the establishment of gigantic enterprises, it is not an easy matter to designate the good from the bad in railroad, manufacturing and public-service corporations. The consequence is that attacks have been directed against some institutions which we know to be good, and that is why I am here to say that although trust-busting legislation may be a good thing, it can be misdirected—overdone—and there can be too much of it at one time.

The stock yard interests, including live stock commission men and Live Stock Exchanges, are favorite subjects of attack. If there is no more ground for attack on the great and successful corporations which employ large numbers of men than there is against the Live Stock Exchanges, then I am willing to go on record as saying that there is no good in it at all, and the panic, which indiscriminate legislation and official action brought upon us, was without reason.

There is not much hope that our own particular views will be accepted outside of our business circle and our constituents. The fact of the matter is that although we have a strong opinion of the number of our constituents, we only represent one-third of the people of the United States, whereas two-thirds of the people are against us. One-third of the people are producers of farm and ranch products and desire to have them sold at high prices, and we are the people who perform that service for them, and the other two-thirds of the population are in favor of farm products selling as low as possible, because they have to buy and consume them. I have recently studied the figures of the last census, and in a rough and ready way the people of the United States can safely be classified as one-third farmers, one-third dwellers in small towns, and one-third dwellers in big cities.

It is not over a year ago when the United States in general—producers and consumers alike — were all having a good time. Some few people were not so well favored, but they were unfortunate exceptions, just the same as the few men who have no business troubles now are decided exceptions. A year ago—two, three and four years ago—we were all doing well. I am not going to recapitulate all the good things. This prosperity was commercial, not political. It had grown up by reason of public confidence in the capital and enterprise of American business men. And alongside of this was growing another influence, which can be classed as official and legislative legislation and persecution. The federal government began with regulation, and the states and cities ended with persecution. There never was, and I pray that there never will be again, such a sudden collapse of business. As the song says: "It came right in and it turned around and it went right out again"—and there you have the story. True prosperity has not returned again. Although a few top prices may attract attention, the average stock raiser is not doing well, and the consumption of meats is below the normal average.

The true history of the panic of 1907 will have to record that it was brought about by continuous official interference with business interests. It originated with a lot magazine misinformers, who first misinformed themselves to prove their own false theories, and then magnified their misinformation to others.

The national government is the most concerned in regard to the conduct of railroad affairs and the interstate trade of the large corporations. In this connection Congress has enacted laws in which many of us are in sympathy. We do not wish the formation of giant trusts and uncontrollable monopolies, but it appears that some of these are the least affected. They are not in violation of law because they are large, and cannot be dispensed with for the reason that kindergarten enterprises are no longer adequate to conduct the commerce of the world. And we may safely leave the whole trust question with the National Legislature, because it is too large for municipalities, counties or states to handle. What I complain of is the superabundance of restrictive legislation from so many different authorities, all designed to stampede business and stop the machinery of industry. We are told that this is an "era of conscience." There is not a doubt about it that many reforms are good reforms; but too many at one time are placing good, honest workingmen idle on the street corners. The millionaire may yet be able to pay a high price for a beefsteak, but if it were not for a decided shortage in the beef supply all our efforts to obtain decent prices for our customers' cattle would be in vain. Just at the present time I am in favor of less reform and more work of the meat-eating workingman. We have floods and cyclones and other troubles to contend with, and that is enough for the present.

I saw recently in a government report a sentence to the effect that farmers had not suffered from the financial situation. If that statement was true, I would not have come here to-day. As a matter of fact, the panic started off with a loss of 2 to 2½ cents a pound on every hog in the United States, and one of the later effects was to bring wool down to the lowest range of prices and extremes of stagnation. Even as this paper is written, stock ewes are 2 cents a pound lower than they were a year ago. The declines in beef and stock cattle were equally apparent to every man in the trade. If we have been able to bring about any reaction in live stock prices in favor of our constituents, it is because we are so organized, and armed with right, truth, honor, skill and energy that for and in behalf of our constituents we fight a commercial battle every day, and we do our duty regardless of adverse influences, and we often come out victorious. The panic accounts for scarcity of cattle on feed, and our skill accounts for the high prices paid to stockmen, about which there is so much kicking. I would also like to have it recorded that when cattle do sell for high prices, it is the countryman and not the live stock commission man who gets the money.

Gentlemen — you remember the attack on canned beef. I looked at a ten-months export report ending in March, 1906, and the export was five millions and three-quarters, and in the year following, in the corresponding ten months it was reduced to one million and a third. There are four and a half millions of dollars, the bulk of it out of the pockets of the class of people we are told can never be hurt.

As I said before, the stock yard and commission interests are favorite subjects of attack. Even the farmers and stockmen do not imagine the wonderful services which the stock yards, packers and commission men have performed for them. If they did know, they would defend us. Stockmen have multiplied the live stock product several times over and we have enlarged the markets to correspond. They can enlarge the product again and again, and we will find them markets if we can only stop the officials and Legislatures from pernicious legislation against us. All we ask is to be let alone. We have nothing to hide or cover up. Our transactions are public, our markets are open, the stockman can sell his own cattle without interference. We claim the right to make our own rules and charge for our services and sell our labor just the same as if we were carpenters, bricklayers or plasterers, and in some of the states the Legislatures have set up nights in the attempt to deprive us of the commonly-recognized rights of free American citizens.

I will now mention a few historical facts in the history of the live stock trade. These facts will be stale news to some of you but interesting to others. The purpose is to show in how short a time our great Western live stock markets have done such wonders.

According to United States government report, which is very surprising, the new state of California had the most pork-packing houses in 1860, and Illinois was seventh. In 1865 the Chicago Union Stock Yards were incorporated, although there had been a scattered market there for forty years previous. The cattle trail from Texas to Abilene, Kas., and beyond is credited to the year 1867. In the year 1868 Thomas J. Biggar packed the first hogs at Kansas City and shipped them to Belfast, Ireland. In the year 1871 Texas cattle were being shipped and received by the market at Weehauken, N. J. A pretty good native cattle market was at Albany, N. Y. Butchers paid shippers for estimated dead weight and forgot any allowance for the hide and tallow. The firm of Armour & Co. began packing hogs at Chicago in 1868. In 1872 the first beef cattle were shipped direct from Texas to Chicago. It was in 1876 that the beef-canning business was started by Mr. A. A. Libby. It was in the fall of 1876 that Mr. G. F. Swift began shipping dressed beef from Chicago to Boston, and it was in 1879 that Nelson Morris & Co. opened a packing house in Chicago. Even as late as 1884, at a great meeting of stockmen assembled at St. Louis, the dressed-beef business was under discussion as something new and little understood.

In the year 1870 Chicago received only a half million cattle. It was 1871 before Kansas City passed the 100,000 mark in cattle receipts. St. Louis history dates from receiving 230,000 cattle in 1874, and Omaha did not appear on the surface until 1885. And then for several years it was these four and no more, and now we have in the West the additional markets at St. Paul, St. Joseph, Sioux City, Denver and Fort Worth, and others I may have overlooked. In the West the pork-packing total jumps from fifteen million hogs in 1895 to twenty-eight million hogs in 1907. The farmers received three hundred and fifty million dollars for their year's production of marketable hogs, and I estimate that they lost twenty-two million dollars by the panic.

In the line of sheep production and marketing in the years from 1880 to 1884, the four original Western markets did not equal a grand total of a million a year, whereas in recent years the same markets have reached a grand total of eight millions, and all the younger markets received a fair proportion of sheep. In the year 1886 the four great Western markets slaughtered 1,615,000 cattle, and last year, notwithstanding the number attracted to the new markets, the home slaughter of these four original Western markets increased to nearly five millions.

I do not wish in the slightest degree to detract from the enterprise of the East, but for the purpose of comparison, in order to place before you the great work of the West, I am obliged to say that the Eastern seaboard markets of Boston, New York, Philadelphia and Baltimore have gained but very little in the past twenty-five years. The popular idea is that there is not much slaughter in the East; but there might have been had Armour moved from Milwaukee to New York instead of Chicago, and if all the other packers followed the Eastman example. Twenty-five years ago the seaboard markets were in the habit of receiving a total of a million cattle, and in 1907 the Cincinnati Price Current, our statistical authority, credits them with 1,232,000 cattle. In sheep these markets decreased from 3,500,000 in 1884 to 2,956,431 in 1907. The Eastern hog receipts amounted to 2,638,000 in 1882, and increased to 4,281,000 in 1907. The Western markets increased rapidly and the East stood still, and yet in the beginning the Western markets were only feeding stations for the Eastern shipments.

And the question arises: How is it the immense live stock production is handled so effectively? Why is it that the West rises to any emergency? The answer is the executive force of the Western railroad, concentration of cattle, hogs and sheep at central stock yards, the enterprise of the packer, the soliciting and competitive salesmanship of the commission interest, all regulated in the interest of fair and honest methods by the Live Stock Exchanges.

I wish I could point with pride to any state or national law that had the slightest beneficial effect upon the upbuilding of the live stock trade. I cannot pretend to be acquainted with all the laws, but I understand the effect of many of them. If the Kansas Legislature had its way, the Kansas farmers would now be shipping hogs for sale to New York City. Year after year the stock yards are the plaything of the Legislature. While we are building up the market the state is doing its very best to tear it down. So many are the official annoyances and legal actions against the live stock trade that finally, if it is not stopped, on each head of cattle, hogs or sheep we will have to impose an extra charge to pay the fines and attorneys' fees. If it is a crime to sell the farmers' hogs in the market, and we cannot sell them without being prosecuted, the stock itself will have to pay the cost.

Just think of it, in Texas the Circuit Attorney brought suit against the Live Stock Exchange for penalties amounting to eleven hundred thousand dollars! And the Live Stock Exchange and the live stock trade of Fort Worth, together with the enterprising citizens of that great city, have done more good for the state of Texas than the state government will do in an hundred years. It is an outrage that officers of the law shall have inducements offered them in the shape of rewards for every time they can stick a knife in a public enterprise, and that is my understanding of Texas law. We were not attacked because we were criminal, but because it was thought we were successful and had money.

To my knowledge the Live Stock Exchange is the only perfect organization in the interest of the producer. I believe some of the fruit and vegetable associations are well supplied with selling agencies, but they are exclusive in special interests. The cotton trade is not well served, otherwise they would not be limiting production, neither is the tobacco interest well balanced, or one man would not be destroying his neighbor's crops in order to find a better market for his own. The grain trade entering on St. Louis is particularly happy in being regulated by the Merchants' Exchange of our city. Its rules of trade and thoroughness of inspection methods are accepted without question; but that did not satisfy the Missouri Legislature. So long as another office could be created to draw another salary, the wishes of the greatest mercantile body of Missouri did not concern them. I am glad to say that the law they passed was unconstitutional and is not in force. Many of the bills to regulate industries are really bills to provide for pauper relatives of politicians.

In most of the live stock markets of the Middle West the local Live Stock Exchanges usually make rules for the conduct of business in the interest of honest methods, and where this is done the expense is the lowest and the service is the highest. I challenge contradiction when I say that market charges are the least and the service is the best where the Live Stock Exchanges make rules for the government of the trade. If the Eastern seaboard cities had organized Live Stock Exchanges thirty years ago and reduced their charges as the volume of business increased, we would to-day have greater rivals on the shores of the Atlantic Ocean.

I hope to make it clear before I get through that I am not complaining of federal control of interstate trade or of just laws for the regulation and investigation or inspection and control of meat products with a view to protecting the health of the people; nevertheless there are unjust laws on the federal statute books. One unjust law, a disgrace to civilization, is that one which discriminates against oleomargarine in favor of butter. Both are cow products, and because the packers of creamery products are good lobbyists, and good bulldozers, and good misinformers, they have succeeded in getting a law passed permitting them to color butter artificially and at the same time impose a penalty of 10 cents a pound on the sale of butterine if it is also colored artificially. In the passage of that law the United States Agricultural Department was on the side of class legislation in favor of the creamery combinations and against the general farmer. In ninety cases out of an hundred the butterine or oleomargarine is the better product, and, as a matter of fact, if butter had any standard color it would not have to be colored artificially. I have seen and eaten butter that was whiter than the natural color of oleo or butterine.

Whenever the stock-raising farmers of the United States are determined to have this injustice removed they can be sure that it will add a dollar to every cow or steer that they sell in any market. The whole fabric of the oleomargarine law is based upon a lie, and it is a rank piece of legislation in favor of one end of the cow against the other. If that iniquitous law had not passed, to-day the best buyers of cream in the United States would be the manufacturers of butterine. If farmers will attack this law, they will get the support of the people of the cities who are deprived of the right to buy a good, wholesome, attractively-colored product unless it is taxed 10 cents a pound. To color butter to make it attractive and not to permit butterine to be colored to make it attractive, may be be good in law, but it is injustice and discrimination nevertheless.

With the immense production of live stock of the present day and still greater productions which we are sure of in future, the great question that we have in mind is, how can we provide for the sale of these great products when the means we have are constantly attacked by well-meaning people who are giving us too much of a good thing?

In conclusion, I presume the question will be asked as to what profit there may be in this presentation of the case. The answer is that we are able to do something towards improving the situation. We, members of the Live Stock Exchange, are the direct representatives of many hundreds of thousands of farmers and stockmen. They entrust us with their live stock for sale on the market. We must systematically advise them to disapprove all radical and pernicious legislation. Our Legislatures are full of members who are anxious to do what is right and best under the circumstances. But nearly all pernicious legislation is enacted in the supposed interest of the farmer. The unauthorized demagogue does not hesitate to speak in the name of the farmer, but we, who are his actual chosen representatives, have not yet adapted ourselves to the situation. The consequence is that many of those elected to the Legislature have gone to their duties filled with the belief that all farmers are very anxious to kill off all successful corporations. What we have to do is to advise our constituents that the corporation-busting business is overdone already. It is so bady overdone that the men who ought to have full dinner pails are going to work half time and eating half rations. A St. Louis restaurant keeper has just made a statement that during the period of high prosperity, only a year ago, the average customer paid him 42½ cents for a meal, whereas since the panic set in and during his dullest recent period, the average was cut down to 14½ cents. These figures may appear to be a little wide off the mark, but they actually represent the true situation. We must educate the farmers and stockmen to understand that their own market depends upon the prosperity of the cities; that there cannot be good prices for live stock when it has to be sold in cities which are full of vacant houses or to communities in which one-half of the people are out of work. We must let our constituents understand that the National Legislature is enough when it comes to trust-busting legislation, and that if the state and city governments all continue to play at it, disasters worse than we have already experienced will follow. I am glad a political campaign and presidential election is on; it generally means an unsettlement of business, but this time both great parties are committed to the policy of a restoration of public confidence in business, and I have hopes that we can also induce the farmer and stockman to lend their best influence in the direction which is the only road to their own commercial salvation.

AN IDEAL GIFT TO A CHILD, FRIEND OR SUNDAY SCHOOL TEACHER.

Bible Pictures by J James Tissot Reproduced in All Their Gorgeous Original Colors.

We Offer to Our Readers One Thousand Sets Only at an Extraordinarily Low Introductory Price.

A Real Bargain.

There are two sets of pictures—one from the Old Testament, 120 pictures; the price is $1.00 for the set. The other set is from the New Testament, 120 pictures; the price is $1.00 for the set. These are reduced prices. For two sets, send two dollars by money order.

Send $1.00 to-day and you will receive by return mail a handsome portfolio, size 5x6, containing whichever set you may choose.

The whole world acknowledges that J. James Tissot was the greatest artist that ever lived, so far as Biblical subjects are concerned.

Nothing approaching this work has ever been attempted before. In a series of splendid pictures, the great and impressive scenes in the Bible story are depicted, true in color, costume, landscape and all details to the life, the country and the time.

Only the unparalleled success in the higher-priced editions makes possible this phenomenally low offer now.

These pictures have received the unqualified endorsement of the leading clergymen and Sunday school teachers throughout the United States.

Nothing could be more helpful and interesting and delightful, when one is reading the Bible, than such a graphic interpretation of Sacred Stories.

In no other way can the Bible stories be made so real and actual to children.

Address, **Hale Publishing Co., 3550 Vista avenue, St. Louis, Mo.**

The Kansas City Veterinary College is one of the most successful institutions in its class. Many young men are successful veterinarians who graduated at the college since we first advertised it. We advise all young stockmen who contemplate entering the veterinary practice to write to Dr. S. Stewart, Secretary, 1324 East 15th street Kansas City, Missouri.

Ways For Keeping Cool.

The cool head always leads to success, and those who can habitually adhere to the motto "Keep cool," even when the circumstances are exasperating, has an advantage over his hot-headed adversary. But the temperature to which I refer is one of the entire system rather than the brain, though the necessity for preserving its equanimity is more emphatically pronounced during the heated term.

Farm homes have many natural advantages for protection against heat, yet the occupation as usually carried on is quite against it. The practice of working until noon and then starting out again after the hour nooning and working until five or six renders both man and beast a prey to the most intense rays of the sun. If one will try the experiment of rising earlier, taking a noon rest of three or four hours and working correspondingly late at night during the hottest days, there will still be the same number of hours employed, but at a great saving to man and horse, and consequently more work actually performed.

It is easier to get up at four and work an hour or two before breakfast. At no other time in the day can so much work be done so easily and pleasantly. The music of the birds, heard so melodiously, is then given with a full orchestra. True, there is some work which cannot be done when the dew is heavy; but much of it can, and more might as well be with a little judicious planning ahead.

The same rule holds still more emphatically in household affairs. Those who sleep late find the morning work dragging into the heat of the day, while by starting early one can have it out of the way and be ready to hunt the coolest spot in the house or yard when the heat becomes oppressive. If there are summer visitors, a slight reformation may be necessary, as most of them are accustomed to rising late. But as their usual time seldom corresponds to that of the farmer at best, there must be a compromise of some sort anyway, and it can perhaps be just as easily effected by opening the eyes of the guests to the real beauty of the dewy morn.

If you would keep the house cool, open doors and windows early and late, but keep them closed during the middle of the day Blinds are a great help in keeping out the hot sun. The hose or a small spray pump which a pail of water will supply used on porches will not only keep the plants upon them in flourishing condition, but will materially reduce the temperature if used daily. Shade trees are a luxury which should be found freely on every farm lawn, placing them preferably at the sides, where they will not obstruct the view. The old apple tree has in it more of comfort than the poet can tell, though as a matter of cleanliness the maple is preferable for shade alone, leaving no refuse fruit to be gathered up or become a nuisance.

All in all, the farmer and his family have a better chance to keep cool than the town people, if they will only take it; but they cannot do it by trying to work continuously through the day save for the noontide hour. Rest when the sun is hottest, plant trees for shade and make the most of your blessings.—Bessie L. Putnam.

The Confession of a Husband.

In the July American Magazine a young husband makes a confession. Following is a brief extract from his autobiography:

"Where youth is coupled with intelligence illusions pass rapidly away. Early in my married life it dawned on me that I was going to be at home for a long stay. I realized that my tenure in business, and even my place in my father's family, were insignificant in their importance when compared with this new relation I had established. I saw that it was the greatest contract I had ever signed. I was also becoming conscious of my relative insignificance in the general scheme of things. It appeared less likely that I should be called away to dig the Panama Canal, and more and more probable that I should continue in the daily performance of inconspicuous work.

"Out of all this there came to my wife and me the realization that the greatest chance within our reach lay right there in our two by four house. If the world was unappreciative of our unparalleled talents, the world could go hang. We'd use them ourselves.

"And so we set out to surmount all difficulties. We haven't done that yet, but we have made a start. I have cultivated my wife's relatives until I have come to the conclusion that they are practically as desirable as my own. My wife has pursued the same attitude toward my relatives to the point where she thinks more favorably of some of them than I do myself.

"We never quarrel in the sense that we harbor and nourish feelings of hate. Sometimes we talk loud, but we keep on talking until our voices tone down and become so amiable that it is both safe and restful to break off. I can listen to the reading of choice poetry, and my wife can pretend that she enjoys the dog show. I can sit through the play 'Hamlet,' even keeping my seat while that lunatic Ophelia is on the stage. This is my greatest achievement, but it is more than matched by my wife, who can sit with her back to the wall and appear to be calm while I read aloud Edgar Allan Poe's story of how the rats bothered that fellow in jail."

Advertising Farm Products.

Ie the commercial world the power of advertising is now unquestioned, yet the farmer,with as varied products as some of the business houses, is only in the first stages of the art. What merchant or grocer would depend upon asking this or that one upon the street if he was in need of some salt or a new table cloth, for keeping up his trade? Yet the farmer does virtually the same thing in not advertising his products, but depending upon chance sales.

Within the last decade a notable change has crept into the farm papers, resulting in a large patronage of their advertising pages, mainly for live stock and poultry products. This has added much to the farmer's prosperity, yet there is an abundance of room for more. Honey, maple sugar, home-canned fruit, vegetables and pickles would find ready sale if put before the eyes of the people through printer's ink.

There are many things which might find a local market if buyer and seller only took a little pains to meet. How often a man looks for some special thing in vain, only to find out too late that a neighbor was wanting to sell that very thing. The free want ads. in the local papers serve a good purpose in this direction, though if one has any first-class goods to offer it is best not to rely upon this source of publicity alone. Suburban cars offer splendid opportunities to make public one's supply. And there is no reason why the plain bulletin board may not become as useful to the farmer as to the city dealer. His neighbors will soon learn to watch for it and buy such products as they are in need of. In these days of autos, trade in farm delicacies might be greatly increased. It is only business to let people know what you have and how you sell it; and business methods are fast coming to the farm to stay.—Bessie L. Putnam.

World Renowned For Headache.

We are pleased to number among our advertisements in this issue that of Bromo-Seltzer,the world-renowned remedy for headaches. A delightfully refreshing effervescent salt, which braces the nervous system, invigorates the mind, cures headaches, relieves mental exhaustion, insomnia, nervousness and nervous dyspepsia. The Emerson Drug Company, of Baltimore, Md., manufacturers of Bromo-Seltzer, claim to have sold during the past ten years 125,000,000 bottles of the various sizes, aggregating 580,000,000 doses. This record should be a sufficient guarantee of the merits of the preparation.

The Technique of Home Making.

"Cook, sweep, dust and sew, these four words will never make a happy home," writes the editor in Woman's Home Companion for July. "They do not make sympathy, and love, and ambition, and faith; but they go a long way toward making room for these things. The average bride has a trunkful of ideals, and maybe two trunkfuls of clothes. Her cook book—if she has one and the leaves are cut at all—opens easily to 'fudge.' But unless she has mastered enough pages of this book to get three meals a day, without exhausting her own body and soul, and her husband's, too, she will have little time for clothes and none at all for ideals. She finds herself involved in the mastery of the merest technical details. In spite of her best endeavors, her husband loses his enthusiasm for badly-cooked food poorly served. Perhaps she tells him that he couldn't do it so well himself, and then he tells her about what he can do—perhaps it's soldering a joint or adding up a column of figures or drawing a straight line between two given points—but anyhow he can do it, because it is his business and he has perfected himself in it, and if she—and then Cook and Sweep and Dust and Sew fling wide the doors of that house, and Sympathy and Love and Ambition and Faith made their escape."

The One Man Hay Press is advertised by Tuttle Hay Press Company. See advertisement on page 6.

Mothers! Mothers!! Mothers!!!

Mrs. Winslow's Soothing Syrup

has been used for over SIXTY YEARS by MILLIONS of MOTHERS for their CHILDREN while TEETHING, with PERFECT SUCCESS. It SOOTHES the CHILD, SOFTENS the GUMS, ALLAYS all PAIN; CURES WIND COLIC, and is the best remedy for DIARRHŒA. Sold by Druggists in every part of the world. Century Manufacturing Company.

The Century Manfacturing Company, of East St. Louis, Ill., are said to be the largest sellers of buggies in the United States. They sell for cash or on easy monthly payment plan, and they would be pleased to extend credit to honest people located in all parts of the world, and knowing that the readers of Th

National Farmer and Stock Grower are honest, they would be pleased to extend credit to all of the readers of this paper. Write for free catalogue and in doing so be sure and mention the fact that you saw their ad. this paper. Address, The Century Manufacturing Company, Dept. 98, East St. Louis, Ill.

The Twice-a-Week St. Louis REPUBLIC

is a magnificent newspaper, containing all the latest home, foreign and political news. It is undoubtedly the best Democratic newspaper in the United States. We highly recommend this paper.

The National Farmer and Stock Grower is a nice, clean, general farm monthly publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers,to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. It is published at 50 cents a year, or three years for one dollar.

COMBINATION OFFER.

On account of the interest in the present political campaign we are able to combine both of these papers for the price of one.

SEND US ONE DOLLAR

and we will mail to your address **The St. Louis Republic Twice-a-Week Edition** for one year; also **The National Farmer and Stock Grower** for three years.

Address,
EVANS SUBSCRIPTION AGENCY,
3552 Vista avenue, - St. Louis, Mo.

Saving the Odds and Ends.

These are no more apparent than o the town resident, who must buy nuch that he sees going to waste bout the farm. Little wonder the illagers croak about the "rich old armers," even though the latter feel hat with taxes, insurance and per-aps interest money to raise they ave quite their share of the burdens.

Yet there are many little things hat are of no use to anyone as they tand which might turn an honest enny or be made to serve a less avored friend.

With the careful methods of airying and the appreciated value of ts products there is comparatively ittle waste in that direction. Pigs nd poultry easily take care of any urplus, and they are given full hance to do this. The same may be aid of eggs and poultry, so easily urned into cash at good prices.

With fruit the case is the same, roviding fruit raising is a part of he regular business of the farm; ut if it is only a side issue for amily use there is often neglect. Who cannot recall seeing bushels of Early Harvest apples rot or go to the igs just because there was no local narket of enough value to pay the arvest hands to take the time from he hay field? Where a cider and elly mill is in the neighborhood they re frequently converted into a most elicious jell, which, if not used in its riginal form, makes the basis of the ld-fashioned apple butter

In most localities a local demand ould be created by picking out the est, putting them in baskets and lacing them upon the market for ating. If you furnish butter and ggs to customers, this will be an asy opening for the early fruit, or t may be canned, flavoring with emon, and find sale later.

The same may be said of other ruits. If you have more than are eeded for home consumption, try xing them up in a form that will be alable, and, failing in this, give them way or feed to the stock.

In the vegetable garden there is he same waste. It is difficult to auge the exact amount of each re-uired, so much depending upon the eason and how plants thrive. Yet o be on the safe side and have nough one frequently errs in grow-ng more than they can use. Beans, eas and corn may be canned, and he evaporator adds to the delicious ays of preserving some of the veg-tables. Cucumbers may be made into ickles or salted to dispose of in the inter, and quite a little pin money ealized.

When beets reach the stage that ney will soon become tough and oody, make them into pickles and eal for future use. Summer cab-ages which are bursting to be used n be made into kraut and then aled for use during the heated rm when the ordinary method of eeping in a crock would fail. It is ery conenient to be able to have ese varied relishes to go to when ompany arrives unexpectedly and ill curtail the cash expenses, besides lding variety to the bill of fare.

Look about all the time and try to op the waste, either through sales, fts or putting it into the live stock. ou will be more prosperous and ore happy; and when city friends me who look with a longing not pressed at the stuff which is going waste, let them help you to utilize me of it.—Bessie L. Putnam.

Facts Worth Knowing.

Kerosene is not a nice thing to spill about the house, but if such an accident happens, do not worry, even if a new carpet is defaced. It will soon evaporate, leaving no trace of the trouble. This evaporating quality may be made to work for good. Thus, by saturating a piece of cotton with it and placing in the lower part of a clock that needs cleaning, leaving it shut tight for several days, the fumes will do the work as satisfactorily as if taken to a jeweler. In the case of a small alarm clock the same result was secured by putting the cotton under the hole in the bottom of the clock.

A mill man finds the quickest way to get machine grease from his hands is to wash them with kerosene and then cleanse thoroughly with soap and warm water.

Tansy sprinkled around their pathway will sometimes drive away ants. If this fails, try borax. Different species seem to have different antipathies and must be treated separately.

The best way to clean black silk is to sponge with cold coffee. Cover with a plain piece of paper (newspaper will not answer) and press on the wrong side. The coffee imparts a luster which looks almost like new goods.

Instead of laboriously winding your point lace around a cloth and bottle before washing, try stretching it out on a window pane to dry. Of course, the latter must be free from dust.

A bit of beeswax tied up in a cloth and rubbed over the face of the flat-irons occasionally will keep them smooth.—Bessie L. Putnam.

A Boys' Indoor Party.

It is not a hard task to give a successful boys' party when the sun is shining and the boys can range freely about a good-sized yard, playing anything they choose regardless of noise or space. But when a rain sets in just after twelve sturdy boys between the ages of ten and fourteen have been received, with the promise of settling down into a steady downpour of several hours' duration—well, the outlook is less hopeful.

And that is just what happened at Aunt Ruth's when she was giving Harold his birthday party. She had hoped for pleasant weather, but Aunt Ruth never lets an emergency catch her napping, and when the rain began she came cheerfully to the rescue.

As a starter, she brought out a small glass jar three-fourths full of navy beans and set it on the table in the midst of the boys.

"You'll have ten minutes to guess how many beans there are in the jar," she said, "and the one who guesses nearest right will receive a little prize, while the one who is farthest off will have to count the beans one by one to prove that our estimate is correct."

The boys were all interested at once and at the end of ten minutes everyone handed in his guess. There were two hundred and ninety-eight beans in the jar, and the nearest was three hundred. To that boy was given one of the Henty books, while to the boy who gave five hundred as his guess was allotted the task of proving there were but two ninety-eight in the jar, and the counting of them provoked as much merriment as had the guessing.

"Going to Jerusalem"

was next suggested by Aunt Ruth, and, as Harold understood that game well enough to engineer it himself, Aunt Ruth left the room. As there were twelve boys besides himself, he placed eleven chairs back to back; that is, one chair less than there were boys to play the game. Then he seated himself at the organ, explaining that the boys were to march round the chairs until the music ceased, which might be a second after it started or five minutes. But when it stopped they were to sit down. Of course, one boy was left without a chair, and this one dropped from the game, taking a chair with him. So at last there were only two boys left walking around one chair, and the one who was successful in getting this chair this time was pronounced winner of the game. The boys tried this over several times until Aunt Ruth came in singing:

"Hey Diddle Diddle!
My son John,
One shoe off,
'N 'tother shoe on!"

The "son John" she carried in her hand, and it was nothing more nor less than a large picture of a man, evidently cut from some sort of an advertising bill and pasted on a cloth background. This she pinned up on the wall, and the boys saw that one shoe was missing, but Aunt Ruth had it in her hand with a pin stuck through it and the boys were to be blindfolded and try putting it in place. Each boy had a turn at it, was blindfolded, whirled around a couple of tmes to make him lose his bearings and then led to the one-shoed man. The place of each boy's pinning was marked with his initials, and the one who pinned nearest to the right place was given a box of colored drawing pencils.

Refreshments

came next, and the boys were led out to the dining room. Aunt Ruth always seats boys at the dining table instead of passing refreshments to them, and she knows it is hard for a boy to manage "victuals in his lap without getting crumbs all over creation."

In the center of the table was a big platter piled high with candy and around were fancifully arranged thirteen bon bon boxes. This was a source of much curiosity to the guests all through the meal. At each boy's plate was a tiny chocolate layer cake with a candle in the center. This made thirteen candles on the table and took the place of the big birthday cake, each boy having his own little cake instead of a slice of a big cake.

The refreshments were meat sandwiches, cut not too small, for boys' appetites are hearty, potato salad with cream dressing, lemonade, white cake and the chocolate birthday cake and ice cream.

When the boys had finished eating Aunt Ruth told them to stay at the table while she cleared it off. They looked at the candy knowingly. When everything was in order, she brought in a couple of sticks with a pin run through the end to make a hook and showed them how to play a

New Game of "Jackstraws."

Each boy was given one of the pink bon bon boxes. Then each had his turn with one of the hooks at the pile of candy. The rule of the game was to get a piece out without moving any other piece in the pile. If another piece than the one he was working on was moved, he stopped at once and handed the hook to the next boy. If he got out one piece without moving any other, he had a chance to try for a second piece, and so on. The pieces were put into the boxes to be kept or eaten, just as they chose. The pile was nearly gone when the clock struck five, and as they started for home, each with his box of candy, the boys told their little host and his mother that they had had a lots better time than if it hadn't rained.

"And this neat house would never tell the tale of a dozen boys being entertained here for three hours, would it?" said Aunt Ruth, as she looked about the orderly rooms.—Janet Thomas Van Osdel.

A VERY FINE BLOUSE OR SHIRT WAIST.

This is May Manton Pattern No. 6010. The simple shirt waist made in tailored style is absolutely necessary to comfort, and this one is tucked after an exceptionally attractive and becoming manner. In the illustration it is made of natural colored pongee stitched with Belding silk, and pongee is much in vogue for waists of the sort while it has a great many practical advantages; but the model is appropriate for all the seasonable waistings. Linen and madras, both white and with stripes and figures of color are much used, and this season there is a great fancy for making cross-barred dimities, batistes and the like in tailored style. The waist is made with the fronts and the back. There is a regulation box plait at the center front and a neck-band finishes the neck. The collar is of the turn-over sort and can be made from striped material as illustrated, or to match the waist, as liked. There are regulation sleeves with straight cuffs.

The pattern 6010 is cut in sizes for 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address on receipt of 10 cents; or, for 25 cents we will send the pattern and our interesting sixty-eight-page monthly **Universal Magazine** for one year. Address, **Hale Publishing Co., 3550 Vista avenue, St. Louis, Mo.**

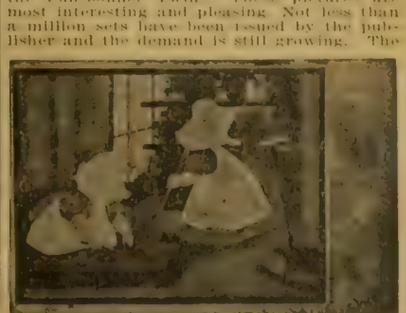
A BEAUTIFUL POCKET MIRROR.

The finest glass ever placed in a mirror is in our handy pocket toilette mirror. It is 1¾ inches in diameter, and is amply protected in a leatherette case. It will last a lifetime. The picture herewith fully represents it. Send us 30 cents and we will send you by mail one of these beautiful mirrors and we will send you for one year the **Universal Magazine.** This is the nicest, brightest, most interesting magazine now published. There are sixty-four pages of choice literature, stories, poetry, etc.

Don't forget to send 30 cents for one yearly subscription and one mirror, or get up a club of four mirrors and four magazine subscriptions for one dollar. Address, **Hale Publishing Co., 3550 Vista avenue, St. Louis, Mo.**

THE UNIVERSAL MAGAZINE A TREAT.

The **Universal Magazine** is published monthly, and is an elegant sixty-eight-page publication. During the month of July we will issue to every new subscriber a set of the famous colored cut-out pictures entitled the Sun-bonnet Twins. These pictures are most interesting and pleasing. Not less than a million sets have been issued by the publisher and the demand is still growing. The



Universal Magazine is fine. There are nice illustrated articles and interesting stories. The subscription price is 25 cents a year including the twelve Sun-bonnet Twins picture supplements. Be sure you ask for the right supplements. Address, **Hale Publishing Co., 3550 Vista avenue, St. Louis, Mo.** Club rates, five sets and five yearly subscriptions for one dollar.

Checkrein on the Work Horse.

[Written specially for this paper.]

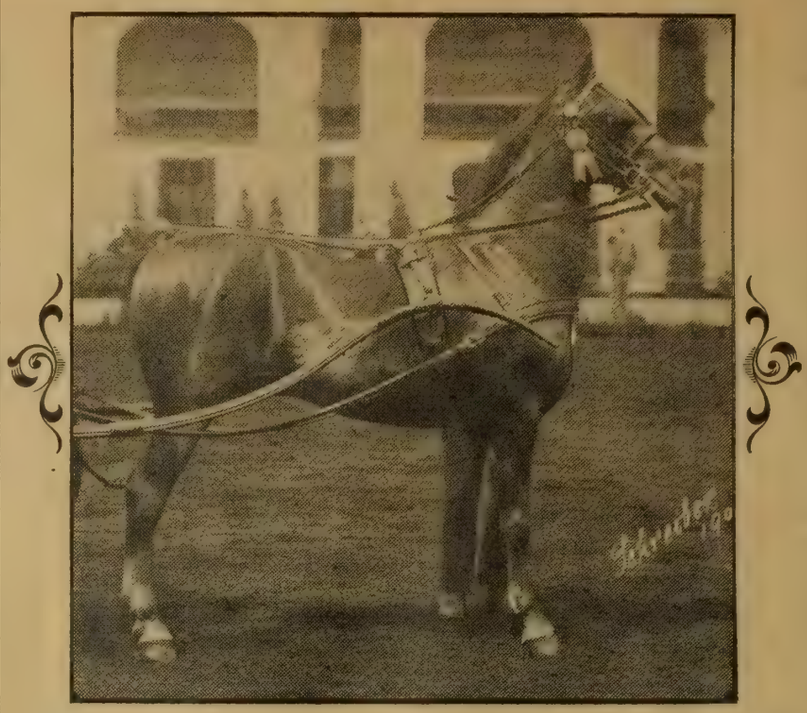
I am one who believes in having a checkrein on the work horse, and do not see how anyone who has ever worked a horse can advise otherwise. There is a wide difference of opinion, as some are for and some against its use at all.

I will give my main reason for being so in favor of the proper use of having the checkrein on the farm work horse. My strongest reason came from watching another farmer who never used any. He worked his horses hard like any other man, but never had a checkrein, and he always had sore shoulders, and this is simple to reason out when we come to think of it. I used to think it was useless and part cruel to have to check up a horse's head when working, but since giving the subject a little more thought I find it is necessary. How a man can work a horse without having a check is more than I can understand.

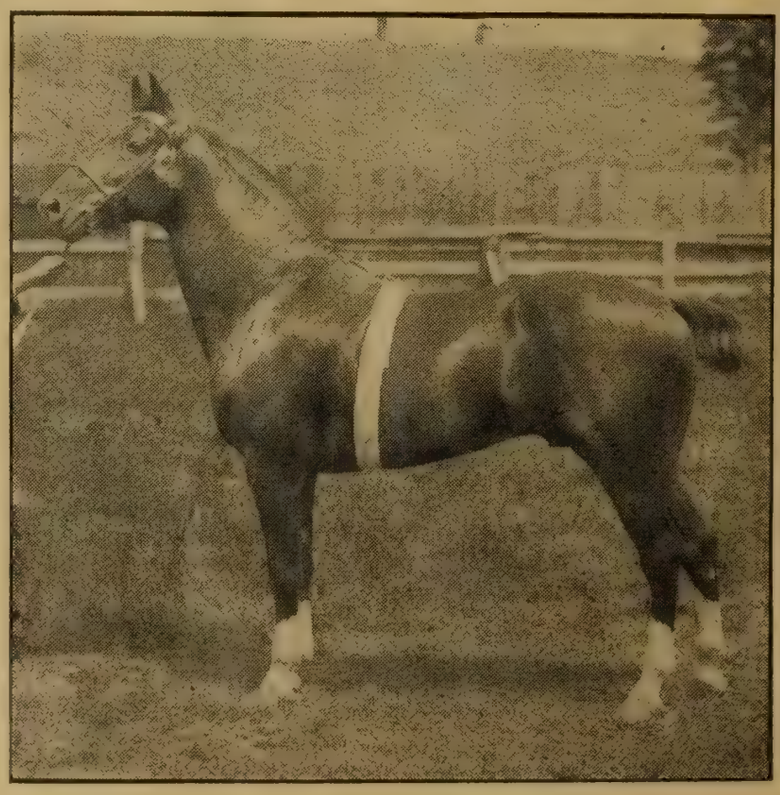
Take, for instance, while plowing, and we have no check on our team, and this is the heaviest work and should be a fair example. You know as well as I that the horse is always putting his head down to the ground and nibbling when he can; it is natural for a horse to do this. I have heard some to tell me that if you fed him enough he would not do this, but this is only a foolish thought, for it makes no difference how much you feed the horse, he will nibble at a blade of grass when he has a chance. No one who has worked a team can say otherwise. At first this eating all the time does the horse no good, and, in fact, is a detriment to his system; it is not good for man to be eating all the time, and neither is it good for the horse. This is only a small reason, and possibly would not amount to very much if it were not for something worse to follow. This nibbling all the time and putting the head down causes the press of the collar to come on the lower part of the shoulder alone and causes more rubbing at that place than it would if it pressed evenly all along the whole shoulder, and a bad sore on the lower part of the shoulder is the result. Some may be ready to say that they have worked horses without the check and did not have sore shoulders, and so have I, but it gives a tendency to rub the shoulder without question, and we should avoid it. We always had to watch the shoulder more closely when for any cause we had to take the check off.

There is a right and a wrong way to use most everything. It is possible to use everything so that it is an abuse rather than a use, and it is in this way, and this way only, that I mean when I use the check on the horse. Do not check the horse so high that he has to look straight up and crook his neck, nor let the check so long that he will be dragging his head, but just check on the natural leved, and this is a wide difference with different horses. Some horses cannot get their heads higher than the level of their shoulders, and some it is natural to hold far above.

In some places it seems to be getting the fashion to drive horses with as little harness as we can. It is getting to be a dangerous fashion and should be discouraged. The checkrein will help control the horse besides and we do not want to do away with it. I consider it a necessity, and want to continue to use it. Do not throw anything off the harness unless not needed, and that does not apply to the checkrein. I hardly know which looks the worse and which really is the worse to see—a horse checked so high to be in misery, or to see his head dragging the ground pulling on the lower edge of the collar. Be humane to the horse and use the check in the proper way. When used properly it is a help to the horse in all ways; but when used wrongly it is torture to the horse. Use all things as intended for good.—E. J. Waterstripe, Marshfield, Mo.



NEWSBOY.—This is the ideal American trotting-bred show pony, winner of 150 show-ring prizes, including the Philadelphia Horse Show championship for horses not exceeding 15.2 hands, in which he defeated a ring of champions. He is a grand little goer, and simply smothered every other horse in the ring. NEWSBOY was recently purchased by Mr. R. P. McGrann, of Lancaster, Pa., and sent by him for exhibit to the International Horse Show in England, where he created a favorable sensation and won several blue ribbons in the greatest horse contest of the century.



OXFORD—Hackney stallion. At the Philadelphia Horse Show of 1908 there was a class for stallions, 15.1 hands or over, and OXFORD was the winner. He was bred by A. J. Cassatt, of Berwyn, Pa., but recorded by Wm. White, of Ithan, Delaware county, Pa., and in 1905, 1906 and 1907 he was winner of many prizes at the great shows. OXFORD is a first-class representation of the American-bred Hackney.

Western Range Horses.

In regard to Western range horses and their value we quote Mr. J. D. Carroll, a prominent New York horse authority, recently interviewed by the New York Herald. He said that he considered the typical range-bred pony of the Western States to be the toughest thing in horsehide that he had ever seen. "Those branded ponies that come from the Rocky Mountain region can do more with less feed and care than any horses in the world," he remarked. "They will actually thrive under treatment that would kill an ordinary horse."

Mr. Carroll says that when he went into the horse business, a branded horse was practically without market value in New York. "Today you can see hundreds of them in Central Park and all around the city. People have learned to like them because they are sure-footed, hardy, enduring and cheap. I know from experience that a man can get more fun for his money out of a range pony than out of any horse he can buy."

The Herald goes on to say:

"In a race from Evanston, Wyo., to Denver, Colo., Teddy and Sam recently covered 560 miles in six and one-half days, doing the full distance at an average of eighty-six miles a day. The contest ended in a tie between these two, the authorities halting them twenty miles out of Denver and requiring them to proceed side by side at a six-mile jog instead of racing into the city.

"Teddy knocked off 112 miles in one day, and the last five miles through a rough canyon was done in the dark in twenty minutes. From Laramie to Denver, 106 miles, the horses traveled with but three-hours' rest. Teddy lost one hundred pounds during the race, having fed badly all the way, but he came out fresh and fine the next mornng, and the opinion was expressed by an expert horseman that either he or Sam could have gone right back over the same road to Evanston at the rate of sixty-five or seventy miles a day.

"Sam's condition at the finish was said to be remarkable. His eye was bright, his coat blooming and his legs in better shape than those of the average pony on the streets of Denver.

"Den, a sixteen-year-old horse of the trotting type, made a performance equal to that of the winners, everything considered. He was thin when he started and was slightly sick at Cheyenne, yet was second in the race all the way to within eight miles of Denver. He lost less weight than any horse in the race, probably because he had less to lose."

See blank for three-year credit subscriptions on page 13. Kindly ask your friend and neighbor to sign and send one in.

National FARMER

Vol. XX. St. Louis, Mo., August, 1908. No. 2.

1908.

This is the best monthly farm paper, and is getting better all the time.

Get in the excursions to Oklahoma. See page 30.

Don't forget the Cement Workers' Handbook on page 32.

Oklahoma lands on the Missouri Pacific Route advertised on page 24.

Any reliable young man who wishes to earn some clean, honest money can do so by representing the Capitol Tailors. See page 28.

Send to the German Kali Works, Monadnock Building, Chicago, and ask for a free copy of the New Farmer's Note Bok. It contains the A, B, C of farming.

The Book of Practical Barn Plans is advertised in this paper on page 19.

We are glad to furnish The National Farmer and Stock Grower three years for one dollar on credit. See subscription blank on page 20.

A few land-bargain advertisements are advertised on page 8, and there are others in the paper.

The U. S. Cream Separator is advertised on page 11. The world's record claimed for clean skimming.

The Sheffield Cream Separator sold on trial on monthly payments. See page 10.

The National Farmer Hat is sent directly from the factory by mail to the wearer. You cannot beat that.

Our farmers' wives will find a splendid Washing Machine advertised on page 23.

Stoddard's book, "A New Egg Farm," advertised on page 23, is the first poultry book we ever advertised, and it always gives satisfaction.

Our breeders on page 17 offer good stock, which it will pay our readers to become interested in.

Do not forget to write Sharples Separator Company and ask for Catalogue No. 232. See page 9.

Practical Farming and Gardening, advertised on page 5, is a splendid book.

Simpson-Eddystone fast hazel brown advertised on page 27.

Buggies for cash or on credit. See page 22.

PURE-BRED BERKSHIRE SWINE ON AN ILLINOIS FARM.—This picture is a reminder that it takes a good hog to top the market and it takes a good market to buy the ever-increasing supply of hogs. Within twenty years from the present time it was difficult to get and more difficult to sell a million hogs a year at St. Louis, whereas now three million hogs a year at St. Louis will not oversupply the market; in fact, when the supply is large at all markets that is when St. Louis looms up in the matter of prices in comparison with the other centers. This illustration is also a reminder that the market demand no longer calls for the heavy-weight hogs. A farmer no longer has to run the risk of losing several 400 to 500-pound hogs just as they are ready for the market. A farmer can raise two hogs of 250 pounds each for less money in one year less time than he can raise one hog of 500 pounds weight, and the 250-pound hogs will top the market and the 500-pound hog will sell at the bottom. The day on which this is written, St. Louis top hogs weighed 246 pounds, sold at $6.80 per 100 pounds, and that was 5 cents a 100 pounds higher than Chicago, 20 cents higher than Kansas City, 30 cents higher than St. Joseph, and 45 cents higher than Omaha. Again, with regard to light hogs—the Agricultural College of Mississippi has just demonstrated that in that state strictly good light hogs, averaging 175 pounds, can be raised and finished at a cost of 2½ to 2¾ cents a pound. On the day we write this article, light hogs were selling at 6¼ to 6¾ cents a pound, and hundreds of thousands are wanted to meet the market requirements. A good, healthy lot of sows can produce two such litters a year, and the country now being opened up on the lines of the Rock Island-Frisco System is splendidly adapted for the purpose and for all other classes of stock raising. In this connection we invite attention to the article entitled "Indian Lands For Sale Cheap" on page 30.

1908.

See advertisement of Columbus Carriage Manufacturing Company on page 11.

Indian lands for sale cheap. This is the time to buy. See page 30.

The National Corn Exposition is talked about in this paper.

Don't forget the St. Louis Horse and Mule Market. See pages 14 to 17.

Learn something about the Corn Harvester. See page 5.

Dietz Lanterns—especially for farm use. See to it that you get the right make. See page 23.

A nice lot of Poetry will be found on page 26.

Universal Magazine advertising is on page 31.

The Twice-a-Week Republic is advertised on page 30.

A sample of Roofing and a Book of Information can be had by addressing Barrett Manufacturing Company. See address on page 3.

Well-drilling Apparatus advertised in this paper on two pages. There is money in them.

All the Farm Telephone advertising is out except on page 11.

The Twice-a-Week Globe-Democrat is advertised on page 6.

The Chatham Fanning Mill comes all right. See page 2. Clean your grain before you sell or sow it.

Portable Gasoline Engines are now the right thing. See page 2.

Horse Remedies are advertised on page 14 in this edition of The National Farmer and Stock Grower and elsewhere.

Cooper's Dips and Tablets are advertised on page 18.

A sheep article by the editor is to be found on page 18.

Long-service Farm Wagons are advertised on page 19.

A splendid Grapevine Subscription Offer is advertised on page 28.

Reliable breeders will be found advertised on page 12.

Trusight Spectacle Company is advertised on page 20.

A splendid line of May Manton Patterns will be found advertised on page 29.

5 Cents a Copy. Published Monthly by The Hale Publishing Co. 50 Cents a Year.

and Stock GROWER

I'll Give You Plenty of Time to Prove that the CHATHAM Fanning Mill is the Best Seed Grader and Cleaner Made

Clean your grain—before you **sell** it—or before you **sow** it. **$1,000,000** lost by Farmers in every state each season by selling **dirty grain** is a low estimate. You are "docked" on the price because of **dirt** in every bushel. Pay me on time for a **CHATHAM Fanning Mill. Cleans** wheat for market. Takes oats, cockle, garlic, mustard and chess out of wheat. Cleans red clover—takes out buckhorn plantain. Cleans alsike clover and alfalfa. Cleans beans, oats, barley. Grades corn. Cleans timothy seed. **CHATHAM FREE BOOK** tells 100 ways you'll profit by having a Chatham. Illustrated—gives terms and low factory prices—full particulars. 30 Days' Trial without any advance payment, to prove it will do what we say it will. 250,000 sold already in U. S. and Canada. Experiment Stations indorse them and Agricultural Papers recommend them. **Write nearest office** for New Catalog.

Does Bare Ground Deteriorate?

Usually, yes. It might not deteriorate if the season were moist enough to permit the land to remain damp without leaching.

This hits the idea of summer fallowing; but summer fallowing is not a good practice in our prairie states where the land is of a mellow character.

The value of the summer fallow is not yet determined. It ought to be best in a humid locality and poorest in an arid locality, yet the opposite seems to be the case, if we can take the practice of farmers as indicative of the progress of facts.

Thus, in the semi-arid lands, where the early writers of Scripture dwelt, summer fallowing was believed to be essential to keep up the productivity of soil.

We have a parallel to this in the semi-arid lands of the Northwest, where summer fallowing is extensivey practiced, and the farmers claim that it is necessary for the purpose of getting good crops from the land.

In many localities in the Northwest the practice is to take two crops off a field every three years. This allows of summer fallowing once three years.

But why should this be more valuable for a dry region than for a wet one? It is difficult to give an answer and know it to be true; but the best explanation is that in humid regions the decay of organic matter is very rapid, and this means that plant food is set free from such organic matter very rapidly. This accelerates the work of the soil bacteria, which depend on the decay of the carbon used in their own organisms for growth, development and multiplication.

Thus plant food is made rapidly and the soil does not have to have a rest period to enable it to provide enough readily available plant food for a good crop of anything.

In dry lands the process of decay of organic matter is very slow, and the preparation of available plant food goes on slowly. In twelve months not enough is prepared to give a big crop of wheat or other staple crop, and the man that tries to farm his land every year witnesses to the fact that he is unable to produce good crops three years in succession.

So he permits his ground to lie idle one year in three. He plows it up and allows it to dry in the sun. He thinks that it is this that gives the benefit, but it is probably not the case. The advantage of the plowing up is that what little stubble, weeds or other vegetation there is on top of the ground is turned under and is thus given a chance to decay.

But does bare ground deteriorate? Yes.

The sun dries up the layer of soil at the surface, and between the air line and the top of the moist layer in the soil is a dry layer in which chemical action is detrimental to both the organic matter and the soil bacteria. This organic matter is destroyed and the nitrogen that comes from its destruction passes off into the air, and is not fixed as a plant food for the use of the roots of plants. To that extent the bare ground deteriorates.

Locating the Farm House.

[Written specially for this paper.]

There are very few well-located farm houses and very many badly-located ones. This is because many of the farm dwellings were located when things were new, and the position of the farm house, as relates to the highway, had not the importance that it has to-day.

To-day many of the farm houses are found to be located too near the highways. One of the great objections is the dust, which flies from under the wheels of the swiftly-passing automobiles.

In the early days the road contained about as much grass as it did dust, and every square food of sod meant just that amount less of dust. The narrow tires cut up the sod but did not raise the clouds of dust that are now hurled into the air by the broad pneumatic tires of the automobiles.

The action of the automobile wheel is a suction. It creates a vacuum, and to fill this the air rushes in under a pressure of 15 pounds to the square inch. The dust is thoroughly stirred up and floats away in whichever direction the wind is blowing.

About half of the time the wind drives it to the farm house that is located within a few yards of the public highway. The farmers that live in such houses say that the discomfort of living near the road has been very greatly increased by the new conditions of travel on country highways.

The farmers that live back several hundred feet from the highways have all the dust they want, but not half the dust received by those living close to the road.

It thus becomes obvious that the country residence should be located as far away from the road as possible. If the highway is a particularly dusty one, it will sometimes pay to violate the laws of landscape gardening and place a barrier of trees or high-growing shrubs in a position to catch the dust before it gets to the farm house.

Where high locations can be secured, they are better than any others for the location of the farm house. This gives a better chance for the sweep of winds in the summer time, and this adds much to the comfort of the people residing in the farm house.

The higher the location of the house the fewer the mosquitoes that will trouble the inmates, and the same is true, in a measure, of the flies.

On roads where dust is not an annoyance it is still desirable to locate the farm house back from the road, to give an opportunity for landscape gardening. With a farm house pushed directly up to the road there is absolutely no opportunity for a good landscape effect. The noise of passing vehicles is always an objection, and is becoming more so as the years go by and country travel increases.

Care should be taken to locate the farm house away from clumps of high trees, especially the conifers. These encourage the attendance of mosquitoes in the summer time and prevent the sweep of the wind, which is most desirable on the hottest days and nights.

Every farm house should be located in reference to the disposal of its drainage waters and possibly of its sewage. The most modern country homes are now being as fully equipped with sanitary arrangements as are the best city homes.

Missouri Woman Quoted by the Government.

In a bulletin on the Farm Home, issued by the United States Department of Agriculture, for distribution to farmers of all parts of the United States, Miss Day, Professor of Home Economics in the University, is cited as one of the leading authorities, and the article is quoted from a paper of hers on this subject published in the last State Board of Agriculture Report of Missouri.

In this paper Miss Day discusses the proper planning of the home and particularly of the kitchen, with its arrangement of sink, stove, work table, etc. She also discusses conveniences of the home that relate to comfort and hygienic conditions, such as proper drains and the farm supply of fresh meat in the summer.

Rusty Milk Cans.

Of the many things which affect the quality of cream, rusty milk pails and milk cans are the worst It is not uncommon to see a creamery patron deliver his whole milk to the creamery early in the morning, fill up his cans with skim milk and let them stand around two or three hours while he does his shopping. Then the cans are taken home and are not emptied until the milk is wanted for feeding. No wonder these cans become rusty. These cans should be emptied at once, washed with warm water, scalded and then put out in the sunlight where they can air. Don't leave the cans sitting around from ten to eighteen hours and then try to clean them up with soap. Scour with salt occasionally and see that the seams are thoroughly cleaned.—L. C. Brown.

PRACTICAL BARN PLANS.

This is the name of the best book out. Every farmer needs it. No matter what kind of buildings he may have on his property, he needs it anyway. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.

A Practical Farm Barn.

Each and every plan in the book is accompanied by a lengthy written description explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

Any carpenter or builder, or even a farmer himself who is handy with tools, can take our "New $5,000 Barn Book" and put up many of the buildings.

A Valuable Work.

We hope we have impressed you with the value of this book and that the nominal price asked is nothing by which the practical value of the book should be measured. This book is 8x10½ inches, contains 156 pages, is handsomely bound in cloth, stamped in two colors, and printed on fine glossy paper. Order to-day while you are in the mood. That's what to do. **Price, $1.00, Prepaid,** including one-year's subscription to this paper.

Whiffletree Injury to Young Trees.

The writer has just returned from a trip of inspection of a young orchard. The call was urgent, but the principal source of trouble proved to be too much whiffletree. A careless hired man had succeeded in barking a number of trees in a ten-acre apple orchard, and then in many instances pear blight had gained entrance. The injuries were thus extended. Some of the trees were dead, but in a majority of instances the blight had died out and the trees were making heroic efforts to heal the wounds. But a wound which extends half way around a trunk is slow in healing, and there is danger of the trunk breaking at that point during wind storms. The loss of a five-year-old tree is considerable, so the owner was advised to bridge graft over the wounds. This can be easily and quickly done by fitting cions over the wound. One end of the cion is slipped under the healthy bark on the lower edge of the wound and the other end under the bark at the upper edge. Two or three cions will usually be enough for small trees. Both edges of the wound where the cions are inserted should be well protected with grafting wax, and if the wound is small, the entire surface should be covered. This work is done in the spring of the year at the time ordinary grafting is done.

The cion may unite along their entire length when the wounds are fresh, but more often they do not do so, consequently the tree appears to have several trunks as it gets older. Such trees live as long and are as strong as though no injury had ever overtaken them.—W. Paddock, Horticulturist, Colorado Agricultural College, Fort Collins.

Get After the Weeds.

Did you ever try to rid a field of Canada thistles? It is quite a job. I was visiting a farmer in Central Illinois a few days ago who had several patches of these thistles in a forty-acre oat field. He was attempting to get rid of the pest by throwing out such bundles as might have thistles bound up in them. He tried it the same way last year, and the result is his field has ten times as many thistles as ever before. This farmer sold nearly all his oats last year for seed, and now, no doubt, some of his neighbors will wonder where their thistles come from. You can't rid a field of thistles in a thousand years by handling them as did this farmer. Those patches should have been cut and burned before the thistles even blossomed. Another very troublesome seed is foxtail. This springs up in the fields and meadows late in the season. Late cultivation and mowing these fields is really the only effective way to attack them. These seeds are long-lived, and if the plants are allowed to mature seeds you will have trouble ahead for several years.—L. C. Brown.

Pasturing Too Close.

The wisdom of shifting stock about from one pasture to another may be seen this year on most any farm. Pastures, as a rule, are not looked after, and the result of this negligence is that they run down until they do not produce one-half the yield they would if they were properly handled. There is continually scant feed when too much stock is put into a field. Every fresh spear of grass is whipped off just as soon as it shows up, and the animals bite so closely that they do much injury to the roots. The best pastures I have seen this season are those which carried really about one-half as much stock as is usually put upon such fields. This gave the grass an opportunity to make a tremendous growth, which will carry the stock through till fall. A pasture laid down with a mixture of grasses which come on at different seasons, and then not overstocked, will supply feed throughout the summer. This is much more profitable than turning in so much stock that the grass is eaten down to the very roots and thus put out of service for the balance of the season. If I had one forty-acre pasture, I should cut it in two, and allow one twenty-acre field to grow while the other one was being fed off. It is surprising how quickly the grass starts up after the stock has been taken off, and the animals seem to do better by changing about. The real secret of good, lasting pastures lies, first, in having the ground in good heart and well covered with grasses which last through the season, and then not crowding in stock to the utmost limit.—L. C. Brown.

Amatite
ROOFING
EASY TO LAY
MINERAL
SURFACED
NEEDS
NO PAINT
Ask Three Questions—Then You'll Buy Amatite
Ask these three questions of your roofing man and you'll surely buy Amatite.
FIRST. Does that roofing have to be painted? If he says "Yes," don't take it, for painted roofings are out of date now.
You can get Amatite, which needs no painting, because it has a real mineral surface to take the wear of the weather.
SECOND. Is it waterproofed with Coal Tar Pitch? If he says "No," refuse it, because pitch is the best waterproofing material known, and you are only sure of getting it in Amatite.
THIRD. Have you anything of the same weight per square as Amatite at as low a price? An honest dealer must say "No."
Any doubts left? Then write for our Free Booklet and Sample, which will prove to you beyond question that no other style of roofing is as economical and satisfactory as Amatite, the ready roofing with the real mineral surface.

The Strawberry Raspberry.

When the fruit growers are not imposed upon by the people who have blight cures or dandelion exterminators to sell, there is sure to be the agent who has a horticultural novelty. These novelties are of divers kinds, but invariably the glowing descriptions would lead one to expect that their introduction would revolutionize the industry. Last spring the Strawberry Raspberry was offered in several sections of Colorado, and a number of sales were made. This berry was represented as being one of Luther Burbank's creations, a production of great merit, price $80 for enough plants to plant an acre of land.

But the facts in the case are that the Strawberry Raspberry is not one of Burbank's productions; it is not new; it is not valuable for its fruit; and instead of being a cross between the strawberry and raspberry, it is a distinct species. This species has been grown in America in a limited way for a great many years, and was reintroduced from Japan, where it is native, about twenty years ago. It was quite widely disseminated a few years later, but it has never developed any commercial importance.

The plants are attractive in an ornamental way, as they make a dense mass of foliage, and flowers are produced through a long period. The berries are large, red in color, and quite apt to crumble, and they are dry, seedy and insipid.

The plants are unusually unproductive, their fruit-bearing habit resembling the wild thimble berry of the foothills, and as a commercial sort they have been no more profitable.

It is usually the safest plan to test novelties in a small way at first. In Colorado in particular, except for local market, the trade demands large quantities of well-known, stable kinds. All these varieties will no doubt be displaced by better ones, but such things take place slowly.—W. Paddock, Colorado Agricultural College.

O. L. Chase, The Paintman, Dept. 79, St. Louis, Mo.

In Coleman county, Texas, Mr. H. Z. Parrott has just purchased 1,600 acres of land formerly known as the William Anson Ranch, for $27,500, which is about $17.25 per acre. The tract includes about 100 lots in the village of Valera, also 200 acres in cultivation. Mr. Parrott is an old citizen of Coleman county, who sold out and afterwards returned because he was not satisfied elsewhere.

WHOLESALE RATES IN TRANSPORTATION.

As Much a Necessity For the Commerce of the Country as Wholesale Prices For Merchandise.

The Secret Rebate Should Be Restored as An Open Rate, or Train Rates Should Be Adopted.

The action of the United States Court of Appeals in regard to the rebate case against the Standard Oil Company of Indiana was pretty generally expected by business men who have all along been satisfied that a fine of twenty-nine millions of dollars is absolutely and positively excessive, no matter what the offense may have been, and that its collection would serve no good purpose and it would demoralize business and probably bring about another panic.

The subject of railroad rebates being again revived, it does not find the people so madly against the proposition as they were. The reason for this is that there has been time for reflection. There never was any reasonable objection to the rebate or drawback system, providing it was open and above board and constituted an incentive to business and was equally available to one man as to another. There never was any reasonable objection to the railroad rebate so long as it represented an honest concession to wholesale business and dividing with the shippers the economical benefits of the wholesale transaction. To participate in such economy was the right of the shipper, and it is safe to say that there never was a rebate granted by a railroad that the shipper was not fully entitled to it. Many rebates were given consequent upon the shipment of a certain number of cars, and the money was drawn and distributed to a certain extent for the benefit of the small shippers who participated in the movement. This was especially so in regard to the long-distance live-stock movement. In early days of live stock transportation that was the case to our own personal knowledge, and it was only a fair business transaction without secrecy. The shippers concentrated their shipments and practically insured the railroads the continual and profitable use of their equipment.

There was a time when many of the rebates were practically wholesale rates, which were right, reasonable, lawful, proper and available. The rebate system at first was the natural result of co-operative effort by business men and railroad to create business. Then began the abuse of the system when a railroad rebate became the secret affair, which was given to one and denied to another, and it brought the system into disrepute. Later on the law was passed making the giving and taking of a railroad rebate a misdemeanor or felony. If we remember right, it was the beginning of the Interstate Commerce Commission. When this law was passed, for as long as twenty-four hours railroad managers did not grant rebates, neither did shippers accept them. Then, as it was discovered that there was no provision for the enforcement of the law, from that time forward the fair use of the rebate was discontinued forever, but the criminal use of the rebate flourished like a green bay tree. To get his rightful wholesale rate one had to be criminal, and so the good and bad alike came into the same category.

It is one of the remarkable evolutions of commercial affairs that almost without protest the legitimate rights of wholesale business have been taken away. And yet this wholesale business is as well established as A, B, C. We buy a cigar for 10 cents, or three for a quarter; a woman buys ten yards of cloth at a dollar a yard or the whole bolt at 95 cents a yard; but the man who ships one load of sheep for an hundred dollars a car cannot get a cent reduction per car, if he buys and ships one hundred or a thousand cars, and the consequence is that only a few cars are moved in certain directions, when there ought to be a thousand.

There is a wide difference between a secret rebate divided between the parties at interest and shutting out others equally entitled to it, and a wholesale rate which is available to all men alike, and there will also be a wide difference between the development of the country with just and free wholesale train rates available to all who can use them and the contraction and idleness enforced by restrictive, uncreative rates, basing the commerce of the United States on the unit of a single car.

The whole country was glad when the Interstate Commerce Commission was placed in a position to insure the enforcement of the anti-rebate law, and this gladness is solely due to the positive discrimination, which was the result of secret rebate giving and taking; but the people who understand business and business methods are not glad that wholesale rates in transportation have been sacrificed together with the rebate.

The wholesale rate is still recognized in passenger service. Excursion rates are put on whenever business can be created thereby. Why business should not be created through train rates (the equivalent to excursion rates) in live stock or dead freight has not yet been clearly stated. If the creator of business is denied a share in the economies and additional tonnage he furnishes, the creator will not be long in the business. Many a beneficial project originating in the minds of active men will die there because of the new laws which to prevent manifest injustice also kill off meritorious enterprises.

What may be called the repressive power in business assumes many indefinable shapes. Opportunities are not taken advantage of because some repressive agency is in the way. One of the greatest repressive influences to-day is the discontinuance of the wholesale rate in transportation, and it is not offset by any increased business due to the disappearance of the rebate.

In our opinion, the country cannot be properly served and encouraged without the full recognition of the wholesale rate in transportation. Under the rebate system the commercial bars were removed for the benefit of favored shippers and put up against others. Under the present regime the bars are up against all. The single car-load unit means limited business under the stress of necessity, but it does not mean activity backed by individual and corporate enterprise.

The situation reminds us of an early experience in railroad matters. A party of innocent shippers went to one high in authority; they complained of a discrimination. The shippers to another market enjoyed a better rate than the innocent shippers did. "All right," said the railroad manager. "We will fix it." And yet there was no apparent change—and they went back again to

SEED WHEAT

62 Bushels Per Acre. — Three hardiest and best yielding varieties in the world. Ratekin's New Malakoff, imported from Russia, has a record of **62 bushels per acre. Turkish Red 58**; each standing at the head of all varieties in yield and quality at the State Experimental Stations of Iowa, Illinois, Nebraska and Kansas. The **Fultz**, the best of all beardless varieties grown. Our seed is all pure, re-cleaned and graded for sowing. Also Mammoth White Rye, and extra quality of Timothy, Clover's Alfalfa, and all kinds of grass and farm seeds. Samples and Catalog **Free**. A postal card will bring them.

see about it. The railroad manager received their complaint, turned to a subordinate official and said: "What did we do in that matter?" The answer was: "We equalized the rate and there is no longer any discrimination." The railroad manager did not reduce the rate for the benefit of the innocent shippers, but raised the rate on the other fellows. The innocent shippers were not satisfied, and as the railroad manager said: "It is a difficult matter to please everybody." That is the situation to-day. The law steps in to prevent discrimination by raising the rate on the other fellow.

Railroad rates used to be based upon less than car lots, car lots and large, continuous shipments. The rates now are for less than car lots and car lots. The rate for large and continuous shipments is done away with. As stated before, in our opinion the rate that has been done away with will have to be restored—if not as an open rebate, then it ought to be an open rate for shipments in trains of cars.

The rate for a single car-load is not broad enough or long enough or low enough or in any way adequate for the conduct of the commerce of this country.

A commodity assembled at a certain station to be shipped in train lots to another certain station is entitled to a better rate than if it was only presented for shipment in single car-loads at different stations. And let train-load shippers and associations of smaller shippers are all reduced to the car-load rate, and they are not allowed to participate in the benefits of the economy of handling and hauling or enlargement of business which they are able to insure to the railroad company.

When we assert that the wholesale rate in transportation should be restored, the first objection raised is that we are giving the larger shipper the advantage over the small shipper. Surely we do not mean anything of the kind. We wish the wholesale rate available to one individual, or one company, or one association of shippers. If one man can comply with the tariff requirements, he is entitled to the rate; so also is a co-operative organization of small shippers. But we have no sympathy with the people who are anxious to kill out large corporations; therefore we would not deprive large corporations of their just rights. The principal difference between a small and a large corporation is the number of mouths to be fed. The corporation that feeds ten families is considered a better citizen than the corporation that feeds a thousand families; but we do not think so. Nevertheless, the small can never become large until the tools are obtained to work with. One of the tools that individuals have enlarged their business with has been taken away from them, and nothing has been done to provide a square deal for the innocent shippers who did not get what they wanted when they appealed to the law.

We know of several proposed enterprises, all of a beneficial character, which are languishing, first, because the projectors cannot give the assurance that railroads would require before they would be justified to put in the service; and, secondly, because in return for that assurance the railroads cannot offer any rates except that which is based upon the single car unit. It is an example of standing still because there is no arrangement for wholesale business except it be on the retail Kindergarten car-load basis.

Judges For Fairs and Corn Shows.

Announcement has been made by the Agricultural Colleges of several Western States that expert corn judges will circuit out this fall and attend many County Fairs and Corn Shows, judging the exhibits and advising the growers what corn will be most likely to win at the National Corn Exposition.

It has frequently been difficult to secure judges who were competent, and this has discouraged many Corn Shows, but the instructors of the Agricultural Colleges have volunteered their services and will make many small shows possible.

Farmers have discovered that the best types of corn do not contain fourteen pounds of cobs to the bushel, and the grower who has 1,000 or 2,000 bushels of corn to spare, shells it and keeps the cobs for fuel. He sells the corn shelled at 56 pounds to the bushel instead of 70 pounds on the cob, and finds that he actually markets more bushels. This makes large corn shellers in demand in every neighborhood. A sheller large enough to be used by half a dozen neighboring farmers is offered for club exhibits at the National Corn Exposition. To qualify in the competition for this corn sheller worth $400 there must be five exhibits of ten ears each in the club assortmenet. As the grain and implement dealers have signified their desire to aid in winning these corn shellers, one of the five exhibitors may buy the ten ears of corn.

Some of the dealers are arranging local contests. The judges from the Agricultural Colleges will attend and judge this corn. The best exhibits will be sent to the National Show to compete for the big premiums.

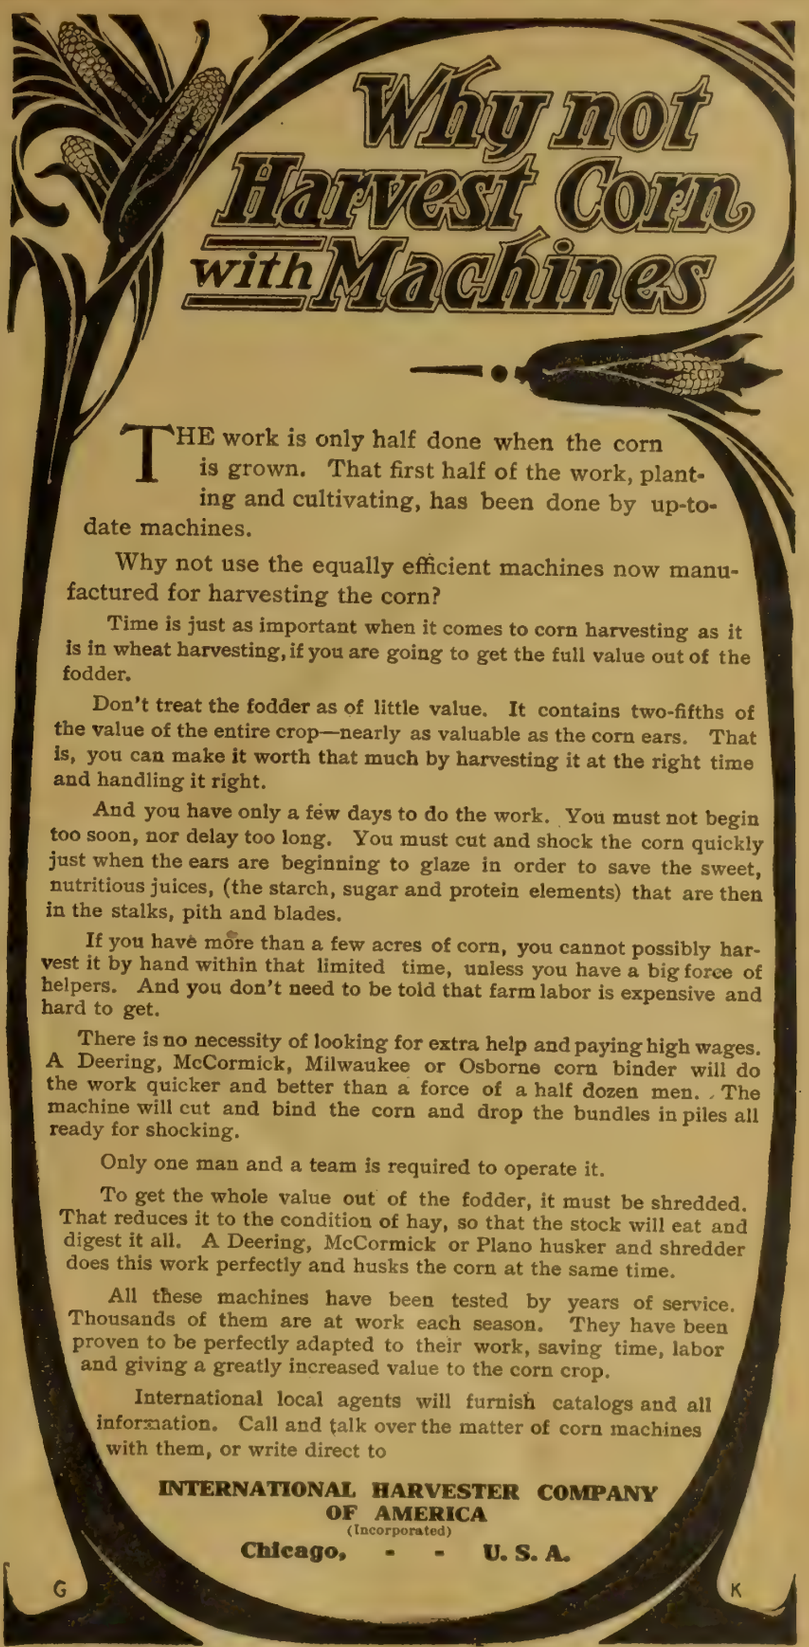
Feeding Silage With Alfalfa.

Some dairymen seem to think that alfalfa makes better feed for their cows than corn silage. The two may be fed together very profitably. Silage is rich in carbohydrates and low in dry matter and protein, while alfalfa is rich in just the things which silage lacks. Together they make a first-rate ration for cows which are not being pushed. For cows in full flow some grain or other concentrated feed should be added to the silage and alfalfa to give a perfectly balanced ration. Good corn silage is the ideal food for cows. It may be fed any time during the year with good results. Cows will greedily eat it when they are upon the best summer pastures, while for July and August feeding it comes in mighty nice. If you have been feeding silage, don't give it up, but put up all the alfalfa you can and feed the two together.—L. C. Brown.

Reseeding Old Meadows.

In making and preserving permanent meadows there should be more or less seeding done every year. This idea does not coincide with the methods of some extensive hay growers in Northwestern Iowa, but their methods make hand seeding unnecessary. These farmers grow clean timothy expressly for city horse feeding, and they allow the timothy seed to become pretty hard before the crop is cut. Of course, at this stage of maturity much of the seed shatters in cutting and handling, and this keeps the ground constantly stocked with a fresh supply of seed. But not many meadows are handled that way, for the crops are taken off the land before the seeds have time to harden. During the next few weeks is a good time to scatter seed over the thin places in the meadow. Put it on good and thick. Where there is quite a large acreage of hay to put up, some of it is bound to get ripe before you can get to it. Here is a chance to get your supply of fresh seed. With a tight bottom in your hay-rack you can rake up all the seed you will need. Rake up chaff and all and scatter this in time to get the benefit of early fall showers.—L. C. Brown.

We ought to have a National Dairy Law that is not oppressive and that states and cities could enforce. The legal conflicts and knock-outs could then be done away with and the dairy interest would know what to do. Have we a National Dairy Association to draft such a law?



Why not
Harvest Corn
with Machines
THE work is only half done when the corn is grown. That first half of the work, planting and cultivating, has been done by up-to-date machines.
Why not use the equally efficient machines now manufactured for harvesting the corn?
Time is just as important when it comes to corn harvesting as it is in wheat harvesting, if you are going to get the full value out of the fodder.
Don't treat the fodder as of little value. It contains two-fifths of the value of the entire crop—nearly as valuable as the corn ears. That is, you can make it worth that much by harvesting it at the right time and handling it right.
And you have only a few days to do the work. You must not begin too soon, nor delay too long. You must cut and shock the corn quickly just when the ears are beginning to glaze in order to save the sweet, nutritious juices, (the starch, sugar and protein elements) that are then in the stalks, pith and blades.
If you have more than a few acres of corn, you cannot possibly harvest it by hand within that limited time, unless you have a big force of helpers. And you don't need to be told that farm labor is expensive and hard to get.
There is no necessity of looking for extra help and paying high wages. A Deering, McCormick, Milwaukee or Osborne corn binder will do the work quicker and better than a force of a half dozen men. The machine will cut and bind the corn and drop the bundles in piles all ready for shocking.
Only one man and a team is required to operate it.
To get the whole value out of the fodder, it must be shredded. That reduces it to the condition of hay, so that the stock will eat and digest it all. A Deering, McCormick or Plano husker and shredder does this work perfectly and husks the corn at the same time.
All these machines have been tested by years of service. Thousands of them are at work each season. They have been proven to be perfectly adapted to their work, saving time, labor and giving a greatly increased value to the corn crop.
International local agents will furnish catalogs and all information. Call and talk over the matter of corn machines with them, or write direct to

Dirty Oat Fields.

The "Succotash" fad is mostly responsible for the mixing of our grain fields. While a patch of this mixed grain is all right for home feeding, yet it is a poor policy to allow the mixture to creep into the general fields. In Northen Indiana and Southern Michigan a clean field of oats is rarely seen. These fields are mixed, more or less, with barley, and in some cases with wheat. I have never seen such dirty fields. The thing to do is to start with a clean supply of seed. The easiest way to get that clean seed is to go over a part of your oat field and pluck out the barley heads. At the time I inspected the oat fields mentioned, the barley was heading out, and unless the field is too badly mixed, it is not a big job to pluck out these heads from four or five acres. I have never found a mill that will clean barley out of oats, so it won't do to take chances of getting clean seed, after the grain has been threshed. Of course, if your oat field is badly mixed it may be cheaper to start anew, and buy clean seed, only make sure when buying seed oats that they are absolutely clean. It is difficult to find clean oat fields anywhere, and absolutely clean seed must come from hand-picked fields. A correspondent this week asks about this very thing. He bought seed oats last spring. He examined it before sowing and did not discover any foreign seeds, but barley heads are now showing up all over his field. He has tackled the proposition right. After a rain last week all hands and the boys and girls went over three acres and cleaned them of both barley heads and also of weeds that might ripen seed by the time the oats were cut. If this work is now followed up, by cleaning out the threshing machine before starting on the grain wanted for seed, one should get absolutely pure and clean seed for his next sowing.—L. C. Brown.

Get Busy With the Scythe.

Weeds we have with us always in the pastures. Now is a good time to whet up the scythes and start in to down the big, coarse fellows that seem to thrive best during July and August. There may not be many of these coarse weeds, but get after them right now. This is the time when overpastured fields are apt to be short on grass, and weeds seem to creep in and cover the ground. Mow them down. Weedy pastures usually indicate impaired land. Don't be afraid you will waste your manure if you put it on your pastures. Put on the manure and scatter seed on the thin spots. That's the best way to crowd out the weeds.—L. C. Brown.

Where to Put the Manure.

Within the same township I saw recently three farmers applying manure to land, and each was doing the work differently from the others. One was scattering well-rotted cattle-yard manure on his meadow fields. That was good, except that he was doing the work by hand. If a spreader had been used, one would not see the uneven growth which was noticeable all over the ground where hand-spreading had always been done. On another farm the manure was being scattered on plowed ground, which was to be put into wheat this fall. This field was clover sod. Here were two hurtful practices. In the first place, this ground was plowed too early, and manure applied on such ground is apt to produce too rank a growth. The straw will be heavy and coarse, and the grain will not fill as it would in ground not manured. The worst field of lodged wheat I ever saw was one where manure had been applied to the clover and turned under for corn the next year. The corn crop was then followed by the wheat crop. On a third farm the manure, hauled directly from the horse stable, was being scattered between the corn rows. This is a poor practice. To get the maximum results from manure on corn ground, it should be thoroughly mixed with and assimilated by the soil.—L. C. Brown.

Turning Stock Into Corn Fileds.

A correspondent asks whether it will be profitable to turn hogs into corn as soon as it is in the roasting-ear stage. While old corn is high yet, it will not pay to hog down corn so early. I should carry the hogs along either by feeding old corn or substituting other feed, and would begin to cut up the new corn as soon as the ears were pretty well glazed. Feeding at roasting-ear stage is most wasteful, for at that time it contains only a small per cent. of nutriment, and really will not do the hogs half as much good as corn that has a month's more growth.—L. C. Brown.

Sowing Alfalfa Among Apple Trees.

A subscriber asks whether it will do to seed an apple orchard down to alfalfa.

I do not favor sowing any kind of a permanent grass crop in the orchard, simply for the reason that the roots of the growing and bearing trees will require all the strength there is in the soil, and, besides, these trees will need all the moisture in the soil. Alfalfa would no doubt be injurious to the trees, because its roots will work down deep into the soil. During the first three years after an apple orchard has been set out the ground between the rows may be put in some cultivated or hoed crop; but when the trees begin bearing I believe in giving them free swing. Clean cultivation and frequent cultivations during spring and early summer will keep the trees thrifty and they will produce a much better quality of fruit.—L. C. Brown.

Economy in High Fertilizing.

[Written specially for this paper.]

Few cultivators of the soil appreciate the economy there is in the high fertilization of ground. By the application to the soil of a great deal of manure or other fertilizer we greatly increase the crop without at the same time increasing the cost of producing it.

No matter how big a crop is grown on a piece of land, the taxes are not thereby increased. Yet it is possible to double many of the crops grown by a large increase of the plant food in the soil.

On land that has been heavily fertilized the cost for plowing is no more than on another piece of land on which no fertilizer has been placed. When we consider the cultivation of the ground, we find that a piece of land that is producing a strong growth of the plants we are raising requires very much less cultivation than a piece that is not producing an abundant crop.

We have been impressed with this fact in the cultivation of strawberries. Where the land was very rich the matted rows were so vigorous that no weeds could get a start in them and the little strip of ground between the rows was easily attended to.

Also, the ground in the shelter of the large leaves was always in a moist, mellow condition. This was of great advantage to the plants and to the ground.

In that state the nitrifying bacteria work with facility, for they require moisture, air and shade. These minute forms of life play a large part in preparing the nitrogen in the soil and in the air for the use of plants. The better the growth of herbage on the soil, the better do they work.

Where plants grow so luxuriantly as to shade a large part of the soil the loss of humus is greatly lessened from the burning up of the organic matter in the surface soil. This organic matter is indeed being destroyed, but its destruction is furnishing carbon for the use of the nitrifying bacteria, if the ground be not dry.

If any man will watch the process of growth he will notice that plants do not grow much when the soil is dry and hard around the plants, on account of the plants standing so thin on the ground that the sun gets through to the ground and dries the surface.

This condition does not usually occur on ground that is so well fertilized that the plants produce great, glossy leaves.

One of the great advantages of high fertilizing is to enable the plants to stand drouth. This fact was once impressed on the writer by a field of tomatoes. In one spot in that field a load of manure had stood all winter and the fertility from it had been washed into the ground. Also, when the pile was spread, much of it was left on the spot where it had stood, and this was forked into the soil.

The succeeding crop had to pass through a long dry spell in the summer. The vines on most of the ground showed how greatly they were affected by the lack of rain; but the vines on the overfertilized spot remained vigorous all through the summer. They had evidently been able to send down their roots into a moist layer of soil from which they were able to gather enough moisture for their needs.

How to Prepare Sheaf Grain and Grass Samples For Exhibition.

The importance of an early selection of samples of small grains for the sheaf display at the National Corn Exposition to be held at Omaha, December 9th to 19th, 1908, should not be overlooked by the intending exhibitors. The greatest care should be observed in making these selections; only the very choice straws carrying fully developed heads. Cut these off close to the ground with a sharp knife. When large bundles have been secured, sort them over for uniform typical heads and uniform length and perfectness of straw.

The process of curing is the next feature of the work. Spread the selected samples out on the grass to bleach and cure in the sunshine, being careful to keep them guarded from all moisture, rain or dew, until they are well cured, which may require from one to three days, depending upon the weather and the ripeness of the straw when cut. As soon as they are in a satisfactory condition of outdoor treatment, strip the blades off carefully, so as not to bruise or break the straw.

The reserve samples may now be collected into small bundles, not to exceed one to two inches in diameter, tie them with muslin or other soft string and hang up in a light, dry room, heads down, and let them hang until perfectly cured. These smaller bundles are usually consolidated into larger bundles or sheaves of approximately four inches in diameter and tied with ribbon; one band just below the heads, one at the center of the sheaf, and one four to six inches from the butt of sheaf.

These sheaves may be loosely wrapped with cheese cloth. Some of the best expert exhibitors let the small bundles hang from the ceiling until ready to exhibit, then put them into larger sheaves, believing that the hanging position is the safest and best for retaining the shape of head and making a bright, attractive exhibit. All samples for exhibition should be kept free from dust and away from mice and the house fly, as all these are damaging to exhibition quality.

In grasses the reverse condition applies in their preparation for show. All samples when gathered should be cured in a dry, dark place, and be excluded from the light and air by wrapping and storing where they will return their natural green and fresh appearance.

Camping Out at State Fairs.

Many of the State Fair Associations have provided tenting space for families who wish to live out during the Fair week. The arrangement is an admirable one, and we are glad to see the number of people taking advantage of it growing every year. To get the most enjoyment out of such a week's stay on the Fair Grounds, there are some things which should be looked after. The tents should be good, servieable ones, absolutely water-proof. They should be pitched on well-drained ground and firmly staked. Insist upon all of these things if you rent a tent for the week. Then keep things tidy about your own premises, and last, but not least, put your name, in big, bold letters, across the front of your temporary home. This will enable your friends to find you. If you have never tried this tent life, do it this year, and arrange your home affairs so that each member of the family can be at the Fair one or more days. —L. C. Brown.

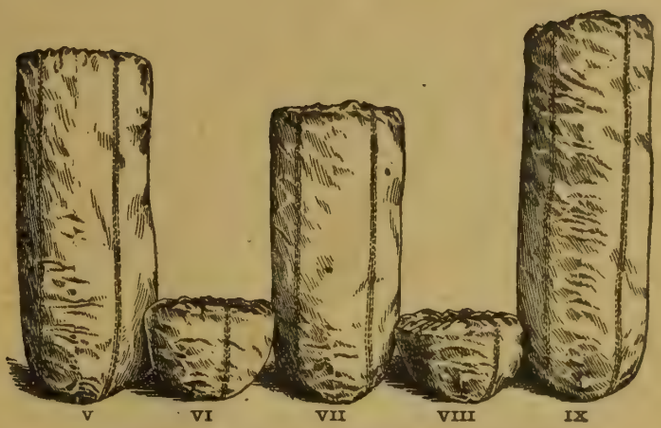
Shabby Handling of Oat Ground.

The costly lesson of last year has not been enough. A good many are getting a second dose this year. Of all our farm crops, oats are given the least thought. Any corn ground is considered good enough for an oat seed-bed, and just so the seed is covered is about all that is done on many farms. I saw a field last week where the oats had been cultivated in on stalk land. Evidently wet weather came on before the harrow could be used, for the ridges were just as they were left at the last cultivation of the corn last season. There was not over 60 per cent. of a stand, and all the oats that would amount to anything was along the corn rows. That sort of farming will not make oats, or anything else. Where oat ground was properly double disked and harrowed until the surface was smooth and fine, the stand is heavy and the crop ripens uniformly over the entire field. Just observe this season how the oat ground has been handled where the heaviest and most oats are grown.—L. C. Brown.

POTASH

Some Practical Results

Experiment at Lexington, Ind., by A. G. Mace



Experiment at Marion, Ind., by P. R. Edgerton

I	II	III	IV	V	VI	VII	VIII	IX
Yield 24.8 bu. Fertilizer 300 lbs. of 3-10-2½	Yield 21.3 bu. Fertilizer 300 lbs. of 3-10-0	Yield 30.8 bu. Fertilizer 300 lbs. of 3-10-**5**	Yield 4.2 bu. Fertilizer None	Yield 29.1 bu. Fertilizer 300 lbs. of 0-8-**6**	Yield 7.6 bu. Fertilizer 300 lbs. of 3-0-**6**	Yield 25 bu. Fertilizer 300 lbs. of 3-8-**0**	Yield 6.5 bu. Fertilizer None	Yield 33.8 bu. Fertilizer 300 lbs. of 3-8-**6**

The first figure in last line of each table shows per cent. of Nitrogen; the second, Phosphoric Acid; the last (in bold type), **Potash**

Make This Year's Results the Basis of Next Year's Plans

Remember: Potash Results Are NOT Compared with Crops from Unfertilized Lands, but WITH Crops from Fertilized Fields

¶ It has been shown, proved, demonstrated, time and time again, by actual field results, secured by practical farmers, that most commercial fertilizers on the market do not contain enough Potash to get all the profit possible out of the land. They are unbalanced, incomplete in root-vitalizing, stalk-strengthening, grain-making Potash.

We Say: Potash is Needed not only to Improve Your "Poor Land," but to INCREASE THE CROP from Fertilizers on Your "Best Land"

¶ We can prove: Potash makes fiber, prevents lodging and fungus diseases, forms and transforms starch, gives plumpness to the grain and increases its weight from two to six pounds per struck bushel.

¶ Potash and phosphate give the big yield. The more Potash, the bigger the yield. In the experiment by Mr. Mace, 15 pounds of Muriate of Potash increased the yield 3½ bushels, but 30 pounds increased the yield 9½ bushels, at a cost of only 75 cents. In Mr. Edgerton's experiment, 36 pounds of Muriate of Potash increased the yield 8.8 bushels, at a cost of 90 cents. Both experiments show that it is very profitable to add a suitable amount of Potash to the ordinary fertilizer. To bones or plain phosphate add 15 pounds of Muriate per 100. To 2-8-2 add 10 pounds per 100. Mix well and drill when seeding. 2-8-6 is a good wheat formula. All are needed—but be sure of the Potash. Potash is Profit.

It Will Pay You and Pay You Big

See your dealer—ask him to call—make your arrangements now. All dealers sell mixed goods—phosphate and bones. Few carry Potash in stock. Therefore, arrange for it in advance, now.

GERMAN KALI WORKS, 560-3 MONADNOCK BUILDING, CHICAGO
New York—93 Nassau St. Atlanta, Ga.—1224 Candler Bldg.

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published Monthly
By THE HALE PUBLISHING CO.
Philip H. Hale, Managing Editor.

Charles H. Hopkins, 150 Nassau street, New York City, Eastern Representative.

Entered at Postoffice at St. Louis, Mo., as second-class matter in January, 1901.

Subscription Price in the United States, 50 cents per year, or three years for one dollar.

Office of Publication, 3550 Vista avenue, (corner of Vista avenue and Carr Lane avenue), St. Louis, Mo. Bell Telephone: Grand 400.

The Blue Grass Fair at Lexington, Ky., leads the show dates of the present year. The Blue Grass Show opens at Lexington, August 1st and continues until the 15th. The Iowa State Fair at Des Moines opens August 20th and continues until the 28th. The Nebraska State Fair at Lincoln commences August 28th and continues to September 4th. The Ohio State Fair at Columbus and the Minnesota State Fair at Hamline both open August 31st.

We are now told that the greatest money force is behind the suburban electric railway sytems; that within a comparatively short time the Western States will have what they already have in Ohio—each 2,300 miles or more of electric railroad—carrying passengers, eggs, poultry, milk, fruits and vegetables to market and competing with steam railroads. Indiana, Michigan and Illinois are already strongly in the business and the capitalists are now organizing to perform marvels in construction. The best farming sections are to receive the earliest attention.

The greatest act of friendship which anyone can perform for a publication is to recommend it to others. We feel that our friends are helping us and we can assure them all that their kindness is highly appreciated.

Common Market Conditions.

Every once in a while we read that there is no change in the price of wholesale or retail dressed beef or dressed mutton. The supposition is that all a packer or butcher has to do is to name a price and get it. Nothing is farther from the truth. The buyer in market who pays either fifty or an hundred dollars for a beef steer often has a sweet time getting his money back again, and there is not any one of them who can guarantee that he will do so.

Common principles of business are plain enough; but all people are not conversant with them. It is the business of the cattle raiser to sell his cattle as high as he can. When this is done he has done all he can. The wholesaler who bought the cattle then has his duty to perform, which is to sell the beef at wholesale as high as he can. The retailer who has bought the carcass as best he can then takes his turn, and it is his business to cut it up and retail the meat to the best advantage. There are plenty of influences depressing the market without the stock raiser taking a hand at it.

If the retailer is losing money, he is a bad influence on the market. If the wholesaler is losing money, he is a bad influence, and when the stock raiser goes home with less money than the stock cost him, he also is a bad influence, because he has returned without profit.

Every business has suffered during the past year. Many wealthy and good men have had their incomes frightfully cut down. Many retired people living on incomes from stocks and bonds in great enterprises have had no income at all; many land and house owners have had no incomes. Factory owners have had idle factories; workingmen have been out of work months at a time.

There is a word passed from one end of the business world to the other, which, being interpreted, means "Stop your kicking!" Clear the road of impediments! If you are a kicker—kick yourself. If you are a reformer—reform yourself. The programme to-day is for every man to attend to his own business and make some money so that he can buy something. We have a political campaign on hand, and that is trouble enough.

Indian Lands For Sale.

We desire our readers to give special attention to the advertisement of the Rock Island-Frisco Railway System on page 30 in regard to the sale of 8,000,000 acres of Indian land in the new state of Oklahoma. This was originally the Indian Territory, and until recently no one could get a title, therefore some of the very best lands were held off the market. These lands can be bought cheap NOW. Not next year, or any time time thereafter. These lands will sell cheap **just once and no more.** A word to the wise is said to be sufficient. For further particulars see address on page 30 and please write to the nearest office.

FARM AND RANCH LANDS.

ALABAMA COAL LANDS.—Fifteen thousand acres of mineral land. Mostly coal lands. Right in the heart of the Warren coal lands of Alabama. These lands were purchased direct from the state under the land act of 1892. Lands in this section have yielded over $1,000 per acre on royalties of five cents per ton on coal.

The Illinois Central Railway has a survey completed through this body from Jasper, Ala., to Birmingham, which is expected to be built in the near future. The reason why the present owner is influenced to part with it is the need of ready money. No one need apply who has not the cash. Such a purchaser can get a bargain if taken up at once. Deed to this body of land will give purchaser title to over 6,000 acres good coal land worth when opened $100 per acre or more. This is an opportunity for a capitalist who can wait a few years to multiply his money. It takes fifty thousand dollars to buy and carry this proposition. Address, JOURDAN ESTATE, care National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

Mississippi.—800 Acres.—This is in Northern Mississippi, Tishomingo county, four to five miles from Iuka. In a solid body. Between the Southern Railway and the new Birmingham branch of the Illinois Central. This is a rich body of chocolate loam, with large and small trees. Suitable for a stock farm that cannot be excelled. The price is $5,000; terms to suit. An hundred families could make good homes on this land, and every one make a good living. Address, **Hale Estate,** 3550 Vista Ave., St. Louis, Mo.

NORTHERN MISSISSIPPI.—About 1,200 acres, consisting of six quarter sections and some small pieces. This land with poor cultivation produces 25 to 30 bushels of corn per acre, also one-half bale cotton without fertilizer; also 100 bushels of either Irish or sweet potatoes. It is only two miles north of Iuka, on the Southern Railway, towards the Tennessee river; about 100 acres in cultivation and 400 acres level ground, worth $20.00 an acre. Well watered with springs and live creeks. Good farm house and outhouses; also good orchard and pecan trees. Ten thousand cross ties can be made from growing timber. This tract of land can be had with clear title at $6.00 an acre. It is a great bargain. An active man who knows his business can clear a first-class income. Near to market, at Memphis; live stock can be shipped by boat to St. Louis by driving a few miles. Two crops of sorghum, millet, peas in corn, and every known vegetable. White clover, spontaneous growth. Address, JOURDAN ESTATE, 3550 Vista Ave., St. Louis, Mo.

Mississippi.—720 acres in a solid body. It is four miles southeast of Iuka, seat of Tishomingo county. This is an excellent tract. A farm house, and some land under cultivation. There is an excellent growth of young timber, mostly gum, oak and pine. About 200 acres of the land is level and produces well. It is the making of a superior stock farm. The buyer can move right on. This land is absolutely worth ten thousand dollars; can be bought for $250 per acre cash. Good climate, satisfactory neighbors, thriving community. Address, **Jourdan Estate,** care Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

800 Acres. MISSISSIPPI. 800 Acres.

This is in Northern Mississippi, Tishomingo county, four to five miles from Iuka. In a solid body. Between the Southern Railway and the new Birmingham branch of the Illinois Central. This is a rich body of chocolate loam, with large and small trees. Suitable for a stock farm that cannot be excelled. The price is $5,000; terms to suit. An hundred families could make good homes on this land. Address, HALE ESTATE COMPANY, 3550 Vista avenue, St. Louis, Mo.

Mississippi.—20 Acres.—A fine gravel hill. On line of Southern Railway, two miles east from Iuka, Miss. Will mine 100,000 carloads of what is famous as the Tishomingo gravel. Will cement together and make fine ballast for railroads or public roads and streets. It is accessible to railroad with cheap rates. Cash price, a thousand dollars. Buy it quick as a bargain. **Jourdan Estate,** care National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

NORTHERN MISSISSIPPI — 410 acres. Four miles from railroad at Iuka, Mississippi, and four miles from boat landing on the Tennessee river. This tract of land is one of the most valuable in the United States. A stock farmer can take this ground, obtain free and clear and guaranteed title for $1,800 cash down. It is a splendid property, and can be used as a dairy, vegetable, stock or fruit farm. Except a fair house, improvements are not much. Splendid climate. It is an hundred times a bargain. You deal direct with the owner. Write to HARRIS ESTATE, care National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

WATER POWER AND BUILDING STONE in Northern Mississippi—120 acres—which includes a fine water power where a successful cotton mill was run until destroyed by fire. Water can be had in abundance with good fall and short dam between solid stone bluffs. The entire 120 acres are covered with fine building stone in quantities to quarry for the next century. Millions of tons of the finest building stone can be quarried in any size or shape. Owner would take some stock in company to develop this property. A spur can be put in from the new Illinois Central Line between Corinth and Birmingham to haul this stone. Price and terms easy to the right party. Address, JOURDAN ESTATE, care National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

CENTRAL MISSOURI FARMS.

For farms and homes that will prove satisfactory and profitable write for our new illustrated list. One hundred farms described and priced. **Geo. W. Hamilton & Son, Fulton, Mo.**

OZARK FARMS For Cattle, Sheep and Poultry raising. Horse or Mule breeding. Fruit General or Dairy Farming or Market Gardening. Beautiful climate, running water. Ideal conditions. Write to-day for our lists—**No property to exhange.**

PICQUET-HARTRICH REALTY CO., 55 Liggett Building, St. Louis, Mo.

MISSOURI. 800 ACRES. MISSOURI.

The best bargain. Adjoins railroad station. Two hours from Kansas City; six hours from St. Louis; twelve hours from Chicago. The land will grow 60 to 80 bushels of corn to the acre; 40 acres winter apple orchard. Improvements worth $15,000. It is just the farm for an Illinois man who is used to good land. Too fancy to describe. Price $65 an acre; one-third cash, balance long time, six per cent. Also smaller farms. Write for particulars. **J. H. LIPSCOMB,** 306 Fidelity Trust Bldg., Kansas City, Mo.

Missouri.—A Fine Farm, 120 acres, 3½ miles from Marshfield. Most all valley. 40 acres good timber. Good six-room house with cellar; well on porch. Several springs with running water. Barn, 30x60. All necessary buildings, as granary, cribs, sheds, poultry and hog houses. Fruit. Model stock farm. Good, level roads. Price only $37.50 per acre. Send for price lists. **Wright & Waterstripe,** Marshfield, Mo.

New Mexico. 22,000 Acres New Mexico

PANHANDLE RAILROAD LAND at PORTALES, NEW MEXICO, on Santa Fe Railroad. SOIL rich, black, sandy loam. **WATER,** in unlimited quantities at from 10 to 50 feet. **RAINFALL,** average for last ten years, 22 inches. **PRICES,** $9.00 to $20.00 per acre. **TERMS,** one-third cash, balance in from five to ten years.

For full particulars write
MONTGOMERY & FISHER,
Times Building, SAINT LOUIS.

Texas.—For Sale: 160-acre farm, 2½ miles from Fort Worth Stock Yards and packing plants. High prairie land. 115 acres in Johnson grass, balance in pasture; fenced and cross fenced. Two average farm houses. One large combination barn. One small barn. Good surface well; surface tank in pasture. Two tons of hay per acre; first cutting this year. Ideal place for feed pens, dairy and poultry farm. $65 per acre, net. Address, **J. B. Buchanan,** North Fort Worth, Texas.

Texas.—Fine Colonization Tract—10,000 acres ten miles west of Falfurrias Station, on Alice Branch of the San Antonio & Aransas Pass Railroad. All red and black sandy loam soil, artesian water strata at 265 feet; water rises to within nine feet of top. Will grow all fruits, vegetables and other crops that can be grown anywhere in Texas. Adjoining land being sold at $25.00 per acre now. Price of entire tract $9.50 per acre; the price is $10.00 per acre in 3,000-acre tracts. Terms, half cash, balance one and two years at eight per cent. interest. **H. M. & P. H. Thompson,** 215 Alamo Plaza, San Antonio, Texas.

TEXAS.—12,000 Acre Ranch For Sale! All together or in parts, in Uvalde county, Southern Texas, nine miles from Sabinal, an up-to-date and rapidly-growing town with fine schools, 71 miles from San Antonio, on the Southern Pacific Railroad. Principal grasses, mesquite and rescue. An abundant and inexhaustible supply of pure water. The tillable soil is black hog wallow and chocolate and produces alfalfa, wheat, cotton, corn, rye, sorghum, broom corn, vegetables, fruits, etc.

No other locality is better adapted for the successful raising and fattening of cattle, hogs, sheep, horses and mules. The land all the way from town to this ranch is under cultivation. Owner being a non-resident, price $7.00 per acre.

Address, A. D. EVANS, National Stock Yards (East St. Louis), Ill.

CASH FOR YOUR FARM OR BUSINESS,

no matter where located. If you want to buy, sell or exchange any kind of real estate or business anywhere, at any price, address,

COSTLY AND CHEAP DAIRY BARNS.

How Difficult It is to Decide What is Best.

The editor of The National Farmer and Stock Grower always had an idea that the surest way to drive a dairy herd into bankruptcy was to construct costly dairy barns without regard to expense and then expect the cows to live up to it and pay interest upon the construction.

A rich man's disgust when he found his most expensive dairy barns were damp, disease-breeding and otherwise unsatisfactory is an example of what we mean. After lavishing his money unsparingly to construct palaces on high-priced and for horses and cattle he found that his high-priced manager did not have the slightest prospect of making the farm pay, although many good paying dairy farms were in the same vicinity with ordinary barns and practical working managers and limited investments.

If rich men by overpowering weight of capital could make any farm pay by simply hiring competent workers and architects, and success depended upon the amount of the investment rather than upon the management thereof, then would the farms of the country soon become the property of non-resident owners, and the workers on the farms become a lot of hired overseers and cheap laborers.

If wealthy men could buy land and control the onion crop, or buy land and control the wheat crop, and buy land and control the chicken crop, or by purchasing land could control the beef crop, they would surely do so, and it is a divine dispensation, for which we ought all to be thankful, that no amount of money can insure successful farming without the individual working management is on the ground. "I cannot use a hoe with a handle that is twenty-nine miles long," said the owner, and he sold the farm to the man who was going to live upon it and work it.

A race horse winning fifty thousand dollars a year is a good excuse for expensive stabling, but a dairy herd with a limit of $40 to $50 a year in profit per cow should not be stabled luxuriantly beyond reason. This is no argument against sanitary dairy barns with cement floors, that can be washed with the hose, and all modern appliances, but the town builder does not put a twenty-thousand-dollar foundation to a ten-thousand-dollar flat; neither should ten-thousand-dollar barns go up on three-thousand-dollar farms, and in this kind of construction the rich man takes the lead, and it is the influence that sends him back to the city a sadder but not a wiser man.

Money is a power to use sparingly in farm construction, unless the expenditure is controlled by the man who has to make a profit upon it. The fine barns which are built with farmers' profits always pay, because the value is considered closely as a business proposition, and the money to build was in all probability saved up from the earnings of a fine lot of cows fully up to paying for a high-class structure.

On the other hand, there are too many leaky roofs, too many dirt floors, too many uneven rock floors, and barns that for want of sanitary drainage only accumulate manure and mud, and all the cleansing which may be diligently performed does not prevent the accumulation of the evils of filthy cattle and a low-grade product.

And yet it is so easy to criticise and so difficult to describe the right thing. The happy medium is hard to find. Convenience, strength, durability, ventilation, sanitation, feed storage and labor-saving appliances, precautions against fire, are all necessary and cost money. The builder of the expensive barn, although he makes grave mistakes, has a better excuse than the farmer who does not try to establish a sanitary dairy.

MILK PRODUCERS' MEETING.

Twelve Cents a Gallon for July Milk, and the Shipper Pays the Freight.

The Directors' meeting of the Milk Producers' Protective Association of Missouri and Illinois was held on Monday, July 27th, at one o'clock p. m., at the office of the Secretary, Mr. Wm. A. Fischer, 409 Franklin avenue, St. Louis, Mo.

The attendance was not confined to the Directors, as all members are invited to attend these meetings if they are in town.

Hon. D. I. Furbeck presided and reported in behalf of the Milk Committee that the price of uncontracted milk delivered in the month of July would be twelve cents per gallon. This, however, would only apply to milk of good quality arriving in good condition. He had visited the principal dairies. This price does not apply to contract milk, although it is practically the price at which much summer milk is contracted.

It was decided that Mr. L. S. Dorsey, of Moro, Ill., would act as Milk Committee during the month of August and make his report to members through the columns of this paper.

There will be no meeting in August unless it is called by the President in case of emergency, and the next regular meeting will be held on Monday, September 28th.

Mr. A. M. Shultz, of Shipman, Ill., was at the meeting as usual, but did not have any reports to make of special character.

Mr. L. S. Dorsey, member of the Milk Committee, agreed to see the city dairies in regard to the price of August milk at the proper time.

Mr. R. E. Forwood, of Piasa, Ill., was at the meeting and joined the association. He was requested to act as Delegate to represent the shippers on the Burlington Route east of the Mississippi river, and to make the attempt to include all said shippers in the membership of the association. Mr. Forwood is now shipping cream to the St. Louis Dairy.

Mr. Henry Wessels, representing the South St. Louis Dairy Company, 813 Allen avenue, was a welcome visitor at the meeting.

Mr. Wm. Nolle, of Orchard Farm, Mo., was at the meeting. Quite recently, owing to the high stage of the Mississippi river, out of 237 acres in all he had 17 acres of dry land. The river has subsided since then and Mr. Nolle is putting in short-time crops, such as millet, sorghum, beans, etc. He is shipping milk as usual.

Mr. C. A. Olmstead, of Shipman, Ill., was a visitor at the meeting. He is now engaged with the St. Louis Dairy Company. As a result of his travels lately over considerable territory in Illinois he reports that the wheat crop is light and inferior, the corn is looking fine, and the hay crop is the best and largest ever known.

Mr. F. M. Scott, of Shiloh, Ill., on the Southern Railway, attended the meeting. He has one of the few herds of Holstein cattle in Southern Illinois.

The Secretary of the association has taken up the subject of rates on calves with the Interstate Commerce Commission with a view to getting old rates restored. From points in Illinois to St. Louis the rate was formerly 60 cents per head; it was raised to $1.00; then to $1.50; and back to $1.00. Now the rate is $1.13, and it is considered extortionate, and the attempt is being made to reduce it. The association has done good work in this connection before, and it is hoped will be able to do so again.

Milk producers and shippers are reminded of their duty to join and uphold the Milk Producers' Protective Association by paying dues promptly. All members who are shippers to the St. Louis market pay $2.00 per year, and all who sell at local stations pay $1.25 per year. Every member receives The National Farmer and Stock Grower, containing reports of meetings, the subscriptions being paid out of the funds of the association. The officers and Delegates serve without pay, but there are necessary expenses of travel, for printing, stationery, etc., which have to be paid. Last year it was entirely due to the prompt action of the association that the advanced tariff on milk and cream did not go into effect. Furthermore, the persistent negotiations with dairy companies in regard to the price of milk has resulted in shippers to St. Louis obtaining a fraction better average than shippers to any other of the greater markets.

In the intervals between meetings all communications should be addressed to Wm. A. Fischer, Secretary, 409 Franklin avenue, St. Louis, Mo. Remember, the next meeting will be held on Monday, September 28th, 1908. All who attend are requested to report to the Secretary promptly at one o'clock p. m.

Batten's Agricultural Directory, 1908.

This book, just published, is a Directory of Agricultural Publications, with full particulars concerning every paper, and beyond that it is an Encyclopedia of Agricultural Products and a Live Stock Census. There are 272 pages, bound in an elegant red, striking, illuminated cover. Under state classification there is a complete list of all state live stock and farm products; number of farms; how owned and how occupied. It gives the standing of every state; for instance, Minnesota stands second in spring wheat, barley and flaxseed, fifth in oats, sixth in rye, also sixth in milch cows. The table of leading crops is no less instructive and interesting. This most comprehensive and useful work is published by Geo. Batten & Company, Advertising Agents, 11 to 15 East Twenty-fourth street, New York City, N. Y.

Dairy and Creamery.

The Union Creamery at Hazen, Ark., started recently and is now working to its fullest capacity. The receipts the first day were 7,000 pounds of milk. The territory from Hazen to Lonoke, eighteen miles, is now shipping more dairy products to the various markets than any section of its size south of the Ohio river.

Little Thefts from the Dairy-man

The difference between the Tubular and "bucket bowl" separators is measured in hundredths of one per cent of butter fat which the Tubular saves and the "bucket bowls" let go into the skimmed milk.

Hundredths of one per cent are hard to realize. Let's calf it one ounce of butter fat lost each milking by a "bucket bowl," which

The Tubular Would Save

This would amount to 45 pounds of butter per year, worth at least $11.25.

"But will the Tubular make this saving over a 'bucket bowl' separator—every 'bucket bowl' separator? Will the Tubular prevent or stop this sort of little twice-a-day theft in my dairy?"

We're ready to stand the cost of a tryout and proof. Write for Catalogue No. 232 then tell us how many cows you have, and how you now dispose of the milk. Then we'll tell you and prove to you what the Tubular can do for you.

THE SHARPLES SEPARATOR COMPANY,

West Chester, Penna.

Toronto, Can. Chicago, Ill.
San Francisco, Calif.

The New Jersey Board of Health has started an active crusade, looking toward the enforcement of the law which provides for the thorough cleaning of all milk cans by city receivers before returning. Arrests have been made in Jersey City and $25 fines for each offense are imposed.

Buttermilk has been so strongly in demand in the big cities during the heated term that some of the shippers whose consignments turned sour received 9 cents a gallon. It is about he first season that there has about the first season that there has

Because butter declined in price recently, a larger quantity was exported than usual. This causes the New York Produce Review to say: "We can take care of all the high-grade butter that is produced in this country, but we need a foreign market for medium goods which are sound and sweet, so as to relieve the pressure that comes from enlarged production."

Shoo-Fly THE ANIMALS' FRIEND

Kills every fly it strikes. Keeps all insect pests off cows in pasture longer than any imitation. Absolutely harmless. Cures all sores. Used by same dairymen since 1885. Kills lice and mites. If dealer offers substitute, send us $1 for Improved 3-tube Sprayer and enough SHOO-FLY to protect 200 cows. Name express office. $1 returned if cows not protected. Free booklet. Shoo-Fly Mfg. Co., 1305 N. 10th St., Phila., Pa.

Editor knows from experience that Shoo-Fly is O. K

Please mention Nat. Farmer and Stock Grower.

DAISY FLY KILLER placed anywhere, attracts and kills all flies. Neat, clean, ornamental, convenient, cheap. Lasts all season. Absolutely harmless, cannot spill or tip over, will not soil or injure anything. Guaranteed effective. Of all dealers or sent prepaid for 40 cents.

When Cows Shrink in Milk.

For the coming two months the milch cow must get more attention than was necessary while the pastures were fresh and plentiful. This talk about "fixing the milking habit" may be all right, but I will venture that the cow that is poorly fed during July and August will not make much profit for her owner. Some cows will shrink, even when they are properly fed, but the cow that will stick to her job, when we do our part in furnishing feed, is the one with the fixed habit we are all looking for. So the problem now for two months is, not to permit any shrinkage in the supply of food. If the pastures get short, other green stuff must be provided, and a little grain will help tide over two very hard months. If cows are expected to keep up a normal milk flow into the winter, every resource of the farm should now be drawn upon for good feed.—L. C. Brown.

Feed the Calves Grain.

It pays to start right with calves; that is, start with the right kind of calves, for they are the only sort it will pay to grain feed. Calves should be bred for some particular purpose, either for beef production or for dairying, and the breeder will do well to constantly keep this purpose before him. Keep the beef calf thrifty and fat. That is the best way to develop and fix the fat-forming habit. I believe it is a big mistake to wait until the calf is nearly matured before fixing this habit. Fix it early, so that when the finishing fattening period arrives, all you have to do is to pour in the feed, with the assurance that your animal is going to turn it into good money for you. Then there is another thing about pushing the calf. The cheapest gains are made during the first six months of the calf's life. Don't stunt the young calves. While they are still on the milk pail, get them to eating grain just as soon as possible. By the time a calf is five or six weeks old it will get much of its living from grain and grass. Milk contains the stuff to form muscle as well as frame, and for beef calves oats and corn will keep them growing. Don't imagine you can take all the butter-fat out of milk and then feed it to calves and keep them thrifty, without putting something back into the milk to make it a perfect ration. You must replace that fat. Corn meal is good for that purpose. Whole oats, oil meal and corn meal are all valuable to feed calves just as soon as they are ready for them.—L. C. Brown.

To Creamery Patrons.

The following circular has been sent out by Henry L. Suhr, of Wist, S. D., to his creamery patrons:

"This year butter is paid according to quality, and as good butter cannot be made from poor cream, it is necessary that the most particular care must be taken of the cream. It means cleanliness in everything connected with milking and skimming.

"Milk and cream should not be kept in cellars, barns or in the house, but should be cooled to 50 degrees right after separating and before mixing with cream of previous skimmings. It should be kept in cold water in the open air, but not exposed to the sunshine. It should be stirred up frequently and the cover kept on tight so nothing can fall into the cream. Cream should be delivered as often as possible; this means while it is fresh and sweet, and when delivered should be well covered with a blanket.

"When cleaning cream cans, milk pails and strainers, use a brush and do not use a rag, neither when cleaning the cream separator. All cleaning should be done right after milking and skimming, and then rinse first in lukewarm water so as to loosen and take off most of the dirt, then wash with hot water and brush, and rinse with scalding water, as this will dry up the tin in a short time, and leave in the sunshine, as this will kill bacteria, but be careful that no dust settles on the tin."

NATIONAL DAIRY SHOW.

The Third Annual Exposition Will Be Held at Chicago, and in the Coliseum, December 2d to 10th, Inclusive.

The time and place for holding the Third Annual Dairy Exhibition were given much consideration. The exhibitors of machinery prefer the winter months for displaying their goods and the exhibitors of live stock would like to have the Dairy Show held early in October or at the close of the State Fair season. The officers being anxious to please both the cattle and machinery exhibitors, brought this matter before the stockholders at the regular annual meeting and discussed very thoroughly the most suitable time for holding the show. It was finally decided to hold it not later than December 15th; the exact dates and place were left to the Executive Committee.

It is desired to make this Dairy Show a strong representative of all dairy interests, to bring together dairymen, butter and cheese makers, farmers and manufacturers of dairy products from all parts of the country for educational purposes; also to present at this gathering the best and most up-to-date makes of dairy machinery, and to show choice herds of cattle, representing all the different dairy breeds; in fact, it is desired to make the occasion the big event of the year for dairying, and to so exhibit the different branches of the dairy industry that the people of the country will realize the importance and magnitude of this great industry.

The purpose is to make this exhibition of cattle and machinery something more than a show. It is the purpose to make it a strong educational affair, where questions of national import may be discussed and plans made for a greater development of all dairy interests. The first two shows were a success, and it is the desire to make the coming one better, bigger and more instructive.

All communications should be addressed to the National Dairy Show Association, 154 Washington street, Room 307, Chicago, Ill.

A Roofing That Needs No Painting.

Labor-saving devices are constantly being discovered, and one of the most important for farmers has been the development of a new type of roofing which does not require continual painting to keep it tight.

The leader in this new development is Amatite Roofing, which has a surface of real mineral matter. The pitch in which this mineral is imbedded is so adhesive that the mineral surface will not wash off.

After an Amatite Roof is laid there is nothing more to do to it. It is not necessary to look after it each year for painting or patching, and all the labor and cost of coating the roof are done away with.

The manufacturers of Amatite are glad to show samples of their materials, and these may be obtained by a postal card request addressed to the nearest office of the Barrett Manufacturing Company, New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Pittsburg, Cincinnati, Kansas City, Minneapolis, New Orleans. Kindly mention this paper.

Plowing Under Cowpeas and Clover.

One of my neighbors plows under the entire season's growth of clover or cowpeas when he wants to green manure his land. The value of plowing under these green crops comes from the nitrogen and mineral matter which the deep-rooted clover plants bring to the soil. And, inasmuch as the roots themselves contain by far the largest percentage of these materials, it would seem a much better practice to take off a crop of clover hay before plowing. An average clover field will have something like ten tons of root growth per acre, and then add to this the manure made by feeding the clover on the farm, and we surely have turned our clover field to the very best account. Cowpeas are fine as a land improver. They do not make as heavy root growth as clover, but when you miss on clover, cowpeas come next in being the most valuable.—L. C. Brown.

TUBERCULOSIS IN COWS.

How It Was Stamped Out of the New York Experiment Station Dairy Herd.

In 1890 it was found that more than half the animals of the New York State Experiment Station herd were affected with tuberculosis. In 1901 the Bang method of controlling tuberculosis was applied to the herd. The Bang method consists of destroying all animals which show pronounced physical symptoms of the advanced stages of tuberculosis and dividing the remainder on the basis of the tuberculin test. Tuberculin tests are made at intervals to detect any new cases which may develop. The milk from the tuberculous animals is heated sufficiently to destroy any disease germs which may be present. Practically all calves are sound at birth and remain so if proper precautions are taken against subsequent infection.

Within four years the natural increase in the herd amounted to more than the original number of diseased animals, and we now have a sound herd which is better in all respects than the one with which we started and we have accomplished this with a minimum of trouble and expense. It would seem that our experience might be a valuable object lesson to the cattle owners of the state.—Geneva Station Bulletin.

FARM BUTTER MAKING.

Expert Testimony From the Colorado Agricultural College.

At this time of the year there are many conditions which are likely to cause the production of an inferior grade of butter on the farm. The cause of this poor butter may be traced either to a single poor condition, or perhaps several of them. By carefully carrying out the following conditions, first-class butter should be produced:

Cream. — Hand-separator cream produces better butter than that separated by any other method. The deep can (shotgun can), surrounded by water, is second best; pans and crocks are third best; and the water-dilution method comes last.

The cream should be kept in as nearly sweet condition as possible until enough has been gathered for a churning. This should then be soured or ripened. To keep the cream sweet, while gathering enough for a churning, keep the can containing it surrounded with cold water, or, perhaps better, hang it in the well. To ripen, place where it will become somewhat warmer (at a temperature of 75 to 80 degrees), until it is sour enough; then cool down to a temperature of from 55 to 60 degrees, which is right for churning. Let it stand at this temperature for an hour or so before churning, if possible. This will cause the butter to come in better condition.

Cream that is being ripened should be thoroughly stirred several times before it is ready for churning.

It is often advisable to save some of the buttermilk of one churning to be used as a starter (the same as yeast in bread-making) for the next batch of cream. Add a small amount of this old buttermilk to the sweet cream which has been gathered for the new churning, thoroughly stir it, and it will ripen very much more readily. Care should be exercised to keep this old buttermilk in as good condition as possible. This method of cream ripening will be found excellent for the winter months.

Temperature.—Every butter-maker should have a good dairy thermometer, and then use it.

One of the main causes for having to churn from one to five hours is either too warm or too cool temperature of the cream. With a temperature of from 55 to 60 degrees butter should be produced in from thirty to forty-five minutes, providing the other conditions are right.

Churning.—Strain all cream into the churn. This will remove all clots and particles of curd, and there will be no danger of white specks in the butter.

Do not fill the churn over one-third to one-half full. Give the cream room for agitation, which insures quick churning. Turn the churn just fast enough to give the cream the greatest amount of agitation. In case a barrel churn is used, turn it so the cream has time to fall from one end to the other with a distinct thud.

Coloring. — In order to make a uniformly colored butter for the entire year, some color must necessarily be used. Very little will be required during the spring and summer months when the cows are getting green feed. During the fall and winter more color will be required. No harm is done by moderately coloring butter with a good commercial color. Colored butter can be sold on the market for a very much better price than that not colored. White butter is not nearly so appetizing as that which contains color. The color should be added to the cream in the churn before starting to churn.

When to Stop Churning.—The butter should be gathered until the grains become about one-half the size of a grain of wheat. Then draw off the buttermilk through a strainer and wash the butter. If the butter is gathered until it is in one large chunk it cannot be washed or salted satisfactorily.

Washing the Butter.—After drawing off the buttermilk, pour a pailful of cold water in the churn over the butter and give the churn four or five quick revolutions. Then draw off the first wash water and put on the second and turn as before. If the butter is hard enough after the second washing, draw it off and take out the butter.

The washing of the butter removes the buttermilk and makes the butter keep for a longer time. It also puts it in better condition for salting.

Salting and Working.—The butter should be taken from the churn in the granular condition and the salt added before it has been worked together. Usually about one ounce of salt is added for each pound of butter. The salt should be worked through the butter with a ladle or paddle and not with the hands.

Once working, at the time of salting, is usually sufficient, providing the butter is hard enough when removed from the churn. If the butter is somewhat soft when taken out, it can be salted and set away for a few hours until it gets hard enough to finish.

Butter is usually worked enough when the water has been removed so that the butter will bend without breaking. Too much working will spoil the grain of the butter and make it salvy, while leaving too much water in it will spoil its keeping qualities.

Packing.—Pack or print the butter as soon as it has been worked sufficiently and put it in a cool place until it is taken to the market.

Remember that the appearance of the package, as well as the way the butter is packed, has a great deal to do with the selling price.

Butter that has been carefully made and handled according to the above precautions can be readily contracted, by the year, at a price ranging from 30 to 35 cents per pound.—H. M. Bainer, Colorado Agricultural College, Fort Collins, Colorado.

Moisture in Butter.

The law limiting the legal amount of moisture in butter to 16 per cent. was passed before there was any reasonable or certain way of finding out how much moisture butter contained. The simple appliances of an ordinary farm were not sufficient for the purpose. The law was concocted by a chemist in Washington, and is one of the unnecessary laws that we could get along better without; but as it multiplies government officials and spies, it will be difficult to get it repealed.

Under the circumstances it is imperative that some simple and accurate plan of determining the moisture content be evolved. The old methods are either inaccurate or else require expensive apparatus and a considerable knowledge of chemistry. After a great deal of study and experimentation the Dairy Department of the Iowa Experiment Station has worked out a method which has proven very satisfactory. By the use of this plan any creameryman can with a very little practice make quick and reliable tests of the amount of moisture in butter. He will then be enabled to avoid exceeding the legal limit and at the same time keep from letting the percentage of moisture run too low which detracts from both the quality of the butter and the amount of the overrun. Bulletin No. 97 of the Iowa Experiment Station gives complete instructions to creamerymen for carrying out these moisture determinations. Copies may be obtained free of charge from Director C. F. Curtiss, Ames, Iowa.

At the auction sale of Jerseys at Gedney Farm, White Plains, N. Y., T. S. Cooper, of Coopersburg, Pa., paid $3,300 for the eight-year-old G. F. Oxford Lad, a bull of the highest Jersey excellence. This looks like a strong price for a Jersey bull, but the Cooper herd is one of the best, and to raise fine heifers and record butter-making cows such bulls are absolutely necessary.

The Holstein-Friesian Record enumerates a large consignment of pure-bred Holstein cattle bought in this country for shipment to Japan. The purchasers were Z. S. Yosida, U. Kitajima and E. Kurd. When the cow named Mechthilde Gerben Hengerveld Katrina Pietertje DeKol begins to give May milk from Japanese grasses it will require quite a number of the Japanese dairymaids to milk her.

Rosendale, Wis., Mar. 23, '08. I have used a U. S. for 15 years. It has always been perfectly satisfactory and I never hesitate to recommend it to anyone. CHAS. L. HILL.

DURABILITY

This word is the secret in separator construction. Compare these two letters, please. Is not Mr. Kroyer's experience, with this "cheap" apology for a separator, sufficient proof to any fair-minded reader, about to purchase a separator, the wise move to make? Read Mr. Hill's testimony, please, and compare—15 years of perfect satisfaction as compared with 8 months' use and "all played out." The ever-ready-to-use

IMPROVED 1908 U. S. CREAM SEPARATOR

has more practical improvements than any other separator made, having a solid, low frame; most simple yet efficient bowl, waist low supply can and numerous other advantages. Send to-day for catalogue No. 125 describing fully this labor saving, money earning, reliable separator.

Registered Rams and Ewes of best breeding and quality. Dense fleeces of good length. Animals that will improve any flock. Prices reasonable.
WILLARD MILLER, R. F. D. 2, Anita, Iowa.

R. C. JOHNSTON, Lawrence, Kas.,
Breeder of Thoroughbred
REGISTERED ANGORA GOATS.
Goats for sale from imported Turkey and South African Bucks. Satisfaction guaranteed. Buck **DOUGLAS** and Doe **GRACEFUL** won the grand champion prize at the American Royal Show, Kansas City, in the fall of 1906.

JACKS AND SADDLERS.

Imported Catalonian, Malyorca and Kentucky Mammoth Jacks, Saddle Horses, Trotting and Pacing Stallions and Tamworth Hogs. We are the largest breeders and importers of Jacks in America. Write us your wants.
J. F. COOK & CO., Lexington, Ky.

SAFE HERD OF LARGE ENGLISH BERKSHIRES. Herd is headed by an excellent son o' the St. Louis World's Fair Grand Champion. I have bred Sows for sale, also bred and unbred Gilts that are hard to beat, and fifty head of early Pigs. Can furnish pairs no akin. I also have S. C. W. Leghorns, Barred Rock Chickens and M. B. Turkeys. Eggs for sale and a few pairs of Peafowls. The breeding of this stock and poultry is the best and will be sold at prices in keeping with the times.
M. W. MAGNUSSON, Owner, Safe, Mo.

SUPERIOR SADDLE STALLIONS.

Gloster, 154, A. S. H. B. A., and **Missouri Denmark, 2,304,** A. S. H. B. A. These Saddle Stallions will make the season of 1907 at the Monroe City Saddle Stock, Monroe City, Mo. They are great ones and stand among the great prize winners of Missouri. Write for catalogue giving full descriptions and terms. **Saddle Horses** bought and sold on commission. Filling orders a specialty. Want to find three fine black Mares to breed to Gloster; must be right and bred right, for which we will pay a fair price.
DR. S. MADDOX, Box 394, Monroe City, Mo

The Twenty-eight-hour Law.

Some of the live-stock-carrying railroads of the West have been assuring shippers, so the Department of Agriculture has been informed, that the Department does not intend to enforce one of the most important provisions of the twenty-eight-hour law regarding the resting of live stock in transit. Agents of the Department have been quoted as saying that if provision were made to feed and water live stock in the cars the Department would regard this as a substantial compliance with the law and would not insist that the stock should be rested en route.

Such statements are absolute misrepresentations, for the Department has no authority to modify the act of Congress in question, but intends to enforce every provision of the law. The statute requires, in general, that stock should be unloaded at the end of twenty-eight hours for feed, water, and five hours of rest. It was feared, however, that this requirement might be onerous upon stock-carrying railroads, and an exception was provided in the law that if stock were carried in cars in which they could and actually did have proper feed, water, space and opportunity to rest, they need not be unloaded.

Contracts are now being made for the fall movement of live stock from the West, and the matter is, consequently, of present interest to both the railroads and the shippers. Copies of the law may be obtained on application to the Chief of the Bureau of Animal Industry, Washington, D. C.—A. D. Melvin, Chief of the Bureau of Animal Industry.

Note.—In this connection it is proper to say that live stock may be kept on the cars in transit thirty-six hours if the shipper makes the request and signs a declaration to that effect at the time the shipment is made, said certificate to accompany the bill of lading.

Great Prize Winning Record.

At Berkhamsted, England, the head of the house of Wm. Cooper & Nephews, the famous sheep dip manufacturers, is Sir Richard Cooper, Bart. He is a successful breeder of Polled cattle, one of the foremost breeders of Shorthorns, and as a breeder of Shropshire sheep has long since led in the show exhibits. In the rings of the present year so far the Cooper winnings include eight championships, five reserve championships, twenty-seven first prizes and many others. Messrs. Cooper & Nephews, at their office, 177 Illinois street, Chicago, are the largest importers of pedigree sheep into this country and accept commissions from American breeders at a mere nominal charge for the service.

Buying the Herd Header.

Many will be hunting for bulls and boars pretty soon; that is, the men who are out after the top males are the ones generally in the field first. Some who need good bulls or boars cannot attend public sales, so an enormous trade has been built up selling on mail order. There are some points in mail-order correspondence which both seller and buyer will do well to observe. It is quite impossible to suit every customer, but every statement in describing an animal should be so plain and true any misunderstanding. Then, if the buyer will state precisely what he wants, giving the seller some idea of his line of breeding, and state precisely the points he should have in his herd header, nine times out of ten the seller will fill the bill exactly. But that is not the usual way it is done. "What have you for $15?" is about the first thing asked when many start out to buy a boar by mail. I should let the price be the last point talked about. But I would throw the responsibility upon the seller to "make good" after I had described just what I wanted.—L. C. Brown.

Harvesting Corn With Machines.

Why not harvest the corn crop with machines? This is a pertinent question. It is a matter of being up-to-date or falling behind. The corn harvester is just as efficient for the purpose as the harvester for small grain. It is a question of economy. Men are scarce and machinery comparatively cheap. Take everything into consideration, it is a subject for immediate investigation. The International Harvester Company advertisement on page 5 is a reasonable statement of the case.

Blooded Stock Notes.

Mr. J. W. Kirby, of the Kirby Stock Farm, has just delivered nine head of Poland-Chinas, which from advertising in The National Farmer and Stock Grower he sold to one planter in Louisiana. Mr. Kirby received assurance that the buyer was perfectly delighted with them.

A good many auction sales of pure-bred bulls and females are lamentable failures. This is because breeders appeal to breeders who have them instead of appealing to stock farmers who have them not. The consequence is that oftentimes a good pure-bred bull in the breeders' auction will not outsell himself on the beef market.

Mr. Chas. Dorr, of Osage City, Kas., is again advertising in this paper. He has thrifty Duroc-Jersey pigs for sale at the low price of $8.00 per head. Although they are cheap, they are strictly good also. Mr. Dorr has advertised with us on and off for several years, and always gave our customers good satisfaction.

Work the Seed-bed.

The biggest kind of a mistake is made when wheat land is plowed early and left untouched by harrow or any other kind of a pulverizer. When wheat ground is plowed during August it usually turns up cloddy, and if it is left in this condition very long there will not be left enough moisture to start the wheat. Plowing the ground during a dry spell will kill the weeds, and if the harrow follows close upon the heels of the plow not much moisture will be lost. Some prefer to wait until just at seeding time before they put the harrows to work. You cannot get a clean, fine seed-bed by that method. Keep the harrows going from the time the ground is plowed up to seeding time, and by all means harrow thoroughly after every rain. This method of culture will make a smooth, even seed-bed, and it will be much easier to drill in the seed shallow and evenly.

I have been studying whether the direction of the drill rows has any influence upon the rigidness of the straw. It is claimed by many that it is not so much the excess of nitrogen that produces overrank straw and consequent lodging as it is the lack of sunshine. If this is a fact, then drill rows running north and south stand a better show to develop heavy straw than drill rows running east and west. I have observed this very thing in the heaviest fields of grain I have seen this year. I would be glad if our readers would help me discuss this question, also tell us which varieties of wheat are proving the biggest yielders under your conditions.—L. C. Brown.

100 HEAD OF PEDIGREED DUROC RED SPRING PIGS, $8.00 a head.

CHAS. DORR,
Osage City, - Kansas.

FOR PURE-BRED BERKSHIRE HOGS,

Shropshire Sheep and Fancy B. P. Rock Poultry, write or call on **E. L. JOHN,** owner of Broadway Herd, Broadway, Maries Co., Mo.

Mill Creek Stock Farm,

The home of the noted Starlight family of Jacks and Jennets for the past thirty years, is located seven miles southeast of Nashville, Tenn., on the N. C. & St. L. R. R., at Asylum Station, and has on hand at all times a nice lot of Jacks, Jennets and Stallions, all of the best blood, from six months to six years old, for sale at reasonable prices. Write me for catalogue. Also Jersey cattle.

Sandwich HAY PRESSES
Combine large capacity with economy of power; simple, durable, easy and safe to feed, continuous and rapid. For horse or other power; all portable. Best money-making balers ever produced. Address: **Webor Implement Co., 415 N. Main street, St. Louis.**

It Means a Rush.

Postmaster-General Meyer, discussing the new two-cent letter rate to Great Britain, said that it would enormously increase the postal business.

"The mail bags will fill quickly when this rate goes into effect," said Mr. Meyer. "If such a rush of business had attended on the Nola Chucky postoffice the old Nola Chucky postmaster's ways would have escaped notice.

"Some years ago an old fellow was appointed postmaster of the small village of Nola Chucky. A number of weeks passed and the Nola Chuckians and their friends began to complain about the mails. And no wonder. The postmaster, it seemed, had sent out no mail since his entrance into office.

"An inspector, investigating the matter, pointed to the hundred or more dusty letters that the postmaster had kept by him, and said sternly:

"'Why on earth, sir, didn't you let these go?'

"'I was waitin',' said the old man, 'till the bag got full.'"—Minneapolis Journal.

Chess in Small Grain.

Mr. F. N. P., of Evansville, Ind., writes: "Last spring I bought some so-called rust-proof seed oats. The seed was grown somewhere south of us. In the crop this season I noticed considerable chess, at least that is what my neighbors call it. I examined my seed oats pretty carefully last spring and I did not notice any foreign seed in it. Can you tell me how this chess got into the soil here?"

In this latitude chess or cheat is not common. If our correspondent has the real thing, no doubt the seed was brought in with the oats. The seed of chess, or cheat, as it is frequently called, might be mistaken for a small oat, and, as much of the seed oats used last spring was light and rather small berry, it might be an easy matter to introduce considerable chess seed. One thing you may be sure of: This chess came from chess seed. It is not a fact that wheat or oats turns to chess, as is frequently claimed.—L. C. Brown.

Not Enough Potash.

In a book entitled "First Prnciples of Soil Fertility" by Prof. Alfred Vivian, he quotes in regard to potash as follows, saying: "In fact, it is believed by many careful observers—and the belief has been substantiated in large part by experiments already conducted—that the average commercial fertilizer does not contain a sufficient amount of this element. It is a particularly useful element in the building up of worn-out soils, because contributing materially to the growth of the nitrogen-gathering legumes, an important crop for this particular purpose."—Voorhees.

Credit Subscriptions.

Three Years For One Dollar, Payable at the End of the First Year.

The publishers of **The National Farmer and Stock Grower** will be glad to furnish the paper three years for **One Dollar**, the same to be payable at the **end of the first year.** This edition is a fair sample of the paper. It is interesting and instructive. Those who read it over will find that it is a help to them in the conduct of their business. All who receive a sample copy are invited to send in a subscription on the following blank form, unless they prefer to pay in advance, thereby securing a premium.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista avenue, St. Louis, Mo.:

Gentlemen: — You are hereby authorized to enter my name as a subscriber to **The National Farmer and Stock Grower** for three years. At the end of the first year I will pay **One Dollar** for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

Hilly and Level Roads.

[Written specially for this paper.]

The idea of the straight line has been the determining factor in the location of roads in this country. There is a strong sentiment in favor of having a road lead as directly to its destination as possible.

In the public mind the straight road has a virtue that does not belong to it. There are many stories current of rulers that have drawn a straight line from place to place and said that the road should go in that way.

One of the popular beliefs is that the engineers laying out the railroad from St. Petersburg to Moscow laid their plans before the Russian Czar. He did not approve the plans, but laid a ruler on the map and drew a straight line from St. Petersburg to Moscow, saying: "That is the way the road must go."

The incident probably never occurred, and so far as we know no straight road was ever built between the two great Russian cities. Had it been so built it would have been built in violation of sound engineering principles.

One of the principles of civil engineering, as to the building of roads, is to sacrifice distance to grade. There is very little gained in having a road perfectly straight.

Yet that principle has been ignored in the construction of many of the roads in this country. That is the reason that we have so many roads going up and down hill, which present so many problems in teaming.

Roads should wind around hills rather than go over them, and as much care should be used in constructing a common road as in constructing a railroad, so far as the grades are concerned.

We have many roads up and down hills where the grade is as steep as 10 per cent. That means a rise of 10 feet in 100 feet.

On a long hill of that steepness a horse can pull only one-quarter the load he can on a level road. A farmer must put on his wagon only the amount of load that can be hauled over the most difficult part of the road.

But how steep should a road be? Well, let us compare our highways with some of the steep grades on the railroads. A railroad running west from Harper's Ferry, in West Virginia, has a grade of 125 feet to the mile for seventeen miles.

The rise is 2,125 feet in that distance. That grade is so steep that two heavy engines have to be put on to pull a short train of cars. Yet that is less than a 2½ per cent. grade.

Civil engineers declare that no highway should be more than a 4 per cent. grade; that is, four feet to the hundred feet. That may not seem like a large grade, but it means over 205 feet to the mile.

The grade of roads should be kept down, so that the sized load hauled over them may be increased. No farmer will lessen the size of a load on account of it having to be hauled a quarter of a mile farther over a small-grade road than he would have to if the hauling were to be done over a road with a few steep grades, but every farmer has to lessen his loads when he knows they must be pulled up steep hills.

A Practical Corn Harvester.

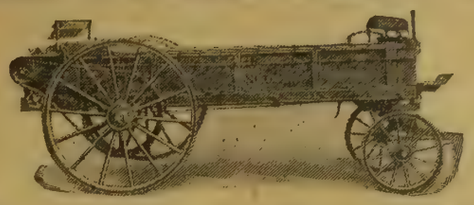
A most practical corn harvester is made by the New Process Manufacturing Company of Salina, Kas. With it a man can cut and shock from four to six acres a day, and it is so simple in construction and operation that a boy can run it. It has been sold in every state in the Union, and has given universal satisfaction. It will pay for itself in less than one season, and is so compact and well made that it will last for years. Write to the New Process Manufacturing Company, Salina, Kas., and mention this paper. They will send you full particulars.

Use More Potash.

A very timely page advertisement appears on page 7. Barnyard manure and nitrogen obtained from legumes go a long way towards fertilizing economically, but the fact remains that the formula is incomplete without sufficient potash to bring the crowning result of the grain making. Why is the crop so light? The answer is: "Not enough potash." Why is the stalk so weak? Not enough potash. What's the matter with the oats crop? Not enough potash. All kinds of questions of the same character can be answered in the same way: "Not enough potash." The German Kali Works will send any of our readers, free, **The New Farmer's Note Book**, containing facts about soil, crops, manures and fertilizer. We advise all our readers to send for a copy now. See page 7 and address the nearest office.

A Man From Ohio Talks

There is 29 years of experience in this machine



It runs a horse lighter than any other

About the Success Manure Spreader

"It has been the most satisfactory piece of machinery I ever purchased. It spreads all kinds of manure better and covers more ground than can be done by hand. The narrow front trucks do away with all jerking of the tongue against the horses on rough ground. I can start a load that a team cannot shake on a wagon. I can get in and out of places that I couldn't with a wagon. It has changed the hard and much dreaded job of manure spreading into a snap. I would not do without it."—A. C. Presno, Mendon, O."

The Success is Now Completely Roller Bearing

Seven sets, one to each wheel, two on beater, one on beater drive. That settles the draft problem. It is still the staunchest, best working spreader made. Send for catalog before you buy.

American Scale Co., 105 Indiana Ave., Kansas City, Mo.

The picture above represents a snapshot at a pair of steel-gray horses sold during the month of July at the St. Louis National Stock Yards by Campbell & Reid and Western Sale Stables Company at $800 for the pair. These horses were 16 hands 1 inch and the pair weighed 3,200 pounds. They were shipped to the market by Mr. E. A. Hull, of Keokuk, Iowa, and bought by the National Oil Company of East St. Louis, Illinois. Such horses, with style and well matched, are always in demand; in fact, there are always instructions to buy every first-class, honest-looking work horse that arrives on the market. For the many varieties of inferior horses there is always ready sale at some price, and there is no market in which quality counts quicker and for more money to the shipper. In this connection it is proper to state that the horse and mule market at the St. Louis National Stock Yards is doing more business than Chicago, twice as much as Kansas City, and is equal to all the other Western markets combined.

Second Range Horse Sale.

The second range horse sale of the season of 1908 at the St. Louis National Stock Yards was held on July 14th. The quality was not good, and about thirty loads were disposed of at prices considered almost steady with the same time a year ago. The sale included eighty-nine broken horses at an average of $55.50 per head but with a top of $125. A few mules sold from $42.50 to $97.50 per head, an average of $69. The sale of some Indian ponies from Washington included twenty-one mares and colts, 850 to 900 pounds, at $39; twenty-one same at $42.50; twenty mares, colts and geldings at $40; nineteen mares and geldings at $41.50; fourteen thin mares, colts and geldings, at $29.50; sixteen yearlings and two-year-olds at $22.50; seven culls at $14.50. Nevada offerings included twenty-two head three and four-year-olds, mares and geldings, 1,000 pounds, at $63; twenty-three head three to seven-year-olds, 850 to 900 pounds, at $42.50; twenty-one head two and three-year-olds, 800 pounds, at $35; eighteen mares and sixteen colts, about 900 pounds, at $50; fourteen mares and eleven colts, thin, 950 pounds, at $48; seven mixed ages, 800 pounds, at $33; ten mares and one colt, thin, 950 pounds, at $45; twenty-five two-year-olds and up, 900 pounds, $45.50. The sale also included twenty-eight three to seven-year-olds, 850 to 900 pounds, at $46.50; twenty-eight three to seven-year-olds, 850 pounds, at $37.50; twenty-eight three to seven-year-olds, thin, 800 to 850 pounds, at $30; thirty three to seven-year-olds, thin, 750 to 800 pounds, at $26; twenty-one three to seven-year-olds, thin, 900 pounds, at $30.50; thirty-six yearlings and two-year-olds at $21; three yearlings at $12.50; twenty-three three to seven-year-olds, thin, 900 pounds, at $30.50; twenty-two three to seven-year-olds, thin, 750 to 850 pounds, at $22.50; nineteen yearlings to three-year-olds at $20; eleven mixed ages, culls, at $10. Although there is considerable to be made out of these horses, the appearance of nearly all of them shows that the ranges from which shipments were made are not turning out fat horses in average market condition.

Heads of the Horse World.

"The occasion of a widely-attended dinner given by the Shire horse breeders of this country to Mr. J. G. Truman, of the Bushnell Pioneer Stud Farm, Bushnell, Illinois, U.S.A., provides a very appropriate opportunity for publishing the likeness of Mr. J. H. Truman, the head of a family almost every member of which has rendered great service to the Shire horse, both at home and abroad. Mr. J. H. Truman, as every heavy horseman is aware, resides at Whittlesea, Cambs, whence he commenced exporting Shires to the United States as far back as the early seventies. The best, and nothing but the best, it has always been his aim to supply, and being happily endowed with a natural gift of judging horses, it need scarcely be added that the excellence of the animals he sent out not merely gained high prices for them, but materially benefited the Shire horse by attracting the attention of Americans to the breed.

"Indeed, the services of Mr. Truman and the members of his family to the Shire horse cannot be overestimated—he has stuck to the horse through good report and bad luck, not invariably exporting them to his immediate profit, but yet always satisfied by the belief that in the long run the position of the English horse would be an assured one in America What his British friends think of Mr. Truman's work has been made evident by the honor recently paid to his son, upon which occasion Mr. John Rowell paid an eloquent tribute to the labors of the subject of these notes and congratulated him upon the accomplishment of his main object — the advancement of the Shire horse. Above all things, Mr. Truman is happy as the head of a united family whose chief ambition it is to carry out the objects of their parent and to popularize and improve the British horse in every quarter of the globe."—From Horses, illustrated, edited by Vero Shaw, and lished in London, England.

Bingen, the Trotting Sire.

Many people have believed all along that Bingen, 2:06¼, is the greatest trotting sire of the present day. Such apparently is the opinion of William Bradley, of Ardmaer Farm, Rariton, N. J., who has just paid $40,000 to Arthur H. Parker, of Bedford, Mass., for him. In doing so Mr. Parker obtained for Bingen at fifteen years old $8,000 more than he paid for him four years ago. Ten thousand of our subscribers have a copy of The Book of Live Stock Champions, issued by this office as a subscription premium, and a first-class picture of Bingen, taken at the farm of J. Malcolm Forbes, of Boston, will be found on page 25.

In this connection we refer to a description in a recent edition of the New York Herald, which will interest our readers:

"Bingen is a solid-colored, rosewood bay, about 15.3 hands high; a beautiful horse at rest, and in action one of the most stylish, showy goers ever seen on the trotting turf. Besides being extremely handsome, he stands picking to pieces, having, in the language of the horse market, 'two ends and a middle,' with a set of legs and feet that are the admiration of all horsemen. Led into one of the horse auctions in the Bull's Head district without name, pedigree or record, he would sell at the top of the market for a gentleman's road horse, if he was not snapped up by some dealer who saw the possibilities of cutting off his tail and converting him into a high-stepping carriage horse for show purpose.

"He is one of those rare horses that exemplify the unrivaled all-around utility of the American trotter, and it would take a champion to best him in either light or heavy harness, in any kind of a competition where beauty, speed or action was appreciated. As a matter of fact, Bingen has never been beaten in the show ring, though he has met the champions of the tanbark as well as the champions of the trotting track."

Don't forget the range horse sales at the St. Louis National Stock Yards, August 11th and 25th.

IRISH ROSE—One of the famous saddle mares of the Eastern Show Ring. Was shown over circuit of 1907 by Julian Morris, of Keswick, Va.; now owned by E. H. Weatherbee, of New York City.

Horse and Mule Receipts.

Eleven stock yards experienced a decrease in horse and mule receipts in the first six months of the year 1908. The decrease amounted to 15 per cent., compared with the corresponding period a year ago. St. Louis received the most—62,858 head; Chicago second, 59,197 head; Kansas City, 34,368 head; Omaha, 13,868 head; St. Joseph, 12,267 head; Indianapolis, 12,247 head; Fort Worth, 6,052 head; Denver, 5,483 head; Sioux City, 4,796 head; and St. Paul 2,198 head. Total, 213,334 head, against 249,830 head received during the first six months of the previous year. The decrease at Chicago was the largest, being 11,292 head, against a decrease of 5,797 head at St. Louis.

Overtraining the Trotter.

"Someone has recently raised the question about the growing tendency of the new class of trainers to work their horses less than those of the older school, says a writer in the Horseman. I have been strongly impressed with the notion that many a good horse has had many a good race taken out of him on the training track, and I am having my horse trained on the modern plan.

In the past I have often had my horse tried out, only to find that when it came to the actual race he could not do as well as he did in his trial. I could not help but think that he would have done better in his race had he been given a jog and a short brush in his trial instead of giving him a mile at a racing clip.

There is certainly some mean ground between too much and too little work before the actual racing begins, and that is the point I would like to discuss. I have had good trainers who I thought brought my horses to the races stale from too much hard work, and I have had them come to the race soft for lack of work. But of the two evils I think the overworked horse is the worst. There is one satisfaction about the soft horse; he is certain to improve if he is raced. In fact, the best success I have had on the race track has been with horses which started in the season a little soft. I have found they would keep getting better with each race until they got on a wire edge.

"The great problem, of course, is how to get a horse on racing edge and keep him there. I am trying the moderate training plan, hoping to get to the first race with my horse fairly fit and soon get him to his best by racing instead of training. I notice some of the best of the old trainers have the knack of bringing their horses to the races in good shape and keeping them in that condition. I notice, too, that once they get their horses on racing edge, they do little training, being content to do light jogging and relying on the race itself to furnish the severe work. By such a process the horse recuperates after the strain of one race and is ready for another. There is much about training the trotter and pacer for all of us to learn."—Spirit of the West.

Horse and Mule Notes.

At the Peoria, Ill., meeting, the bay horse Minor Heir, a green pacer, owned by P. C. Isaacs, of Storytown, Pa., started in the 2:18 pace, and, to the general surprise, made a record of 2:05¼. At Terre Haute, a little later, he paced a mile first in 2:01½ and afterwards in 2:01 flat. Minor Heir is a son of Heir at Law, with double records of 2:03¾ pace and 2:12 trot, he by Mambrino King. Minor Heir's dam is Kitty Clover by Redwald, son of Lord Russell. Minor Heir, 2:01, is in the hands of Charley Dean, of Illinois, and almost anything may be expected of him.

Highball, the mighty son of Dr. Hooker, owned and driven by Ed Geers in the free-for-all trot in the Great Western races at Peoria, Ill., July 10th, after covering the first mile in 2:03¼, winning easily from Margaret O. and Oro, came back in the second heat and made the distance in 2:03¾, a world's record for geldings in any heat, and equaling Sweet Marie's record for second heat, made in 1907. Geers announced before the race that he would drive for a record. A splendid picture of Highball appeared in The National Farmer and Stock Grower for June.

At Terre Haute, on July 17th, in the 2:25 pace which made the pacer Minor Heir famous, the gray horse The Eel, by Gambolier, a green performer, separately timed, made the first two heats in 2:02½ and 2:03. He made the greatest performance on record for a green pacer, but, being overshadowed by the winner, whose time was 2:01½ and 2:01, The Eel closed the day with an official record of 2:05½, his winning time in the third heat.

Worn-out Horses For Farm Work.

I was talking a few days ago with the manager of one of the big stables at the Union Stock Yards, Chicago, where thousands of horses are sold every year. I was surprised that so large a number of the worn-out horses from the city were sold to farmers. Of course, a few of these horses are young and may be only sore-footed, so with proper care and good, strong feed, they might be fitted up for work in the fields. But I would not take a car-load of those horses as a gift. They are "dead" ones; the ginger has been worked out of them. The effort needed to get them along in the fields, and the feed needed to put them in light-work condition will soon make any one regret his bargain. Farm work calls for quick-moving, alert teams. We have no place now for ox teams, nor for the broken-down city horses which must be constantly urged and prodded from one end of the field to the other.—L. C. Brown.

Blooded Horses in Ecuador.

Minister Williams C. Fox writes from Quito that it will interest American horse breeders and others to know that the first attempt to import blooded horses from the United States to Ecuador has been very successful, the report continuing:

This was done some months since under the auspices of the Quito Hippodrome Association. The string consists of six Kentucky-foaled thoroughbreds—one stallion (sired by Watercolor) and five fillies, all under two years old. These animals were brought via New Orleans and the Isthmus of Panama to Guayaquil, thence by rail to the vicinity of Quito. They stood the hard journey remarkably well and are now in first-class condition, the high altitude having apparently no disturbing effects upon them.

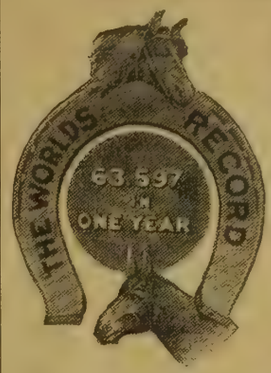
The sport of horse racing is well patronized in Quito and the meetings are important social events. The bringing of North American thoroughbreds will create added interest, as they will compete with those of Chile. However, the native Ecuadorian horses, though small, are often very fast runners. Much interest is also being manifested in the prospective crossing of the Kentucky strains with the Chilean and Ecuadorian.

Western Horse Raisers

—are invited to—

REMEMBER

that we have conducted



THE MOST SUCCESSFUL SALES of

Western Range Horses and Mules

ON RECORD.

By securing a superior class of offerings at the most Central Market in the country we always obtain a satisfactory attendance of responsible buyers.

Our sales for the season of 1908 commenced in June, and we will hold sales every other Tuesday to the end of the season.

August Sales on the 11th and 25th.

CAMPBELL & REID and
WESTERN SALE STABLES CO.
J. J. SEARCY, Secretary,
NATIONAL STOCK YARDS, ILL.

About the most businesslike Veterinary College in the United States is that of Kansas City, and 425 graduates have entered into veterinary practice with splendid results. Twenty eminent and successful practitioners have taken the post graduate course. There are now several hundred enrolled in the classes. Anyone who desires full particulars should address Dr. S. Stewart, Secretary, 1324 East 15th street, Kansas City, Mo.

THE VERY BEST MARKET, THE MOST CENTRAL HORSE MARKET ON THE FACE OF THE EARTH

—is at the—

ST. LOUIS NATIONAL STOCK YARDS in Illinois,

right opposite the city of St. Louis.

Auction sales of Horses are held MONDAYS, TUESDAYS, WEDNESDAYS, THURSDAYS and FRIDAYS.

Horses are also bought and sold by personal contract every day in the week.

The concentration of Horses should be where all can be assembled, sold and distributed at the least possible cost. For this reason the growth of the St. Louis Horse Market is the Marvel of the Age.

THE CENTER OF GRAVITY IN THE HORSE TRADE IS AT THE ST. LOUIS NATIONAL STOCK YARDS.

BE SURE TO CONSIGN YOUR CATTLE, HOGS AND SHEEP

To Be Sold For Good Prices at the

St. Louis National Stock Yards

Where They Will Sell to the Best Possible Advantage.

The Grand Central Live Stock Market in the United States.

Total Volume of Business in the Year 1907: 1,132,740 Cattle, 2,065,145 Hogs, 564,920 Sheep, and 117,379 Horses and Mules.

Hog Receipts and Sales the Largest Ever Known Upon the Market.

Cattle, Sheep and Car Receipts Larger Than During the Year Previous, Owing to Good Sales.

Great Record Made in Resisting Declines—Holding Up Values When Competitors Were Falling.

Range Horses and Mules Averaged Higher in Price Than During Any Previous Year in the Trade.

Day Records of the Year: 12,321 Cattle, 17,496 Hogs, 8,781 Sheep, and 1,909 Horses and Mules—A Fair Indication of Market Requirements.

The Most Competitive Market, the Most Active Market, and the Best Market on the Continent.

New Buyers Are Coming Into the Market Every Month in the Year.

Ship Your Stock to Commission Firms Doing Business at the St. Louis Market.

During the first seven months of the present year the St. Louis National Stock Yards received more hogs than were ever received before, also a few less than the previous largest total of cattle; the same of sheep; and more horses and mules than any other market. The all-round increase in business amounts to about 2,000 cars over and above the first seven months of the previous year.

Butcher Cattle Prices.

The following prices were being paid at the close of July at the St. Louis National Stock Yards: Choice to fancy heifers, $6.00 to $6.50; good to choice heifers, $4.50 to $5.75; medium to good heifers, $3.50 to $4.50; common to medium heifers, $2.75 to $3.50; fancy beef cows, $4.75 to $5.25; good to choice cows, $3.50 to $4.50; medium to good cows, $2.65 to $3.50; cutters, $2.25 to $2.65; canners, $1.50 to $2.00—all quotations being at the price stated per 100 pounds.

St. Louis Horse Quotations.

At the St. Louis National Stock Yards the Monday horse auction is conducted by the McFarlane Commission Company, and they make very strong claims that it is the best day of the week. Their last auction in July was a pronounced success. The only kind that were hard to sell were small Southern horses. They sold a pair of medium-sized draft horses for $485. Common to fair draft horses were quoted at $150 to $175 per head, and good drafters, 1,600 pounds, at $225 to $250. Eastern chunks, 1,200 to 1,300 pounds, were sold at $120 to $175, with a majority around $150. Plain Southern horses were selling at $50 to $100, the bulk at $60 to $90, and extra Southern horses at $110 to $150. Fair drivers were selling at $125 to $150, and good drivers at $165 to $250. Remember that the McFarlane Commission Company hold auction every Monday in the year at the St. Louis National Stock Yards.

James H. Campbell,

Expert commission salesman, is now at the head of his own organization, with headquarters at the St. Louis market. He is one of the few who were at the opening of the National Stock Yards and is one of the most active men on the market right now—an enthusiastic worker, knowing that he has the best market in the country to back him. Thoroughly competent and with a splendid expert organization, he is holding his old customers by splendid sales and making new ones all the time. Mr. Campbell issues a circular every week of his own composition containing his advice to intending shippers. Write for information to James H. Campbell and consign cattle, hogs and sheep to Campbell Commission Company, National Stock Yards, Ill.

St. Louis Stock Cattle Prices.

At the St. Louis National Stock Yards the stock cattle trade is enlarging. Ordinary stock cows are selling at $2.00 to $2.85 per 100 pounds; a fair line of stock heifers at $2.75 to $3.25; a good line of stock heifers at $3.00 to $3.50; stock heifers, fair in quality, at $2.50 to $3.25; good stock steers at $3.35 to $3.75; fair to medium feeding steers at $3.35 to $4.00; and good feeding steers at $4.10 to $4.50—all quotations being at the price stated per 100 pounds.

FIVE TO TEN THOUSAND FULL AGE MULES

—can be purchased at the—

JAMES H. CAMPBELL,

Veteran Commission Salesman.
General Manager of the

Campbell Commission Company

NATIONAL STOCK YARDS, ILL.

Ship to the Best Market and the Best Firm on that Market. There is more competition at St. Louis for Native and Southern Cattle than at any other Market on the continent. The St. Louis Hog Market continues to grow, and is habitually 10 to 25 cents a hundred pounds higher than the Missouri River Markets. Sheep and Lambs sell at St. Louis to the advantage of the shipper.

WE KNOW THIS MARKET AND RECOMMEND IT ABOVE ALL OTHERS.

Do not forget us when you wish to know anything about either the Sheep, Hog or Cattle Market or future prospect.

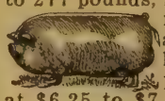
Don't hesitate to write or ship to

James H. Campbell,
National Stock Yards, Ill.

EQUALLY EXPERT SERVICE IN EVERY CLASS OF STOCK—SHIP US YOUR CATTLE, HOGS AND SHEEP.

July Closing Hog Prices.

On July 31st, at the St. Louis National Stock Yards, the market closed with a top of $7.10 per 100 pounds for choice hogs averaging 243 pounds. Other loads, averaging 221 to 277 pounds, sold at $6.60 to $7.05, most of them at $6.90 and above. The light hogs, 175 to 190 pounds average, sold at $6.25 to $7.00, the bulk at $6.80 to $6.90. The pigs and light lights, 100 to 159 pounds, sold at $5.00 to $6.70, all the good ones selling above $6.00 per 100 pounds. As usual, St. Louis was fully up or a little better than Chicago, and 15 to 25 cents above the Missouri river markets.



St. Louis Mule Trade.

When last seen concerning the mule trade the McFarlane Commission Company reported trade difficult to handle because mule values were considered high and dealers were determined to buy them when cheaper. A load of good 16-hand mules may sell around at $210 to $225, but it is almost impossible to sell the other mixed loads of mules in proportion. Under the circumstances, quotations are not lasting. The market, however, is subject to change and is as likely to go up as down. At the time we speak of, 14-hand mules were selling at $65 to $110, with a few selected animals up to $130; 14½-hand mules were selling at $85 to $125, with a few tops up to $150; 15-hand mules were selling at $95 to $155, with a few at $165; 15½-hand mules were quoted at $135 to $175, with some extra quality up to $190; 16-hand mules in car lots were quoted at $150 to $225. Mules 16½ hands are scarce, selling singly at $175 to $250, and in matched pairs at $500 and upward. Matched teams are being made up all the time, and it often happens that a buyer will travel many miles to get together a stylish team.

Sheep and Lamb Prices.

At the close of July, at the St. Louis National Stock Yards, medium to good lambs sold at $6.00 to $6.55 per 100 pounds, while the fair grades sold at $4.50 to $5.75, including most of those from Southwest territory, and culls $3.75 to $4.25, with some of the little trashy lambs at $2.25 to $3.25. Good mutton sheep sold at $4.25 to $4.60, and breeding ewes at $4.50 to $4.75; plain stockers at $3.25 to $4.00; and bucks at $2.75 to $3.25, most of them at $3.00 per 100 pounds.

At St. Louis, August 1st, home-grown pears were selling at 40 to 50 cents per half-bushel basket. Leconte pears from the South sold at $3.50 per barrel.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' interests ARE OUR INTERESTS, and our rapidly-increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

Evans-Montague Commission Company

Box 68,
NATIONAL STOCK YARDS, ILL.
FORT WORTH, TEX., and at
KANSAS CITY.

PAIR OF BLACK MARE MULES at the St. Louis National Stock ards owned and for sale by Gillen, Heiman & Co. The photograph from hich this picture was engraved was taken at the National Stock Yards. here appears to be only one mule, but there are actually two of them, a lendidly-matched team of drivers, weighing 2,800 pounds in medium flesh. hey are described as style mules and extra good hitchers, driving like coach orses, but equal in a day's work to the heaviest draft team in the country. hey are 16½ hands high and six years old. Messrs. Gillen, Heiman & Co. ell many car-loads of good mules during the year and are always pre- ared to deliver a splendidly-matched team or two. This black team is robably one of the best they ever had, although they have other fine mules n sale at this time. They recently sold a fine pair of 16-hand mare mules, eighing 2,600 pounds, for $560 to the San Antonio Machine and Supply ompany of San Antonio, Texas, and the buyer paid cost of freight and ttendance. They fill orders all over the United States to the perfect satis- ction of the buyers. We take especial pleasure in inviting attention to r. Adolph Heiman, who is on the box. When there was but one mule aler at the St. Louis National Stock Yards he was the one. He is one of ie originators of the greatest horse and mule market on the face of the rth. The postoffice address of Messrs. Gillen, Heiman & Co. is National ock Yards, Ill. They buy and sell on the market every business day in e year.

On Tuseday, July 8th, at the St. uis National Stock Yards, seven- en head of 836-pound steers were ld at 7 cents a pound. This is the nd of baby beef the market can ver get enough of.

Third Range Horse Sale.

The people in St. Louis territory e warming up to the Western range rses which are being sold every o weks by Campbell & Reid and estern Sale Stables Company at the Louis National Stock Yards. On tesday, July 28th, twenty-five to irty loads were sold at prices rang- g from $15 for some 600-pound mares and geldings, and $82 for a load of 1,100-pound mares. The sale list was as follows, each lot being a car-load: 1,100-pound mares and

ldings, $82; 1,000-pound mares, 5; 950-pound mares and geldings, 6; 950-pound mares, $58; mares d geldings, $46.50; two-year-olds, 5; 800-pound mares and geldings, 3.50; two and three-year-olds 0.50; two and three-year-olds, 0; mares and colts, $35; yearlings, 3.50; two and three-year-olds, 0; 800-pound mares and geldings, 3.50; two-year-olds and up, $29; res and colts, $26.50; 850-pound res and geldings, $26; yearlings three-year-olds, $25.50; year- gs, $25.50; 850-pound mares and dings, $24.50; 700-pound mares geldings (thin), $23; colts, $19.50; 600-pound mares and geldings (thin), $15.50. Mules—Two-year-old mules, $69; yearlings, $42; two-year-olds, $38.50; two-year-olds, $37.50; two-year-olds, $35.

Please remember that the August auctions will be held on Tuesday, the 11th, and on Tuesday, the 25th. All communications should be addressed to J. J. Searcy, Secretary, National Stock Yards, Ill.

One day in July at the St. Louis market a few 324-pound calves from Mississippi sold at $1.75 per 100 pounds, or $5.67 per head, and on the same day a load of Texas calves, 251 pounds average, sold at $4.60 per 100 pounds, or $11.54 per head. A little beef quality in the Texans made the difference. Too much Jersey blood in the Mississippi calves.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. Every courtesy known to the trade is extended. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their customers. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Illinois.

Southern Texas Cattle.

At the St. Louis National Stock Yards, on August 1st, the following figures represent the sales of Texas cattle: Good to choice steers, $4.25 to $5.50; medium to good steers, $3.40 to $4.25; common to medium grassers, $2.75 to $3.40; good to choice cows, $3.00 to $4.00; fair to medium cows, $2.50 to $3.00; cutters, $2.25 to $2.50; canners, $1.50 to $2.25; bulls, $2.50 to $3.30; fair to choice vealers, $4.25 to $6.00; fair to choice heavy calves, $3.50 to $4.50; yearlings, $1.75 to $2.75—all quotations being at the price stated per 100 pounds.

At the St. Louis National Stock Yards, during the month of July, hog receipts were the largest for the month on record.

Tenth Range Horse Season.

The Tenth Range Horse Season conducted by Campbell & Reid and the Western Sale Stables Company at the St. Louis National Stock Yards opened June 30th. August sales will be on the 11th and 25th. September sales on the 8th and 22d. October sales on the 6th and 20th, and the last sale of the season will be on Tuesday, November 3d. All sales are held on Tuesdays. Particulars can be had by writing J. J. Searcy, Secretary, National Stock Yards, Ill.

At the St. Louis National Stock Yards, during the month of July, 89,702 sheep were received and sold. This is the largest July supply ever on the market.

Native Beef Cattle at St. Louis.

At the close of July, on the St. Louis market, native beef steers of the better class, 1,350 to 1,500 pounds, were quoted at $7.25 to $7.50; good to choice steers at $6.50 to $7.00; and medium at $5.00 to $6.00. Good steers, weighing 1,193 pounds, sold at $6.35. Choice to fancy yearlings were quotable at $6.00 to $7.00; good yearlings at $5.00 to $6.00; and common to fair at $3.50 to $4.75. It is a splendid market for all choice yearlings and a good market for the better class of heavy steers.

On August 1st, at the St. Louis National Stock Yards, the top hogs at $7.10 per 100 pounds weighed 198 and 201 pounds. They were hot-weather butcher weights.

Where Distinction Counted.

Governor Chamberlain, of Connecticut, after telling about the railroad accident which befell him not long ago, took occasion to make some thoughtful observations on European railroad customs.

"What amuses me about these lines," he said, "is the very slight degree of difference between the first, second and third-class carriages. I vow that if a carriage's rank were not printed on the door you would not know what it was.

"I am aware of but one case of a real distinction between first, second and third class.

"A friend of mine was touring Yorkshire last summer. An omnibus ran between two Yorkshire towns and there were, of course, first, second and third-class seats in it, yet they were all very much alike.

"My friend, sitting in his first-class place, thought he had been done until a long, steep hill appeared before him.

"The driver, halting at the foot of this hill, turned his head and shouted: 'First-class passengers keep their seats. Second-class, please dismount and walk. Third-class, get out and push.' "—The Circle.

McFARLANE COMMISSION COMPANY...

HORSE and MULE COMMISSION SALESMEN

AUCTION EVERY MONDAY IN THE YEAR.

These Monday sales at the St. Louis National Stock Yards are the best attended of all sales and produce the most satisfactory results for the shipper.

We also solicit consignments of Mules to be sold by the most competent salesmen on the best market in the country.

MULE DEPT.—W. R. McFarlane, Lan B. Morris.
HORSE DEPT.—E. L. Hawkins, S. B. Howell, Eddie O'Connell.
OFFICE—Frank Mulholland.
AUCTIONEER—Col. I. H. Howard.

YOUR CONSIGNMENTS ARE SOLICITED.

Write for Weekly Market Report.

McFarlane Commission Company
NATIONAL STOCK YARDS, ILL.

The government report is to the effect that in the dark-tobacco districts of Tennessee and Kentucky the planting is 28 per cent. larger than last year. In the Burley district only 18 per cent. of last year's acreage is reported.

The oats condition is reported as being about 2 per cent. less than the ten-year average.

Wise Precaution.

The mercury was trying to ooze out at the top of the farm-house thermometer and the old farmer was pitching chunks of ice in the pond.

"What are you doing that for?" queried the summer boarder.

"That's t' keep th' pesky ducks from layin' hard-b'iled eggs," answered the rural philosopher.—Chicago News.

The Latest Healing Oil.

It is surprising how many dollars can be saved by procuring and using V. S. C. Healing Oil. It will save many a veterinary bill. This is the up-to-date dressing used extensively by surgeons, veterinarians and stock owners with remarkable results in all diseases of the skin of man or beast, and is especially adapted to saddle galls, spavin, wire cuts, scratches, cracked heel, rope burns, old sores, inflamed or swollen joints, blood poison, thrush, mange, ring worm, and as a liniment for pains, rheumatism, cuts, bites, aches and sprains it is invaluable. A large bottle will last for months. It is fully guaranteed to do all that is claimed for it. Send one dollar to the Veterinary Supply Company of St. Louis, Mo., and ask for one large bottle of V. S. C. Healing Oil.

A SHEEP PROPOSITION.

Lambs For the Early Market When They Sell High—Ewes to Follow After Being Shorn.

A Way to be in the Sheep Business Eight Months in the Year.

An Experiment That Can Be Conducted With a Few Sheep or a Few Thousand Sheep.

Farmers Have an Opportunity of Creating an Industry That Will Pay Good Dividends and Enrich Their Farms.

We have been requested by some of our subscribers to suggest a plan whereby they can get a start in the sheep business and obtain quick results. The questions come to us in many different ways, and when those questions are answered by letter they generally come back again and again in different form. We have therefore determined to submit a suggestion which all can understand and which all can adopt on as small or large a scale as they see fit.

The method we are about to suggest is not new, neither is it our own idea. The suggestion is for the individual farmer to buy a number of ewes in the fall to breed them so as to have lambs come as early as he can safely raise them, then feed and force the lambs to suitable weight as fast as he can and ship them to the St. Louis market and afterwards shear the ewes and sell the wool at the proper time and then ship the ewes to the St. Louis market and get through with them.

This is an easy proposition from beginning to end. If the ewes are good and healthy the farmer ought to have no difficulty in carrying them on very little pasturage until lambing time. Farmers will differ very much in their methods; one will have his ewes covered with burrs and

The Right Kind of Lambs.

another lot will not have a burr on them; but even the burry lot will pay out if the range or pasture is good. If the ewes have good pasturage in a moderate climate, feeding the ewes any amount of grain before lambing will not be necessary; it is altogether necessary, however, that the ewes be in good condition at lambing time and that the lamb have a good start. The ewe must be able to give plenty of milk, because a vigorous lamb demands it and he needs a full ration.

In a very large section of country tributary to St. Louis there is pasturage all the year round. Many sheep and lambs actually come to market that have never had anything to eat except grass, but this experiment requires that the lamb shall be fed grain and fed all he can eat. It also includes the final fattening of the ewes with something besides grass, and nothing fattens easier than a ewe in spring that has just weaned her lamb, as weaned it should be when it goes to market.

Prof. Craig, a sheep expert, when in Wisconsin, began feeding lambs when they weighed 19 pounds and forced them along until they weighed 62½ pounds at a cost for feed (in addition to ewes' milk and what grass they could get) of 18 cents a head. This proposition of ours includes feeding each of the lambs about 18 cents' worth of bran, corn meal and cotton-seed meal—whatever is good for them at the time.

Mr. Joseph E. Wing, another expert, says that there is often danger of the ewes drying up and fattening too soon, therefore no one need be afraid of their not fattening in the end. As a matter of fact, if the ewes are properly handled, they will often sell for enough more in the spring than they cost in the fall to pay all expenses charged up against them and their lambs, leaving the wool and lambs as clear profit. As the lambs at 60 pounds weight ought to sell at $5.00 a head or better, it will pay to give each of them the 18 cents' worth of feed which he needs.

The principal difficulty in this experiment is the care of the flock during the lambing season. This to one man or woman is a pleasure and to others a burden. Lambing, however, is a chapter by itself. Another difficulty is dogs, and that is another chapter by itself.

One thing to avoid in this experiment is the Merino buck. We have nothing against the Merino as a wool-growing sheep, but for raising a quick lamb, Cotswold, Hampshire, Dorset, Lincoln, Leicester, Southdown or Shropshire bucks are better; in fact, absolutely necessary. The ewes might have a little Merino blood and be satisfactory; but a good, large ewe is what is wanted. The purpose is to buy the stock ewes as cheap as possible consistent with getting a good mother.

A Good Buck.

Stock ews are for sale at all great markets. At this time at the St. Louis National Stock Yards stock ewes fit for such an experiment are selling at about 3½ cents a pound, and fat ewes at about 4¾ cents a pound. The market is always changing, but there will probably remain a fair margin between the price of the stock ewe and the fat ewe. There would be a freight bill to get the ewes home.

This method of lamb raising for the spring market is a sure winner in the country tributary to St. Louis. St. Louis is becoming more important as a sheep and lamb market every year. The lambs sell according to weight and quality at 7 to 12 cents a pound. Sixty-pound fat lambs arriving on the April and May markets average from $4.20 to $7.20 per head, as the case may be, and the ewes' fleece ought to bring $1.50, and does so. one year with another.

The method suggested originated on the outskirts of the city of London. The farmers there never raise lambs to be a year old. They do not even keep bucks on their premises, as the ewes are bred in the western counties and then driven and sold to farmers of the counties of Kent, Surrey and Middlesex, where they are expected at the proper time, and each farmer buys a few ewes, knowing that he will have one or more lambs in addition to the mother ewe to sell in the spring. The English farmers produce lambs for the London market weighing 80 to 120 pounds, but we do not have to make them so heavy.

Another Good Buck

Farmers on railroad lines entering St. Louis can get their supply of ewes at the stock yards, or if the stock-yard supply is short, they can buy them upon the sheep ranges. On railroads that have one end at the market and the other end on the sheep range, this opportunity stands out very clear. The Cotton Belt Route, for instance, approaches the St. Louis market through Alexander, Union, Randolph, Jackson, Monroe and St. Clair counties, Illinois, and in all these counties there are but 15,000 sheep, whereas there are 250,000 sheep within the borders of the six counties adjoining that of Coryell, where the road terminates in Texas.

There is no better country for our lamb-raising method than the 200 miles between St. Louis and Springfield, Mo., through which the Frisco road runs. All the counties—seven of them—contain 65,000 sheep, whereas in Texas, at Brady, the end of one of the branches of the system, there are a half million sheep in seven or eight counties. If one asks, where can the ewes be obtained? this furnishes the answer to the question.

To return to the main subject again we desire to say that any farmer who desires to add to his income will find it to his advantage to study this simple proposition. One great advantage is that it does not require so much pasturage as where the ewes are kept all the year round. Eight months is all the time required. One week to receive and breed the ewes, twenty-one weeks before the lambs arrive, and in ten to twelve weeks thereafter to market the lambs, the wool and the ewes. From September 1st to May 1st is all the time necessary, except it may pay to hold some of the slow-growing lambs a little longer.

It is a simple experiment to buy the ewes in the fall, breed the ewes to lamb as soon as possible after the opening of the new year; give special care to the lambs that they may grow quickly to the marketable age; then sell them before grass lambs arrive in market; shear the ewes; sell the wool; fatten the ewes as well as you can and send them to market, so that no sheep remain on the farm except the bucks, and the bucks will pay their board bill with big fleeces.

The experiment can be conducted with either five ewes, fifty ewes, a car-load or a dozen car-loads, just according as the circumstances permit and there is safe pasturage for them. Let a few careful farmers' sons or farmers' daughters start off this special manner of handling sheep and we will be able to sell millions of early lambs and fat ewes each year at a good price on the St. Louis market, where there is a growing demand for them.

A.J. CHILD & SONS MERCANTILE CO. Box 301, ST. LOUIS, MO.

Sheep Notes.

Mr. C. A. Olmstead, of Shipman, Ill., will probably carry a number of ewes over winter according to the method advocated in this paper. Two years ago he did so at the suggestion of the editor of The National Farmer and Stock Grower, and with very satisfactory results.

Sheep raisers who have wool on hand will find it to their advantage to write to A. J. Child & Sons, St. Louis, Mo., for their market reports. St. Louis is a splendid wool market, with buyers from many mills on hand all the time. If there is activity anywhere, St. Louis soon shows it. This spring the markets of the country were quiet and sluggish until St Louis showed an active line of buying on account of interior mills. Messrs Child & Sons do business promptly and satisfactorily.

DIP YOUR SHEEP

Stockmen and farmers who use the Cooper Dips have healthier animals—get more wool and better prices. More than half the cloth and flannel of the world is made of Cooper dipped wool. Tanks supplied at cost to all users of the Cooper Dips.

COOPER'S POWDER DIP

The leading sheep dip for 65 years. Used on over 250 million sheep every year. Kills ticks, lice, nits and eggs in one dipping. Does not stain the wool, but increases the yield and improves the quality. Price—25 gal. pkt. 60c; 100 gal. pkt. $2.00.

COOPER'S FLUID DIP

for all animals. A highly concentrated, non-poisonous fluid dip of marvelous strength. Mixes readily with cold water, whether hard, brackish, or salty. The only pure liquid dip—no sediment. Goes further than Coal Tar dips and therefore cheaper. Positive remedy for scab, mange, ticks, lice ringworm, eczema, sores, bites, stings, etc. One gallon makes 200 gallons for general dipping, or 300 gallons for disinfecting. Price—Qt. can 60c; ½ gal. can $1.00; 1 gal. can $1.75; 5 gal. can $8.50.

COOPER'S WORM TABLETS

A sure remedy for intestinal worms in Horses, Sheep, Cattle and Hogs. These tablets offer the great advantage of correct doses and certain results. Dose—one tablet for lamb or shoat; two for sheep or hogs; three for horses and cattle. Price—10 tablets 20c postpaid; box of 100 tablets $1.50 postpaid.

COOPER'S "LAVENE"

The most effective skin dressing for Horses, Cattle and Dogs. Cures worst case of Mange and Ringworm at one dressing. Searches the skin and attacks the disease at its root. Improves the coat and renders hair soft and glossy. Is used by many of the best breeders in preparing animals for show. Price—Quart can $1.00; gal. can $3.00.

COOPER'S TREE SPRAY

Fluids V1 Winter and V2 Summer have caused a revolution in tree spraying. These new and scientifically prepared spray fluids stand alone for the absolute destruction of all living insects, eggs, fungi, etc. One gallon makes 100 gallons of wash. Price—Gallon can, $3.00.

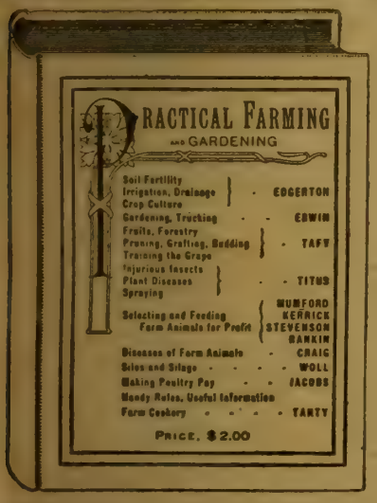
WHERE THERE IS NO DEALER

If you live where there is no dealer who can supply you with the Cooper preparations, order from Wm. Cooper & Nephews, 177 Illinois St., Chicago, and deduct 10% from any of above prices (Worm Tablets excepted) for freight account.

WM. COOPER & NEPHEWS,
177 Illinois Street, Chicago, Ill.

Meyer Bros. Drug Co., St. Louis, Mo.
Faxon & Gallagher, Kansas City, Mo.

Practical Farming and Gardening is a book that weighs thirty ounces ready for mailing. It is a book of 500 pages 6x7¾ inches to the page. It is a complete farmer's instruction book. The feeding chart, which is the frontispiece, is worth more to a stock farmer than any publication heretofore issued. It is worth a ten-dollar bill to any stock farmer. The book itself is a wonderful production. Soil fertility, irrigation, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, hog, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. Eleven of the top-notch stock and



agricultural experts compiled this book. They did the work so that farmers and farm boys could understand it. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. We buy large quantities at one time. We obtain this book for a very low price considering its value. Send One Dollar and we will send you Practical Farming and Gardening, postage paid, and The National Farmer and Stock Grower for one year. This is a grand offer. Address, Hale Publishing Co., 3550 Vista avenue, St. Louis, Mo.

Sheep and Lambs.

Mr. Frank S. Springer, of Springfield, Ill., Secretary of the American Southdown Breeders' Association, in writing to the editor of The National Farmer and Stock Grower, states that the article on ewes and lambs for market is very clear and practical and will work out just as we say. The Southdown ram is a splendid sheep to use to produce the very best of lambs.

New York City begins to receive fall lambs about Christmas and then they follow on until spring lambs come in. At first a lamb that dresses 30 pounds is just the thing, but later on the butchers like them to dress 33 to 35 pounds.

There is nothing so easy to sell at good top price as a fat, early spring lamb; but there is considerable difference between a choice lamb and a common thin lamb. As a recent example, a lot of 69-pound spring lambs sold for $7.30 per 100 pounds, or $5.04 per head, whereas another lot following the first bunch averaged 72 pounds and sold for $4.25 per 100 pounds, or $2.38 per head. There had not been fifteen cents' difference in cost of raising the lams—they were all raised on grass without grain feeding—but one lot was sired by a mutton-breed buck and the other was not.

The St. Louis market can use spring lambs all the year round, but what are most wanted are spring lambs one to two months earlier than the grass lambs which arrive freely in May, June and July. The market calls for early lambs in February, March and April.

Mr. J. H. Lafrenz, of LaBelle, Mo., intends to handle a car-load of ewes this fall for the purpose of conducting a sheep experiment as outlined in our article in this edition of The National Farmer and Stock Grower.

The first Idaho lambs on the Chicago market in 1908 for feeding purposes sold at $5.50 per 100 pounds. They were purchased by an Indiana farmer, and the price was $1.25 lower than was paid for the first lot of feeding lambs sold the previous year.

R. C. Moulton, founder of the Anoatok Rambouillets at Woodstock, Ohio, in 1852, and Hon. Warren D. Sibley, of North Lewisburg, Ohio, also a Rambouillet sheep breeder of fifty-years' standing, are veteran sheepmen who have recently gone to their rest with the silent majority. Both true and good men are mourned by friends and associates throughout the land.

Mr. P. J. Hilbert, of Hitchcock, Oklahoma, intends to handle the sheep proposition as outlined in The National Farmer and Stock Grower, and is looking around to buy about a car-load of ewes for that purpose.

Jacob Graves, of Duncan, Ill., gives the Shepherds' Criterion the following remedy for caked udder: Remedy —"Oil of tar and lard; lard to keep it from blistering too severely."

Many circumstances are conspiring to bring about a reduction of sheep raising in the West, among which can be mentioned the great influx of settlers, the rise in land values, the forest-reserve policy of the government. All this will bring back sheep to the farming sections. Every farmer should have at least a few ewes to raise a few lambs and to obtain a clip of wool. The article in this paper is the correct proposition.

The National Corn Exposition.

A display of sheaf grain and grasses is to be made a feature at the coming great National Corn Show and Cereal Exposition to be held at Omaha, December 9th to 19th, 1908. A full and well-defined classification has been provided, and thousands of dollars in cash, live stock and farm machinery will be awarded to the exhibitors of small grains and the cultivated hay and pasture grasses.

The plan of exhibition system to be observed in this department is a division of the country by zones—Northern, Central and Southern. The Northern comprising the states of Michigan, Wisconsin, Minnesota, the Dakotas, that portion of Iowa north of the Illinois Central Railroad, thence west in North Nebraska to the 100th meridian. The district southwest of this is not yet treated or defined in its exhibition boundaries.

The Central zone is composed of Ohio, Indiana, Illinois, Iowa, Nebraska (except that portion of the latter three states provided for in the Northern division), Kansas, Missouri and Kentucky. The Southern zone will comprise Tennessee, Oklahoma, Arkansas and all states south.

There will be for exhibition purposes in addition to these three divisions a state classification for each state. There will also be an open-to-the-world classification for all states and exhibition divisions in which there are no restrictions in qualification for entry.

This division of the exhibition promises to be the greatest educational display ever made in the history of Agricultural Fairs or Expositions. The milling and manufacturing process of the cereals into food and feed products will stand side by side with the raw materials, the grains in the sack and the sheaf grains in gorgeous array, just as nature turned them over, at harvest time, to the grower.

The straw product of the small grains in the sheaf display will be used to illustrate type, stooling quality, etc., in these various grains. The straw, to an extent, determines the ability of production, both in quality and quantity of grain, and resistance against wind and rust, consequently the importance of this feature of display in carrying out to the fullest possible extent the educational opportunities of the Exposition.

Prospective exhibitors should lose no time in gathering their samples of sheaf grain and grasses for this feature of the show. Exhibition samples should be procured in advance of the harvesting of the crop. The selection of these samples by individual heads and stalks and the cutting of them by hand is the only safe method in getting uniformity and quality suited for the show.

Sow Some Rape.

I do not know of any other crop that will give as much good, cheap feed, especially for hogs and sheep, as Dwarf Essex rape. It may be sown in corn with the last cultivation, and five or six pounds of seed per acre will be ample to cover the ground. This feed comes on right at the time when other green stuff is getting tough and unpalatable, and it is the finest conditioner in getting hogs and sheep ready for vigorous feeding on grain. Some make the objection that the stock will destroy the corn. Rape feeders do not find this an actual fact. The rape is so satisfying that neither hogs nor sheep will pull down any of the upright corn stalks, and such stalks and ears as are lying upon the ground had better be eaten. It has been shown that one acre of rape is equal to 2,600 pounds of grain in feeding pigs, and will yield 762 pounds increase when fed to lambs. Try some this season.—L. C. Brown.

Picking Out the Breeders.

The best time to select the young breeding sows for next season's work is along in September. On account of the fall rush of work this matter is not usually attended to until along after corn-husking time. By making the selections early the sow pigs may then be run in separate pastures. And they should be given every opportunity to develop bone and muscle—to make a good, strong frame — while the fattening pigs should have more of a fattening ration at this time. There is a widespread practice of allowing the young sows to run in the feed lots right up to the time when they are to be bred. That practice must be condemned. It is hurtful to the young sows; it checks their proper development as mothers, and when bred under such conditions they usually bring small litters. They are nervous and have more of a liking for the feed lots than for raising a litter of pigs. Select these young sows during September. Give them plenty of pasture and run them by themselves. Every man has his own ideas about type, but give us the long-bodied sow in preference to the chunky one; give it a strong, clean bone, and evidence of a strong constitution. That type of a sow will make good. We believe that the young brood sow should be handled like the dairy calf—make her fit for her business before she begins business. This thing of trying to develop a brood sow or a dairy cow, after she is full grown, is merely a waste of effort and a bigger waste of food.—L. C. Brown.

LONG SERVICE

FARM WAGONS

THE wagon that breaks down and has to go to the repair shop every once in a while is not a good wagon to buy.

Such a wagon is a poor one because it is poorly constructed, and because it is made from poor and improperly seasoned material. It is dear at any price.

In the building of Weber and Columbus wagons there is always a rigid observance of these four indispensable requisites:

1. Proper wood materials,
2. Thorough seasoning,
3. Superior ironing,
4. The best of skilled workmanship.

These are the things which have built up the excellent reputation everywhere enjoyed by

Weber and Columbus Wagons.

The New Bettendorf Wagon has steel gears which make it a wagon for any climate, and practically unbreakable.

Strength and durability should be first considerations when you buy a wagon. The Weber, Columbus and New Bettendorf wagons can be relied upon for long, satisfactory service. They are built to haul heavy loads and to stand the rough usage to which farm wagons are always subjected.

These wagons are in the front rank of high-grade wagons.

With all the strength and durability of these wagons, they are not made excessively heavy. They are noted for their light running qualities.

International local agents will be glad to show you these superior wagons and furnish catalogs with all desired information. Call and take the matter up with them or write direct to the home office.

International Harvester Company of America, Chicago, U. S. A.
(Incorporated)

The Feed Mill on the Farm.

[Written specially for this paper.]

On every farm where live stock of any kind is kept there should be a feed mill of some kind. Even if only poultry is kept, it will pay to have one, for poultry is the most important of all live stock on the small place. I would have a small mill if only for the purpose of grinding grain for the poultry. We need to make more savings on the farm when we can.

The kind of a mill we should buy will depend on many things; possibly for the average small farmer it would be best to get a horse-sweep mill, as I did. I find these practical in every way for farm use. They do not cost much at the start, and do the work just as well, taking a little more time; but they do the same work and just as good, grind grain in any way, from the coarse cracking of corn down to fine meal for table use. Do not be afraid of them, for they are all right. We can get a good sweep mill for $15, and on every farm if put to use it will save its cost each year. Even where poultry is kept, and for that alone, it will be a great saving.

I am a great chicken man; that is, I do not keep so many, but have a great interest in them, and in this way my first and main reason for buying a mill to crack the corn for young chickens. I was tired to death taking a sack of corn to mill and having it cracked, and then after the miller would take his toll out it seemed that I would hardly have anything left; at any rate, the miller took a good percentage, and I determined to stop the leak, and did it. I purchased a small sweep mill for $12 and still have it. I can crack the corn in as quick a time as they do at the mill and save the hauling back and forth, and have the miller's toll still left to feed. I can do this at times when I am not crowded, and do it just as good as they do at any of the mills and better, for I can have it to suit myself. When you go to the mill you have to take it as you get it, and often it is too fine or too coarse, yet you have to take it; but with your own mill you take it as you wish, and grind as fine as you please. No farm where poultry is kept should think of being without one; the cost is nothing, anl saved each year.

I use the same mill for making meal for the table. If I set the mill down to grind fine it takes more power and more time, but I have a better plan to work it. Possibly I have told it here before. I set the mill to grind coarse, and then sift. We then have the coarse for the chickens, either young or old. Then we have meal of a fine quality. We have lost nothing and gained time in the grinding, and better all around. There is nothing like planning.

We can grind any kind of grain. I have ground oats and corn mixed, and it is a fine feed for pigs and sows suckling their pigs. I mix the oats and corn before grinding, then grind rather fine, and you have it. It takes power and goes slow, but it makes a sure enough fine feed.

If you wish to crush ears of corn, it can be done, and does not take as much power as one might think. It does the work fine.

Any kind of grain may be ground, and if you have some rich feed and wish it ground, if you have your own mill, you still have it all after grinding, and do not let the miller have a good part. This is what I like about the home grinder so much.

If you wish to do much grinding, and can afford it, I would get a power mill and engine, or a sweep mill of the large size. When you get the mill first, have it well fastened to the ground, for it has a powerful strain when a team is pulling; have it solid, and it will do the work. It will pay to spend some time in getting it right.

Get a mill on the farm and save the leaks. Save the feed on the farm. You will never regret it.—E. J. Waterstripe.

Threshing Out of Shock.

If threshing can be done before the grain is damaged by rains, all well and good. Even with some nice threshing weather, under the common practice now of threshing in circuits, not many can get their work done during the most favorable time. Some must wait until the last of the threshing season, and during this time grain in shocks is sure to deteriorate. In some localities farmers are going back to the practice of putting all grain in stack and giving it time to go through the sweat before it is threshed. This insures nice, bright grain, which may then be stored without any danger of heating and the straw is much nicer for feeding. But if grain must be left in shock until a machine gets around to you, then by all means put up good shocks and cap them with two big sheaves. Walk around the grain field every day and replace any caps which the wind may have blown off. If any shocks are damaged, better throw these out as you haul in to the threshing machine. A few musty or smutted shocks will lower the grade of your whole crop when you come to market it.—L. C. Brown.

Fall-sown Grains.

The winter-grain zone is being pushed farther northward every season. Only a few years ago we considered Southern Indiana and like latitudes about the northern limit for sowing winter wheat. Now the hardy Russian varieties are fall sown away up in Minnesota and the Dakotas. But while all of Indiana and Illinois may now be considered well in the winter-wheat belt, it will not do to sow the same varieties in all sections of these states. In Illinois the Turkey Red has proved to be the best adapted to the northern section of the state; but in the southern section of the state this variety is not recommended at all. In Indiana the Turkey Red has proven a very hardy sort and almost rust resistant, but growers have a very weak straw and it is inclined to lodge. For this reason other varieties, such as Mealy, Rudy, Michigan Amber and Dawson's Golden Chaff, are the best yielders and have the strongest straw. We have pointed out before that a variety may do exceptionally well in one section of the state and be a poor second in another section. The safest plan, when changing seed wheat, is to introduce seed grown as nearly as possible under your own soil conditions.

Winter rye has come to stay. There has been a large acreage grown this year of the variety called "Mammoth White." This is a fine milling sort, with good, long straw, and a fine yielder. With winter oats and barley our advice is to go slow. These will come in time; but it will require time to develop suitable varieties. We have frequent inquiries about Winter Turf oats. We should test them out on a small acreage before risking a general crop.—L. C. Brown.

I Want to Loan You a Pair of TRUSIGHT SPECTACLES on Six Days Trial

FREE!

My Free Offer: I want to introduce Trusight Spectacles to every reader of this paper. To do this I am making a special one-third price. I want to send you a pair of genuine Trusight Spectacles in a Gold Filled Frame, guaranteed for ten years, on 6 days free trial.

Send Me Your Name I will send you my perfect Trusight Eye Tester with which you can test your own eyes as well as the most skilled optician. When you return the tester with your test I will send you a pair of Genuine $5.00 Trusight Spectacles, that will surely fit, on 6 days free trial. I won't ask for a cent of money—no deposit—not even a reference. You wear the glasses in your own home for six days and if perfectly satisfactory in every way—if they are the best glasses you ever saw at any price—send me only $1.65 and the glasses are yours. If the glasses, for any reason, do not suit you—if you don't believe them to be the best bargain you ever had—return them and you are out nothing.

THIS CASE FREE

This is my famous Orient Case; it is made of metal covered with seal grain leather and has a patent spring fastener. This is a very attractive case and will outlast any other case on the market. Ask your local optician if he will sell you such a case as this for less than $1.00. By my special plan this case will be given free to every body who answers this ad. right away and takes advantage of my special offer. Address

E. O. KOCH, Pres., TRUSIGHT SPECTACLE CO., 1605 Friend Bldg., Kansas City, Mo.

Send No Money.

Just sign your name and address on the Coupon and mail it to me. I will send you my Trusight Eye Tester by return mail. Do this TODAY and secure the beautiful Orient Spectacle Case which I give you FREE merely for promptness.

TEAR ON THIS LINE.

STATE

CARE OF THE HORSES.

With the extreme heat of summer comes a call for the best care of the horses of all ages and in all conditions. Distemper and the other kindred diseases which lurk everywhere need to be guarded against. A recognized remedy for the influenza, pinkeye, shipping fever, colds, etc., is Craft's Distemper and Cough Cure, which is advertised regularly in our columns. It should be remembered that a summer cold is a serious matter, and this liquid used as a tonic regularly is a good preventive and a sure cure for the above-named troubles. Our readers will remember that the manufacturer guarantees it. One should consult a druggist for it, and, if not to be obtained from this source, it may be ordered from the manufacturers, The Wells Medicine Company, 17 Third street, Lafayette, Ind.

Sample of Good Roofing.

Eleven different addresses will furnish a sample of Amatite Roofing if requested to do so. They are all given in the advertisement on page 3. Do not fail to write for a sample and kindly mention this paper. Address, Barrett Manufacturing Company, either at St. Louis, Chicago, Kansas City, Mo., or any other of the addresses in the advertisement.

Rubber Roofing Bargain.

A. J. Child & Sons have an advertisement on page 18 relating to a roofing bargain which they have obtained and offer to their customers at less than factory prices. This is too good to last long, therefore address A. J. Child & Sons, Box 301, that there is the minimum chance for St. Louis, Mo.

$4.95

20 Year Guarantee

A GENUINE 23 JEWELED R. R. WATCH

costs from $50 to $100 in a retail store. Why pay such a price for a R. R. watch. For the next 60 days only we will send to any address by express C. O. D. subject to examination, for only $4.95 a genuine Regular Special R. R. watch in heavy 3 oz. solid ore-silver dust proof screw case, both case and works guaranteed for 20 years. You examine it at your express office and if you consider it equal in appearance to any $25 jeweled R. R. watch you ever saw pay express agent our reduced price $4.95 and express charges and it is yours. Send this advertisement to us with your name, post office and express office address and watch will be sent at once. Address R. E. CHALMERS & CO., 360 Dearborn St., CHICAGO.

Apple Growers' Congress.

The sixth annual meeting of the American Apple Growers' Congress will be held at the Southern Hotel, St. Louis, Tuesday and Wednesday, August 11th and 12th, 1908. The hotel has announced special rates for the occasion and the directors of the Missouri Botanical Garden have arranged for the annual Shaw dinner, to which the members of the Congress will be invited guests. Following are the officers: H. M. Dunlap, Savoy, Ill., President; M. L. Dean, Pontiac, Mich., Vice-President; T. C. Wilson, St. Louis, Secretary; Wesley Greene, Des Moines, Iowa, Treasurer. Papers on all phases of the apple business will be read by prominent members, as shown by the following programme:

1. "Spraying Mixtures, J.C.Blair, Urbana, Ill., Professor of Horticulture, University of Illinois; W. M. Scott, Washington, D. C., Department of Agriculture.

2. "Shall We Spray in Off Years?" U. T. Cox, Rockwood, Ohio, Commercial Orchardist; J. W. Stanton, Richview, Ill., ex-President Southern Illinois Horticultural Society, Commercial Orchardist.

3. "Shipping Apples to Market in Bulk," A. Goodman, Kansas City, Mo., President American Pomological Society and Commercial Orchardist; H. A. Aldrich, Neoga, Ill., ex-President Illinois State Horticultural Society; Louis Erb, Cedar Gap, Mo., Commercial Orchardist.

4. "Exporting Apples," William M. French, New York, N.Y., Exporter and Commission Merchant; W. S. Perrine, Centralia, Ill., Secretary Illilnois Commercial Apple Growers' Association and Commercial Orchardist; C. H. Williamson, Quincy, Ill., Commercial Orchardist and Dealer.

5. "From Grower to Consumer," Henry W. Collingwood, New York, N. Y.,. Editor Rural New Yorker; George T. Tippin, Nichols, Mo., Commercial Orchardist and Dealer.

6. "Packages and Packing," William L. Wagner, Chicago, Ill., President International Apple Shippers' Association; S. G. Palmer, Minneapolis, Minn., Commission Merchant; Hon. Alec McNeil, Ottawa, Canada, Chief Fruit Division, Department of Agriculture.

7. "Effects on the Crop of Cross Pollenation," Prof. A. D. Selby, Wooster, Ohio, Botanist, Ohio Experiment Station; Paul Evans, Mountain Grove, Mo., Director State Experiment Station; J. G. Whitten, Columbia, Mo., State Horticulturist.

8. "Off Grade Apples as Affected by Pure Food Laws," M. H. Lamb, Kansas City, Mo., Assistant State Food and Dairy Commissioner; H. L. Prussing, Flora, Ill., Cider Vinegar Manufacturer; J. P. Logan, Springdale, Ark.

9. "Legislation Affecting Orchards and the Distribution of Nursery Stock," Prof. S. A. Forbes, Urbana, Ill., State Entomologist; Prof. J. Troop, Lafayette, Ind., Horticulturist and Entomologist.

10. "Benefits of Co-operation and Organization," E. H. Shepherd, Hood River, Ore., Manager Fruit Growers' Union and Editor Better Fruit; N. N. Hoover, Pierce City, Mo.; C. E. Bassett, Fennville, Mich., Secretary American Federation of Horticultural Societies.

11. "Pruning Fruit," Capt. George T. Lincoln, Bentonville, Ark., Commercial Orchardist and President Arkansas State Horticultural Society; M. L. Dean, Pontiac, Mich., Commercial Orchardist and Vice-President American Apple Growers' Congress.

Election of officers.

Reports of Standing Committees—On Pure Food: Norman J. Colman. On Grades of Fruit and Sizes of Packages: F. D. Voris, Chairman; E. E. Yaggy, L. A. Goodman, U. T. Cox, Louis Erb. On Tariff Changes: L. A. Goodman, Chairman; J. W. Stanton, W. W. Farnsworth.

Use of Potash by Plants.

[Written specially for this paper.]

All plants use potash in their development. There are a dozen or more elements that are needed to make plants grow, and one of the most necessary of these is potash.

The work of the potash in the plant is partially understood, which is saying a great deal about any element entering into the life of a plant, for mysteries are connected with the use by plants of all of the elements. Potash performs the important work of making the starch soluble, so that it may pass freely through the plant. Potash also develops the fruits and seeds.

The starch is formed in the surface of the leaves of the plants by the carbon from the air being combined with water and with a very small amount of other things in the tissues of the plants. But if the starch could not get out of the leaf, the laboratory in which it is created, it would be of little value. It must pass down the stems of the potato vine to be stored up in the tuber in the ground; it must pass from the corn leaf into the corn kernel, where it is also stored up; in all plants it must pass out of the place in which it is made to build up the fiber of the plant. Potash acts as a solvent of the starch in somewhat the same way as it does when it is combined with other things to make them easy to move, such as grease. A hint is given in soapy water, which is grease-removing on account of the potash.

It is easy to see, then, that in soil that lacks an abundance of readily available potash, plant development will not go on. There are multitudes of farms to-day where the crop production is very small on account of the very limited supply of potash in the soils in a condition that the plants can use. It should be understood that the soil may be full of potash and little of it be available. Ground granite possesses a large supply of potash, but only an infinitely small amount is available at any one time.

Soils that are richest in organic matter or humus are sometimes very deficient in potash. This is due to the fact that the original plants that made the organic matter had in them little potash. Another reason is that in some forms potash is very soluble and has leached out of some soils. Farmers have plowed and tilled black soils for a lifetime and gotten little from them because the needed potash was not present.

Instances are numerous where farmers have cultivated for many years soils that lacked potash and have received from them very meager returns. Then they have applied potash and had the returns come in five and even ten times as great. This is no exaggeration. There are numerous experimental fields in several of the states of the Middle West where experimenters have taken black land that would not produce more than five bushels of corn per year and made it produce seventy bushels by applying potash.

There are millions of fields to-day where the potash supply is below what full crops require, and these fields are being farmed at a less profit than would be the case if the manurial elements were properly balanced. Where potash is the lacking element, its application is an easy matter, for it does not usually cost more than $2.50 per acre to give such land the potash it needs.

Our millions of acres of reclaimed swamp land are nearly all deficient in potash, and need only potash to make them extremely fertile.

No Need to Buy Paint Blindly
If there were no way of knowing good paint materials from bad, except by waiting to see how they may wear, painting would necessarily be the lottery which many people make it.
The paint lottery is not necessary. Pure White Lead and Pure Linseed Oil are the essential elements of good paint. White Lead can be tested absolutely. The commoner adulterants of Linseed Oil can be also detected. See that they are pure and properly put on, and the paint will stay put.
To test White Lead, a blowpipe is needed. If you intend to paint this season, ask us for a blowpipe, which we will send you free, together with full directions for using it. The test is so simple, that any man, woman or child can make it.
Ask for "Test Equipment No. 30.
Full Weight Kegs
The Dutch Boy Painter on a keg guarantees not only purity, but full weight of White Lead. Our packages are not weighed with the contents; each keg contains the amount of White Lead designated on the outside

A Great Need.

7,978 cars of corn were inspected and sold upon the Chicago Board of Trade during the month of June. Only one car graded No. 1; only 772 cars, or less than 10 per cent., graded good enough for No. 2; 2,873 cars, or about 36 per cent., graded No. 3; 3,872 cars, or nearly one-half of the entire amount, graded No. 4; and 460 cars were of such poor quality that no grades were attached. This evidence shows the great need for grain improvement. The grain dealer and the receivers in the markets are anxious to lend asstance.

This great cereal exposition enterprise is not confined in its element of education, training and advantage to one class of persons, representing a single industry, such as the growing of crops. It extends in its general scope of influence to every business and industry carried on by man. In fact, it appeals to the appetite of every human being for endorsement of better food products, better living and a fuller compensation for labor performed.

The grain dealers of the United States are a recognized strong and influential class of business representatives. In recognition of their business relation to this great cereal exposition and their interest in its success and permanent influence for better grains and larger crops, the management has planned for a Grain Dealers' Day, and will arrange for excursions from all parts of the country. The entertainment that will be provided for this occasion and the completeness of arrangements in general is a guarantee that thousands of leading grain men of the country will be in attendance.

A NEW EGG FARM.

Stoddard's book entitled **A New Egg Farm**, is, in our estimation, the best book for a young poultry raiser to study. It shows the way to profitable production of eggs and poultry. He compares the best locations for the business. Tells how to build the houses for layers, breeders, sitters or chicks, adapted to the colony system, the yard system and other methods. How to breed and manage. How to breed and select. Choice of breeds and crosses. Management for mild or severe climates. How to feed fowls and keep them at exercise without hard work. How to manage hundreds of sitters with little labor. How to raise brooder chicks and keep them alive and growing. There are 320 pages of useful, attractive, illustrated information. The book is nicely bound, and we will send this book by mail, postpaid, and include a year's subscription to **The National Farmer and Stock Grower**, for one dollar. Address,

Value of Poultry Shows.

[Written specially for this paper.]

The poultry shows that are coming should be freely patronized by both the farming population and by the people living in the villages.

Poultry raising is a thing that is of interest to citizens as well as to people that make a business of farming. We find many of our finest poultry-raising establishments located in the villages and being run successfully by people that had no experience in general farming.

Probably nothing has done more to stimulate the raising of poultry than the numerous shows that are every year held in all parts of the country. Without these shows, the fowls on our farms would still be the inferior sorts that developed with the development of the country.

The poultry shows have been largely responsible for the interest in the new breeds as they have appeared in the arena. Under no other influence could some of the best of the new breeds have so quickly driven out inferior kinds.

This is one of the chief values of poultry shows. Many of the new breeds are particularly adapted to certain localities or to certain markets, and these advantages when possessed by a breed should be known. The new breed must be personally introduced and the poultry show makes this possible.

Every year many new people start in the raising of poultry, and they do not feel certain as to which breed they prefer. Sometimes they start with one breed, and after some years conclude that they made a mistake and should have started with another breed. Then they have to begin over again in their breeding-up process.

All people that are planning to start in the raising of poultry should attend not one but several poultry shows and get acquainted with the different breeds; also, they should get acquainted with the breeders.

One can pick up a great deal of information by getting acquainted with the breeders. One not only learns the good points of the breed a particular person is raising but also finds out the weak points of the breeds that particular breeder is not raising. This is a matter of great importance to the amateur poultry raiser or to the person that expects to be a professional.

One of the great values of the poultry shows lies in inducing people to raise varieties of fowls they never thought of raising, such as ducks, geese and turkeys.

On many a farm there are water privileges that might be used for ducks and geese, but which opportunities are going to waste. The idea of introducing these kinds of fowls is often first born at a poultry show. It is probably true that Americans are not making as much of water fowls as is made of them in other countries and as could be made of them here to the great advantage of our farmers, especially as these birds are more larger grazers than the common fowls.

Poultry shows incite an aspiration for better things. Many a farm boy has the idea in his head that poultry does not amount to much anyway. The poultry show jars that idea out of his head. When he sees poultry being made much of, he changes his attitude. The farmer boy that grows to manhood without ever attending a poultry show often carries into his farm practice the idea that the poultry do not count for much.

Out of this idea comes the dilapidated poultry establishment and the poorly-kept flock.

Working Up the Egg Trade.

Egg prices will gradually rise from now on as the spring flush is over, while the summer boarder and city resident who is shut in town alike clamor for the country products.

It used to be that "an egg was an egg;" but more and more are the marked differences in size and quality becoming apparent to the public. Now the fastidious person wants eggs brought to market in a clean basket. The soiled receptacle which serves for potatoes and turnips fresh from the ground takes a back seat, and the dainty willow or at least the absolutely clean grape basket with spotless eggs commands the highest price.

The consumer observes if his poultryman keeps the premises tidy. If there is a mass of refuse near he concludes to try for eggs elsewhere. If the hens have access to only a pool of filth, modern hygiene revolts at once, well knowing the large percentage of water contained in an egg. It may be that you live some miles from the place of sale, yet if no one happens your way, the peculiar flavor of the product will eventually discount sales. An egg is almost as easily damaged in flavor as milk, and the public are fast being educated to this. Once they noticed that the egg was not of first quality and imputed to it staleness; now they know that there are other things than age which count, or rather discount.

Never bring discredit by offering any but strictly fresh eggs. Use the thin-shelled and abnormal-formed ones at home, and let the sales be neat, clean, fresh eggs.—Bessie L. Putnam.

Find the Cause.

When anything goes wrong about the poultry yard, find the cause. If the eggs are unfertile and do not hatch; if the chicks die off; if the hens get sick or do not lay; in fact, if anything happens that is not as it should be, stop and find the cause. How many times you hear people talk about luck. They have no luck raising chickens (early ones). They never have any luck getting winter eggs or getting the pullets to lay before cold weather sets in. To hear them talk one would conclude that the poultry business was run on luck. But this is not true, as we know from experience. Everything in this world follows cause and effect. A certain

effect is produced by a certain cause, and this is just as true in the poultry business as in any other branch of business, and should be controlled by man in all practical ways. There are certain conditions of weather that work to interfere with the best of success at times, and yet right here is where man urgently comes in and overcomes these conditions in a great measure and brings success out of apparent defeat. It should be the aim of the poultryman to arrange the cause to produce the desired effect—good, healthy stock, well cared for at the proper times to produce full egg baskets, etc. Try to stop the leaks. It's the little leaks in many ways that make the great, big defeat or bad luck, as many are pleased to call them. They make the same mistakes year after year; mistakes are forgotten from one hatching season to another. Learn to study your fowls and the conditions surrounding them, and when you become thoroughly familiar with conditions you will know how to treat the various conditions to insure success. One man claimed he was never successful in getting eggs in winter, although his hens were in apparently good health. I soon found his mistake to be in putting twice as many hens in one house as it would accommodate. This was plain why he received no eggs. If changing one condition does not produce the desired effect, make other changes until the right change is made, all the time using common sense along practical lines.

Poultry and Pet Stock.

Poultry premiums to the amount of $2,420 will be offered by the Colorado Interstate Fair and Exposition to be held at Denver during the second week in September. Mr. Harry Petrie is the General Superintendent.

In order to prevent a great deal of trouble in turkey raising, one should be careful in the feeding. The turkey's natural home was in the woods and fields, and in their present condition (semi-domestic) they perhaps need more looking after. They should not be pampered or overfed with unnatural feed. Remember, that in their wild state they ran about here and there in search of their food. They were all the time getting plenty of exercise, which is one of the most important factors in successful turkey raising. It is very unsatisfactory to raise them by hand unless you understand their nature. I have lately found out that medicated charcoal is an important item in the raising of turkeys and chicks by hand.

Roomy coops with rain-proof roofs should be ready for the different broods, and these little homes should be placed in shady places, and the coops should be cleaned every few days with some strong lice killer. Almost daily cleanliness is necessary during the extremely hot weather. I always prevent loss by having my little chicks yarded, otherwise they would run in every direction but the right one.

No use shirking the work when you are fighting the vermin on your poultry, and you should should fight them every day. They cause more loss one way and another than all other troubles combined. I have known twice as much feed to be given to lousy birds as was necessary, and then there wouldn't be any gain in weight.

One great advantage in brooder chicks is that they are all of the same size and need less care than when a lot of different ages are to be raised. These few that outgrow and develop the others are the ones that you want to watch. They are those that have great prepotency, that is, the ability to transmit their individuality.

Do not keep your laying hens too fat. Working hens are not apt to get in this condition, so if a variety of food is given in plenty of litter or straw, so they must scratch to find it, little trouble need be apprehended along that line. Do not starve the laying hens. They must have sufficient variety to meet all the needs of the system.

The Queen's Reprimand.

At a political breakfast William E. Gladstone told the following story of Queen Victoria and the old Duke of Cambridge, Commander-in-Chief of the British army; Lord Mark Kerr had sworn at some troops at review before the Queen. The Queen sent for the Duke of Cambridge and told him he must reprimand Lord Kerr, which he did in this fashion:

"Look here, Mark, her Majesty heard you swear this morning, and she said she was damned if she'd stand it."—Bellman.

Don't Sell Your Eggs

When they are cheap; pack them with my new method—will keep two years—will be as fresh as new laid eggs. No special place required to store them. Cost only ½c. per dozen to pack them. Write me for circular.

HORSE BOOK FREE.

W. F. Young, P. D. F., 106 Monmouth street, Springfield, Mass., has recently issued a larger and more complete edition of his handy reference book, "How to Remove Blemishes," which will be sent postpaid to any address upon request. This little book will be appreciated by the horse owner, as it is full of "horsey" pointers and information that can be used to advantage. Send a postal to-day addressed plainly as above and the book will be sent you by return mail free of all cost and postpaid.

Use It 30 Days

Before you pay one penny or decide to buy

We mean that exactly; please take us at our word.

Simply ask us to show you the "1900" Gravity Washer. We will send it to you, freight prepaid. You pay no deposit, give no security; you are under no obligation.

Use it for 30 days; do four washings with it. Learn how it saves your labor, and how it saves your clothes.

Then, if you want it, pay a little each week, or a little each month. No hurry; just suit yourself. If you don't want it, simply send it back.

The above offer—just as we state it—is open to anyone who is responsible.

Don't you want to see a washing machine that will stand such a test as that?

The "1900" Gravity is a machine that every woman will have when she knows it. That's why we want you to see it. It does washing solely by forcing soap and water through the meshes of the clothes. No rubbing, no stirring, no paddling; no wear of any sort on the clothes. They are simply held still, while the soapy water is forced back and forth, up and down, through the meshes.

Clothes are washed perfectly clean in this way in six minutes. It does away with the tub and washboard. Makes washing almost fun. Saves all the wear of washing, which means nine-tenths of all the wear on clothes. Cuts wash-bills in half.

We control this machine by patents which have cost us $50,000. So no other washer does what this does. It has built for us the largest washer business in the world.

The "1900" saves so much, and costs so little, that it is far cheaper to have it than to go without it. So send us this coupon now for our new Washer Book, showing the different styles. Then tell us which you want to see, and we'll send it. Do this in justice to yourself.

The "1900" Gravity Washer

Another Cure For Gapes.

Numerous as are the remedies and cures for this troublesome disease, the best of them sometimes fail, and there is a persistence required to be effectual which is quite as troublesome to the patient as to its owner. A new remedy which is highly recommended will be gladly given a trial, and if it should prove all that is claimed for it, the drug will have a double shelf among the poultry supplies.

Take a wooden box a little larger than an ordinary biscuit tin and make a partition across the middle of it with a piece of wire netting. Put the chickens in one side and a half a brick, heated very hot, in the other. Care must be taken not to place it so close to the partition as to heat the wires and burn the chicks. Cover the entire box with a cloth. Then slip in upon the hot brick a teaspoonful of carbolic acid. This will be more conveniently done with a tablespoon. Be careful not to let the hands or face come in contact with the liquid as it is poured upon the hot surface. The fumes will, it is claimed, cure the chicks in two minutes. They should be removed before the point of suffocation is reached. If the first time does not suffice, try again and keep them in the fumes a little longer.

The remedy, if effectual, suggests still more the value of carbolic acid or soap about the houses as a disinfectant and cure for insects. Great care, however, should be taken in its use, as it is a deadly poison.—Bessie L. Putnam.

House Cleaning in Hendom.

Now is the crucial time for thorough work. Every hot day increases many fold insect life, and the more complete the subjugation in early summer the less trouble later.

Let the sweet air and sunshine in. It will help to disinfect the place and be less disagreeable for the one who does the renovating. Burn the waste straw, and put the droppings in the garden. If your garden is all made, work it in about the roots of cucumbers, cabbage or tomatoes; or dig a deep hole between each four hills of cucumbers or melons, dump in half a pailful of the fertilizer and cover it up. The summer rains will furnish liquid food which will keep the plants vigorous until cut short by frost. There is an unwarranted prejudice against using this fertilizer for such vegetables as do not furnish a root product. Though highly-concentrated food, it will not hurt the above-mentioned when liberally applied if first well mixed with the soil. It is too valuable to waste, and the daily or weekly cleaning through the summer should every bit of it find a place in some part of the garden.

If there are rats about the premises, try sprinkling copperas about their haunts. Quicklime and soft soap is another mixture into which they do not like to get their feet. Their holes may be stopped up with a mortar made of cement and sand, and if the entire floor is cemented they will trouble less, and the house will be warmer in winter as well as more easily kept clean.

After all the dirt and loose material are removed there is no cheaper and more effective insecticide than kerosene, applied with an ordinary spray pump. These tin pumps can be bought for a dollar, and, while not to be compared with the expensive spraying outfit, they are useful in many ways where copper solutions are not required. The material is forced into the cracks more effectually than can be done in any other way, and less material is required to cover the same ground theoretically.

Carbolic soap may be made by melting common laundry soap, first shredding and adding a little water, adding enough carbolic acid to the mixture to give a strong odor of the acid. Cook until the soap is thoroughly dissolved and then remove and cool. Unless too much water is put in it will soon harden and may be kept indefinitely. In the soft state it is more convenient for immediate use. Make a strong suds of it and spray every part of the house with it. This will not only cleanse and purify, but it is death to the mites.

Do not let the hens sit in the poultry house. Their presence is but an increase of the pest, and it is better for both hens and house to have them removed to some box or apartment away from the main flock. Dust each nest thoroughly with insect powder when she commences to set, and sprinkle it liberally about the nest. Give another dose after the chicks are hatched, and see that the coop is clean and thoroughly dusted before entrusting the chicks to it. Powder not strong enough to make you feel like sneezing when using it is of very little use. The secret of success is in getting that which is fresh.—Bessie L. Putnam.

An Eye on the Future.

Tommy's maiden aunt had called attention to some of that young man's misdemeanors, thereby causing him to be punished. Tommy pondered a while, then asked: "Papa, will little sister Gladys be an aunt to my children when I am a man?"

"Yes, Tommy," answered his father, much interested. "Why do you ask?"

"'Cause she might as well get married and have a home of her own, for I don't intend to 'low any aunts to stay around my house, making trouble for my children."—Woman's Home Companion for August.

Midnight Oil Means Suicide, Says Dr. Edward Everett Hale.

"People talk about the midnight oil as if it had some virtue attached to it," writes Doctor Hale in Woman's Home Companion for August. "In truth, four times out of five the midnight oil means overwork; or it means that you have neglected some duty which should have been attended to before the sun went down.

"Unless each night recovers the ground lost in the exertion of the day before, you are committing suicide by inches; and you have no right to commit suicide at all."

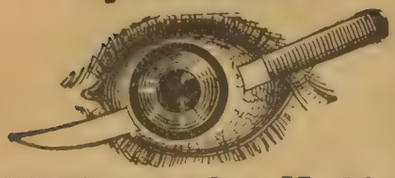
Eyes Cured



Without the Knife

Grateful Patrons Tell of Almost Miraculous Cures of Cataracts, Granulated Lids, Wild Hairs, Ulcers, Weak, Watery Eyes and All Eye Diseases—Send Your Name and Address with Two-Cent Stamp For Free Trial Bottle.

The cures being made by this magic lotion every day are truly remarkable. I have repeatedly restored to sight persons nearly blind for years.

Ulcers, wild hairs, granulated lids disappear almost instantly with the use of this magic remedy. Weak, watery eyes are cleared in a single night and quickly restored to perfect health. It has repeatedly cured where all other remedies and all doctors had failed. It is indeed a magic remedy and I am glad to give this free trial to any sufferer from sore eyes or any eye trouble.

Many have thrown away their glasses after using it a week. Preachers, teachers, doctors, lawyers, engineers, students, dressmakers and all who use their eyes under strain find with this Magic Lotion a safe, sure and quick relief. If you have sore eyes or any eye trouble, write me to-day. I am in earnest in making my offer of a free trial bottle of this lotion. I am glad to furnish proof in many well-proven and authentic cases where it has cured cataract after the doctors said that only a dangerous and expensive operation would save the sight. If you have eye trouble of any kind, you will make a serious mistake if you do not send for my great free offer of this Magic Eye Lotion. Address with full description of your trouble and a two-cent stamp, H. T. Schlegel Co., 2716 Home Bank Bldg., Peoria, Ill., and you will receive by return mail, prepaid, a trial bottle of this magic remedy that has restored many almost blind to sight.

A Chapter on Kerosene.

There are few things about the house more helpful to the housekeeper than the common kerosene oil, and it is of inestimable value in the laundry and kitchen. In the first place, it will remove stains from clothing and will often remove old fruit stains by soaking them in the oil. Then it is good for cleaning the rubber rollers of the wringer if they have become discolored and covered with lint. Dip a cloth in the oil and wipe off the rubber, then wipe with a dry cloth, and they will be bright and clean. If the flatirons get wet or rusty, soak them in the oil and scour with ashes, and before using rub a cloth dampened with the oil over them and they will be perfectly smooth. Kerosene mixed with coal ashes is fine for scouring galvanized ironware, steel knives, tinware and the steel of the range, and if a little of the oil is used in the water for cleaning oilcloth, it will last longer and look better. White garments that are very much soiled or that have turned yellow can be made as white as new by first washing them through a strong Pearline suds and then boiling them in suds to which a few tablespoonfuls of the oil has been added. Remove from the boiler into very hot water and rinse well, and several hours of direct sunshine will make them white and clear, and this is a good way to wash any garment that is very soiled, such as men's working shirts and overalls. It may fade the colors some, but rubbing lightly through the first suds and boiling will clean the fabric better and will not wear out the goods nearly so much as hard rubbing on the washboard. The best way to keep the machine in good running order is to fill the oil can with kerosene oil and oil every part where there is the least friction, then run the machine for a few minutes and wipe off all of this oil and use the machine oil, and this should be done once a week if the machine is used, as it will not only do better work, but will last twice as long if properly cared for.—M. H.

An English Woman's Yarn.

Lady Duff-Gordon was describing at a dinner in New York the visit that she paid to Chinatown under the able guidance of "Chuck" Connors.

"It was a most interesting visit," Lady Duff-Gordon said, "but I could not understand the English of my guide, nor could I understand the intricacies of the opium smoking, the Chinese acting, and the other strange and novel things I saw.

"Altogether, I must have appeared very ignorant—as ignorant as the Yorkshireman who came to London to see our famous British museum.

"Unfortunately, the Yorkshireman chose a close day for his visit, and the policeman at the gate, when he presented himself there, waved him away.

"But I must come in,' said the Yorkshireman. 'I've a holiday on purpose.'

" 'No matter,' said the guardian. 'This is a close day, and the museum is shut.'

" 'What! Ain't this public property?'

" 'Yes,' admitted the policeman, 'but,' he cried excitedly, 'one of the mummies died on Tuesday, and do you begrudge us one day to bury him in?'

" 'Oh, excuse me,' said the Yorkshireman, in a hushed voice. 'In that case I won't intrude.' "—New York Press.

The National Farmer Hat.

The sizes are from 6¾ to 7¼. They are hats suitable for men or boys. They are of good material, well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. These hats are all black, wear as well and last as long as any $2.00 to $3.00 hats on this market. They will give entire satisfaction. We believe this hat will make a first-class subscription premium. The subscription price of The National Farmer and Stock Grower is one dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us one dollar to pay for two-years' subscription to The National Farmer and Stock Grower and we will send you by mail one of these fine, wool crusher National Farmer hats as a premium. Be sure to mention the size.

Address, **The Hale Publishing Co., 3550 Vista avenue, St. Louis, Mo.**

Iowa Graduate at Hawaii.

B. E. Porter, of the 1906 graduating class in the Animal Husbandry Department of the Iowa State College, has just been elected Professor of Animal Husbandry in the Hawaii Agricultural College at a salary of $1,800 per year. The position is an excellent one, and offers great opportunities for future promotion.

Mr. Porter is well fitted for the place, as since graduation he has very acceptably filled the position of Instructor in Animal Husbandry in the Maryland Agricultural College. He spent the summer of 1907 in Europe studying live stock conditions and visiting the foremost institutions of learning. His rapid promotion has been earned by hard work. Mr. Porter not only worked his way through the Centerville (Iowa) High School, but through the four-year course at the Iowa State College. He is a worthy illustration of what work and purpose will do for a young man. The demand for well-trained men along Animal Husbandry lines is greater than ever before.

The World's Meat Supplies.

The world is eating up its sheep. The number on foot is steadily being diminished, and the same is true of the cattle and poultry. From the available statistics it is said that in three years, should there be no increase, at the rate of consumption every head of cattle, every hog, every sheep and every chicken in the barnyards would be eaten up. It has been noticeable for several years that the number of food animals raised throughout the world was steadily decreasing, while the population is as steadily increasing. The question is, unless conditions are modified, and that shortly, from where are the meats of the future to come?—London Meat Trades Journal.

Bargain Sale of Widows.

India is full with "flower widows" as a result of the "hard times." These "widows" are not widows in the Western sense of the world. They are only so in accordance with the customs of their country. Their "widowhood" is a ruse to aid their marriage.

It is customary in India for a father to take his daughter to the market place and sell her as a bride to the highest bidder. When times are hard, purchasers are scarce. To sell a girl at a reduced rate would be regarded as a blot on the family.

It appears, however, that custom permits widows to be sold at any price without disgrace. Fathers therefore "marry their daughters to flowers," and if these flowers die, the daughters are considered "widows" and can then be sold at a bargain.

In some cases the father forgets to water the flowers to which his daughter is married.

Rockefeller on Persistence.

"Sleep well, eat well, work well and put by for a rainy day—those are the rules to keep if one wants to become an expert golfer."

The speaker was John D. Rockefeller. He made a fair drive and resumed:

"And to become a good reporter you must be persistent. But I don't need to tell you that, young man.

"With persistence anything can be accomplished. A peddler entered a business man's office the other day.

OKLAHOMA LANDS

OPENED FOR SETTLEMENT

Better than a land drawing; better than any free home offering; better than any other opportunity you have had to secure low-priced lands—is the

Removal of Restrictions from 8,000,000 Acres of Rich Indian Lands

in the best part of the new State, along the line of the **Missouri Pacific-Iron Mountain,** surrounding the growing cities of Seminole, Lenapah, Delaware, Nowata, Watova, Claremore, Inola, Ross, Wagoner, Rex, Fort Gibson, Illinois, Vian, Mackey, Sallisaw, Hanson, Muldrow and Rowland.

MISSOURI PACIFIC IRON MOUNTAIN

Best farm land in Oklahoma—never before upon the market—to be had at your own prices and in any amounts. Soil and climate suited to any crops.

HOMESEEKERS' EXCURSIONS

Every First and Third Tuesdays.

Low rate, long return limit, liberal stopovers. Write for Oklahoma literature and information.

B. H. PAYNE, G. P. & T. A.,
Room 668 Missouri Pacific Building, St. Louis, Mo.

Please send list of lands for sale in Oklahoma, and your literature descriptive of that country, and explaining the recent removal of Indian restrictions.

" 'I am introducing,' he began, 'a patent electric hair brush—'

" 'What do I want with a hair brush?' growled the business man. 'Can't you see I'm bald?'

" 'Your lady, perhaps—'

" 'Bald, too, except when she's dressed up.'

" 'Yes, sir. But you may have at home a little child—'

" 'We have. It's a month old and quite bald.'

" 'Of course, at that age,' said the peddler. 'But,' he persisted, 'maybe you keep a dog?'

" 'We do,' said the business man. 'A hairless Chinese dog.'

The peddler dived into another pocket.

" 'Allow me,' he said, 'to show you the latest thing in fly paper.' "—Cleveland Leader.

Recommends Caustic Balsam to Stockmen.

"I had a mule which had a large growth on one knee and one coming on the other knee. Nothing seemed to do any good until I tried your **Gombault's Caustic Balsam.** After four applications the bunches were all gone. I cheerfully recommend it to all stockmen. It is also good for human ailments. A neighbor tried it for rheumatism and was relieved after one application. A neighbor's wife cured a very painful bruise on her finger with it. I cannot say too much in favor of your wonderful remedy."—J. J. WHITE, Calhoun, Ga.

DON'T BUY GASOLINE ENGINES

UNTIL YOU INVESTIGATE "THE MASTER WORKMAN," a two-cylinder gasoline, kerosene or alcohol engine, superior to any one-cylinder engine; revolutionizing power. Its weight and bulk are half that of single cylinder engines, with greater durability. Costs Less to Buy—Less to Run. Quickly, easily started. Vibration practically overcome. Cheaply mounted on any wagon. It is a combination portable, stationary or traction engine. SEND FOR CATALOGUE. **THE TEMPLE PUMP CO., Mfrs., Meagher and 15th Sts., Chicago.** THIS IS OUR FIFTY-FIFTH YEAR.

The Chance Acquaintance.

As Elsie took the letter from the rural carrier her face turned a rosy red, and Aunt Rose Mitchell, an old family friend, who was spending a few days with Elsie's people, could not help but notice the fluttered manner of the girl as she dropped down upon the steps of the vine-covered porch. And as she did so the letter slipped to the ground, address side up, and Aunt Rose could plainly read the address printed in the corner.

"Just a letter for me," Elsie announced with assumed indifference, and then she tried to pick up the thread of the conversation again, but Aunt Rose was not listening; she was watching the girl. Finally she broke in irrelevantly: "Jim Brenton seems to be a fine young man. He makes me think of his father."

"Yes," answered Elsie, looking away.

"He's a pretty good friend of yours, isn't he, Elsie?" she continued.

"We've known each other always and he's taken me around a good deal and—well, Aunt Rose, I may as well tell you, he wants to marry me, and has been wanting to for more than a year, but I can't seem to care for him that way since I met—somebody else."

"And the letter is from the 'somebody else?' " said Aunt Rose.

"Yes, Aunt Rose, and he's so different than Jim. He is so polished and looks so elegant. And since I met him Jim has seemed a little bit common to me."

"And when did you meet this piece of elegance?"

"Well, it was—don't think I would do this with everybody, but you know once in a while you do meet someone that you seem to know the minute your eyes rest on them—it was on my trip back from Iowa, and he was going to Chicago; he works there; and we got to talking, and it seemed just as though we'd always known each other; we had so many things in common, and he thought so, too."

"Have you seen him since?" asked Aunt Rose.

"Yes, he gave me his telephone number and told me to call him up if I went to Chicago. I know you'll think it awful for me to call up a young man in that way, but with Claude it seemed different, for it seemed just as he said that we were soul mates, and those conventionalities didn't matter just between us. Well, when I went to Chicago, I did it, and he took me out to the most elegant lunch room and maybe he'll come here this summer. I'll show you his picture if you'll like to see it," added Elsie hesitatingly.

"Certainly, dear, if you don't mind showing it," answered Aunt Rose.

In a moment Elsie returned and placed in her guest's hand a small photograph of a young man—handsome he might be called by some, but a student of human nature would observe differently.

Aunt Rose studied the face a long time before she spoke and when she did it was with a great tenderness. "I want to tell you something, Girlie, and I want you first to know that it hurts me to think of hurting you, even while I am thankful that I can tell you. This is a picture of Claude Ransome. I should know it only too well, for I have seen it many times in his wife's home. I know no good of him. His wife is earning a living for herself and two children. In fact, this dress I have on is one she made for me. Her husband gets a good salary, but not a cent of it goes into that home, for he spends it on just such innocent, or perhaps they are not always so innocent, girls as you. Most of the time he lives at the club. Depend upon it, he has told hundreds of other girls just what he has told you. A pick-up acquaintance is never right nor safe for a girl, Elsie, and this fickle and wicked scapegrace might have cost you the love of a truly worthy man."

There was a long silence, broken only by the sobs of the girl as she sat with her face hid in Aunt Rose's lap. When at last the sobs ceased she raised a calm face to the older woman.

"Thank you, Aunt Rose," she said. "I have learned my lesson. Jim is coming to-night, and I'll tell him all about it. He ought to know if he still wants me for his wife, but he may not think me fit for that now."

"Just try him!" answered Aunt Rose.—Janet Thomas Van Osdel.

SHIRT WAIST EMBROIDERY PATTERN.

This embroidery pattern is No. 513, made by the Paris Modes Company. It is a wheat design in shadow and outline embroidery for shirt waist. It comes imprinted on light paper and is transferred to the cloth by pressing it with a hot iron. The pattern is good for two impressions.

We are sending out this pattern as a circulation premium in connection with the **Universal Magazine.** Anyone who will send 25 cents to pay for the **Universal Magazine** for one year can select embroidery pattern No. 513 as a free premium. The **Universal Magazine** is sixty-eight pages, published monthly, and contains a large amount of interesting reading matter. Address, **The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

CHILD'S LINGERIE HAT.

This embroidery pattern is No. 526, made by the Paris Modes Company. It is for eyelet embroidery and D. M. C. embroidery cotton. The pattern comes imprinted on light paper and is transferred to the cloth by pressing it with a hot iron. The pattern is good for two impressions. Anyone who will send us 25 cents to pay for one year's subscription to the **Universal Magazine** can select embroidery pattern No. 526 as a free premium. The **Universal Magazine** is a nice, clean, interesting sixty-eight-page, two-column monthly paper, and it will please everyone. Address, **The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Mind of a Martinet.

"A martinet," said General F. D. Grant at a Memorial Day banquet, "is generally a fool."

"They tell a story of a martinet of the Civil War, a Captain. He got orders from headquarters one day that his men were to change their undershirts.

" 'But, Captain,' said a Sergeant to whom this order was comuunicated, 'the men only have one undershirt each.'

"The Captain frowned. Then he said:

" 'No matter. Military commands must be obeyed. Let them change undershirts with each other.' " —New York Sun.

Society Leader Hits Merry Widow.

Mrs. "Jack" Gardner, of Boston, has taken up the Audubon Society's war against the "merry widow" hat.

"This hat is the worst omnivorous creation that the milliners have yet given us," she said at a recent dinner. "The number of things required to trim the hat is frightening. Its appetite, in fact, reminds me of a police court episode.

"A detective was testifying in the case of a woman shoplifter whom he had arrested in her bedroom.

" 'And, your honor,' he said, 'when I told her the charge, she turned her back on me and swallowed a purse, six suits of silk underwear, a silver candlestick, a chafing dish, and—

" 'Rubbish! Are you crazy?' the magistrate interrupted.

" 'Excuse me. What I mean to say, your honor,' exclaimed the detective, 'is that she swallowed the pawn ticket.' "—Washington Star.

Great Men and Their Cats.

The cat, although the target for mischievous boys and hooligans, has been a general favorite from time immemorial. In Egyptian writings 2,000 years ago it is mentioned. Famous men in all ages have had their cats. Montague, Richelieu, Dr. Johnson with "Hodge," who used to cause Boswell a certain amount of uneasiness when visiting the doctor in Bolt Court, and the late Robert Stephen Hawker, the poet vicar of Morwenstow, all had and loved the the cat.

Francois Coppee, who died recently, had at one time a legion of cats and kittens, but, as he grew older, he declined to replace those which died, and at his death he possessed but "Isabelle" and her daughter. Both have been famous hunters of sparrows in their time, but "Isabelle" is now past sport.

The family of Coppee has made provision for his two feline friends, and they have been sent to the cottage of an old servant, where, we learn, the poet's nephew occasionally visits them, and with "Isabelle" watches the younger cat exercising her prowess with the sparrows.—London Globe.

Knew Meat From Carrion.

Tennessee bred two great orators in the olden days—Andrew Johnson, a Democrat, once President of the United States, and Gustavus A. Henry, a Whig, known as the "eagle orator of the South."

They ran against each other for Governor, and when a long series of joint debates had reached its close, Johnson addressed the Whigs in the audience: "I have spoken with the boasted eagle orator from the Mississippi river to the Unaka mountains, and as yet I see no flesh in his talons or blood on his beak."

Quick as a flash Henry was on his feet, saying: "The American eagle is a proud bird and feeds not on carrion."—Nashville Banner.

A Girl's Overdress.

This is May Manton Pattern No. 6021. It is a girl's dress to be worn with any guimpe. Every variation of the guimpe dress is being worn by school girls, and some very pretty and novel effects are shown. Here is one that is trimmed to give the Princesse lines and which is charmingly attractive, while it is absolutely simple and youthful. The dress is made with the blouse and skirt. The blouse consists of the fronts and backs and narrow Mandarin sleeves. It is tucked becomingly and is gathered at the lower edge and joined to a belt. The skirt is straight and laid in backward-turning plaits, the closing being made invisibly at the back.

The quantity of material required for the medium size (twelve years) is 5¾ yards 24, 4¼ yards 32, or 3¾ yards 44 inches wide, with 1 yard 32 inches wide for trimming.

The Pattern No. 6021 is cut in sizes for girls of eight, ten, twelve, and fourteen years of age, and will be mailed to any address on receipt of 10 cents, or, we will send the pattern and our nice, sixty-eight-page monthly **Universal Magazine** for one year for 25 cents. Address, Hale Publishing Co., 3550 Vista avenue, St. Louis, Mo.

Eight-gored Skirt.

This is May Manton Pattern No. 5955. It is an eight-gored skirt. To be made with inverted plaits or habit back in round or walking length.

The plain gored skirt is an unquestioned favorite of the season and has many qualities to commend it. It is very generally becoming, it is most satisfactory to the wearer and it is adapted to almost all fashionable materials. This one is novel, being closed by means of buttons and buttonholes at the front, and is admirably well adapted to linen, pique and the like as well as to wool and to silk. The buttons, besides serving a practical purpose, make an exceedingly effective trimming. In this instance the lower edge is finished only with a hem stitched with Belding silk, but while this plain, simple style is much used, one wide band above the hem also is in vogue, and again there are a great many skirts made with applied bands, or hems, at the lower edge that are of contrasting material or color.

The skirt is cut in eight gores and can be made with inverted plaits or habit back, also it allows a choice of round or walking length.

The quantity of material required for the medium size is 10⅝ yards 24, 8⅝ yards 32, or 5¼ yards 44 inches wide, if material has figure or nap; 8⅝ yards 24, 5⅝ yards 32, or 3¾ yards 44 inches wide if it has not.

The Pattern No. 5955 is cut in sizes for a 22, 24, 26, 28, 30 and 32-inch waist measure, and will be mailed to any address on receipt of 10 cents; or, if you send 25 cents, we will send the pattern and the interesting, illustrated sixty-eight-page **Universal Magazine** for one year. Address, Hale Publishing Co., 3550 Vista avenue, St. Louis, Mo.

The KEELEY Treatment Has Stood the Test of Time,

Having been used with unparalleled success for 22 years in curing Alcoholism, Morphine and other drug-using, Cigarette and Tobacco habits, and Nerve Exhaustion. Half a million cured men and women in the United States are our testimonials. Remedies and treatment absolutely free from any injurious or harmful effects. Will-power, intellectual activity, health, business capacity and the confidence of family, friends and business associates recovered. For full information, consult or write in confidence,

2803 Locust Street,
ST. LOUIS, MO.

For eight years Chief of Medical Staff of the Keeley Institute, Dwight, Ill.

SELECTED POETRY.

ELEGY WRITTEN IN A COUNTRY CHURCHYARD.

The curfew tolls the knell of parting day,
The lowing herd winds slowly o'er the lea,
The plowman homeward plods his weary way
And leaves the world to darkness and to me.

Now fades the glimmering landscape on the sight,
And all the air a solemn stillness holds,
Save where the beetle whirls his droning flight
And drowsy tinklings lull the distant folds.

Save that from yonder ivy-mantled tower
The moping owl does to the moon complain
Of such as, wandering near her secret bower,
Molest her ancient, solitary reign.

Beneath those rugged elms, that yew tree's shade,
Where heaves the turf in many a moldering heap,
Each in his narrow cell forever laid,
The rude forefathers of the hamlet sleep.

The breezy call of incense breathing morn,
The swallow twittering from the straw-built shed,
The cock's shrill clarion, or the echoing horn,
No more shall rouse them from their lowly bed.

For them no more the blazing hearth shall burn,
Or busy housewife ply her evening care;
No children run to lisp their sire's return,
Or climb his knees the envied kiss to share.

Oft did the harvest to their sickle yield;
Their furrow oft the stubborn glebe has broke;
How jocund did they drive their team a-field;
How bowed the woods beneath their sturdy stroke!

Let now ambition mock their useful toil,
Their homely joys and destiny obscure,
Nor Grandeur hear with a disdainful smile
The short and simple annals of the poor.

The boast of heraldry, the pomp of power,
And all that beauty, all that wealth, e'er gave,
Await alike the inevitable hour—
The paths of glory lead but to the grave.

Nor you, ye proud, impute to these the fault
If Memory o'er their tomb no trophies raise;
Where through the long-drawn aisle and fretted vault
The pealing anthem swells the note of praise.

Can storied urn or animated bust
Back to its mansion call the fleeting breath?
Can Honor's voice provoke the silent dust,
Or flattery soothe the dull, cold ear of Death?

Perhaps in this neglected spot is laid
Some heart once pregnant with celestial fire—
Hands that the rod of empire might have swayed
Or waked to ecstasy the living lyre.

But knowledge to their eyes her ample page,
Rich with the spoils of time, did ne'er unroll;
Chill Penury repressed their noble rage,
And froze the genial current of the soul.

Full many a gem of purest ray serene,
The dark, unfathomed caves of ocean bear;
Full many a flower is born to blush unseen,
And waste its sweetness on the desert air.

Some little Hampden, that with dauntless breast
The little tyrant of his fields withstood;
Some mute, inglorious Milton here may rest,
Some Cromwell, guiltless of his country's blood.

The applause of listening Senates to command,
The threats of pain and ruin to despise,
To scatter plenty o'er a smiling land,
And read their history in a nation's eyes.

Their lot forbade; nor circumscribed alone
Their growing virtues, but their crimes confined;
Forbade to wade through slaughter to a throne,
And shut the gates of mercy on mankind.

The struggling pangs of conscious truth to hide,
To quench the blushes of ingenuous shame
Or heap the shrine of Luxury and Pride
With incense kindled at the Muse's flame.

The thoughtless world to Majesty may bow,
Exalt the Brave and idolize Success;
But more to innocence their safety owe,
Than Power and Genius e'er conspired to bless.

Hark how the sacred calm that broods around
Bids every fierce, tumultuous passion cease,
In still, small accents whispering from the ground,
A grateful earnest of eternal peace.

Far from the madding crowd's ignoble strife,
Their sober wishes never learned to stray;
Along the cool, sequestered vale of life
They kept the noiseless tenor of their way.

Yet even these bones from insult to protect,
Some frail memorial still—(erected nigh,
With uncouth rhymes and shapeless sculpture decked)—
Implores the passing tribute of a sigh.

Their name, their years, spelt by the unlettered Muse,
The place of fame and elegy supply;
And many a holy text around she strews,
That teach the rustic moralist to die.

For who, to dumb Forgetfulness a prey,
This pleasing, anxious being e'er resigned,
Left the warm precincts of the cheerful day,
Nor cast one longing, lingering look behind?

On some fond breast the parting soul replies,
Some pious drops the closing eye requires;
E'en from the tomb the voice of Nature cries,
E'en in our ashes live their wonted fires.

For thee, who, mindful of the unhonored dead,
Dost in these lines their artless tale relate,
If chance, by some lonely contemplation led,
Some kindred spirit shall inquire thy fate.

Haply some hoary headed swain may say:
"Oft have we seen him at peep of dawn
Brushing with hasty steps the dews away,
To meet the sun upon the upland lawn.

"There at the foot of yonder nodding beech,
That wreathes its old fantastic roots so high,
His listless length at noontide would he stretch,
And pore upon the brook that babbles by.

"Hard by yon wood, now smiling, as in scorn
Muttering his wayward fancies he would rove;
Now drooping, woeful, wan, like one forlorn,
Or crazed with care or crossed in hopeless love.

"One morn I missed him on the 'customed hill,
Along the heath and near his favorite tree.
Another came; nor yet beside the rill,
Nor up the lawn, nor at the wood was he.

"The next, with dirges due, in sad array,
Slow through the churchyard path we saw him borne;
Approach and read—for thou canst read—the lay
Graved on the stone beneath yon aged thorn.

"There scattered oft, the earliest of the year,
By hands unseen, are showers of violets found;
The redbreast loves to build and warble there,
And little footsteps lightly press the ground."

THE EPITAPH.

Here rests his head upon the lap of earth,
A youth to fortune and to fame unknown;
Fair science frowned not on his humble birth,
And melancholy marked him for her own.

Large was his bounty, and his soul sincere,
Heaven did a recompense as largely send;
He gave to misery all he had—a tear;
He gained from heaven ('twas all he wished) a friend.

No further seek his merits to disclose,
Or draw his frailties from their dread abode—
There they alike in trembling hope repose—
The bosom of his Father and his God.

—Thomas Gray.

HIS CHARMING SISTER.

I have the sweetest sister ever bloomed in beauty's garden,
A winsome little angel full of innocence and grace;
If you could see the charming girl, you'd grant me smiling pardon
For saying she would knock 'most male heart off its base!

There's rippling music in her laugh, it seems inspired of heaven;
Her smile would melt the coat of ice from woman-hater's heart!
Though but my sister, by her charms my heart is sadly riven—
Is pierced from suburbs clear to core by Cupid's stinging dart!

Her pretty face an angel from the upper realms would covet,
A smiling face set in a frame of semi-golden hair;
Ah! that sweet, winsome frontispiece! to see it is to love it!
No man susceptible of heart could 'scape its waiting snare!

Her teeth of porcelainish tint set in their rosy portal
Seem far too pure to chop at such a vulgar thing as hash!
I'll bet my birthright 'gainst a dime no other female mortal
Such lovely teeth of natural growth upon the eyes can flash!

Her hands are beautiful in shape, and very well she knows it!
Her feet—well, them I never saw, but dainty are her boots;
Her nose is of the Grecian build, and when the darling blows it
The melody is sweeter than an orchestra of flutes!

Her gentle voice falls on the ear like golden lovebells tinkling,
It holds me in a waking trance I scarce can give an inkling
Of all the charms possessed by that sweet sister dear of mine.

You're no doubt wondering just why the blooming deuce a fellow
Should group the leakings of his brain in a poetic maze,
Should chew the rag of poesy and musically bellow
Such hifalutin' language to exploit a sister's praise.

The thing is new to me, you know, and hence it is I shovel
Such tuneful fuel on the fire to keep her charms alight;
It is a new experience most devilishly novel—
She's only been my sister since I popped to her last night!

—Sioux City Tribune.

10¢, 25¢, 50¢, & $1.00 Bottles.

THE SHEEP HERDER.

All day across the sagebrush flat,
Beneath the sun of June,
My sheep they loaf and feed and blat,
Their never-changin' tune.
And then, at night time, when they lay
As quiet as a stone,
I hear the gray wolf far away,
"Alo-one!" he says, "Alo-one!"

A-a! ma-a! ba-a! eh-eh-eh!
The tune the woollies sing;
It's rasped my ears, it seems, for years,
Though really just since spring;
And nothin', far as I can see
Around the circle's sweep,
But sky and plain, my dreams and me
And them infernal sheep.

I've got one book—it's poetry—
A bunch of pretty wrongs—
An Eastern lunger gave to me;
He said 'twas "shepherd songs."
But, though that poet sure is deep,
And has sweet things to say,
He never seen a herd of sheep
Or smelt them, anyway.

A-a ma-a! ba-a; eh-eh-eh!
My woollies greasy gray,
An awful change has hit the range
Since that old poet's day,
For you're just silly, on'ry brutes,
And I look like distress,
And my pipe ain't the kind that toots
And there's no "shepherdess."

—Charles B. Clark, Jr., in Pacific Monthly.

THE DEACON'S DAUGHTER.

Queen of the favored pew,
I can not half reveal
The thoughts I have of you,
With unromantic steel.

The stamen of a pink,
Dipped in a drop of dew,
Would not be pen and ink,
Too exquisite for you.

The music of the choir
Is pitched in one sweet key
That tells of my desire
And that of more like me.

When roguishly you glance
At me across the pew,
Each eye-lash is a lance
That stabs me through and through.

The deacon thinks your wings
Are just about to sprout;
Well, I know other things,
But he won't find them out.

Dear little Methodist,
Say one sweet prayer for me,
And I shall in the list
Of the elected be.

THE BASE BALL ROOTER.

When yer sorter sour on livin' through the worry an' the fret,
Ther' is nothin' that will make ye feel so foine
As to hustle fur the bleachin' boards an' set an' set an' set
A-rootin' fur yer base ball nine.

The people in the gran' stan' simply cheer the players on—
They hafter show they knows what manners is—
But right down on the bleachin' boards is where they have the fun,
Fur rootin' is the thing that does the biz.

Yer toes go diggin' in the planks, yer hands are shet up tight,
While yer fingers fairly hurt—so close they twine—
Till ye have ter let yerself right out an' yell with all yer might,
When yer rootin' fur yer base ball nine.

An' when yer fellers conquer 'em, jes' like ye knew they would,
An' git a record leadin' all the line,
Ye feel like ye was in it, like ye done a heap o' good,
A-rootin' fur yer base ball nine.

—Joe Kerr.

A-MAIZE-ING.

The modern farmer
Ought to be
Enjoined from deeds
Of wizardry!

To him there's no
Such word as luck,
But he will buy
A field of muck,

Put potash on,
Then plant his corn,
And in the fall,
As sure's you're born,

He'll husk six ears,
And often more,
Where only one
Was husked before!

—N. Parker Jones.

GOOD NIGHT.

Good night! A word so often said,
The heedless mind forgets its meaning;
'Tis only when some heart lies dead,
On which our own was leaning,
We hear in maddening music roll
That last "good night" along the soul.

Good night! in tones that never die
It peals along the quickening ear,
And tender gales of memory
Forever waft it near.
What stilled the voice—O crush the pain—
That ne'er shall breathe "good night" again.

Good night! It mocks us from the grave,
It overleaps that strange world's bound
From whence there flows no backward wave;
It calls from out the ground,
On every side, around, above,
Good night, good night, to life and love.

Good night! Oh, wherefore fades away
The light that lived in that dear world?
Why follows that good night and day?
Why are our souls so stirred?
Oh, rather say, dull brain, once more
Good night! thy time of toil is o'er.

Good night! Now cometh gentle sleep,
And tears that fall like welcome rain.
Good night! Oh, holy, blest, and deep
The rest that follows pain.
How should we reach God's upper light
If life's long day had no "good night?"

—Anon. (Published in 1859.)

JOY.

She came to me long, long ago,
And bided many a day;
And thro' the golden summer's glow
She sang to me at play.

The hills were green, the fields were bright,
Wherever passed her feet;
And at her voice the darkest night
Was filled with music sweet.

But little heed to her I gave,
Nor ever thought that I
Could lose the rainbow from the wave,
The blue from out the sky.

But, lo! one morning she had fled,
And I was left alone,
And all the flowers were lying dead,
And all the birds were flown.

Hope, work and faith since then have come
To bring me peace and aid,
And love, that seems of all the sum—
But not that smiling maid.

—William Wallace Whitlock, in August Ainslee's.

CANCER CAN BE CURED

My Mild Combination Treatment is used by the patient at home. Years of success. Hundreds of testimonials. Endorsed by physicians, ministers, etc. The local application destroys Cancerous growth, and the constitutional treatment eliminates the disease from the system, preventing its return. Write for Free Book "Cancer and Its Cure." No matter how serious your case, no matter how many operations you have had, no matter what treatment you have tried, do not give up hope, but write at once. DR. JOHNSON REMEDY CO., 1233 Grand Ave. Suite 103, Kansas City, Mo.

AN EXCELLENT ATLAS

Offered as a Premium to be Selected by Those Who Pay One Dollar in Advance For a Three-year Subscription to The National Farmer and Stock Grower.

The subscription price of The National Farmer and Stock Grower is fifty cents a year, or one dollar for three years. We are glad to obtain subscriptions on credit, payable at the end of the first year, but we are better satisfied if the dollar is paid in advance; therefore we offer premiums to induce advance payments.

OUR MOST VALUABLE PREMIUM.

Our very best premium for the purpose of inducing the three-year subscription to be paid in advance is **HAMMOND'S HANDY ATLAS OF THE WORLD**, and it is remarkable what this wonderful book contains.

HAMMOND'S HANDY ATLAS OF THE WORLD consists of 107 pages, 6x8 inches; is printed in colors and is bound in a durable red-cloth cover, just as shown in the illustration. It contains seventy full-page maps of every state and territory, with new railroads and towns.

Every country in the world is shown by maps from the latest plates.

All maps are carefully printed in colors on best cream-laid paper, boundaries distinct, names of towns in graded type, indicating their size. A work of rare beauty and usefulness.

This Atlas contains arranged lists of cities, giving the latest census figures of all states and territories and foreign countries.

The chapter on the United States Reclamation Service, illustrated with a comprehensive map, gives latest and most complete data in regard to irrigation in our Western States.

A detailed description of the final plans for construction of the Panama Canal, accompanied with a profile and complete map of the Canal, is given.

Among other valuable features is a condensed biography of each of our Presidents, with likenesses in half-tone.

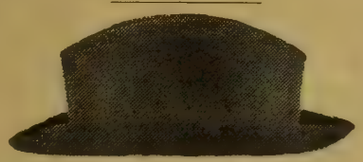
Useful Vacations.

The children's freedom from school may mean that the whole family may have a let-up in the work which takes their time the year around, provided these vacations are rightly managed. Mothers and fathers need vacations quite as much as the youngsters. We know one fourteen-year-old girl who has been diligently applying herself to the study of cookery and the management of the house since the close of school, with the result that the mother is planning for a lake trip which will give her a five-days' outing, leaving this daughter in charge of a nine-room house and the cooking for four persons. She not only can do it, but she does her work all the better because of the confidence placed in her. And she will enjoy her own vacation trip, which is to be a week spent in a neighboring city, all the more because her efforts have helped to give the mother an outing.

A neighbor's daughter has a grown-up sister who is a dressmaker, and during this summer vacation this little daughter of twelve is learning to sew. Each day she spends a part of her time with her big sister in the sewing room. She is taught to make very simple garments, cutting them herself and doing every bit of the sewing under the supervision of her sister. She has made most of her underwear for the summer and is planning to do other things before school begins.

Aren't the children far happier for using their time in this way, and will they not be better fitted to fill a woman's place in the world?"—Janet Thomas Van Osdel.



A MAGNIFICENT PREMIUM.

The National Farmer Hat.

The sizes are from 6¾ to 7¼. They are hats suitable for men or boys. They are of good material, well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. Be sure to mention the size.

Address, **The Hale Publishing Co., 3550 Vista avenue, St. Louis, Mo.**

Children's Blues.

When children have the blues it means something, commonly one of three things—the stomach is being overfed or wrongly fed; they are not getting the right amount of sleep; or they are in need of a bath.

Do away with rich food, pastries, heavy meats and overmuch candy. Give simple nourishing food, plenty of bread and milk, cereals, succulent vegetables and fresh fruits. Insist that the food be well chewed and slowly eaten. Do not allow promiscuous eating between meals. A growing child usually needs a little lunch, especially if there is an early breakfast and a late supper, but let the "piece" be a couple of crackers, a slice of bread or some fruit, and let it be given just about midway between two meals. Sweets between meals are harmful, for if the child is not really hungry there is no need of giving him anything, and if he is hungry, something substantial will be relished.

Give the child an afternoon nap regularly at least until he is of school age and for several years longer, if he can be persuaded to take it. Have a regular time for putting them to bed. Eight o'clock is late enough for all growing children. If put to bed at that time they will get a good night's rest and be ready for the morning breakfast.

To be at their best children need a daily bath and a frequent change of underwear. They are constantly on the go, and this continual activity results in sweaty little bodies which need frequent cleansing if the child is to be kept healthy and comfortable. A soiled, sticky child can hardly keep good-natured.

Properly-fed, well-rested, clean-kept children should be sunshiny from morning till night.—Janet Thomas Van Osdel.

The Meat Grinder.

If you have a meat grinder, try—

Grinding horse-radish in it and you will have a relish of finer texture and your task will be accomplished without the usual sore eyes that are apt to be a result of grating horse-radish.

Running through it confectioners' sugar that has become lumpy, or Coffee A and granulated sugar that is not of the desired smoothness.

Putting crackers and crusts of bread through it; then dry them in a quick oven and put away to be used as needed.

Cutting up a pumpkin and feeding it to the chopper in small pieces. It comes out quite as fine as when sifted through a sieve and saves work and dishes.

Taking enough scraps of beef to make two cupfuls, a small piece of cooked salt pork, a small onion and a couple of crackers; run through the grinder; mix with a couple tablespoonfuls of water and a seasoning of pepper and salt; form into balls and bake or fry until browned.—Janet Thomas Van Osdel.

Nor a Hospital.

"Talking of our British cousins?" inquired E. Black Ryan, Tax Attorney of the Southern Pacific, "well, I heard one the other day. Big fat Britisher shoved into one of those compartments at the last moment. There was an American in there reading his newspaper.

"'It's sixty miles to my station,' remarked the Englishman, 'and I say, old chap, I'm treating myself for a wounded foot, and I say, if you don't mind, I'll put some of this iodoform on my ankle. Beastly smelling stuff.'

"'Go ahead,' said the American. But when he got the full odor of it he shoved up a window, pulled out a cigar and lighted it, and began puffing away vigorously.

"'Here, here, my good fellow,' protested the Englishman, 'this is no smoking compartment!' "—San Francisco Chroncile.

The Bishop Had Higher Aim.

It is the man who looks for trouble who generally finds it. When the late Bishop Dudley was about to transfer the field of his labors to Kentucky, some of his friends were inclined to remonstrate.

"So you are really going to Kentucky?" said one of these.

"Yes, indeed," replied the Bishop.

"But do you know what kind of a state that is?" inquired the anxious one. "Why, I saw in the paper that in a Kentucky town one man killed another dead for just treading on a dog. What are you going to do in a place like that?"

"Well," replied the Bishop, calmly, "I am not going to tread on a dog."

Three generations of Simpsons have made SIMPSON TRADE MARK REG. U.S. PAT. OFF. EDDYSTONE PRINTS Founded 1842

Ask your dealer for **Simpson-Eddystone Fast Hazel Brown**

The fastest and most beautiful Brown on the market.

Never before have you been able to make dresses of such rich, fast, and stylish brown calicoes. This beautiful shade cannot be moved by sunlight, perspiration, or soap. The up-to-date designs and splendid quality of these cotton dress-goods give unequalled service and satisfaction.

Beware of all imitation Browns. They are *not* "just as good." If your dealer hasn't Simpson-Eddystone Fast Hazel Brown, write us his name. We'll help him supply you.

A GRAPEVINE PREMIUM.

A Splendid Introduction to Grape Growing Under the Most Favorable Circumstances.

Every farmer or owner of a suburban home will find it pleasant and profitable to grow a few grapes. To enable our friends and patrons to make a favorable introducion to grape growing we will furnish them a collection of grapevines which will grow nicely on a trellis of which the diameter is fourteen feet.

Grape trellis which can be easily constructed.

The trellis is not necessary, however, the first or second year, as stakes can be driven to each vine. The trellis can be constructed when it becomes necessary. The time for planting is now until the ground freezes. We have arrangements with the best grape nursery in the country to mail out for us a special collection of the twelve grapevines indicated on the diagram showing the ground plan of the trellis.

Twelve grapevines: The **Concord**, black; the **Niagara**, white; **Catawba**, red; **Moore's Early**, black; **Elvira**, white; **Massalla**, red; **Ives**, black; **Moore's Diamond**, white; **Perkins**, red; **Norton's Virginia Seedling**, black; **Martha**, white; and **Aroma**, red; constituting the best possible collection of grapevines.

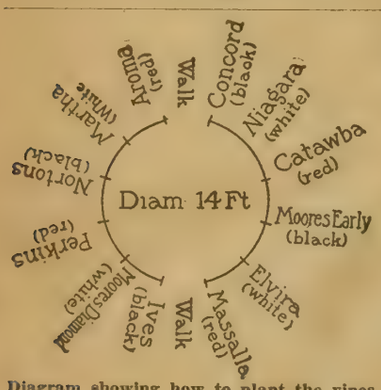

Diagram showing how to plant the vines.

Send us one dollar and fifty cents and we will credit you with two-years' subscription to this paper, The National Farmer and Stock Grower. We will also send you the twelve grapevines.

Each variety undergoes a local test. Those best adapted to climate, soil and local conditions and to tastes of the grower can be selected. The collection will furnish grapes for all of the family. Anyone having a small yard can grow these vines to excellent advantage. Address, **Hale Publishing Co., 3550 Vista avenue, St. Louis, Mo.**

A Good Irish Answer.

"Secretary Cortelyou was discussing," said a New York broker, "a question of finance during the panic. He broke off to tell a story.

"He said he was reminded of the Irish farmer on his way to the Cattle Fair.

" 'Where are you going, my man?' said an English tourist, stopping the agriculturist.

" 'To Waterford Fair, your honor,' was the answer.

"The Englishman looked approvingly at the heifers the other was driving.

" 'And how much do you expect to get for your beasts at Waterford Fair?' he asked.

" 'Sure, an' if I get £8 a head I shan't do badly,' said the Irishman.

" 'Ah, that's a sample of your country,' said the Englishman, severely. 'Take those heifers to England and you'd average £14 a head for them.'

"The Irishman laughed.

" 'Just so, yer honor,' he said, "and if yez were to take the Lakes of Killarney to purgatory yer would get a guinea a drop.' "—New York Tribune.

He Admired Carthage.

"The late O. H. P. Belmont," said a New York picture dealer, "was a profound admirer of the painter Turner. He liked especially Turner's 'Carthage,' and one day he told me an odd story about it.

"Turner," he said, "kept 'Carthage' for years. If you wanted to buy it, he'd ask you £500; on your acceptance he'd say, on second thought, he must ask you £750, and if you again accepted, the price would go up to £1,000. So on indefinitely.

"Turner for years declared that he would be buried with 'Carthage' wrapped about his corpse. One day he said to Chantrey, his executor:

" 'Chantrey, if in my will I order you to bury me like that, with 'Carthage' for my shroud, you will obey, won't you?'

" 'Certainly,' said Chantrey, 'I'll bury you rolled up in your picture, if it is one of the conditions of your will, and the next day I'll dig you up and unroll you.' "—New York Sun.

Purely For Sympathy.

Mrs. Clarence Burns, of New York, who is one of the leading members of the City Federation of Women's Clubs, was talking at a luncheon about children.

"As the Federation's Santa Claus," she said, "I often get as many as 1,200 children's letters a day. They were interesting letters. Are not children always interesting? Yes, they are interesting even in their tears.

"A friend of mine, a young mother, sat reading 'Hans Andersen' to her little daughter the other morning, when all of a sudden the youngster began to cry.

" 'Why, what is the matter?' said the mother.

" 'I failed yesterday,' sobbed the little girl.

" 'But that was yesterday,' said the mother. 'Why do you cry about it to-day?'

" 'You wasn't home yesterday,' explained the child."—Boston Herald.

A Case For Cautiousness.

Senator La Follette, discussing the currency bill, said of a certain passage:

"That needs delicate handling. It is like the position of the young man on his honeymoon.

"This young man's honeymoon was peculiar, because, while still in mourning, he had married his deceased wife's sister.

"A friend of his, a chap he had not seen for years, accosted him on the honeymoon in a Niagara restaurant.

"The friend, after being introduced to the bride, said sympathetically:

" 'But who are you in mourning for, old man?'

" 'For my sister-in-law,' was the delicate reply."

Cortelyou's Vacation Joke.

Three days of temperature over the 100-degree mark drove George Bruce Cortelyou, Secretary of the Treasury, to Huntington, L. I.

"Weaver, I have decided to take a vacation," said the Secretary to his private secretary, forcing a strained smile. "My going will leave only Secretary Luke Wright to represent the Cabinet, and I admit it does hardly look right, but—"

Willing hands dragged Weaver into the corridor, where he was held under the spout of a water cooler until consciousness returned. He appeared to be in great agony.

"Oh, it wasn't the pun," he moaned. "It wasn't the pun, but it was that awful, awful smile."—Philadelphia Record.

SEE DEMONSTRATIONS AT ALL STATE FAIRS

Manson Campbell Company of Detroit and Chatham, Ontario, will have interesting exhibits of the Chatham Fanning Mills and Chatham Fireless Cookers in charge of experts.

One of the most interesting exhibits and demonstrations at all State Fairs this season will be that of the Manson Campbell Company whose factories are at Detroit, Michigan, and Chatham, Ontario, makers of the famous Chatham Fanning Mill and Seed Grader and the Chatham Fireless Cooker, both of which are so well known. Over 250,000 Chatham Fanning Mills are in use everywhere in America and they have long been considered the world's standard. The Chatham Fireless Cooker has for over two years been the great demonstrated success of all cookers and every reader of this paper will be interested to eat the delicious food which will daily be cooked without fire in the Chathams that will be at this company's fair exhibits which you are invited to make your headquarters. Meanwhile if you are interested now to get their free catalogs on either of these famous articles, just write your name and address to their Detroit factory, and all literature and their liberal selling plan direct from the factory at wholesale prices will be sent you at once.

Following are the names of the officers of the company and experts who will be in charge of this company's Fair exhibits at the places named and at the time indicated. Be sure to call on them when you visit any of these Fairs.

MAY MANTON PATTERNS.

ery Elegant Fashion Service, With Full Instructions For Ordering and Making.

One-piece Shirt Waist.

No. 6041.—Every fresh development of the ne-piece feature is met with enthusiasm, nd this blouse is one of the prettiest yet to ave appeared. It is absolutely simple, involving very little labor in the making and absolutely none in the fitting, while it is adapted to all seasonable waistings, and both to the gown and to wear with the odd skirt. In this case it is made of pongee stitched with Belding silk, and pongee is being extensively used this season for shirt waists as well as for garments of more formal dress, but lawn, batiste, madras and linen all are favorites. The tucks over the shoulders give becoming breadth and fullness, and those in the sleeves allow of making from the narrower materials without the

ecessary joinings being seen.

The blouse is made in one piece, and the ox plait is applied over the front edge. he sleeve portions are gathered into traight cuffs and the neck is finished with eck band, over which can be worn any tock or collar preferred. If made from triped material, the backs can be joined t the center, when the fashionable chevron ffect will be produced.

The quantity of material required for the edium size is 4⅝ yards 21 or 24, 3⅛ yards 2, or 2⅛ yards 44 inches wide.

The Pattern 6041 is cut in sizes for a 32, 4, 36, 38 and 40-inch bust measure, and ill be mailed to any address by the ashion Department of this paper on eceipt of 10 cents.

Boy's Russian Suit.

No. 6036.—The Russian suit is a well-eserved favorite for the small boy. It suits is needs perfectly well and it renders him ttractive as well as comfortable. This one is made of natural colored linen, with hair stripe of red, and the belt is of red leather, but there is a great opportunity for choice in the matter of color and material for khaki cloth, galatea, cotton cheviots, madras and the like are all equally correct. Also for the cooler days such materials as mohair, shepherd's check and other light-weight wools are much used, while the same model made of white silk or white serge becomes an exceedingly dressy costume suited to occasions of more elaborate dress.

The suit is made with trousers and blouse.

Girl's Dress With Circular Skirt.

No. 6035.—Circular skirts are exceedingly shionable just now for the school girls as ell as for their elders, and this dress com-nes one with an exceedingly attractive blouse. In the illustration the material is white linen banded with Copenhagen blue, and there is braiding with white soutache on the blouse portion, but there are so many materials that can be made available as to render the list a long one. Linen is always handsome and always durable, and is being much worn, both in colors and in white, cotton poplin and the like are much in fashion, while there are also lighter-weight materials, such as batiste and lawn, which are appropriate. The washable pongees are charming and are exceedingly fashionable, while for more dressy frocks the silk pongee and simple foulards are admirable. Trimming

ays can be contrasting material, or bands the same edged with braid, or almost appropriate finish that fancy may sug-t. The soutache braid can be applied any preferred design or omitted; and if further variation is wanted, the yoke blouse consists of the fronts and back, e are buttoned from the right shoulder true Russian style, while it is held in e by the belt. The trousers are in ckerbocker style and drawn up by means lastic at the knees.

he quantity of material required for the lium size (four years) is 4 yards 24, 3 ds 32, or 2 yards 44 inches wide.

he Pattern 6036 is cut in sizes for boys of two, four and six years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

portion could be made of all-over lace or embroidery or any similar material.

The dress consists of the blouse and the skirt, the two being joined by the belt. The blouse is trimmed to give the yoke effect and is laid in plaits on the shoulders, beneath which the epaulettes are attached. There are moderately full sleeves finished with roll-over cuffs.

The quantity of material required for the medium size (twelve years) is 6¾ yards 24, 4½ yards 32, or 3½ yards 44 inches wide, with ¾ yard of contrasting material 32 inches wide to trim as illustrated.

The Pattern 6035 is cut in sizes for girls of eight, ten, twelve and fourteen years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Work Apron.

No. 6015.—The apron that is simply made while at the same time it really protects the gown and can be slipped on and off easily and readily is the one quite certain to be well liked, and this one fulfills all these requirements. In the illustration it is made of checked gingham, and the edges are simply stitched, but butcher's linen is adaptable for the purpose, being both sturdy and handsome, while there are plain chambrays, percales and simple printed wash fabrics, all of which are suited to aprons of the sort. The patch pockets mean convenience and comfort, and the straps that are crossed and buttoned into place at the shoulders are very easily and readily adjusted.

The apron is made with the front and the backs, the backs being extended to form the straps. The patch pockets are arranged over the front on indicated lines.

The quantity of material required for the medium size is 4½ yards 27 or 3⅜ yards 36 inches wide.

The Pattern 6015 is cut in sizes for a 34, 38 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Child's One-piece Dress.

No. 5969.—One-piece garments are greatly in favor just now, and the children's dresses unquestionably have much to commend them. They are so simple that making becomes a trivial matter, they launder with ease and with success, yet they are becoming and attractive withal. This one can be made from linen, gingham, chambray, percale, any of the pretty printed washable fabrics, and, indeed, from anything of a similar nature. In the illustration the belt, the shoulder straps and the cuffs are of embroidery, while the material is pale blue linen.

The dress is made in one piece, there being only underarm and sleeve seams. It is opened at the shoulders and the shoulder straps allow of an invisible closing. The belt holds the fullness in place at the waist line.

The quantity of material required for the medium size (four years) is 2⅛ yards 24, 1⅞ yards 32, or 1⅝ yards 44 inches wide.

The Pattern 5969 is cut in sizes for children of two, four and six years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Tucked One-piece Waist Closing in Front.

No. 6031.—So few blouses close in front in these days that when one appears which includes that feature and at the same time is smart and attractive, it is quite certain of its welcome. Here is a model which in addition to such practical advantage shows several novelties and which is as graceful and charming as well can be. The sleeves and the overblouse are cut in one, while there are close-fitting undersleeves that are faced with lace, and there is a girdle arranged over the lower edge, so that the whole garment is made in one and is closed together at the front. In this instance crepe de Chine is stitched with Belding silk and trimmed with applique, the chemisette and undersleeves being of filet lace. All the seasonable materials are appropriate, however, and the very lovely cotton fabrics and the silk and cotton mixtures, that are having such unprecedented vogue, would be extremely becoming so made with banding of lace or of some lighter sort of applique.

The blouse is made with a fitted lining, which is closed at the center front. On this lining are arranged the chemisette portions and its sleeves are faced to form the close-fitting cuffs. They are inserted in the armholes, after which the tucked blouse is arranged over the whole. The girdle finishes the lower edge. The lining is closed at the center front, the blouse invisibly beneath the left side.

The quantity of material required for the medium size is 3½ yards 21 or 24, 2½ yards 32 or 1⅞ yards 44 inches wide, ⅞ yard of silk for chemisette and cuffs, 1½ yards of banding, ⅛ yard of silk for girdle.

The Pattern 6031 is cut in sizes for a 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Three or Four-piece Skirt.

No. 6009.—The skirt which is smooth over the hips and which flares at the lower portion continues a favorite one for walking, while it is always the most becoming and most graceful. Here is a model that can be made either in three or four pieces, as the front gore is seamed at the center or cut in one. In the illustration it is made from striped material, and the front gore is seamed at the center to produce the chevron effect, but the model suits plain materials quite as well as striped, and whether or not the front gore shall be treated in this way is dependent entirely upon individual taste and the material used. The circular bands are pretty and novel and are exceedingly effective in the striped fabric, but were the material plain, they could be greatly enhanced by braid above, or finishing the lower edge of each one. All the seasonable skirting materials are appropriate, linen, pique, cotton rep and the like can be so made quite as well as wool materials.

The skirt is made with a front gore and side and back portions, which are circular. The front edges of the side portions are turned under to form tucks, which are laid over onto the front gore, so concealing the seams and allowing effective use of buttons as trimming. The fullness at the back can be laid in inverted plaits or it can be cut off and the skirt finished in habit style as liked. Also the closing can be made either at the back or at the left side of the front. The circular folds are arranged over the lower edge on indicated lines.

The quantity of material required for the medium size is 8½ yards 24, 7½ yards 27, or 5 yards 44 or 52 inches wide.

The Pattern 6009 is cut in sizes for a 22, 24, 26, 28 and 30-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Please address all pattern orders to **Hale Publishing Co., 3550 Vista Ave., St.Louis,Mo.**

Day of Cheap Meat Past.

With crop conditions as they are and with live stock raisers in such firm control of the live stock markets, it would almost seem that the day of cheap meat is past. Undoubtedly there will be fluctuations from time to time, but where farmers are able to hold back shipments upon telegraphic and other quick means of communication, it is not probable that the markets will again be overrun with animals for any considerable period of time.

If the country wants cheaper meat it will have to look to the live stock raising end of the business for cheaper prices, because the packer cannot sell cheap meat in the face of high cost for his raw material. The live stock raiser, on the other hand, cannot be expected to furnish cheap raw material to the packer when his feedstuffs are high.—National Provisioner.

Heads of American Families.

Congress has authorized the publication of the names of the heads of families obtained when taking the first census. The first census was taken in the year 1790 and comprised an enumeration of the inhabitants of the states of Connecticut, Delaware, Georgia, Kentucky, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, North Carolina, Pennsylvania, Rhode Island, South Carolina, Vermont and Virginia. The population of the United States in those days, including slaves, was 3,893,635 persons, besides 35,691 scattered in the West and Southwest, including Tennessee. Some of the census records were destroyed by fire in 1812, notably those of Virginia, but the state records have been drawn upon to recover this loss, and even with this Virginia is only partially reperesented; but the other states are complete.

The Census Department has issued at $1.00 a copy a certain list of 100 to 300-page pamphlets, each one representing one of the states named. This work has been planned to satisfy the demand for information concerning the actual location of colonial and revolutionary families. For further particulars address Director of the Census, Washington, D. C.

"The reason why you don't want to apply animal manure to grapes is that it induces a rank, coarse growth of wood and foliage, which is unfavorable to the production of fruit. Potash fertilizers are much better than animal manure and especially if it is fresh." — Metropolitan and Rural Home.

Motor Cycle Record.

B. A. Swenson, a motor cyclist of Providence, R. I., finished a run from New York to Chicago, July 10th, his total traveling time being 49 hours 40 minutes. Swenson left the Eastern city Monday morning, reaching Utica, 262 miles out, on his first day's run. The second day took him 282 miles to Dunkirk, N. Y. Swanton, Ohio, 314 miles farther on, was reached the third day, and the final lap was 254 miles. Swenson was one of several riders who left New York on the first annual tour of the American Federation of Motor Cyclists.

Geraniums.

This plant, for years one of the stand-bys in the window garden, has been so greatly improved within the last decade, both in the size of flowers and flower clusters, that one would hardly recognize it as a descendant of the old acquaintance. Colors vary, from the purest white through orange, salmon or rose to the most intense reds, and whether brilliancy or delicacy of tint is desired, it may be readily found.

While the single varieties have perhaps more beautiful and usually larger flowers, the double are more permanent; some of the ivies show as magnificent flowers as the zonales, and their foliage adds a pleasing variety. The white-edged is always admired. It is a robust grower, and when exposed to the direct sunshine, shows tinges of pink on the leaves.

The zonales all mark their enjoyment of sunshine by the increased richness of color. Happy Thought is one of the handsomest of the variegated foliage sorts, the creamy white center being surrounded with a dark band which is again margined with rich green. Several of the bronzed varieties are quite as ornamental as the coleus, with the additional incentive that the flowers add another half to their beauty.

If cutings were made early in the spring and placed in a glass of water in a sunny window, they in a few days throw out rootlets and were in as many more to thrive in the soil. This is the quickest way of rooting cuttings, and succeeds as admirably with coleus and other slips. As soon as the weather is warm they may be transplanted to the bed, using rich soil.

Care during the summer is simple. In the driest weather they may need an occasional watering, though if the soil is kept loose, comparatively little will be needed.

Keep the blossoms picked as soon as they show signs of decay. Never allow them to go to seed, as the single ones sometimes incline to do. Florists can raise the seed so cheaply and it is so great a drain upon the plant that it does not pay to thus injure it for so small a gain. Water occasionally with manure water, and the increase in size and brilliancy of foliage is noticeable.

A packet of seedlings affords much pleasure, and the plants will in a single season reach blooming size. The speculation over possible new varieties and the almost certain realization of some choice ones make the pan of seedlings a constant pleasure.

Before hard frosts come, take up the plants with as much soil as readily adheres and hang them up in the cellar, or they may be wintered in pots if room can be given. Slips started in late summer and the spring seedlings will soon fill the windows with bloom.

The skeleton rose should not be omitted from the list. Its leaves are of value for bouquets, for scenting handkerchiefs or letters, and two or three placed in the top of a can of sweet apples before sealing give a most delicious flavoring.—Bessie L. Putnam.

Hints on Dress.

It is safe to say that a vast majority of the middle classes of women do their own sewing; yet a large percentage of these look neat despite the small cash outlay in their attire. If they were compelled to pay the huge bills which society dictates, farmers would be bankrupt. It is this ability in many ways to turn skill and handiwork to account which makes the neat gowns with small cost.

Thanks to cheap patterns with explicit directions, there is really no excuse for a woman in the most remote hamlet to be out of fashion. And there are so many elegant touches obtained by a little care and patience that daintiness can scarcely fail to aid in the wardrobe.

As for a number of years, needlework is still prominent. While some of the dainty stitches of our grandmothers may be resurrected and put into use again, the present generation has scarce time for the tiny stitches, but strives rather by longer ones to create a similar effect.

Indian Lands For Sale Cheap

All Government Restrictions Removed
Clear Titles Given

The government restrictions have been removed from a large part of the Indian lands; the Indian will sell his fertile acres, and the government will give a clear title to the purchaser.

There are over 8,000,000 acres of these Indian lands on which restrictions are removed July 27th.

The Indian, though a peaceable, civilized citizen, cannot cultivate all his land, and most of them would rather sell it. This is the golden opportunity for the progressive farmer to get a splendid farm at a very reasonable price.

The land varies greatly in character. The rich bottom lands will raise from 40 to 70 bushels of corn to the acre, 20 to 30 bushels of wheat, 3 to 4 crops of alfalfa, averaging three-fourths of a ton to a ton per acre each cutting, or from three-fourths of a bale to a bale of cotton. The prairie lands raise from 25 to 65 bushels of corn to the acre, and other crops in proportion. The agricultural reports give the average yield of all staple crops as about the same as those of Illinois.

There are excellent fruit lands, similar to the famous fruit lands of the Ozarks.

The rainfall is abundant, averaging 35 to 40 inches.

This land can be bought in tracts of 40 to 320 acres at a very low price.

This territory has hundreds of towns and cities, many of which have all the advantages of older settled communities, such as schools and churches, hotels, libraries, electric lights, telephones and telegraph lines, street railways, etc. Only 11% of the present population of these Indian lands are Indians and they are civilized, law-abiding citizens.

If you are not satisfied with the opportunities where you are now located, this is your one **great** chance to better your condition. Take a trip down there and look around; find the farm that just suits you and buy it while it is cheap.

The Rock Island-Frisco Lines have over 1300 miles of railway in the territory where the restrictions have been removed — over three times as much as any other line.

Purchase your ticket over the Rock-Island-Frisco-Chicago & Eastern Illinois Lines and you will see the best. Low round-trip rates will be in effect to all points in these lands and other parts of the Southwest on August 4th and 18th, September 1st and 15th, and the first and third Tuesdays of other months.

If you are interested, write for full information. We will post you on conditions and furnish you with names of reliable men who will aid you to get a desirable piece of land.

Rock Island — FRISCO

Rock Island-Frisco-Chicago & Eastern Illinois Lines

Many of the little crochet and tatting wheels in vogue a generation ago may be remodeled into motifs for the fashionable stock or jabot.

Lace is used in profusion in all neckwear, and even a small bit of the real article is a treasure in artistic hands.

The professional claims to know at a glance when a bow is made by a novice. The style this season is of the butterfly sort, which even the novice can neatly imitate, the band being drawn tightly in the center.

Embroidered belts are things of beauty which may be made at home, those on white linen being charming with a white waist. A simple pocket for the handkerchief, also of embroidered linen, now adds to the smart appearance of the costume and may be of white or colored linen, to match the belt and waist. These are suspended from the belt and usually buttoned down or closed with a drawn ribbon.

All sensible women will hail with joy the announcement that they are to be well supplied with pockets in future; though some, as in the petti coat or stocking, will scarcely appea as designed strictly for convenience However, even these are far bette than no pocket, and woman has to long been handicapped in this respect

The fashionable parasol is orna mented with embroidery and has si teen ribs instead of eight, making a Japanese article, little less pro nounced than the kimono.

The comfortable sailor suit is sti deservedly popular among the youn girls; and the Russian style for chi dren has evidently not waned. Th latter is especially acceptable to th busy mother who must economiz time as well as money, the plea offering a legitimate method of a larging as growth renders it necessar

The frills of last season seem have dropped to the skirt, the ne being comparatively plain, a band embroidery often marking its outlin

VERY FINE BLOUSE OR SHIRT WAIST.

This is May Manton Pattern No. 6010. he simple shirt waist made in tailored yle is absolutely necessary to comfort, and is one is tucked after an exceptionally ttractive and becoming manner. In the lustration it is made of natural colored pongee stitched with Belding silk, and pongee is much in vogue for waists of the sort while it has a great many practical advantages; but the model is appropriate for all the seasonable waistings. Linen and madras, both white and with stripes and figures of color are much used, and this season there is a great fancy for making cross-barred dimities, batistes and the like in tailored style. The waist is made with the fronts and the back. There is a regulation box plait at the center front and a neck-band finishes the

ck. The collar is of the turn-over sort nd can be made from striped material as ustrated, or to match the waist, as liked. here are regulation sleeves with straight ffs.

The pattern 6010 is cut in sizes for 32, 34, , 38, 40 and 42-inch bust measure, and will mailed to any address on receipt of 10 nts; or, for 25 cents we will send the ttern and our interesting sixty-eight-page onthly **Universal Magazine** for one year. ddress, **Hale Publishing Co., 3550 Vista** venue, **St. Louis, Mo.**

A BEAUTIFUL POCKET MIRROR.

The finest glass ever placed in a mirror is our handy pocket toilette mirror. It is 6 inches in diameter, and is amply protected in a leatherette case. It will last a lifetime. The picture herewith fully represents it. Send us 30 cents and we will send you by mail one of these beautiful mirrors and we will send you for one year the **Universal Magazine.** This is the nicest, brightest, most interesting magazine now published. There are sixty-four pages of choice literature, stories, poetry, etc.

n't forget to send 30 cents for one yearly bscription and one mirror, or get up a b of four mirrors and four magazine bscriptions for one dollar. Address, ale Publishing Co., 3550 Vista avenue, St. uis, Mo.

IE UNIVERSAL MAGAZINE A TREAT.

The **Universal Magazine** is published nthly, and is an elegant sixty-eight-page blication. During the month of August we ll issue to every new subscriber a set of famous colored 6x8-inch pictures entitled Bun-bonnet Twins. These pictures are at interesting and pleasing. Not less than million sets have been issued by the pubher and the demand is still growing. The

versal Magazine is fine. There are nice strated articles and interesting stories. subscription price is 25 cents a year. uding the twelve Bun-bonnet Twins ure supplements. Be sure you ask for right supplements. Address, **Hale Pubing Co., 3550 Vista avenue, St. Louis, Mo** b raisers' rate, five sets and five yearly scriptions for one dollar

How to Make Cold Meat Loaf.

"Avoid warm hashes in summer and have in their place a meat loaf that can be served cold," writes Christine Terhune Herrick in the Woman's Home Companion for August. "Chop your remnants of steak or roast fine, mix with them one-third as much cold boiled ham or tongue, season well, and add a couple of raw eggs beaten light. If rather dry, moisten with gravy or stock, turn into a greased mold with plain sides, cover, set in a baking pan with hot water about it, and bake for an hour. This loaf may also be made with raw beef, but then it must cook for two hours. Let it get very cold before turning out, and slice. Veal loaf may be prepared by this recipe, and even cold roast lamb may be treated in the same manner. The main point to be borne in mind is the seasoning. Be careful that this is well done and you will have a popular dish."

A Unique Leap-year Dance.

An attractive leap-year dance is described in Woman's Home Companion for August. Each girl sends to the gentleman she has chosen to be her escort, an invitation to the dance, stating at what time he should call for her.

The girls agree among themselves to exchange places, and each girl is masked and dressed to represent some distinguished character. When the guests have all arrived at the hall, each man is given a slip of paper and a pencil, to guess who each girl is. A prize may be given to the one guessing the most correctly.

Before unmasking, each man has the first dance with the girl with whom he came. Afterward comes the unmasking, and the surprise—if the girl has played her part well.

Could Not Lose Wife's Money.

Frank J. Reed, General Passenger Agent at Chicago of the Monon Railroad, was in Indianapolis the other day, telling a good story on himself. It had to do with his wife's bank account. "A couple of months ago," he said, "I was about to leave the house when my wife handed me her bank book with $300 to deposit for her. I promised to attend to the matter promptly.

"I went down to my office and forgot all about the errand I had promised to perform. Three weeks later Mrs. Reed said to me that she had some more money to put in the bank, and inquired what I had done with her book. My mind was a blank on the subject, but I tamely suggested that perhaps I had left it at the bank to be balanced. With fear and trembling I hurried off to the bank to find the book and was startled to learn that it was not there.

"All that I had ever heard about lost letters and careless husbands and such things flashed across my mind. I realized that I would have to make good in some way. Thinking the bank book and money might be in my desk, I tore to the office. In throwing off my overcoat I felt a package in one of the pockets. I had the contents of that pocket in my lap in a jiffy. It was my wife's bank book and her $300 just as snug and safe as if it had been on deposit with the trust company.

"During the three-weeks' disappearance of that money I had traveled thousands of miles, checked that overcoat in ten or fifteen different hotels, had it checked in as many checkrooms and barber shops, had it brushed by hotel and Pullman car porters, and had jostled against hundreds of people. All this time that money rested there safely."

"Does Mrs. Reed know about it?" asked another railroad man.

"I should say she does," replied Reed, "and I can't get her to trust me with the mailing of even a postal card."—Indianapolis Star.

Squirrel Whisky.

Sir Thomas Dewar told an amusing story at the opening of Dewar House yesterday concerning a liquid which he sampled in the prohibition state of Maine, U. S. A. When he asked what it was made of he was told that the blender took a gallon of wood alcohol, put a wineglassful of glycerin in it to mellow it, then ground down some plug tobacco, and strained it through a cheesecloth to give it a flavor, and united the whole with a gallon of water. It was called "squirrel whisky" because "those who drank it talked nutty and climbed trees."—London Globe.

HOLD ON TO YOUR MONEY

DON'T SPEND A PENNY

until you are certain you are getting ***good value*** for it. In these times every man and woman must be careful of their money, must hold on to it and ***not waste a cent.*** Sick people should ***buy no medicine*** unless they feel sure it will give them more than their money's worth in benefit and health. We want our pay for our medicine, but ***not until you say*** "Here is the dollar; you deserve it," not until we ***have earned it,*** not until you are ***willing*** to send it to us. ***Hold on to your money*** until you are ***satisfied*** to pay it, until we ***have proven to you*** that we have what we claim, until ***Vitæ-Ore has done for you what you want it to do.*** Until then you pay us ***nothing.*** After that, you will be willing to pay, ***glad to pay,*** as hundreds of the readers of this paper have been glad to pay. ***You are to be the judge!*** We leave it to you entirely for you to decide.

We want your money only when you can say that we and Vitæ-Ore have earned the dollar.

How can you refuse to give this remedy, which has won an international reputation by the cures it has made, a trial on the terms of such a ***liberal offer?*** If you need medicinal treatment of any kind, if you are sick and ailing, if anyone in your family is ailing, worn-out, sickly, you do yourself an injustice if you do not send for Vitæ-Ore upon the terms of this thirty-day trial offer. Read the offer! Send for this medicine! Do it today! Each day lost makes a case more obstinate and harder to cure. ***You don't pay a cent unless benefited.***

OUR TRIAL OFFER

If You Are Sick we want to send you a full sized $1.00 package of Vitæ-Ore, enough for 30 days' continuous treatment, by mail, postpaid, and we want to send it to you on 30 days' trial. We don't want a penny—we just ask you to try it, just want a letter from you asking for it, and will be glad to send it to you. We take absolutely all the risk—we take all chances. You don't risk a penny! All we ask is that you use V.-O. for 30 days and pay us $1.00 if it has helped you, if you are satisfied that it has done you more than $1.00 worth of positive, actual, visible good. Otherwise you pay nothing, we ask nothing, we want nothing. Can you not spare 100 minutes during the next 30 days to try it? Can you not give 5 minutes to write for it, 5 minutes to properly prepare it upon its arrival, and 3 minutes each day for 30 days to use it? That is all it takes. Cannot you give 100 minutes time if it means new health, new strength, new blood, new force, new energy, vigor, life and happiness? You are to be the judge. We are satisfied with your decision, are perfectly willing to trust to your honor and your judgment, as to whether or not V.-O. has benefited you. Read what V.-O. is, and write today for a dollar package on this most liberal trial offer.

A God-Send.

HARRISBURG, PA.

Vitæ-Ore has proven a God-send to me. I suffered for years with Rheumatism and was led to

think from repeated failure to cure that there was no hope for a cure. Today I am cured and all through this efficient remedy. It drove it all out of my system and there has been no return. I recommend it most highly for the great good it has done me and want everybody who suffers the terrible torture of Rheumatism to know how it cures this disease. MRS. H. WERLEY.

Cured Catarrh and Eczema

BISCO, S. C.—I have suffered long years with Catarrh and Eczema. Since I took the first dose of Vitæ-Ore I have not had a headache. The Catarrh is now gone and there is no further signs of Eczema.J. B. SKIPPER.

WHAT VITAE-ORE IS.

Vitæ-Ore is a mineral remedy, a combination of substances from which many world's noted curative springs derive medicinal power and healing virtue. These properties of the springs come from the natural deposits of mineral in the earth through which water forces its way, only a very small proportion of the medicinal substances in these mineral deposits being thus taken up by the liquid. Vitæ-Ore consists of compounds of Iron, Sulphur and Magnesium, elements which are among the chief curative agents in nearly every healing mineral spring, and are necessary for the creation and retention of health. One package of this mineral-substance, mixed with a quart of water, equals in medicinal strength and curative, healing value, many gallons of the world's powerful mineral waters, drunk fresh at the springs.

If You Suffer from Rheumatism, Kidney, Bladder and Liver Diseases, Dropsy, Stomach Disorders, Female Ailments, Functional Heart Trouble, Catarrh of Any Part, Nervous Prostration, Anæmia, Sores and Ulcers, or are just worn-out, send today for a package on trial and see what it will do for you. ADDRESS N. F. Dept.

THEO. NOEL CO., VITÆ-ORE BLDG. CHICAGO, ILL.

SHIPPERS AND SELLERS
—of—
STOCK AND FEEDING CATTLE
are reminded that the
ST. LOUIS
NATIONAL STOCK YARDS
furnish by far the best market for their stock.

The cattle feeders of the states of Missouri and Illinois are large buyers on the St. Louis market and furnish a demand for more and better cattle all the time.

The Wabash Eastern Railway, the Chicago & Alton R. R., the Vandalia Line, the Big Four Route, the B. & O. Southwestern Railway, the Clover Leaf Route, the Chicago, Peoria & St. Louis R. R., the Chicago and Eastern Illinois, and the eastern branches of the Burlington System, all start out from the

NATIONAL STOCK YARDS,

and their lines traverse a magnificent country, in which live stock feeding is a leading industry. On their valuable lands the stockmen on these lines cannot raise cattle cheaply, but they can feed them profitably. The stockmen of Indiana and Ohio are specially referred to.

The best market for all these successful stock feeders is St. Louis. They have short runs, favorable rates, quick service, small shrinkage. These people get their cattle home in good shape. There is never a glut of stock cattle at St. Louis. Western shippers of stock cattle can get their stock to the St. Louis market just as easily and as cheaply as they can to any inferior far West market, and at St. Louis there is quicker sale, better results, and in the shipping in, concentration, sale and outward shipment there is less expense, less shrinkage and less loss to come out of the cattle.

The market values advance and decline, sometimes in favor of the buyer and sometimes in favor of the seller; but the center in which all can be brought together and distributed at the least expense to all concerned is the best market of all.

THE BEST MARKET FOR ALL—UNDER ALL CIRCUMSTANCES—IS ST. LOUIS.

How Far Roots Feed.

A correspondent asks whether it is necessary to mulch an orchard between the rows. He seems to consider that the area within two or three feet of the trunk of the trees is all that is necessary.

This is a mistake. The materials needed for the growth of the tree or plant are taken in through the root hairs, and these extend to the ends of the smaller roots. These fine root hairs work their way into the spaces between the particles of soil and are constantly pushing out for fresh supplies of food. The manure may be applied profitably even beyond the feeding ground of these roots, because as the water is absorbed from the soil with which these root hairs come in contact, other water naturally flows toward these points. Hence the feeding ground of a well-developed root system of a tree will likely drain all the area between the rows of trees. When trees are set even so far as thirty feet apart I should cover the entire area between the rows.—L. C. Brown.

Alsike and Crimson Clover.

One of our readers in Winnebago county, Illinois, asks whether seed crops of alsike and crimson clover are handled like the ordinary red clover. Many misunderstand the nature of these clovers, and some advice given free by farm papers has been misleading. Alsike produces only one crop, so if seed is produced at all, it must be in that crop. There is no second crop, nor any second growth, or aftermath, as it is usually called. I have seen two adjoining fields of alsike in the above section of Illinois, which gave very different results, simply because one was handled improperly. One field produced seed, while the other did not. Here is the reason: The one field was not touched until the machines went in to harvest the seed crop, while the other field was pastured for nearly six weeks in the spring. While alsike may be pastured, to some extent, yet it is always more or less of a risk, because we can never tell how much rainfall we will have when moisture is most needed to crowd the crop along. So if one is growing alsike for seed, better keep off all the stock and allow the crop to mature.

Crimson clover has never found much favor in this section. Its value lies in the fact that it is a winter annual. It may be sown in corn, during the last cultivation, or any time up to October 1st. Like all other clovers, it is valuable as a soil improver. It is quite extensively sown in the Eastern States. I have never tried it.—L. C. Brown.

The National Corn Show a Big Farmers' Institute.

Experiment Station enterprise will establish a veritable school in agriculture at the National Corn Exposition at Omaha during the big show in December. It is the purpose to have as full and complete an educational exhibit as can be made by the various State Agricultural Colleges and Experiment Stations. This is planned to be of such a character as will give the visitor to the Exposition an intelligent and comprehensive idea of the experimental work being carried on at these state institutions.

There will be with each of these exhibits an instructor who will cooperate in any plan of lecture or demonstration best suited to instruct the public on the soil and climatic conditions of his particular locality and the crops and varieties of grains best suited to that section. The diseases of grains, such as rust and smut in wheat and oats, the corn louse and corn root worm, and the numerous insect pests that have proven a menace to crop growing in various localities over the great grain-producing districts will be discussed from a practical and scientific point of view, with definite information as to their origin, their life history and remedies that influence toward their extermination.

There will be lectures and discussions on the composition and value of grains. Such topics as the composition and characteristics of heavy and light-weight wheat, oats and barley, showing that the heavy-weight grains are desirable because they contain a larger total amount of food. This with a more matured germ gives the heavy-weight kernel the advantage for seed purposes.

Starchy and glutenous properties in grains; uniformity in composition of wheat grown from a uniform lot of seed, showing superior individuality in both head and kernel; these with scores of other important experiments and tests that have been worked out by the Experiment Stations will be in the line of instruction that will be put forth by Agricultural Colleges at the Exposition.

The Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement. How to mix mortar of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

The National Farmer and Stock Grower

Is a nice, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. The best live stock illustrations appear in *The National Farmer and Stock Grower*. There are thirty-two pages, four columns to the page. It is published monthly.

Anyone who sends in One Dollar to pay in advance a three-year subscription to *The National Farmer and Stock Grower* can select the *CEMENT WORKERS' HANDBOOK* as a free premium.

National Farmer and Stock Grower
3550 Vista Avenue, ST. LOUIS, MO.

Shall We Plant Fruit Trees?

That depends upon just one thing. If one is willing to give his trees proper care, then plant fruit trees, and lots of them. But if general farming is one's business, and fruit growing is merely a side issue, then better get rid of the side issue ju as soon as possible. The scale a other insect pests and fungous di eases are all here to stay, and mo pests are coming. So that, unle one is willing to take the time fight these pests, he had better orcharding alone. Many have alrea made up their minds about this a have cut down old, scale-infest orchards and have given up in di gust. The tendency is to depe upon orchardists who make fr growing a business for family su plies. That is a mistake. Eve farmer should grow enough fruit f his own use. First learn how to s cessfully fight pests and the li time required for annual pruning a spraying will then be well spe This thing of giving up fruit growi entirely by so many farmers will costly after a while. Preserve t home orchard.—L. C. Brown.

National FARMER

Vol. XX. St. Louis, Mo., September, 1908. No. 3.

1908.

This is the best monthly farm paper, and is getting better all the time.

The Success Manure Spreader is on page 2.

Towers' Fish Brand Slickers are light, durable and clean.

Send to National Lead Company for Test Equipment No. 30. See page 7.

De Laval Cream Separator is advertised on page 11.

Financial Countess, the leading Jersey cow, has her picture on page 11.

Don't buy any Alaska Wheat. There is no evidence to prove that over thirty bushels per acre were ever raised of it.

Baldy, the try horse, is an interesting subject on page 14.

Indian Lands for sale cheap. This is the time to buy. See page 25.

Get in on the excursions to Oklahoma. See page 25.

Don't forget the Cement Workers' Handbook on page 32.

Send to the German Kali Works, Monadnock Block, Chicago, and ask for a free copy of the New Note Book.

The Book of Practical Barn Plans is advertised on page 6.

We are glad to furnish The National Farmer and Stock Grower three years for one dollar on credit. See subscription blank on page 13.

The U. S. Cream Separator is advertised on page 10.

The National Farmer Hat is sent directly from the factory by mail to the wearer. See page 10.

A splendid Washing Machine is advertised on page 30.

Stoddard's book, "A New Egg Farm," advertised on page 22, always gives satisfaction.

Write Sharples Separator Company and ask for Catalogue No. 232.

Practical Farming and Gardening, on page 21, is a splendid book.

Simpson-Eddystone Black and Whites are advertised on page 27.

Buggies for cash or on credit. See page 22.

The National Corn Exposition is talked about in this paper.

The Hitching Strap Premium on page 15 means business.

A picture of a good mule is on page 15.

If you wish to secure Horse Bargains, attend the Tuesday sales.

Men can safely buy a Suit of Clothes. See page 18.

Galvanized, Rust-proof Roofing. See page 19.

A PEN OF IDEAL SHROPSHIRE LAMBS—THE KIND THAT TOP THE MARKET. Every picture in a farm publication should teach a lesson, and this picture shows that lamb perfection is no dream. A majority of the high-priced lambs are sold between January and June of each year. The lambs which are fit for market early in the year make the money, and those which are sold between July and November sometimes sell at a high price and more often they do no not. For example, during the first ten days in April, at the St. Louis National Stock Yards, the good spring lambs, 50 to 60 pounds average, sold at 8 to 12 cents a pound, whereas four months later better lambs were selling at 4½ to 6 cents a pound. On the basis of 60-pound lambs, in the spring they were worth $4.80 to $7.20 per head, and four months later lambs of the same grade were selling at $2.70 to $3.60 per head. The one market which so far has never been oversupplied is the spring lamb market. The St. Louis butchers and packers all need spring lambs before they get them. All of South Missouri, all of Southern Illinois, all of Arkansas, Oklahoma, Kentucky and Tennessee, and all over the Southern States, lambs can be raised to 50 and 60 pounds and delivered on the March, April and May markets. These lambs will require a little grain feeding. Ewes can be bought in the fall; bred to lamb as early as possible in spring; the lambs can be pushed to be sold on the early market; the ewes can afterwards be shorn and then fattened for market, and when sold will very likely bring more money in the spring than they cost in the fall. This is the only sure thing in live stock husbandry. September breeding will bring January lambs, which means marketing in April, May and June—the earlier the better. See article on page 18.

THE BEST HOG MARKET.—At the St. Louis National Stock Yards, August 31st, 1908, the top price was $7.17½ for choice hogs weighing 283 pounds, and the bulk of the hogs sold at $6.75 to $7.00 per 100 pounds. Chicago hogs were not quite so high as St. Louis; Kansas City was 15 to 30 cents below St. Louis, and Omaha 25 to 45 cents lower. These are official figures. Kansas City did not have as many hogs as St. Louis, but the light run did not save the shippers. St. Louis is 15 to 25 cents a hundred nearer the consumer. That's why St. Louis has the competition and is by far the best market.

1908.

Lumber Bargains. Write for Catalogue 319. See page 22.

The fourth page of this paper is noted for a number of very interesting single-column advertisements.

Put both in and mix

POTASH

The Last Call

We have been telling you all summer to use not less than 6 per cent. of Potash in your wheat fertilizer.

We have told you how to add 6 per cent. of Potash to bone or phosphate, by mixing 100 lbs. of either with 15 lbs. of Muriate of Potash.

Have you arranged to do this? To increase your wheat crop at a cost of less than 10 cents per bushel?

If not, telephone to your dealer to get the Potash at once—or, to furnish you with a 2-8-6 fertilizer for your wheat—equally good for rye.

Potash is profit. But next week may be too late to get the goods delivered in time for use. Therefore, do it *now*.

Send for **New Farmer's Note Book** containing *facts* about soil, crops, manures and fertilizers. Mailed *free*.

The One Roller-Bearing Spreader

There are many spreaders and so-called spreaders. You may wonder which one to buy. You don't want a machine that you will lay up in the shed for good after a few months. But there's danger of it. We believe we can help you to choose wisely. We have been over all the "features" of all the new spreaders in the 29 years we have been evolving

Roller Bearings on Wheels, on Beater, and Beater Drive.

The SUCCESS

Spreader. It has always been the leading spreader. It was the gold medal machine at Norfolk. It controls patents on the best adapted appliances. It has tried and discarded scores of devices that proved not to be the best. It runs at least a horse lighter than any other spreader.

The Only Completely Roller-Bearing Spreader

It is practically unbreakable. No other spreader is so simple, so direct and positive in its workings, or so easily controlled. We are building for the whole country, and we build it to last—with right care—a farmer's lifetime.

Isn't that your kind of a spreader? Write for catalog and get the proof.

Appointments now open. Term opens September 16. Catalogue and further information sent on application. DR. S. STEWART, Secretary, 1324 E. 15th Street, Kansas City, Mo.

Keep the Roadsides Clean.

The most prolific source of bad weeds is the roadsides, where nobody seems to care for them. Here are the seed-beds for enough weeds to infest fields miles around. In some sections the roadsides are seeded down and each farmer mows the strip adjacent to his own land. In this way the weeds are kept down and the ground yields considerable good feed; but there are great stretches of roadsides all over the country where Canada thistles and other bad things are just coming into bloom. Get after them with mower and scythe. If they are cut off now many will be killed outright. Then keep cutting them off until frost relieves you of the job. Keep down the cockle and smartweed. While you have the mower and scythe out, better go over the weedy pastures. Get in close to the fences. Here are places which are often neglected, because it is difficult to get at them. Here is the place for the scythe and the spud.

The Potato Field in the Summer and Fall.

All kinds of experiences are possible with potatoes because they are grown on all kinds of soils and with all kinds of cultural conditions. Also diseases prevail in some localities and not in others, and these are destructive or not according to circumstances.

The late potato crop should be kept growing as long as possible to allow of the greatest possible amount of starch being elaborated in the leaves for the increasing of the size of the tubers in the ground.

If the field is subject to late blight, it should have been sprayed with Bordeaux mixture in the early stages of growth, but after a field has been attacked in all parts by the blight, the spraying will do little good. The mycelium that has begun its work is protected by the outer layers of the leaves and so develops from within.

A part of the disease comes from the seed potatoes that carried over the blight from the preceding year, and in such cases the whole vine is permeated by the parasitic plant and will perish when that parasite begins to produce spores, for the parasitic plant, instead of drawing its nourishment from the soil, draws its sustenance from the host plant and exhausts it in developing its own spores or seeds.

Where the blight comes before the tubers have been developed, the vines die down before the starch to complete the development of the tubers has been secured from the air. As soon as the leaves begin to wilt or die, the gathering of carbon is at an end, and no more can be done in the collecting of material for the development of the potatoes.

The writer knew of one farmer that year after year raised a crop of half-grown potatoes on the same ground. His vines died in the middle of the summer before his potatoes had half obtained their growth, yet he used the same potatoes for seed and continued to grow the potatoes on the same ground. He charged everything to drouth. A realization of the real condition would have led to a radical change of seed, a change of ground and the vigorous spraying of the crop in the early season to prevent the developing of the spores of the blight that get onto the potato leaves from the soil or from other sources.

Where blight has assailed the field the potatoes should not be dug till ten days or so after the vines have died. This gives a chance for the spores to perish. When the potatoes are dug, they should not be brought into contact with the dead vines, and should not be covered over night with them, as is done in some cases to save labor. The potatoes should be removed from the field as soon as dug, for it frequently happens that the spores that get onto the skins of the potatoes later develop and penetrate the tubers, causing rotting.

The potatoes that have not been affected by the blight will keep better if they are not dug till fully mature, which will be after the vines have entirely died naturally. Then the skins will be thick and will cling firmly to the potatoes and not rub off easily, as in the case of immature potatoes.

Early Seeding of Wheat.

A correspondent at Bloomington, Ind., writes: "Will the first week in September be too early to sow wheat; what variety do you think best suited to this section?"

This is an important question, and it cannot be answered precisely. The prime essential in getting a good crop of wheat is a good seed-bed, and there are many things which affect right conditions. The thing to do is to study one's own field and work accordingly. Where the Hessian fly is likely to give trouble, I would defer seeding until about the first week in October; but in the meantime I should put in a whole lot of good work upon the wheat ground. I believe that in Southern Indiana farmers are inclined to sow too early rather than too late. Another thing: Wheat ground well fertilized will produce strong plants, and on such ground later sowing may be practiced. As to varieties, "Rudy" ranks first, according to Experiment Station's recent tests. "Red Wave" comes next.

Grow More Winter Wheat.

The phenomenal success of some growers of winter wheat, in localities which have heretofore not been considered within the winter-wheat zone, has aroused an old-time interest this fall in this crop. Twenty-five years ago spring wheat was an important crop, and yields of twenty-five to forty bushels were not uncommon. But spring wheat growing has been declining in Iowa, Illinois and Indiana, for several years, and in many sections has been abandoned altogether. Right in the same territory where spring wheat has turned out so disastrously those who have ventured to sow winter wheat have made a success of it, and it seems strange that not more are sowing it. Winter wheat fits admirably into a rotation which will keep land in good tilth. It makes a better nurse crop for grass seed than any other grain crop; and another thing: It is not nearly so apt to lodge as spring wheat. Winter wheat will respond to judicious fertilizing in the first crop, and it grows a stiffer, better straw. In fact, winter wheat is in many places crowding out oats, and really taking the season of oats. This wheat question is worth consideration by every farmer who has not been succeeding with other grain crops. Try it on a moderate scale, say ten or fifteen acres. Drill it in, and put it in good ground. Then sow varieties which have been thoroughly tested. I believe with a little balancing up that most of the well-drained lands within the above-named states will produce profitable crops of winter wheat almost indefinitely.—L. C. Brown.

Look Out For These Weeds.

Central Illinois and Indiana are being sown with two of the worst weed pests that can possibly infect any section. The result of buying cheap clover and alfalfa seed is now showing up all over the country. On account of the very high price of these seeds during the last two years many farmers have been tempted to buy the cheaper grades of seed. One could scarcely believe that a bushel of clover or alfalfa seed could contain such a vast number of weed seeds, and it seems that every weed seed is alive and vigorous enough to grow. In an unfavorable period, such as we have had now for six weeks, alfalfa or clover stand no show at all against these hardy weeds, and the result is that weeds are taking many fields. I want to warn clover and alfalfa growers against Bracted Plantain and Wild Carrot. These two pests are spreading at an alarming rate, and pastures and meadows all over Illinois and Indiana are seriously menaced. You can't mistake these pests. Bracted Plantain produces a head resembling a short timothy head, and many mistake it for timothy. It matures seed in August, and if left undisturbed it will quickly crowd out all grasses. Wild Carrot sends up a long flower stem and bears clusters of white flowers, which become cup-shaped as the seeds ripen. This weed is a biennial, so in pastures and meadows it should be cut down as often as the plant attempts to form seeds. Don't allow these seeds to mature and fall upon the ground, for if you do you will have another fresh patch coming on next year. These two pests have not had enough attention, and they are spreading at a rate which threatens our clean seed supply.—L. C. Brown.

END YOUR ROOF TROUBLES WITH Amatite ROOFING

A Roof that Really Protects

THE more carefully you study the subject of Ready Roofings the more you will be convinced of the great superiority of AMATITE.

The average buyer sends to a few advertisers for samples, picks out one that looks tough, and sends in his order to the nearest dealer.

If the dealer doesn't keep the kind selected, some other kind which he has is generally bought instead.

That is a good way to get a leaky roof.

The careful buyer is more particular. He knows that any roofing will last for a little while without attention, but he wants to postpone the time and cost of renewal as long as possible.

He is figuring next year's cost as well as this year's cost. He thinks of the money he will have to spend after a few years for a new roof if this one won't last any longer. If he can get a better roofing at equal cost that will last longer, he is so much the gainer.

That kind of calculation is called thrift. The thrifty buyer sees important differences between AMATITE and the other roofings.

The other roofings either require a coating with a special liquid every year or two, or periodical painting. Right there is a future expense to be counted by the thrifty buyer. His judgment swings toward AMATITE, because it needs no painting either at the time it is laid or afterward. Once it is on you have no further bother or expense.

Then, again, AMATITE has wonderful durability:—

First, because it has a mineral surface. Doesn't it seem reasonable to believe that a top covering of crushed stone will resist the wear of storms better than a roofing with a smooth or unprotected surface?

Second, it contains solid layers of Coal Tar Pitch—the material which is used by the best engineers for waterproofing deep cellars, tunnels, etc. Doesn't it seem reasonable to suppose that this offers better protection against water than materials which are never used for such severe service?

One more argument. Weight for weight, AMATITE is the lowest in price of any mineral surfaced Ready Roofing.

ONE OF THE BELLEMEADE FARM BUILDINGS ROOFED WITH AMATITE.

These, then, are some of the reasons why thrifty people buy AMATITE—It costs nothing to maintain, it has remarkable durability, and its first cost is very low.

The experience of careful purchasers with AMATITE is illustrated by the following letter from Bellemeade Farm:

BELLEMEADE FARM,
BEDFORD, MASS.
March 7, 1908.

Gentlemen: — It is now nearly three years since we put your Amatite Roofing on our new 300-foot buildings. This Roofing is now in its third winter and has gone through without a leak, and there is every indication that it will be good for many years. The buildings with this light, sparkling Roofing and the red trimmings as painted, are very attractive in appearance, and altogether we are much pleased with your Amatite Roofing. We are contemplating the construction of some further buildings for our Shetland ponies, and mean to use more of your Roofing.

Yours truly, S B. ELLIOTT, M. D.

Sample Free.

There are more arguments for AMATITE than these. Our Booklet tells them. Sent with Free Sample for a postal to nearest office.

A FRUIT EXPERIMENT.

Rotten Cored Apples Made Sound by Proper Fertilization.

Certain facts regarding an experiment which we conducted a few years ago may interest some of the readers of this paper, writes a correspondent of American Cultivator.

When we came into possession of the farm which is our present residence the apple trees were in bloom, and we were delighted with the beauty of an especial one, which was the most compact mass of bloom we had ever seen. We were told that the apples at maturity were practically worthless, the former owner only allowing the tree to stand because its closely interwoven branches made an admirable shelter for his pigs.

We became interested in this apple tree and anxiously watched the growing fruit. The variety was a golden russet of fine acid flavor, just suited to culinary use. They grew to a large size and were slightly streaked with red at the stem, a beautiful apple, but we had never seen a closer comparison to the "apples of Sodom"—outwardly a first-class fruit, but which could be crushed with ease in the hand, revealing a blackened, rotted center, and entirely worthless. Such was the state of fully three-fourths of the crop.

I hesitated before acting upon the advice to destroy this tree, for I believed there was a remedy. It was evident from the rank growth that nitrogen had been supplied too generously by the pig-pen, and too much nitrogen without potash in proportion to make the pulp of firm texture had worked mischief with the apples. When the tree was making good growth the following year we applied ten pounds of muriate of potash, scattered it over the ground under the trees as far out as the branches extended. As this potash is soluble, it was soon supplying plant food to the roots, there being no sod to interfere with its descent.

The result was a decided object lesson to our neighbors, yet not greater than we anticipated.

A large majority of the apples were at maturity of the finest quality, sound and crisp. Although none had in previous years been placed in the cellar, several bushels were stored that fall, which kept very well. We make the same application since each summer, and there is not a trace of decayed center, nor have we an apple on the farm which is so salable during March and even into April as this formerly worthless russet.

Picking and Keeping Apples.

Those that have eaten early apples purchased from the fruit stands in the large cities know how insipid such fruit is. It is a wonder that anyone will buy and eat such fruit. It is mostly raised far south of the ordinary crop of winter apples and is picked before the fruit has begun to ripen. Often the fruit has not attained its full size and the seeds are still green. It is no wonder that a large proportion of our population do not have a liking for early apples.

An apple cannot have the true apple flavor till it has reached maturity at least. Ripening is a further development that brings the apple to its fullness of juiciness and flavor. But to pick an apple before it is mature is to force on the market one kind of a fraud.

We hear much being said about how the big commercial orchardist should pick and keep his apples; but the farmer that has only a moderate-sized orchard is as much interested in knowing how to pick and save his fruit as the larger grower.

To the small grower of apples the writer would say: "Do not be ready to let another man buy and pick your apples at his price." There are many apple buyers that make a good lot of money every year buying up small orchards at prices that are ridiculously low.

Cases have come to the notice of the writer where small orchards having good crops of apples were purchased by professionals because the owners were made to believe that the apple crop of the country was so immense that the apples could not be sold at hardly anything.

Hand-picking of apples only should be allowed. There is no apple so solid that it should be shaken to the ground. This not only injures the apple but also injures the buds that are to produce the apple crop of next year.

The large commercial companies are so particular on this point that an apple that falls to the ground is sorted with the windfalls, even though not the slightest bruise can be discovered. On many such apples bruises develop weeks and months after, and if they are put into barrels with other apples they become the centers of rot development.

When apples are picked they should be put into barrels at once and not allowed to lie in piles in the orchard. This latter is the practice of some who think that the apples need to sweat before being put into barrels. Sweating is not an advantage, and the bloom of the fruit goes with the process of sweating.

The fruit should be put into tight packages and kept from the air, as the more the air circulates the more will the apples dry out.

The cool cellar is about as good a place as any in which to keep the apples produced by the small grower, for it is not often feasible to haul a few barrels of apples miles to a cold-storage house. The cellar can be so ventilated during the fall and winter as to remain at a low temperature suitable to the long keeping of winter apples.

Free to Farmers.

By special arrangement the Ratekin's Seed House of Shenandoah, Iowa, agrees to mail a descriptive circular and sample of their new imported Malakoff winter seed wheat to every reader of this paper who will mention it when writing. This marvelous variety of wheat has made a yield and record of over 62 bushels per acre and is endorsed by the Illinois, Iowa, Nebraska and Kansas Experiment Stations as standing at the head of all other varieties, both in yield and quality of grain. Write for sample and descriptive circular and mention this paper. It's free. The address is Ratekin's Seed House, Shenandoah, Iowa.

Recent St. Louis honey quotations were as follows: Comb at 10 to 13c. per pound; dark, inferior or broken less; extracted or strained —Choice Southern in barrels at 5½c. and in cans at 6 to 6½c.; old or candied 1c. less.

Sunflower seed is quotable at St. Louis at $2.00 per 100 pounds.

SEED WHEAT

62 Bushels Per Acre. — Three hardiest and best yielding varieties in the world. Ratekin's New Malakoff, imported from Russia, has a record of **62 bushels per acre. Turkish Red 58**; each standing at the head of all varieties in yield and quality at the State Experimental Stations of Iowa, Illinois, Nebraska and Kansas. The **Fultz**, the best of all beardless varieties grown. Our seed is all pure, re-cleaned and graded for sowing. Also Mammoth White Rye, and extra quality of Timothy, Clover's Alfalfa, and all kinds of grass and farm seeds. Samples and Catalog **Free**. A postal card will bring them.

The New Horticulture.

[Written specially for this paper.]

The advent of hordes of insects and a multitude of fungous diseases into the orchards of to-day mark a significant epoch in American horticulture.

The old system of fruit growing has become obsolete mainly because it was utterly unable to cope with the new conditions of things.

The unprogressive horticulturist has been taught by many a severe and costly lesson that he must adapt himself to a new system; that he must begin again almost at the rudiments of his profession and learn a fresh and strange text.

The result of all this was not hard to foresee. The negligent and unenterprising could not find the energy to rise to the demands of the new order and forsook their profession.

Those, on the other hand, who had faith and courage, at once set to work to master the new laws that they perceived were going to be indispensable to success.

Another fact, too, that may be asserted with equal safety, is, that the cost of fruit production is going to move, if indeed it has not already gone, to a new and high level; that is, the staple fruits of the Mississippi valley.

The new horticulture that has forced itself upon us has almost doubled the amount of work that we must give as the only means to secure perfect and profitable fruit.

Probably it has actually doubled it while at the same time almost doubling the wage of labor. Thus we can say with absolute certainty that the fruit grower of this continent will never again produce fruits of the orchards at the low prices of past years.

When it comes to selling the fruits we may assume that the people will have to pay more in the future than they did in the past. This, however, is not a hard and fast conclusion to be jumped at. No matter what it may cost to produce uninviting and diseased fruit, the chief demand will always be from the poorer class of people or for drying and curing. There are orchards that do not produce a solitary unblemished peach or pear. It is not possible that the cost of production will cut any figure when it comes to the actual market value of such fruits. Perfect fruit will undoubtedly average higher than in the past, not because it costs more, but because of its intrinsic value, its scarcity, its attractiveness, and because the consuming population is larger and wealthier and growing larger all the time. It is always safe to assume that a large crop of any kind of fruit in any year will have to be sold at prices which the masses of the people will be able to pay. The producers' battle is against disease and a high cost of production.

The new lessons that the horticulturist must apply himself patiently to master are many and long, but their acquisition is absolutely essential to his existence and it is therefore a matter of life or death to the continuance of his profession.

These lessons are not intrinsically difficult, but it will be found that the educational training of the mind will have much to do with their easy and complete mastery. They are the work of science, and it is easy to see that such principles will be comprehended most readily by those whose minds are already conversant with scientific methods. Let no one be discouraged, however, because he has spent little of his years at the schools, for sound judgment, alertness of perception and practical experience are, after all, the main factors that make for success.

What do these lessons which we refer to deal with? The newest and most important department of the new horticulture will treat, I should say, of spraying, or the methods to combat insects and infectious diseases; another will treat of fertilizers and how to maintain soil fertility; another will deal with packing and marketing; another, perhaps, of varieties in relation to soil and climate, pruning and other minor topics. All in all, it would hardly be going too far if we were to class horticulture as a distinct and adequate profession requiring quite as clever qualities as the so-called learned professions.

As time goes on, too, it will be more and more realized that only in a technical school devoted exclusively to its teaching can horticulture be mastered thoroughly and at all speedily. And what has been said of horticulture as a profession may be said of agriculture, for the rudiments of each are the same.

I hope the day may not be far off when a scientific training will be thought as essential for the horticulturist as for the lawyer.

Another factor that will hasten the movement to engage the full services of science is the steady increase in the amount of capital that is required to establish a horticultural farm large enough and well enough equipped to insure a comfortable living for its proprietor.

Land is rising rapidly in market value though there is still much of it that can be purchased cheaply because it is unfit for ordinary agriculture.

Besides the land there must be a good equipment of stock, tools and special implements of the profession.

A first-class spraying outfit will cost into the hundreds.

Intelligent and high-priced help must be employed; in brief, there must be a good working capital that will guarantee the work being done at the right time and in the right way.—L. R. Johnson, Cape Girardeau, Mo.

The Fertilizer Principle.

The fertilizing principle is that fertilizers are food for plants; they are not food for the land. The land is the table from which your plants eat and drink. This is not to say that your land cannot be improved—yes it can—it can contain more food for the plants and it can be improved in condition to deliver it to them. This is taken in part from an article on fertilizers in the Saturday Evening Post of August 29th, 1908.

Missouri State Fair.

Everybody should remember that the Eighth Annual Exhibition by the Missouri State Fair, Sedalia, will be held October 3d to 9th, inclusive. Write these dates down somewhere where you can find them and plan to attend the State Fair. Talk to your friends about it and induce them to go with you. It is a great educational institution and will do everybody good that attends it. There you can inspect the fine exhibits of live stock, see the big horse show, study the machinery exhibits and learn what is doing in Missouri. This will enable you when you come home to help make things go better than ever before.

HOW TO HANDLE THE CORN CROP ECONOMICALLY

THE speedy harvesting of the corn crop is just as important as speedy harvesting of small grains.

Slow, expensive hand work and waste through improper handling cause many a farmer to lose fully half his corn profits.

There is a right moment for cutting and shocking corn. When cut just as the ears begin to glaze, you preserve the sweet nutritious juices in stalks and blades which make the fodder a prime growing and fattening feed. When shredded it is practically as good as timothy hay.

A delay of a day or two causes the palatable, nutritious fodder to turn into tasteless, worthless woody fibre.

Right here comes the unanswerable argument for cutting and binding the crop with a Deering, McCormick, Milwaukee or Osborne corn binder. The binders cut and bind into bundles and deposit them in piles ready for shocking. It means millions in profits saved to corn growers every year.

You then make sure of having your corn safely harvested within the very limited time in which the work must be done to get the full value from it.

A machine of this kind will harvest all the corn, whether tall, short or tangled. And it does the work in double quick time.

The work goes right along. You can cut and bind as fast as your team can walk. You not only harvest your corn when it is in the pink of condition, but you make a great saving of labor and wages.

Then comes, in due time, the shredding of the fodder. Fodder must be shredded to get the full value from it.

The Deering, McCormick, and Plano huskers and shredders not only husk the corn clean and with least possible shelling, but they shred and reduce stalks, blades, pith and husks into a condition so that it is relished and eaten up clean by all classes of animals.

This shredded stover is not a mere filler. It has a high feeding value, rich in protein, starch and sugar. It is proven by analysis and experiment to have two-thirds the feeding value of an ear of corn.

When shredded with Deering, McCormick and Plano machines, the fodder is all digestible and ranks along with clover, timothy and alfalfa as a sustaining ration or growing and fattening feed.

Call on the International local agent and talk over the matter of corn harvesting, husking and shredding machines with him. He will be glad to furnish catalogs and explain just how these machines will make money and save money for you. Or, if you prefer, write direct to

INTERNATIONAL HARVESTER COMPANY OF AMERICA

The greatest act of friendship which can be extended to this paper is to pass it around and interest others in it. When this is done we usually obtain a few new subscribers because there is interesting matter in every edition

Recent wholesale quotations at St. Louis for beans and peas, per bushel: White beans—Choice hand-picked at $2.65 to $2.70; machine-picked or screened, $2.50; imported, $2.40 to $2.45; country at $1.75 to $2.00. Scotch peas at $2.65; split peas at $2.10 per bushel or $6.50 per barrel of 3½ bushels; black-eyed peas, $2.50 per bushel; Lima beans, 5¾c per pound; Lentils, 7c.; California Pink, 4¼c.

Although the Adams wheat story is generally discredited and the yield is greatly exaggerated, the wheat dealers of the Merchants' Exchange said that in appearance it was remarkably good and extraordinarily hard. See page 20.

Weeds in Alfalfa Fields.

While traveling in Livingston county, Illinois, a few days ago, my attention was called to two particular fields of alfalfa which were seeded during the spring of 1907. I have never seen worse contaminated fields anywhere. The seed sown on both fields came from the same source. The owners of these farms have taken great pains to keep their fields clean of weeds, and pastures and grain fields are comparatively free, but there is enough deviltry in the alfalfa patches, if left unchecked, to contaminate thousands of acres. In one field I found wild carrot, buckhorn, crab grass and Lady's Thumb in great abundance; in the other field wild carrot and dodder had just about taken it. All of these weeds are serious pests, and they menace our grass fields. When I called attention to the seriousness of wild carrot and buckhorn in one field, the owner was much surprised; in fact, he had taken the buckhorn for grass and had thought little about the other weeds. One of these farmers considered the situation so bad that he intended to plow up his alfalfa field this fall. It requires vigorous measures to handle these infested fields. It will not do to wait until the seeds ripen and then turn them under, for then it may take years to get rid of them. The thing to do is to keep these weeds from seeding. It will be too big a job to pull up even the wild carrot roots, but keep the mower and scythe busy and don't allow one of these plants to mature seed. Then plow the ground late enough so that any seeds that sprout and come up will be nipped by frosts.—L. C. Brown.

Do Hauling Now.

On nearly every farm there is hauling which will have to be done between now and Christmas or later. There is the hauling of the winter supply of wood, and more or less hauling of hay and feed. I have gotten out in most all kinds of weather and hauled hay, and used to —like a good many others are doing—hitch up every morning, no matter what kind of weather it was, and get a load of hay for the stock; but I am glad that I have learned better and am using a more comfortable way. I find that we can do it and make farming more like living during the winter.

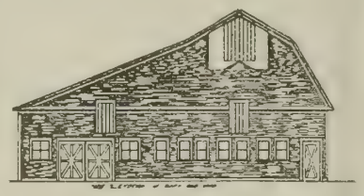
With the hay question: I have it hauled just where I will feed it at harvest time; it takes a little more time just then, but it saves a handling in the end, and we on the farm can always make use of time in some way. Even when I had no barn, I would haul right out of the windrow and put in rack ready to feed. This saves all bothering in the winter, in all kinds of weather and mud, and makes farming seem more pleasant. The point which I want to make is to plan to do hauling on solid ground. You can make much in this way. You can get the hauling done faster, haul more at a time, and it is not so hard on the team. More than one horse has been hurt and made a balker by trying to haul too much. Besides, this way saves our land, for it hurts land to haul when muddy.

We must get up our winter supply of wood, and now is the time to do it, while you can haul it on solid ground, and then you do not have to bother to get out and hitch up during the winter, and the life and work on the farm will be more like living, and your boy will stay with you instead of running off to some city. I had rather do the hauling now when it is a little hot, than to have to get out in the cold, muddy and damp weather. We should get out of life all we can, and this we can only do by managing to make things come out best. Now is the time to do any kind of hauling. Better for you and better for the team. Try it this time and see if winter life on the farm is not more enjoyable.—E. J. Waterstripe.

Pecan nuts are so high in price that peanuts are substituted. A wholesale grocer said: "We used to sell three bags of pecans to one of peanuts. Now we sell three bags of peanuts to one of pecans."

PRACTICAL BARN PLANS.

This is the name of the best book out. Every farmer needs it. No matter what kind of buildings he may have on his property, he needs it anyway. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.



A Practical Farm Barn.

Each and every plan in the book is accompanied by a lengthy written description explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

Any carpenter or builder, or even a farmer himself who is handy with tools, can take our "New $5,000 Barn Book" and put up many of the buildings.

A Valuable Work.

We hope we have impressed you with the value of this book and that the nominal price asked is nothing by which the practical value of the book should be measured. This book is 8x10½ inches, contains 156 pages, is handsomely bound in cloth, stamped in two colors, and printed on fine glossy paper. Order to-day while you are in the mood. That's what to do. **Price, $1.00, Prepaid,** including one-year's subscription to this paper.

The National Corn Show.

Arrangements have been made with manufacturers of corn products who are exhibiting at the London Exposition this summer to send similar exhibits to the National Corn Exposition at Omaha, and, considering the number of things which are made from corn, the Industrial Department of the big Agricultural Show will be one of the largest departments.

G. W. Wattles, President of the National Corn Exposition, is abroad. At a commercial exposition in London he saw 128 products made from American corn, most of which is manufactured from maize grown in Illinois, Nebraska, Iowa and Kansas.

All over the continent President Wattles writes that he saw American demonstrators of corn products, and was told at the foreign office that they employ over 400 men and women as demonstrators at home and abroad. He found demonstrators at work in France, Holland, Germany and Italy, nearly all of whom spoke the language fluently of the country in which they were working, and were very popular with the people who visited the Fairs and Expositions. As a result Mr. Wattles has found everywhere that there is a great trade working up for corn products of America. At most of the hotels he found that several dishes were on the bill of fare made from Indian corn grown in America.

Practically all of the manufacturers who are making so many articles of food and utility from corn and building up a trade abroad, which means better prices for the grain, have now arranged to send to the National Corn Exposition the same kind of exhibits which they make at the big commercial expositions in Europe.

Make Liberal Contracts With Tenants.

A real estate man who owns several farms in Central Illinois came to me a few days ago to talk over the matter of rental which his tenants ought to pay. His farms have been well kept and his tenants have done exceedingly well. In fact, this owner thinks his tenants have had decidedly the best end of the bargain. Let us see: He has rented for $6 per acre cash, covering the entire acreage of the farms. His tenants have been obliged to grow a fixed rotation of crops and haul out upon the fields all the manure made about the barnyards. His tenants have even bought their own clover seed. In fact, the $6 per acre cash rent was net, except real estate taxes. Under this system these lands have become better each year, the best class of tenants handle the lands, and never has there been one cent of the rent money lost. Instead the rent money has been paid fully twelve months in advance. This landlord thinks he ought to have $8 per acre for that land. The tenants say they won't "stand for" it, unless they are given a free hand to put in just such crops as they want. This means, of course, that the biggest money-making crop will be taken from those fields, and you can depend upon it that not very much will go back upon the land. Now, what would you do if you were in that landlord's place?—L. C. Brown.

The World's Wheat Crop.

Beerbohm, the great European crop expert, estimates the grand total of the 1908 wheat crop of the world at 400,000,000 quarters of 480 pounds each. Last year the crop was 393,226,000 quarters, and in 1906 the crop was 431,955,000 quarters; and in 1905 the crop was 414,735,000 quarters. Of the 1908 crop the total for Europe is 210,000,000 quarters, and for the balance of the world 190,000,000. The largest production is in the United States, 86,000,000 quarters, the next is Russia with 65,000,000 quarters, and France third with 41,500,000 quarters.

Clover Seed Crop.

The outlook now is first-rate for a larger clover seed harvest this fall than any previous time during the last five years. Hay crops have been ample, and this, together with the high price of clover seed, has induced more farmers than usual to leave their clover fields for seed crop. The crop is very promising. There has been sufficient moisture since the first cutting to produce a tolerably heavy growth, but not too rank. The heads are now coming into bloom and the fields are now showing up pretty even. While the last two weeks may not be ideal for pastures or growing corn, yet it has been just right for putting seed into the clover heads. Don't be in too big a hurry to cut the seed crop. Wait until the heads are well filled and the seed is thoroughly matured. A well-ripened seed is stronger in germinating power than immature seed. Some cut their seed crop early, lest the seed shatter if it is left until dead ripe. Right here is the source of the black, shrunken seed we find in low grades. If you want bright, plump, hard seed, mature the seed heads, harvest carefully and thresh the seed before fall rains damage it. Well-matured clover seed insures quick, vigorous germination and rapid growth. With such a start the young clover plants will soon crow out weeds. A cleaner sample of clover seed may be had by threshing with a clover huller; but when the huller cannot be had, use a clover seed attachment on an ordinary threshing machine.—L. C. Brown.

Prizes Advance Prices of Land.

Lands in Northern Mississippi advanced from $15 per acre to $25 and $30 per acre, because of an award won by a grower of alfalfa on his big exhibit at the St. Louis Exposition.

This story is told by Captain J. F. Merry, General Immigration Agent of the Illinois Central Railway, who has in his possession letters and reports which substantiate his word, which in itself is good with every newspaper man in Iowa and Illinois.

There are some lands particularly adapted to certain crops. No one knew just what some of the Mississippi lands would produce until the farmers experimented with alfalfa. When one of the Mississippi growers won the prize, it became apparent that the Mississippi lands were alfalfa lands, and five crops per year are now being produced on them. The result is that the lands have increased in value.

The National Corn Exposition which is to be held at Omaha, December 9th to 19th, will show the varieties best suited to certain sections of the agricultural region, even better than they were shown at one of the World's Fairs or Industrial Expositions. To learn more about clover and alfalfa as soil rejuvenators is worth a trip to the Exposition at Omaha. These crops not only feed the soil, but also furnish a much-needed protein feed. Better crops mean crop rotation, and this means an effective way to get rid of many insect pests. The results of seeding fields to clover and alfalfa in regular rotation with other crops will be shown in the magnificent exhibits which will be shown at the Omaha Exposition.

Sea Will Succor a Famished World.

It is just ten years since Sir William Crookes, President of the British Association for the Advancement of Science, presented his alarming array of statistics proving to his own satisfaction at least that by the year 1928 the entire population of the globe would be face to face with starvation, or, at best, short rations, for the reason that the production of wheat could not possibly keep pace with the progressive increase in the world's population. Sir William failed to take into consideration the neglected and ungathered harvest of the seas. In the great Sargasso Sea alone, in the North Atlantic ocean, sufficient nutritious vegetation flourishes and decays to support the entire population of Europe, if it were harvested and prepared in a manner fitting it for human consumption. On the sea beaches of the United States, enough proteids are cast up by the waves, and allowed to decay and dessicate into their original elements, to take the place of the whole product of the Northwestern wheat fields. If the world's teeming millions ever face wholesale hunger, it will not be on account of any niggardliness on the part of nature, or any shortsightedness of Providence, but because mankind lack the wit to utilize the food materials that exist in superabundance.—September Technical World Magazine.

Our Wasted Resources.

The recent call of President Roosevelt for a meeting of all the State Governors and of representative officials and citizens for the consideration of what he styles the "greatest of national problems," directs the eyes of all Americans to some of the losses which we are wantonly letting slip from us.

It concerns the farmer most of all, because the source of waste is most nearly under his control, the evil effects most directly crippling him.

While the enormous wastes in coal and iron mining are entirely out of his hands and are of national portent, the waterways and forestry problems are still more threatening. It is these with which the farmer may deal personally, while the nation is managing the same question within public domains.

There are now 150,000,000 acres of national forests in the West being intelligently handled. These will go hand in hand with the reclamation service, which has made the desert to literally blossom as the rose. The East needs protection of its forests and streams to save it from being parched. With a few reservoirs the entire valley of the Ohio and its tributaries might be made to vastly increase its resources, while with a continuation of forest destruction, floods and drouths alternating will be a result inevitable, the extremes increasing with the years.

Common sense tells the farmer that he must not crop his land to death without planting for the future. Science has proved conclusively that growing trees intelligently is just as profitable and more obligatory to the good of the country than growing wheat.

Catalpa and a number of the quickly-grown trees will, if treated to creosote, make posts and poles more durable than the more expensive timbers not treated. With young trees trying to grow on every side of us, it is simply battling against nature to refuse to increase our timber crop.

Nor is it a work for future generations, though they will unquestionably be largely benefited by our foresight. While the nation is grappling this as a most momentous problem, each land owner can add his mite to the general fund of prosperity and to his own personal wealth or he can continue the depletion.

Specialists affirm that in ten years at the present rate the price of lumber will be about double the present figure. Is not this alone an alluring prospect for planting and protecting trees? Accidental uprooting, as by wind, may be restored, as was done with a large Norway spruce two years ago, under the eye of the writer.

A severe gale in midwinter uprooted it, and in the absence of the owner it was left with roots exposed to freezing and thawing until spring. On his return it was gently pulled up into place by a team and pulleys (though twenty-five feet high) and the roots covered with soil. A guy rope was fastened to a maple near, and board props, which were several times found most necessary during the winds of the first year, kept it in place until the roots had gained firm hold. It has outstripped its companion in growth, and was last season loaded with cones, the root pruning seemingly being a benefit rather than a damage.—Bessie L. Putnam.

The Capitol Syndicate.

The death of Jno. V. Farwell, of Chicago, in his 83d year, reminds ranchmen of the transaction whereby the state of Texas gave title to over three million acres of land for the Teaxs Capitol Building. It was in 1886 when the Farwell Syndicate obtained the land. It was then valued at $1.00 per acre, and since that time much of the land has been sold in large bodies at $3.00 per acre and in smaller pieces at $6.00 to $10 per acre. It is doubtful if the large ranch ever paid a profit, as such, but it appears on the surface that the advance in land values helped out the proposition in the end. Some very severe winters and unfavorable seasons attended the early operations of the Capitol Syndicate Ranch.

Send to J. Wilkes Jones, 606 Bee Bldg., Omaha, Neb., for the premium list of the National Corn Show.

A Child Can Tell Good Paint

if instructions for using our white lead tester are followed. The whole experiment is very simple and yet it is an absolute guard against throwing away money on worthless paint which looks like the real thing when put on the house, but which will not wear. Painting is a great and constant expense only when the paint material is bought blindly or used without intelligence.

Send for our Test Equipment No. 30.

which includes blow-pipe for testing, instructions for using it, and book on paint and painting. Worth dollars to every paint user; costs nothing but a postal card. Address

The right way to market almost any crop is to spread the sales over the twelve months of the year. If all the crop is sold at harvest time, speculators have to step in to carry all the unconsumed supply until it is sold to advantage or until the country can absorb it. The best place for a farmer to hold the crop is on his own farm, and if he needs advances, the next best place is in a warehouse, from which he can obtain moderate advances at reasonable rates of interest and still retain his power to sell at any time his judgment considers best. The man who surrenders his right to sell his own crop as his own judgment dictates has very likely put the sale of his crop in the hands of a fool.

The Middle Man.

Every once in a while somebody starts to cut out the middle man. St. Louis is full of middle men. Some of them have wagons. They go to the wholesale markets; they buy the produce of the farmers and buy the right kind of produce to suit their trade. They also buy it as cheap as they can.

These wagons cost $200 each. They are more like houses on wheels. They are built to convey fruits and vegetables, with plenty of air, without the sun shining on them. They are practically moving stores. The wagons that go to the West End with attractive harness and finely-decorated signs and a good horse that a farmer raised are a credit to all concerned—to the farmers who grew the produce; to the people who buy it.

In active times, two men and sometimes a boy go with these wagons. House to house, street by street, they sell the farmers' product. This goes on day after day, week after week, in sunshine or in rain. They sell for cash, generally extending credit when necessary. They sell the goods as high as they can, but they have to judge their market. They must hold their trade or somebody else will get it.

It is an industry by itself. It varies according to localities. Every district is different, and there is also a difference in the quality of the goods offered and the prices realized.

The West End pays the most and gets the best; the North and South Sides are nearly equal; and there are cheaper neighborhoods, where they get the culls; but everything salable is sold, and these middle men create 80 per cent. of the trade which they satisfy. Cut them out and you cut out ten thousand dollars a week paid for products which go directly to the farms.

They are not farmers; they are not large consumers; but they are useful citizens, and we have never yet seen the farmer who wanted them cut out. They help to make up the population of the city, and there would not be any market at all if there was no city.

Mr. J. R. Dugal, of Aurelle, Union county, Ark., reports great success with the Clore's Grand Sweepstakes White Corn which he received from The National Farmer and Stock Grower as a subscription premium.

"Clover is such a source of nitrogen that it would be supposed that it must be fed nitrogen. This, however, is not the case, as it draws nitrogen from the soil air and is therefore in greater need of potash and phosphoric acid."—From article on fertilizers in Saturday Evening Post.

The removal of the restrictions on which were formerly Indian lands has thrown open to purchasers 8,000,000 acres of fertile lands in what was formerly the Indian Territory. It is now the state of Oklahoma. The land is in tracts from 40 to 320 acres. No matter what may be said of the Indians themselves in regard to their lack of industry, it is safe to assert that their reservations were the richest lands on the continent, and they have never worn out any soil. The way to obtain correct and reliable information concerning the newly-opened Indian land is to write to John Sebastian at 1768 LaSalle Station, Chicago, or 1768 Frisco Building, St. Louis, Mo. Excursions are announced for September 15th, October 6th and October 20th.

Cuba Shutting Out Our Cattle.

Except for breeding purposes, the island of Cuba has fixed an import duty on cattle. This is done for the purpose of protecting the farmers of Cuba. The duty amounts to $2.25 on every 220 pounds. It is practically a cent-a-pound duty. We have no quarrel with the Cubans for imposing this tariff—we do such things ourselves—but we cannot help laughing when we read that the Cuban planters have agreed not to sell their two-cent dogie cattle to the people of Havana above six cents a pound on foot, and that the retail meat sellers' combination will adjust the price of meat to the price of live stock. In other words, the planters and butchers have promised not to accept any more than they will ever get. It remains to be seen if the duty is prohibitive. Cuba has imported numbers of our bulls, stags and oxen, but very few beef cattle. During the year ending June 30, 1907, Cuba imported domestic animals of all kinds from the United States to the value of $924,708.

People who object to cold-storage products would gain a little valuable experience by leaving their meat, eggs, milk and butter out of the ice box.

Milking Tenacity and the Fall Calf.

Two valuable items appear in the Milk Reporter of Sussex, N. J.:

"The greatest money-making element in the dairy cow is tenacity in milking, yet too many dairy farmers judge the dairy cow by her flow at flush."

"The men who make the most money with their dairies are those who have their cows calve in the fall and grain them liberally through the winter."

FARM AND RANCH LANDS.

ALABAMA COAL LANDS.—Fifteen thousand acres of mineral land. Right in the heart of the Warren coal lands of Alabama. These lands were purchased direct from the state under the land act of 1892. Lands in this section have yielded over $1,000 per acre on royalties of five cents per ton on coal.

The Illinois Central Railway has a survey completed through this body from Jasper, Ala., to Birmingham, which is expected to be built in the near future. The reason why the present owner is influenced to part with it is the need of ready money. No one need apply who has not the cash. Such a purchaser can get a bargain if taken up at once. Deed to this body of land will give purchaser title to over 6,000 acres good coal land worth when opened $100 per acre or more. This is an opportunity for a capitalist who can wait a few years to multiply his money. It takes fifty thousand dollars to buy and carry this proposition. Address, JOURDAN ESTATE, care National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

ARKANSAS 4,600 acres of farm and ranch land in Ashley county, Arkansas, for sale; 3,400 acres prairie, balance in timber. For particulars, write
WM. G. NEELY, Mist, Ashley County, Ark.

Mississippi.—800 Acres.—This is in Northern Mississippi, Tishomingo county, four to five miles from Iuka. In a solid body. Between the Southern Railway and the new Birmingham branch of the Illinois Central. This is a rich body of chocolate loam, with large and small trees. Suitable for a stock farm that cannot be excelled. The price is $5,000; terms to suit. An hundred families could make good homes on this land, and every one make a good living. Address, **Hale Estate**, 3550 Vista Ave., St. Louis, Mo.

NORTHERN MISSISSIPPI.—About 1,200 acres, consisting of six quarter sections and some small pieces. This land with poor cultivation produces 25 to 30 bushels of corn per acre, also one-half bale cotton without fertilizer; also 100 bushels of either Irish or sweet potatoes. It is only two miles north of Iuka, on the Southern Railway, towards the Tennessee river; about 100 acres in cultivation and 400 acres level ground, worth $20.00 an acre. Well watered with springs and live creeks. Good farm house and outhouses; also good orchard and pecan trees. Ten thousand cross ties can be made from growing timber. This tract of land can be had with clear title at $6.00 an acre. It is a great bargain. An active man who knows his business can clear a first-class income. Near to market, at Memphis; live stock can be shipped by boat to St. Louis by driving a few miles. Two crops of sorghum, millet, peas in corn, and every known vegetable. White clover, spontaneous growth. Address, JOURDAN ESTATE, 3550 Vista Ave., St. Louis, Mo.

Mississippi.—20 Acres.—A fine gravel hill. On line of Southern Railway, two miles east from Iuka, Miss. Will mine 100,000 carloads of what is famous as the Tishomingo gravel. Will cement together and make fine ballast for railroads or public roads and streets. It is accessible to railroad with cheap rates. Cash price, a thousand dollars. Buy it quick as a bargain. **Jourdan Estate**, care National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

WATER POWER AND BUILDING STONE in Northern Mississippi—120 acres—which includes a fine water power where a successful cotton mill was run until destroyed by fire. Water can be had in abundance with good fall and short dam between solid stone bluffs. The entire 120 acres are covered with fine building stone in quantities to quarry for the next century. Millions of tons of the finest building stone can be quarried in any size or shape. Owner would take some stock in company to develop this property. A spur can be put in from the new Illinois Central Line between Corinth and Birmingham to haul this stone. Prices and terms easy to the right party. Address, JOURDAN ESTATE, care National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

CENTRAL MISSOURI FARMS.

For farms and homes that will prove satisfactory and profitable write for our new illustrated list. One hundred farms described and priced. **Geo. W. Hamilton & Son**, Fulton, Mo.

OZARK FARMS For Cattle, Sheep and Poultry raising. Horse or Mule breeding. Fruit, General or Dairy Farming or Market Gardening. Beautiful climate, running water. Ideal conditions. Write to-day for our lists—**No property to exhange.**
PICQUET-HARTRICH REALTY CO., 55 Liggett Building, St. Louis, Mo.

NORTHERN MISSISSIPPI — 410 acres. Four miles from railroad at Iuka, Mississippi, and four miles from boat landing on the Tennessee river. This tract of land is one of the most valuable in the United States. A stock farmer can take this ground, obtain free and clear and guaranteed title for $1,800 cash down. It is a splendid property, and can be used as a dairy, vegetable, stock or fruit farm. Except a fair house, improvements are not much. Splendid climate. It is an hundred times a bargain. You deal direct with the owner. Write to HARRIS ESTATE, care National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

MISSOURI. 800 ACRES. MISSOURI. The best bargain. Adjoins railroad station. Two hours from Kansas City; six hours from St. Louis; twelve hours from Chicago. The land will grow 60 to 80 bushels of corn to the acre; 40 acres winter apple orchard. Improvements worth $15,000. It is just the farm for an Illinois man who is used to good land. Too fancy to describe. Price, $65 an acre; one-third cash, balance long time, six per cent. Also smaller farms. Write for particulars. **J. H. LIPSCOMB,** 306 Fidelity Trust Bldg., Kansas City, Mo.

Missouri.—A Fine Farm, 180 acres, 3½ miles from Marshfield. Most all valley. 35 acres good timber. Good six-room house with cellar; well on porch. Several springs, with running water. Barn, 30x50. All necessary buildings, as granary, cribs, sheds, poultry and hog houses. Fruit. Model stock farm. Good, level roads. Price only $37.50 per acre. Send for price lists. **Wright & Waterstripe, Marshfield, Mo.**

Texas.—Fine Colonization Tract—10,000 acres ten miles west of Falfurrias Station, on Alice Branch of the San Antonio & Aransas Pass Railroad. All red and black sandy loam soil, artesian water strata at 265 feet, water rises to within nine feet of top. Will grow all fruits, vegetables and other crops that can be grown anywhere in Texas. Adjoining land being sold at $25.00 per acre now. Price of entire tract $9.50 per acre; the price is $10.00 per acre in 3,000-acre tracts. Terms, half cash, balance one and two years at eight per cent. interest. **H. M. & P. H. Thompson**, 215 Alamo Plaza, San Antonio, Texas.

TEXAS.—12,000 Acre Ranch For Sale! All together or in parts, in Uvalde county, Southern Texas, nine miles from Sabinal, an up-to-date and rapidly-growing town with fine schools, 71 miles from San Antonio, on the Southern Pacific Railroad. Principal grasses, mesquite and rescue. An abundant and inexhaustible supply of pure water. The tillable soil is black hog wallow and chocolate and produces alfalfa, wheat, cotton, corn, rye, sorghum, broom corn, vegetables, fruits, etc.

No other locality is better adapted for the successful raising and fattening of cattle, hogs, sheep, horses and mules. The land all the way from town to this ranch is under cultivation. Owner being a non-resident, price $7.00 per acre.

Address, A. D. EVANS, National Stock Yards (East St. Louis), Ill.

GO TO TEXAS

and buy a home farm in the Red River Valley, just across the line from Oklahoma, in the beautiful

"CLUB Ranch"

Had 40,000 acres, sold 20,000 to actual farmers. Railroad through land—raise 40 bu. corn, 40 bu. wheat, 60 bu. oats, ½ bale cotton per acre. Fine grass; water 12 to 40 feet—rich alfalfa land. PRICES $8 to $18 PER ACRE, ¼ down, balance 2 to 5 years. Go along September 15 or October 20; $17.60 round-trip from Kansas City. Write for illustrated book and samples oats and wheat. Beautiful pocket map Texas 15c., stamps or silver. **LOTT,** "The Land Man," 130 W. 8th, Kansas City, Mo.

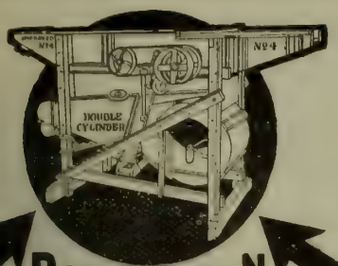
CLUB RANCH

VIRGINIA FARMS $5.00 per acre and upwards. Easy payments. Catalogue free. Loans made on country real estate. **George E. Crawford & Co.,** 1009 East Main street, Richmond, Va. Established January, 1875.

CASH FOR YOUR FARM OR BUSINESS, no matter where located. If you want to buy, sell or exchange any kind of real estate or business anywhere, at any price, address, **FRANK P. CLEVELAND,** 7910 Adams Express Building, Chicago, Ill. Please mention Nat. Farmer and Stock Grower.

At St. Louis, on September 1st, hard winter Nebraska wheat sold at 96 to 98c.; Kansas Turkey at 98 and 99c; No. 3 at 94 and 95c.; No. 4 at 92 and 93c.

At St. Louis, September 1st, No. 2 red wheat sold at 97 to 97½c.; No. 3 at 95 to 96½c.; and No. 4 at 91½ to 94½c.



DO YOUR OWN THRESHING

If you raise one acre or more of Beans or Peas, we have a **Special Thresher Proposition** to offer you, which is the most liberal ever made by any manufacturer. If you write us about it we will also send you free our new book on Bean and Pea raising. This book will show you how the

OWENS

BEAN and PEA THRESHERS

pay for themselves in a short time; how they are made in four sizes to suit both the small and large grower as well as the jobber; how they thresh directly from the vines without splitting the Beans or Peas, and separate the vines and pods. **Write to-day** for our special proposition and free book.

FINANCIAL COUNTESS.

Imported Jersey Cow Beats the Jersey Record in Official List.

Owing to her performance for one year in an official test under the rules of the American Jersey Cattle Club, Financial Countess, 155,100, takes first place in her breed in dairy capacity. She calved on June 1, 1907, and her record began on June 8. During the 366 days following, 1908 being a leap year, she gave 13,248 pounds of milk, containing 795 pounds 4.6 ounces of butter-fat, equivalent to 935 pounds 10 ounces butter 85 per cent. fat—just about 31 pounds less than her own weight of butter, her weight being 967 pounds.

This test was made by representatives of the Colorado Agricultural Experiment Station. The milk of every milking was weighed and the weight recorded by the owner. From July 3 to 16, 1907, the milk of every milking was weighed and tested by Mr. F. C. Tripp, representing the Experiment Station. During these fourteen days she produced 730.1 pounds of milk, containing 36.2874 pounds fat. During the month of August, 1907, and each month thereafter to April, 1908, inclusive, the milk of every milking for two days each month was weighed and tested by Mr. James J. Girardet, on behalf of the Station. From May 17 to 23, 1908, the milk of every milking was weighed and tested by Mr. Girardet, and during the seven days, after having been in milk for eleven and one-half months, she produced 214 pounds 9.6 ounces milk, containing 14 pounds 6 ounces fat, equivalent to 16 pounds 14 ounces 85 per cent. butter. On May 23 and 24, 1908, as an extra authentication, she was tested by Prof. E. J. Iddings, State Agricultural College of Colorado, when she produced 61.3 pounds milk, containing 4.186 pounds fat.

Financial Countess was scored by Prof. W. L. Carlyle, Dean of the State Agricultural College of Colorado, and he gave her 96.2 per cent. of the perfect score. Prof. Carlyle says of her: "Financial Countess is a strong, rugged cow, possessing great quality in finish, and, so far as my judgment goes, is the ideal what a Jersey cow should be for this country." "Financial Countess is the most nearly perfect type of a Jersey that I have ever seen. * * She is clearly a demonstrtion, it seems to me, of the importance of strength, constitution and vigor, as indicated by conformation, in order to produce a large quantity of milk and butter economically."

The average daily yield of Financial Countess for the entire year was 36.2 pounds milk and 2.19 pounds butter-fat, the average percentage of fat being 6.03.

The lowest percentage of butter-fat was 4.97, during the first two months of the test, when she was giving 1,520 pounds of milk in each month, and the highest percentage, 6.88, in the eleventh month. Her average daily yields during these months were as follows:

	Milk. lbs.	Fat lbs.
First month.. ....50.70		2.52
Second month.....49.03		2.44
Third month.....43.06		2.25
Fourth month.....40.57		2.48
Fifth month.....36.11		2.25
Sixth month.....32.25		2.03
Seventh month....31.68		2.02
Eighth month.....30.93		1.98
Ninth month.....30.26		1.99
Tenth month.....29.73		1.99
Eleventh month...29.96		2.06
Twelfth month....30.12		2.05

Financial Countess was bred by John G. Buesnel, St. Saviour's, Island of Jersey. She was imported in dam by Michel Hilgert, St. Joseph, Mo., January 16, 1900, her dam being Financial Queen, 155,098, P.S. 7,766, H.C., J.H.B., and her sire Financial King, 57,788, P.S., 2,624, H.C.,J.H.B. She is No. 96 in the A. J. C. C. Register of Merit, having been entered on a record of 12 pounds 15.8 ounces of fat in seven days, authenticated by the Missouri Agricultural Experiment Station, the test being made when she was four years and ten months old, and owned by Dr. C. E. Still, Kirksville, Mo.. At this age she was scored 91½ per cent. of the perfect scale of points by Mr. W. R. Spann. Her present owner is Mr. C. E. Parfet, Golden, Colo. During her year's test she was fed 1,380 pounds bran, 675 pounds ground oats, 1,277 pounds ground corn or chop, 649 pounds old process oil meal, 689 pounds cotton-seed meal, and 5,400 pounds roots, and was about three months on pasture. The hay fed was not weighed.

Before the test of Financial Countess was completed, the highest year's authenticated fat record of a Jersey cow was that of Olive Dunn, 188,832—671 pounds 13.8 ounces.—R. M. Gow.

Rusty Milk Cans.

Experiments made by Prof. Geo. A. Olson, of the Wisconsin Experiment Station, indicate the milk hauled in poorly-tinned or rusty cans is materially injured for cheese-making. "The cheese factory operator should not hesitate to refuse milk which is hauled in poorly-tinned or rusty cans, for, in addition to the retarding influence of the iron on the rennet action and the neutralization of the acid by the iron, there are also produced taints or off flavors."

"The milk cans used to haul milk to the cheese factory are often of a cheap grade and are dented the first or second time that they are used, with a result that the tin cracks and the iron is exposed and rusts. At one factory a can was found that had been used for thirteen years and had been soldered forty times, with lead patches two inches in diameter in some places. Milk kept in such cans would take forty minutes longer to coagulate than that kept in good cans."

"In these experiments milk was placed in rusty tin cans and allowed to stand for different periods, while other samples of the same milk were kept in glass beakers. Every time that this experiment was repeated the milk kept in the rusty cans gave evidence of a retarding influence on the rennet action as compared with the milk kept in the glass beaker. Milk which was allowed to stand in iron utensils for several hours had a peculiar bluish color, indicating the presence of iron in solution. It was evident that the acid in the milk acted upon the iron and dissolved some of it. The maximum quantity of iron dissolved in the milk ranged from one to one and a half pounds for every thousand pounds of milk. This iron in solution at least partly causes the retarding influence of the rennet action, since it increases the solids in the milk."

THE PRICE OF AUGUST MILK.

Also a Few Remarks Concerning the Prospects For Winter.

St. Louis, Mo., August 24, 1908.
Editor National Farmer and Stock Grower:

Dear Sir:—As member of the Milk Committee of the Milk Producers' Association of Missouri and Illinois I desire to report that uncontracted milk delivered in August to the principal dairy distributors of St. Louis will be paid for at the rate of 12 cents a gallon, the shipper paying the freight.

My understanding is that during the summer months the milk supply has been considerably in excess of the requirements of the trade, but I believe all this will be cleared away by the end of September, and by that time the dairy companies will be anxious concerning future supplies.

I desire to report through your paper to members of the association and to others who are not members that in addition to the prospect of having to pay higher transportation rates on milk and cream we have also to look square in the face a determination on the part of the city dairy companies to force down prices for the winter months. They do not hesitate to say in advance that last winter's prices are too high for next winter.

The dairy companies say that the demand for milk, cream and ice cream is small; the trade that brings in the good money is less, and the trade that produces the least money is larger; for instance, it does not pay a city distributor to make butter and sell buttermilk, and yet more buttermilk is now being sold in St. Louis than ever before.

The city dairy operators go so far as to say large plants have been conducted at a loss, and $10,000 is mentioned as the summer loss by one great dairy. All this, however, can be accepted with considerable allowance. This is the day of exaggeration, and when we look at the surroundings of the dairies, their magnificent offices, well-paid managers, and consider the fact that all the new pure-food regulations are in the interest of the well-organized companies, we cannot help arriving at the conclusion that they are pretty well able to take care of themselves.

The Milk Committee of the association feel that it is our duty to warn shippers that there is a contest in front of them. Last year's prices may be maintained by a strong, determined effort on the part of the association, but not otherwise. We need the help of many milk producers who are not members. We know that it will be a hard pull and it will be still harder if some who ought to be pulling for us are pulling against us.

Respectfully submitted.
L. S. DORSEY, for Committee.

The September Meeting.

The next Directors' meeting of the Milk Producers' Association of Missouri and Illinois will be held at one o'clock p. m., Monday, September 28th, at the office of the Secretary, Mr. Wm. A. Fischer, 409 Franklin avenue, St. Louis, Mo. This will be the first fall meeting, and the principal subject before the house will be the programme of the annual meeting to be held on November 23d.

Stringing Telephone Wire.

The Wire Rope News, published by the American Steel and Wire Company at their Chicago headquarters, contains a double-page illustrated article entitled "Stringing Telephone Wire." Another chapter is devoted to maintaining a telephone line, another to telephone wire, and the conclusion relates to how telephone wire is made and the list of prices of steel wire strand. It is a very interesting subject and handled by headquarter experts. Write Frank Baackes, Am. Steel & Wire Co., Chicago, Ill., for a copy. You will surely keep it.

The Benefits Derived by Using a TUBULAR

are so many, that after a man buys one, he wonders why he waited so long, to "get wise."

Don't you wait and then regret; but investigate, now, the superiority of the Tubular Separator.

Easy filling—Waist low supply tank.
Easy turning—Light running, self oiling gears.
Easy cleaning—Simple (3-part) bowl.
Clean skimming—Suspended bottom fed bowl.
Durability—Made to stand wear and tear.
Economy—Less attention—less repairs than other separators require.

These are some advantages found in the Tubular, only. To learn more write for Catalog 232.

The Sharples Separator Co.,
West Chester, Penna.
Toronto, Can. San Francisco, Calif. Chicago, Ill.

THINK OF IT!

BICKNELL, IND., June 26, 1908.
Have used a U. S. six months; it's perfectly satisfactory. I made 17 pounds of butter the week before using the U. S. The following week with the U. S. I made 27 pounds from the same cows, under the same conditions. It's the best investment I ever made. ALEX. NEAL.

An Investment Paying 33⅓%

and this is exactly what the U. S. earned for Mr. Neal over his former methods of skimming.
If you are not using a reliable

U.S. CREAM SEPARATOR

but skimming your milk by some other method, you are losing just as large a per cent. of cream (which is money) as did Mr. Neal.
It is clean skimming that counts, and the U. S. holds World's Record for clean skimming, therefore it is the separator that every one ought to purchase.

A COMPLETE CONDENSARY.

Description of the Model Plant at Pecatonica, Ill.—How the Product and Cans Are Made.

Pecatonica, Ill., is on the Chicago and Northwestern Railway. Elgin is forty-two miles from Chicago; Rockford ninety-two; Pecatonica 107 and Freeport 121.

The leading industry in Pecatonica, Ill., is the factory of the Wisconsin Condensed Milk Company, which was established in 1904. The plant consists of three brick buildings, office, factory and ware rooms. The concern buys the milk from 380 outlying dairy farms, which averages 75,000 pounds daily.

During the month of July, $1.05 per 100 pounds was paid for the milk. The factory has fifty-five employes and ships a car-load of its product daily to its distributing points in the large cities.

The process of condensing the milk is interesting and instructive. The milk is taken from the wagons of the haulers and thrown into seven large vats, each of which holds 5,000 pounds. From the vats it is run into the boiling wells, huge kettles, where it is boiled. The milk is then forced into ground wells, similar to the boiling wells, where it is thoroughly mixed with sugar, thirty-five barrels of the finest cane sugar being used daily.

From the ground wells the milk is drawn to the second floor by a vacuum pressure pump into three large condensers, where it is condensed by the "wet vacuum" condensing system. When the milk is condensed it passes into four large cooling tanks, which cool 144 ten-gallon cans of the milk in three-quarters of an hour.

From the cooling tanks it is taken to the filling machines, where 120 sixteen-ounce cans are filled per minute and passed along a runaway into the boxing room, where they are packed and boxed ready for shipment.

A. S. Howe is manager of the factory. The company also manufactures its own cans. This department manufactures between 50,000 and 60,000 cans daily. The cans are made from sheets of tin, 20x27 inches, which are put in a machine called a "slitter" and cut into strips, the width equal to the height of a can. These strips are fed into the "body former," where they are formed up and soldered, from thence into the "header," where the head of the can is put on; then through the crimper, where the edges are crimped. From the crimper they go to the "floater," which solders in the end and polishes the can. The can is then run into the testing and labeling machines and turned out complete. An automatic press makes the tops and bottoms of the cans, and at no time are these parts touched by human hands, the work being done by machinery, which is kept in a condition which insures cleanliness. The friction cap is used to seal the can and prevents scorching milk in the canning process. The company has a patent on this device.

A great amount of water is used by this establishment, and they have two wells, one 1,100 feet deep and another 700 feet deep, from which water is pumped into the huge cistern by means of compressed air.

It takes a great amount of power to operate the plant, which furnishes its own electricty and gas. This power is furnished by a seventy-five-horse-power engine and boiler power of 120-horse-power. The factory furnishes employment to from fifty to seventy-five people, distributes about $25,000 monthly to the farmers in the vicinity, and brings them to town when they deliver their milk.

In addition to the condensing plant the company operates a creamery which is making about 1,200 pounds of butter daily.

Too Rough For a Dairymaid.

Mrs. Rorer, of cook-book fame, tells of seeing a maid drop and break a beautiful platter at a dinner recently. The host did not permit a trifle like this to ruffle him in the least.

"These little accidents happen most every day," he said apologetically. "You see, she isn't a trained waitress. She was a dairymaid originally, but she had to abandon that occupation on account of her inability to handle the cows without breaking their horns."—Everybody's Magazine.

Pasteurized Milk.

From the Hospital, London, England: "Recently the committee appointed by the Central Hospital Council for London has recommended that the hospitals should adopt a form of contract with the milk dealers which will ensure a supply of pure, clean milk from healthy cows, unadulterated, unpasteurized, cooled down to at least 60 degrees Fahrenheit after milking, and containing 3.25 to 3.50 per cent. of fat. This may be taken as an authoritative expression of opinion of the necessity for pure, clean milk which is not manipulated in any way by the addition of preservatives to prevent the growth of micro-organisms or by heat to destroy those already present."

* * * *

"The history of the milk supply since the development of bacteriology is an interesting one. At first it was deemed essential to destroy all the microbes present by prolonged sterilization. Later on, this high temperature was realized to be a disadvantage in that it devitalized milk and made it less nutritious. Now there are two schools of thought. Some hold that milk should be given fresh. Others maintain that, because of the impurities so often present, it should invariably be heated to a high temperature, a few being satisfied with boiling in order to destroy the germs of tuberculosis, typhoid fever, etc. Eventually what we hold to be the rational view will prevail, that the milk must be pure, clean, unadulterated and unpreserved by heat."

* * * *

"Commercial pasteurized milk is, in the opinion of many, much more dangerous than the ordinary milk supply. In the process of making it the lactic acid bacilli are destroyed, as well as those organisms which may give rise to infective disease."

* * * *

"We may sum up the disadvantages of pasteurized milk as increasing the liability of diarrhoeal diseases, to scorbutic affections, anaemia, rickets and malnutrition generally."

Starting Cream Separators.

Bring the machine gradually up to its normal speed, and then turn the milk in slowly until the valve is wide open. Keep a constantly uniform motion of the handle during the entire run. When all of the milk has passed from the supply can, one quart or so of the skim milk should be caught and poured through to flush out the cream that will remain in the bowl. Unless this is done, some of the butter-fat will adhere to the surfaces and a small amount remain in the center of the bowl, not being able to get out of the machine because there is no more milk flowing in to force it through. Pouring in the skim milk forces it all out. Warm water may be used for this purpose, but usually it is not so convenient.—E. H. Webster, United States Department of Agriculture.

Dairy and Creamery Notes.

In Chicago, after January 1st, all milk offered for sale in the city will have to be pasteurized, unless it comes from cows that have been tested with tuberculin within a year and proven to be free from disease. Ordinances have also been passed requiring that no butter or cheese shall be sold in the city unless made from the milk of tuberculin-tested cows or from pasteurized milk.

Director Neff, of Philadelphia, in his health bulletin, specially calls the attention of mothers to the need of caring for their milk supply between the hours of delivery and use. The Director insists that the city's whole milk supply is good, but that deterioration takes place in nearly every instance because of neglect on the part of the householder after delivery.—Milk Reporter.

According to the Milk Reporter, the New York price of milk from August 1st until further notice is three cents a quart. We understand that this is net, the receiver paying the freight.

B. D. White, of the Dairy Division, United States Department of Agriculture, said in one of his addresses: "Anyone desiring to know some means of ascertaining whether milk is unfit for use may do so by pouring some in a glass and letting it stand long enough for it to settle thoroughly. Then pour it out, and if any sediment is noticeable, I would advise against its use."

The Milk Reporter, published at Sussex, N. J., says: "The milkmen of Philadelphia are petitioning the railroads which carry milk to that city to supply refrigerator cars for this traffic. During the hot, dry season large quantities of milk soured before arrival in the city, and aside from the loss to the farmers, many dealers were short on their supply."

Make One Friend a Day.

One of the busiest men in a busy city says: "I try to make at least one friend a day." That seems more than most of us can manage, and yet the wayside spring of a country road makes a friend of every passerby.—Woman's Home Companion.

A MAGNIFICENT PREMIUM.

The National Farmer Hat.

The sizes are from 6⅝ to 7½. They are hats suitable for men or boys. They are of good material, well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. These hats are black and steel gray. We send black unless steel is called for. These hats wear as well and last as long as any $2.00 to $3.00 hats on this market. They will give entire satisfaction. We believe this hat will make a first-class subscription premium. The subscription price of The National Farmer and Stock Grower is one dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us one dollar to pay for two-years' subscription to The National Farmer and Stock Grower and we will send you by mail one of these fine, wool crusher National Farmer hats as a premium. Be sure to mention the size and color. A million and a half of these hats have been sold.

Address, The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Send to J. Wilkes Jones, 606 Bee Bldg., Omaha, Neb., for the premium list of the National Corn Show.

How Animal Diseases Are Spread.

A few years ago an epidemic of anthrax broke out in Wisconsin and the state authorities took up the investigation of the matter to ascertain its origin. It was learned that the outbreak was confined to farmers whose lands ran down to the Black river. It was argued that the aniamls must either have drunk of the water in the river which might carry the germs of the disease, or that they must have eaten the grass on the lowlands that were supplied with soil water from the river.

It was further found that the disease was confined to a strip of territory on both sides of the river, which strip of contaminated territory ended at a tannery. Above the tannery no disease was reported. It was therefore suspected that the tannery had been handling contaminated hides.

On further investigation it was discovered that this tannery had for more than a year previously been tanning, at various times, hides brought from China. The certainty of these hides having been from animals killed by anthrax was established by tracing a part of the consignment that was sent to another tannery and in the vicinity at which anthrax also broke out.

The Chinese shippers of the hides did not know that the hides from anthrax-killed cattle were dangerous, or, if they knew it, did not care, as the hides would bring the same price as other hides and would disappear in a foreign country. That the germs of this dreaded disease could remain in the hides and retain vitality enough to become deadly in a country thousands of miles away shows the terrible virulence of anthrax, which also is true of some other diseases common to our stock.

We not only are therefore endangered by the diseases existing in our own midst, but also by diseases existing in the wild portions of far-away China and other countries. It shows the necessity there is of giving farm stock water from deep wells known not to be contaminated.

The case is famous of the hogs that in Indiana were given hog cholera by means of the streams that flowed through many farms and thus carried the germs from the infected herds to well herds. Is it not a dangerous thing to permit farm stock to drink from rivers and streams that flow through all kinds of localities where possible sources of contamination are numerous?

An animal generally takes in a disease through eating or drinking. In some cases the disease germs are breathed in; yet it is probable that the food and the drink contain the greatest dangers.

Confinement for long periods in close stables is the next surest way of conveying disease from animal to animal. Illustrations of this are seen in the herds that are kept in some places in conjunction with the production of and the feeding of slop in large quantities. All farm animals should as much as possible be given the protection of the open air.

Rates on Milk and Cream.

At Chicago, on September 6th, Hon. Chas. A. Prouty, member of the Interstate Commerce Commission, will hold a session and receive testimony from different interests in regard to the proposed advance in the transportation rates of milk and cream which the railroads have been trying to put into effect for over a year.

It appearing to be a matter of vital importance to the members of the Milk Producers' Protective Association of Missouri and Illinois, an emergency meeting was called by the President on Monday, August 24, to arrange for representation before the Commissioner.

As a result of this meeting, Mr. Wm. Nolle, of Orchard Farm, Mo., was selected to proceed to Chicago at the proper time to appear before the Commissioner and represent the association. Mr. Nolle is well qualified to attend to this business; he is milk producer and shipper of twelve-years' standing; he is the Delegate representing shippers on the Burlington Route; is a member of the Milk Committee of the association. It is hoped and believed that his testimony before the Interstate Commerce Commission will be of benefit to the milk-producing interests.

Dairy and Creamery.

The Holstein-Friesian breed has now twenty-four cows that have made four pounds of butter a day for seven days, which is twenty-eight pounds of butter in a week. This is by authenticated tests, which are official.

The advertisement of the De Laval Separator Company contains several addresses. The best way in writing is to address the nearest office, which in most cases will be 42 East Madison street, Chicago, Ill.. Kindly mention this paper when you write for the new catalogue. It is a magnificent description and price list of all their new makes and sizes.

The United States Department of Agriculture is conducting a demonstration dairy farm near Denison, Texas. C. O. Moser is expert in charge. We hope this government farm will be able to demonstrate that it will pay all officers and workers and current expenses out of the farm earnings and a profit besides. A demonstration showing how to make a dairy farm pay is the kind of demonstration that is worth something.

According to official records, 114 Holstein-Friesian females just tested, of which number 60 per cent. were heifers with first or second calves, produced in seven consecutive days 42,971.9 pounds of milk, containing 1,512.456 pounds of butter-fat, thus showing an average of 3.52 per cent. fat. The average production for each animal in one week was 376.9 pounds of milk, containing 13.267 pounds of fat, equivalent to 53.8 pounds, or 26 quarts, of milk per day, and nearly 15½ pounds of commercial butter.

If milking machines could only be as efficient and as economical as cream separators, the dairy business would soon be overdone. It would be too easy. The U. S. Cream Separator, for instance, enabled the farmer to increase his butter output one-third, whereas it is doubtful if the milking machines can strip the cows. If you are considering the purchase of a first-class cream separator, write to the Vermont Farm Machine Company, Bellows Falls, Vt., and ask for Catalogue No. 125. They have sixteen distributing stations in the country, but all correspondence should be addressed to Bellows Falls.

Ten ears of corn will win $1,000 in cash and a trophy valued at $1,000. Write to J. Wilkes Jones, 606 Bee Bldg., Omaha, Neb., for premium list of the National Corn Show.

FINANCIAL COUNTESS, 155,110—Imported Jersey cow. This cow takes first place in her breed in dairy capacity. In one year (leap year) she gave 13,218 pounds of milk, containing 795 pounds 4.6 ounces of butter-fat, equivalent to 925 pounds 10 ounces of merchantable butter 85 per cent. fat, just 31 pounds less than her own weight, her weight being 967 pounds. Previously FINANCIAL COUNTESS made a private churn test of 943 pounds 13 ounces of butter in one year. FINANCIAL COUNTESS is owned by Mr. C. E. Tarfet, of Golden, Colo. See article regarding this famous cow in another column.

Double Standard Herefords.

Editor National Farmer and Stock Grower:

There seems to have arisen in many sections a misunderstanding of the term "Double Standard Polled Herefords" as applied to the new strain of pure-bred hornless Herefords. In order to set breeders right in the matter we ask that you kindly give space to the following short discussion of the subject in your journal:

Double Standard Polled Herefords are simply pure-bred Herefords without horns. They originated from freaks of nature which were hornless, although both sire and dam had horns. These freaks when mated with horned Herefords produced a large per cent. of their calves without horns, and these hornless cattle have since been developed in the new breed called Double Standard Polled Herefords.

The idea seems common among breeders that to be a "Double Standard" a Polled Hereford must have both sire and dam polled. This is not the case, however, as any pure-bred Hereford that fails to develop horns is a Double Standard Polled Hereford. The term "Double Standard" comes from the fact that these polled cattle are eligible to registry in two herd books, namely the American Hereford Record at Kansas City, Mo., and the American Polled Hereford Record at Des Moines, Iowa. They are thus double recorded; that is, they comply with two "standards" of requirement for registration, and hence are called Double Standard.

Any breeder of pure-bred Herefords can breed Double Standard Polled Herefords simply by using a Double Standard Polled Hereford bull with his horned cows. The use of polled cows is not necessary in the breeding of Polled Herefords, although of course the use of polled ancestors on both sides insures a larger per cent. of polled progeny and fixes the polled character a little more firmly in your herd.

Calves sired by a Double Standard Polled Hereford bull and out of registered horned Hereford dams are eligible to record in the American Hereford Record just the same as calves from the same cows by a horned Hereford bull, and so many of them as fail to develop horns are also eligible to registry in the American Polled Hereford Record.

WARREN GAMMON,
Secretary American Polled Hereford Breeders' Association, Des Moines, Iowa.

Fall Pigs.

In my opinion, more or less one-sided matter has been written about fall litters of pigs being unprofitable. While I do not wish to be understood as saying that I think them as profitable as spring pigs, I think they can be made fully as profitable if we consider the fact that the sows must be kept and the extra cost of the fall litter, figuring on that basis, will be reduced considerably. The man who is properly fixed for caring for fall pigs and brings them through in good shape can obtain much of their growth in fully as economical a manner as he can that of his spring pigs. They are in good condition to go on pasture in the spring and will utilize more of the clover, alfalfa and blue grass from the time they are turned out until fall than the spring pigs, and in this way much of the loss of winter feeding is returned in the form of increased gains on pasture.

They are then in excellent condition to fatten and put on the market in December, and should make a weight of 350 pounds each at twelve months. They also make more desirable pigs to follow the steers than the spring pigs, on account of not being as liable to injury.

The great difficulty that many hog raisers have in growing and developing fall pigs can be traced to wet bedding, dirty houses and lack of proper feed to build up good, strong, constitutional vigor. They are fed twice a day with corn and water. The water is cold and allowed to freeze in the trough, and the next day's water is turned on the ice. They then wonder how anyone can make money out of fall and winter pigs.

From my own experience, I find that they can be made almost as profitable as spring pigs, if rightly handled and properly fed until ready to put on pasture in the spring. I am very careful to give my fall pigs good feed and good care. I always make their ration as wholesome and tempting to the appetite as possible. They are given no stale or undesirable feed. Their troughs are kept clean, comfortable sleeping quarters are provided for them, and a plentiful supply of charcoal, ashes and salt are accessible at all times.—Wm. H. Underwood.

Blooded Stock.

Jno. M. Wheeler, of Winchester, Ky., a breeder of reputation, is advertising in this paper. His line of swine breeding includes Duroc-Jerseys, Hampshires and Tamworths.

Giltner Bros., of Eminence, Ky., are advertising their fine Hereford cattle. It is one of the best herds in the United States. They will trade a car of pure-bred bulls for some range steers. The advertisement is worthy of close and careful consideration.

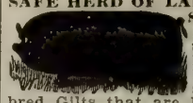
Mr. N. R. Powell, of Pettus, Texas, sold thirty-one head of registered Hereford and Shorthorn bulls and heifers about 1½ years old to Dr. G. Haase, of Guatamala City, state of Guatamala. They were shipped recently from New Orleans by the vessel of the United Fruit Company. This is the second sale by Mr. Powell to go to Central and South America during the present year.

Samuel Slabaugh & Sons, R. R. 2, Greentown, Ind., have the blood of Columbus and Dale in their herd of Herefords. This means good cattle that are beef to the finish. Young stock of both sexes for sale.

A Fine Proposition.

The ad. of J. L. Owens Co., of Minneapolis, Minn., printed elsewhere in this number, has something to say about a Special Thresher Proposition that will prove of deep interest to every grower of beans and peas. This concern has issued a little book on bean and pea culture which is brimful of timely and valuable information upon this vital subject, and they offer to mail you this book free for the asking. As the facts and the suggestions in this book are from the pens of men of long experience and high authority in bean and pea raising, no grower of beans or peas should fail to take advantage of their offer. And when you write for the booklet, don't forget to ask about their Special Thresher Proposition. Address, J. L. Owens Company, 680 Superior street, Minneapolis, Minn.

SAFE HERD OF LARGE ENGLISH BERKSHIRES. Herd is headed by an excellent son of the St. Louis World's Fair Grand Champion. I have bred Sows for sale, also bred and unbred Gilts that are hard to beat, and fifty head of early Pigs. Can furnish pairs not akin. I also have S. C. W. Leghorns, Barred Rock Chickens and M. B. Turkeys. Eggs for sale and a few pairs of Peafowls. The breeding of this stock and poultry is the best and will be sold at prices in keeping with the times.



M. W. MAGNUSSON, Owner, Safe, Mo.

100 HEAD OF PEDIGREED DUROC RED SPRING PIGS, $8.00 a head. CHAS. DORR, Osage City, - - Kansas.

FOR PURE-BRED BERKSHIRE HOGS, Shropshire Sheep and Fancy B. P. Rock Poultry, write or call on **E. L. JOHN,** owner of Broadway Herd, **Broadway, Maries Co., Mo.**

Mill Creek Stock Farm,

The home of the noted Starlight family of Jacks and Jennets for the past thirty years, is located seven miles southeast of Nashville, Tenn., on the N. C. & St. L. R. R., at Asylum Station, and has on hand at all times a nice lot of Jacks, Jennets and Stallions, all of the best blood, from six months to six years old, for sale at reasonable prices. Write me for catalogue. Also Jersey cattle.

THOS. H. EZELL, Prop.,

THE AERIAL TROLLEY

Brings mail to parlors. Make a happy move by sending five names and P. O. of people who live 300 or more feet from their mail boxes, and in return receive descriptive price list.

HANDY CARRIER, Box 10, Godfrey, Ill.

A GREAT OFFER.—We will give every reader of this paper an 18-months' trial subscription to that handsome farm and story magazine **FARM LIFE,** printed in colors, for only 25 cents. Send the quarter to **FARM LIFE,** 310 Coca Cola Bldg., Chicago, Ill.

The Twice-a-Week GLOBE-DEMOCRAT

is a magnificent newspaper, containing all the latest home, foreign and political news. It is undoubtedly the best Republican newspaper in the United States. It is published at $1.00 per year, and is worth the price.

The National Farmer and Stock Grower is a nice, clean, general farm monthly publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. It is published at 50 cents a year, or three years for one dollar.

COMBINATION OFFER.

On account of the interest in the present political campaign we are able to combine both of these papers for the price of one.

SEND US ONE DOLLAR

and we will mail to your address **The St. Louis Globe-Democrat Twice-a-Week Edition** for one year; also **The National Farmer and Stock Grower** for three years.

Address,
EVANS SUBSCRIPTION AGENCY, 3552 Vista avenue, - St. Louis, Mo.

HIS GREAT ACT.

Now, Johnny," sadd the Sunday school teacher, "can you tell me one of the most remarkable things Moses did?"

"Yes, ma'am," replied the bright youth, "he broke all the ten commandments at the same time."—London Opinion.

Jones Bros. Mercantile Company advertise a good line of buggies on page 13.

A Simple Remedy For the Cabbage Worm in the Home Garden.

The public as a whole has come to hold in high esteem the use of poisons for the control of the insect and fungous enemies of cultivated plants. In fact, it has come to look upon the Experiment Station as a sort of dispensary of information as to how all diseases, insects and weeds can be eliminated, and people are inclined to be disappointed when told that for such and such there is no known remedy.

Fortunately a great many such problems have been solved, and many of them by the use of chemical poisons. However gladly the producer of crops on a business scale may welcome this advice, the person who has a small back-door garden seldom likes to scale down the quantities recommended in the formula for the preparation of a fungicide or an insecticide. Further, he dislikes the trouble and expense of applying the mixture. He doesn't believe it would pay him even to buy a small hand sprayer where he grows so few vegetables; so he either allows the insects to fatten at his expense, or buys his vegetables in the market, paying several profits for them and losing all the fun of seeing them grow.

Cabbages are subject to the attacks of several insects, but especially of the green cabbage worm and the cabbage aphis, for which various spraying mixtures are found to be highly effective. However, for the man who likes to make his sauerkraut himself, or to grow a few cabbages for his table, there is a simple remedy for these insects which involves very little trouble and for which the remedy is always at hand, and here is the story of its discovery:

A carpenter living in a town in New York was very proud of his little back-lot garden. In it he set several rows of fine cabbages one year. These grew well for a time until he was summoned away from home for a few days. Upon his return he went out to the garden and there beheld a sorry sight. The cabbages which had been his especial pride were honeycombed and contained hundreds of these voracious cabbage worms. His anger was frightful to witness, and his language unfit for publication. He dashed into the house to tell his wife what had happened during his absence, and beheld two steaming kettles upon the stove. Grabbing one in each hand he returned to the garden and poured boiling water over every cabbage. Thus his rage was satisfied and the worms punished. The cabbages were a sorry sight, appearing to be pretty thoroughly cooked. But to his great surprise, in the course of a week they began to head up and he had the best cabbages he had ever had.

Briefly, the secret is to pour about a cupful of boiling water into the cabbage, just after the inner leaves have begun to curve inward to form the head. The leaves thus cooked dry into a hard exterior, shutting out the worms from the inside and continue to grow from the internal but into a firm, solid head.—Leslie F. Paull, Colorado Agricultural College, Fort Collins.

Seeding Ground Now.

Have you a piece of land in oats or corn that you would like to get into a good meadow for next year? There is a way to do it, and a sure way. I hardly ever sow seed at any other time than in the fall any more. I find this to be the surest way.

This is the time of the year when nature seeds ground, and what better can man do than improve on nature? This is the duty of man. The fall of the year is when the seed falls off the timothy, if left to itself, and this will reseed well, and now if we go on the same plan and assist nature, are we not wise? The only way I see to do is to have a well-prepared seed-bed for the seed to fall in at this time of the year and sow the seed, and how can we be any surer of a stand? This is the only way I sow. I have a well-prepared seed-bed and sow the seed and cover lightly, and I am most sure of a stand of good meadow the following year, and, if it should fail, as all will occasionally, we have a chance to put in another crop of something else the next spring.

The best young meadow I ever saw was put in after the corn was cut off and the land was cut up with a disc and harrowed well and the seed sown. There is no better way than to plow the oat stubble and get it ready for seeding. Turn under the stubble and weeds early, and this destroys a crop of weed seeds and turns them into valuable humus for the soil. The best time to sow is during the latter part of August or early in September. I would prefer to have it sowed in August. We find this the best for many reasons. We have always found it the surest plan.—E. J. Waterstripe.

Not Altogether a Fake.

Read about the fairy Alaska wheat story on page 20. It is not altogether a fake.

Credit Subscriptions.

Three Years For One Dollar, Payable at the End of the First Year.

The publishers of **The National Farmer and Stock Grower** will be glad to furnish the paper three years for **One Dollar**, the same to be payable at the **end of the first year.** This edition is a fair sample of the paper. It is interesting and instructive. Those who read it over will find that it is a help to them in the conduct of their business. All who receive a sample copy are invited to send in a subscription on the following blank form, unless they prefer to pay in advance, thereby securing a premium.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista avenue, St. Louis, Mo.:

Gentlemen: — You are hereby authorized to enter my name as a subscriber to **The National Farmer and Stock Grower** for three years. At the end of the first year I will pay **One Dollar** for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

GOOD BOOKS AND PAPERS.

An interesting feature of the September Century will be a discussion of "The Future Wheat Supply of the United States," by Edward C. Parker, assistant in agriculture at the Agricultural Experiment Station at the University of Minnesota. Mr. Parker will present with authority existing conditions in the United States and outline some of the many means at hand to meet the future demands for wheat. He declares that the science of agriculture is still in its infancy, and that the limit of its present possibilities will be set aside by a new limit set by each succeeding generation.

"THE FURROW" is published for free circulation by Deere & Company, Moline, Ill., and is edited by Frank D. Blake. It contains quite an amount of display advertising of up-to-date implements and vehicles. It also includes some splendid articles. "Dairying in the Corn Belt," by Charles L. Hill; "Smuts and Hints For Prevention," by Prof. E. M. Freeman; "Mosquito Bites Cause Sickness," by Prof. Henry J. Quayle, are samples. By writing to Deere & Company, Moline, Ill., you can get on the Furrow free list.

VETERINARY NOTES, a handsome quarterly publication, issued by Parke, Davis & Co., of Detroit, is sent free to veterinarians, and is interesting to all investigators of the cause and cure of animal diseases. The September number contains twenty-eight distinct articles.. "Future Work in Eradicating Tuberculosis," by Dr. Melvin, with comments by the editor, is specially interesting to stockmen who desire to have clean herds. "Formidine in Veterinary Surgery" is another interesting article, Formidine being an improvement in Iodoform. "Several Cases of Tetanus Cured With Anti-Tetanic Serum." This article by Dr. Ira G. Cable proves that animal lockjaw is not incurable. Other articles are equally instructive.

THE WINTER LAMB.— This is a handy little book published by J. E. Wing, of Mechanicsburg, Ohio. Mr. Wing is an expert sheep raiser and alfalfa grower. **THE WINTER LAMB** tells how to produce lambs for the high-priced markets. Mr. Wing is particularly interested in Dorsets, the breed that is an early lamb raiser. His book is most interesting. We do not know the price.

WHOLESALE PRICES DIRECT TO THE USER

We will sell you a **High Grade "Old Hickory"** buggy at the lowest wholesale price. We will **save** you **$25.00 on any vehicle** you buy. We have a complete line of the newest automobile seat buggies and surries manufactured, also **spring wagons, driving wagons, farm wagons,** carts and pony vehicles.

11,000 ACRES ONLY $4.50

This land will subdivide into small farms in a few years at from $25 to $50 an acre. In its present condition it will fatten 3,000 head of steers from April 1 to November 1. I think 50 per cent. is tillable; the balance will grow the finest clover, timothy, blue grass and other grasses. Only 4½ miles to railroad station; 130 miles to St. Louis; 200 miles to Memphis and 300 miles to Kansas City. It has an average annual rainfall of 43 inches. Average January temperature, 35 deg.; average temperature for July, 76 deg. At present the finest blue stem prairie grass grows in the open; white and red oak timber. The timber will pay for this land three times over. You can cut out all the small timber and the little underbrush, and the annual growth of the timber left standing will pay big interest on cost of land and cost of clearing. You will have the pasture free and the increase in value of the land will be net profit. Where can you beat such an investment? You are close to schools, churches and fine people. One acre of this in its present condition will pasture more cattle than 10 acres in the Panhandle or Western Kansas. Abundantly watered with clear springs, creek and branches. The timber will cut from 8,000,000 to 9,000,000 feet. Don't neglect. Look this up. Smaller and larger tracts in same locality. A home and fortune await the purchaser.

J. H. LIPSCOMB,

306 Fidelity Trust Building, Kansas City, Mo.

KANSAS CITY HAY PRESS COMPANY, 425 Mill Street, Kansas City, Mo.

BALDY, THE TRY HORSE.—In every market where horses are sold and guaranteed to be workers it is the rule to hitch them up and prove it. This necessitates keeping a wagon ready for use and a try horse. The try horse is hooked up on one side and the horse to be tried is hitched up on the other, and then the procession is supposed to move. Try horses, like poets, are born, and not made. A try horse must know his business; it is his duty to show off the other horse to the best advantage; if the strange horse when hitched up does not start off in a nice, clean-gaited, workable manner, the try horse is supposed to talk to him in the horse language something after this fashion: "You are recommended as a work horse; you are sold as a work horse; and now stop your foolishness and prove you are a work horse." About the time the strange horse thinks this over he finds himself working quietly alongside of BALDY to the satisfaction of all concerned. BALDY is perfectly capable of doing anything necessary to start the other horse off all right, and generally has his way. BALDY has been on the market about five years. He is a light bay gelding, 15½ hands, with a strong back and short legs. He is a Western horse without brand, with a little draft blood in his ancestry, and is given up to be the best try horse ever on Jones' Boulevard, which is the horse avenue at the National Yards. He is entirely willing, and has never been driven with a whip. Many attempts have been made on the part of the boys of the yards to provide this try horse with a more aristocratic name, but on looking at his face they forget it and fall back on "BALDY." BALDY is the property of the McFarlane Commission Company, the firm that sells horses at auction every Monday in the year. When Mr. McFarlane gave us the photograph for the purpose of publishing this picture he said: "In this company we are trying to do our duty to our friends and patrons as well and faithfully as "BALDY" does his.

Difficulties in Matching.

"The matching of horses in size, color, conformation, action and temperament is one of the most difficult problems in the commercial horse industry. The demand for matched pairs is always active at prices above what the animals would command if sold as individuals. Men who take pride in owning matched pairs of drivers or drafters know how difficult it is to fill their orders. It is not difficult to buy a good horse, but to secure two good horses of a class that closely match in every particular is a hard task. Horses are easily matched in one or more homogeneous attributes, but to match two horses is as difficult as finding twin foals when all desirable qualities enter into the problem. It is no marvel that well-matched pairs command good prices."—Spirit of the West.

A Pair of Imported Shires.

Perhaps the most sensational yearling Shire colt that has been imported to this country, at least in the last decade, was Wrydelands Clifton, which Truman's Pioneer Stud Farm, of Bushnell, Ill., have sold since landing to that old Shire breeder, Edwin Hobson, of Clifton, Ill., together with the Shire filly, Wrydelands Duchess, both of which were included in their last importation. We believe that Wrydelands Duchess is one of the best fillies ever imported. She has been shown in England this year with great success, having won two prizes the day before she left England. It is needless to say that in Mr. Hobson's hands these two fine specimens of the Shire horse will be heard from later.

Care of the Colt.

The future usefulness of the colt depends to a great extent upon the condition in which it is kept during the first year of its existence. The colt is a more delicate animal than many would suppose, and in caring for it the exercise of good judgment is called for.

Kindness is one of the most important factors. Kindness goes a long way in caring for any class of animals, and there is not enough of it used.

Some farmers do not attempt to break a colt to work until it has reached the working age, and then have a difficult job of it, which could be prevented by beginning to handle it when young. A colt can quickly be learned to obey, and will not forget it.

Right now many colts are carrying a coat of unnecessary hair, which of course will finally fall off, but can be more quickly removed by a frequent and light use of a currycomb.

The colt should be given plenty of bone and muscle-making foods and all the good, pure water it will drink at all times. During the winter, good, warm quarters are essential.—Wm. H. Underwood.

Horse and Mule Notes.

Much interest was manifested among Central Illinois horsemen over the sale in August of Joe Joker, known throughout the West as the "Guideless Wonder." The animal was purchased by J. O. Vosseler, of Jacksonville, from Will McConnell, of Springfield, for $5,000. McConnell purchased the horse in 1904 and he is now nine years old. For several years he was trained to go without harness or driver, and his record without either is 2:16. Joe Joker is a pacer.

Truman's Pioneer Stud Farm of Bushnell, Ill., have sold to George L. Levitt, of Wilson, Kas., the noted two-year-old Shire stallion, March Harold, that they imported from the stud of Mr. H. H. Truman, of March, England, his breeder. This is the sixth stallion that Mr. Levitt has purchased from Truman's in the past two and one-half years, and as he is an expert judge and has bought perhaps more stallions in his time than any private individual, it is evidence of the high character of the horses sold by the firm.

At the Great Western Circuit at Davenport, Iowa, August 20th, Minor Heir paced a mile in 2:02, failing in an attempt to reduce the track record from 2:01, set by Dan Patch. Minor Heir is doing pretty good for a green pacer.

The pair of black mules illustrated in the August number of The National Farmer and Stock Grower was sold by Messrs. Gillen, Heiman & Co., of the National Stock Yards, to the firm of Kilduff & Beall, of New Orleans, La. Four fine mules were in the sale, making the average about $300 each. The matched team, weighing 2,800 pounds in medium flesh, 16½ hands high, was estimated about $625 for the pair. In this connection it is proper to assert that more good mules are matched up and sold at the St. Louis National Stock Yards than anyone has an idea of. Mules are bought to sell again, and it is no advantage to give particular sales too much notoriety.

According to the New York Herald, Mr. J. D. Carroll, one of the best authorities on the horse market, estimates a 50,000 shortage in the supply, which will show itself when normal conditions prevail. This opinion is based on the scarcity of horses in New York state, which is a great factor in supplying the Eastern trade. The present market range of values for rugged work horses is 15 to 20 cents less than before the panic, and is due to the fact that all horse users have kept as few as they can possibly get along with. Later on, Mr. Carroll believes, the demand will quicken and prices be restored to strong figures.

An interesting and instructive bulletin concerning cattle tick eradication is issued by the Agricultural Experiment Station at Fayetteville, Arkansas.

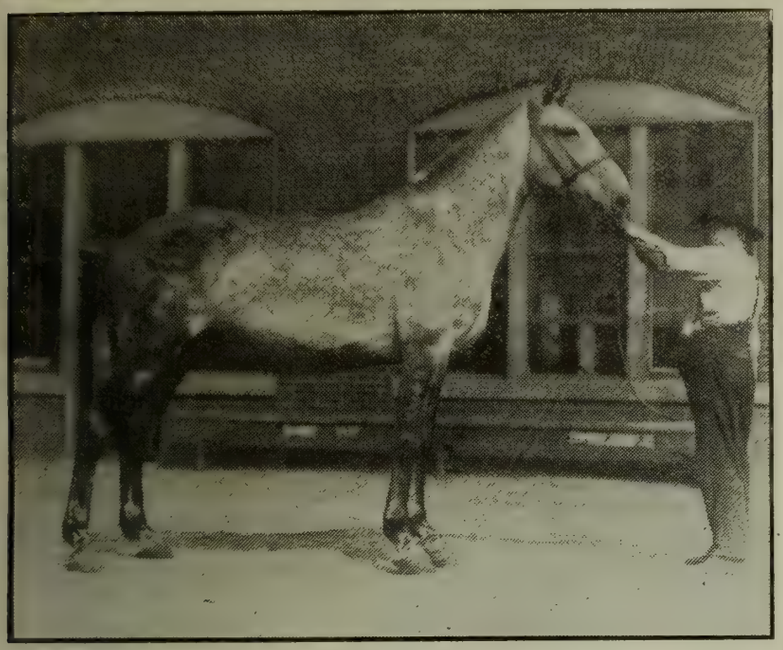
First-class Veterinary Instruments.

Veterinary instruments for the use of horsemen, dairymen, swinemen and the general farmer are advertised in our columns by the well-known house of Haussmann & Dunn Co., 392 South Clark street, Chicago, Ill., who will be pleased to forward their large illustrated catalogue to people who write them for it.



A GOOD MULE.—This is a picture of an exceptionally fine dapple-gray horse mule, 16.2 hands and weighing 1,400 pounds in fair flesh. This mule belongs to Messrs. Gillen, Heiman & Company at the National Stock Yards, Ill., the market of St. Louis, which is the greatest mule market in the world. Messrs. Gillen, Heiman & Company buy and sell mules on their own account in car-loads and train-loads and make a specialty of buying and matching mule teams of good size, weight and superior conformation. The postoffice address of Gillen, Heiman & Company is National Stock Yards, Ill.

THE VERY BEST MARKET, THE MOST CENTRAL HORSE MARKET ON THE FACE OF THE EARTH

—is at the—

ST. LOUIS NATIONAL STOCK YARDS in Illinois, right opposite the city of St. Louis.

Auction sales of Horses are held MONDAYS, TUESDAYS, WEDNESDAYS, THURSDAYS and FRIDAYS.

Horses are also bought and sold by personal contract every day in the week.

The concentration of Horses should be where all can be assembled, sold and distributed at the least possible cost. For this reason the growth of the St. Louis Horse Market is the Marvel of the Age.

THE CENTER OF GRAVITY IN THE HORSE TRADE IS AT THE ST. LOUIS NATIONAL STOCK YARDS.

Messrs. Truman's Pioneer Stud Farm of Bushnell, Ill., write us as follows: "We have just had the pleasure of a visit from Messrs. Albert Zwicker & Sons, of Pre-Emption, Ill., who, I believe, are the largest breeders of Shire horses in this country. Notwithstanding the fact that we sold them a Shire stallion last spring, when they saw the two-year-old Chipping Statesman, weighing 1,900 pounds in his two-year-old form, they could not resist the temptation to own him. He has to his credit no less than nine first prizes, one champion and reserve for champion on the other side, and also holds a certificate of soundness from the Sire Horse Society of England. He is a beautiful dark bay with black legs, standing on tremendous feet and joints, and we consider him one of the very best colts we ever imported."

A HITCHING STRAP PREMIUM.

We will send The National Farmer and Stock Grower for two years and one safety hitch strap by mail postpaid for one dollar. This is The National Farmer and Stock Grower.

It is published monthly. Read it through and through; you will find it to be interesting and useful. The hitch strap is very handy and simple. It does away with tying and untying the troublesome knot. Easy to hitch. Saves time, temper and lives. Everything handy, neat, durable and practical. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

The Year Book of the Department of Agriculture for 1907 says: "The work in breeding Morgan horses, which is being carried on in co-operation with the Vermont Experiment Station, has been greatly extended through the generosity of a public spirited citizen of Vermont, who donated to the Department a farm of 400 acres near Middlebury to be used in these operations. There were used in the Vermont stud on July 1st, 1907, one stallion, nine brood mares, one two-year-old filly, eight younger fillies and one weanling colt.

"The work in the breeding of American carriage horses in co-operation with the Colorado Experiment Station is progresing satisfactorily. During the year eleven foals, the progeny of selected parents, were dropped, two males and nine females. No additional horses were purchased." This is from the Year Book of the Department of Agriculture for 1907.

Fifth Range Horse Sale.

At the St. Louis National Stock Yards, on Tuesday, August 25th, Campbell & Reid and Western Sale Stables Company held their fifth auction sale of Western horses, with thirty-five loads of unbroken stock and 200 head that had been broken to harness. The bunches that sold

below or around $40 were considered strong compared with former sales, and the loads that sold from $45 to $65 were considered $5.00 to $7.00 lower than similar quantity sold for at former sales. The weights average lighter than at any previous sale.

The following list of sales generally represents car lots:

1,000-lb. mares and geldings	$65.00
1,050-lb. mares and geldings	62.00
1,050-lb. mares and geldings	61.00
1,000-lb. mares and geldings	60.00
900-lb. mares (thin)	59.50
1,050-lb. mares and geldings	51.50
850-lb. mares and geldings	50.00
850-lb. mares and geldings	49.00
Two and three-year-olds	42.50
900-lb. geldings	40.00
850-lb. mares and geldings	40.00
900-lb. mares and geldings (thin)	40.00
Yearlings and two-year-olds	38.50
Two and three-year-olds	38.00
850-lb. mares and geldings	38.00
900-lb. mares and geldings	37.50
Yearlings and two-year-olds	37.50
Three-year-olds	36.50
850-lb. mares and geldings (thin)	36.00
750-lb. mares and geldings (thin)	36.00
700-lb. mares (fat)	32.50
700-lb. geldings (fat)	31.50
Unbranded yearlings and two's	31.50
Mares (colts at side)	31.50
Mares and geldings	31.00
700-lb. mares and geldings	30.00
Yearlings and two's	28.00
700-lb. mares and geldings, (thin)	25.50
Two and three-year-olds	25.50
Two-year-olds	25.00
Yearlings	20.00

According to the United States Department of Agriculture, there are 19,992,000 horses and 3,869,000 mules on farms in the United States. These are the largest figures ever reported by the Department. Ten years ago there were 13,960,911 horses and 2,190,282 mules. At present there are five states with upwards of a million horses on farms and ranches. They are Illinois, Iowa, Nebraska, Kansas and Texas.

Send to J. Wilkes Jones, 606 Bee Bldg., Omaha, Neb., for the premium list of the National Corn Show.

Warranted to Give Satisfaction.

Why He Joined the Sunday School.

"Tommy," said a young lady visitor at his home, "why not come to our Sabbath school? Several of your little friends joined us lately.

Tommy hesitated a moment, then suddenly he exclaimed: "Does a red-headed kid by the name of Jimmy Brown go to your school?"

"Yes, indeed," replied the new teacher.

"Well, then," said Tommy, with an air of interest, "I'll be there next Sunday, you bet. I've been layin' for that kid for three weeks, and never knew where to find him."—Philadelphia Public Ledger.

Western Horse Raisers

—are invited to—

REMEMBER

that we have conducted

THE MOST SUCCESSFUL SALES of

Western Range Horses and Mules

ON RECORD.

By securing a superior class of offerings at the most Central Market in the country we always obtain a satisfactory attendance of responsible buyers.

Our sales for the season of 1908 commenced in June, and we will hold sales every other Tuesday to the end of the season.

September Sales on the 8th and 22d.

Day Records of the Year: 12,321 Cattle, 17,496 Hogs, 8,781 Sheep, and 1,909 Horses and Mules—A Fair Indication of Market Requirements.

The Most Competitive Market, the Most Active Market, and the Best Market on the Continent.

New Buyers Are Coming Into the Market Every Month in the Year.

Ship Your Stock to Commission Firms Doing Business at the St. Louis Market.

At St. Louis, on August 31st, two 490-pound hogs sold at 6½ cents a pound. That is $31.85 per head. Not bad for hogs which were really too heavy.

Tenth Range Horse Season.

The Tenth Range Horse Season conducted by Campbell & Reid and the Western Sale Stables Company at the St. Louis National Stock Yards opened June 30th. September sales will be on the 8th and 22d. October sales on the 6th and 20th, and the last sale of the season will be on Tuesday, November 3d. All sales are held on Tuesdays. Particulars can be had by writing to J. J. Searcy, Secretary, National Stock Yards, Ill.

McFarlane's Market Report.

McFarlane Commission Company held auction sale of horses on Monday, August 31st. This is what they said: "The market was uneven. Extra good big draft horses sold all right; medium drafters were hard to place at remunerative prices; Southerners were about steady with a week ago."

On August 31st, at the St. Louis National Stock Yards, O. E. Converse, an Illinois stockman, shipping from Greene county, was represented on the market with ninety-four steers, average weight 1,277 pounds, that were good enough to sell at $6.65 per 100 pounds, and went to Swift for exjort.

September Sheep Opening.

At the St. Louis National Stock Yards, on September 1st, the good lambs were selling at $5.50 to $6.00 per 100 pounds. A variety of inferior llambs sold all the way from $3.00 to $5.25. The butchers and packers paid $4.00 to $4.25 per 100 pounds for native sheep and $3.75 per 100 pounds for a lot of 76-pound Western ewes. The stock sheep sold at a long range, from $1.75 to $5.00 per 100 pounds. A lot of 90-pound fine native breeding ewes brought the top price. The best breeding ewes outsold fat sheep 75 cents per 100 pounds. Bucks averaging 112 to 140 pounds sold at $2.50 to $3.00 per 100 pounds.

Stock Cattle Quotations.

At the opening of the month of September at the St. Louis National Stock Yards, the trade was considered very quiet. Sellers claimed that buyers were getting the bargains. A fair supply of stock cows were to be had at $2.00 to $2.75 per 100 pounds. Native stock heifers, fair only, were selling at $2.50 to $2.75, and good stock heifers at $3.00 to $3.25. Light stock steers were quotable at $2.50 to $3.25, and the red kind, good stock steers at $3.30 to $3.75. Feeding steers, medium grade, 800 to 1,000 pounds, were quotable at $3.50 to $4.00, with good 1,000-pound steers selling up to $4.25. Strictly select feeding steers were quotable up to $4.50.

OUR REFERENCE IS EVERYONE WHO HAS EVER SHIPPED US A CONSIGNMENT — OUR GOOD WORK IS OUR REFERENCE.

JAMES H. CAMPBELL,

Veteran Commission Salesman.
General Manager of the

Campbell Commission Company

NATIONAL STOCK YARDS, ILL.

Ship to the Best Market and the Best Firm on that Market. There is more competition at St. Louis for Native and Southern Cattle than at any other Market on the continent. The St. Louis Hog Market continues to grow, and is habitually 10 to 25 cents a hundred pounds higher than the Missouri River Markets. Sheep and Lambs sell at St. Louis to the advantage of the shipper.

WE KNOW THIS MARKET AND RECOMMEND IT ABOVE ALL OTHERS.

Do not forget us when you wish to know anything about either the Sheep, Hog or Cattle Market or future prospect.

Don't hesitate to write or ship to

James H. Campbell,

National Stock Yards, Ill.

EQUALLY EXPERT SERVICE IN EVERY CLASS OF STOCK—SHIP US YOUR CATTLE, HOGS AND SHEEP.

Notice by McFarlane Commission Company.

We have set Monday, September 21st, 1908, as the opening day of the horse market for the season of 1908-09 at the St. Louis National Stock Yards. By that time the demand should be good, and from that time on we confidently expect a steady to strong market. Especially deserving horses will be shown in harness or under the saddle. Get your lines out; get the horses and have them with us. We will have the buyers.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. Every courtesy known to the trade is extended. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their customers. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Ill.

Baby Beef Wanted.

At the St. Louis National Stcok Yards, September 1st, Fennewald Bros., of Audrain county, Missouri, marketed thirty-six head 760-pound heifers at $6.20 per 100 pounds, and thirty-eight head not so good, 754 pounds average, at $6.00 per 100 pounds. They were fine, fat, well-bred heifers. They brought $45.24 to $47.12 per head. Buyers can never get all they desire of this class of cattle. On the same day there were 760-pound heifers that sold at $2.60 per 100 pounds, or $19.76 per head. These low-priced cattle cost as much within $5.00 or $6.00 per head as the others. A little better breeding and a few dollars in feeding made all the difference. In the territory tributary to St. Louis 500,000 fat baby-beef steers and heifers can be raised cheaply, and St. Louis is the greatest market on earth on which to sell them. Ten to fifteen years ago the market was not within two cents a pound as good as it is now and has been all the year.

Arkansas steers, 930 pounds, sold at $3.25 per 100 pounds, could just as well bring $5.50. All that is necessary is a Hereford bull and two-dollars' worth of feed and grass, instead of brush in the pastures.

DISTEMPER DANGERS

Are prevalent in early autumn. Every horse owner needs to guard against it and the other troubles, such as shipping fever, which is abroad during Fair times, as well as coughs, colds and catarrhal affections, which affect also sheep and dogs. Craft's Distemper and Cough Cure, the well-known liquid treatment, when used as a tonic in advance, is a guaranteed preventive, and it is also the certain cure if properly used when any of these troubles are contracted. Our readers should note the announcement in our columns. If a druggist does not supply it, it may be ordered direct from the manufacturers, The Wells Medicine Company, 17 Third street, Lafayette, Ind.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' interests ARE OUR INTERESTS, and our rapidly-increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

Try us once. We can keep you posted. We have a great and expanding Market at St. Louis.

Evans-Montague Commission Company

Box 68,
NATIONAL STOCK YARDS, ILL.
FORT WORTH, TEX., and at KANSAS CITY.

Hogs at St. Louis.

At St. Louis all weights and qualities of hogs and pigs are in active demand. On August 31st the bulk of the good-weight hogs sold at $6.75 to $7.00 per 100 pounds. The butcher qualities sold at $7.00 to $7.12½. The butcher weights were 236 to 283 pounds. Light hogs, 190 pounds average, sold up to $7.00, and 177-pound hogs sold up to $6.95. Good pigs, 121 pounds average, sold up to $6.10, with others down to $5.00. Heavy sows sold up to $6.50 per 100 pounds. In eight months hog receipts were 1,678,368 head, the largest number on record and 235,000 more than were received during the corresponding period of the previous year.

Native Beef Steer Quotations.

At the St. Louis National Stock Yards, September 1st, fancy beef steers, 1,350 to 1,550 pounds average, were quotable and did sell at $7.25 to $7.75 per 100 pounds. Good to choice steers sold readily at $6.25 to $7.25, and medium to good steers at $5.00 to $6.25. Common to fair steers sold at $4.00 to $5.00 per 100 pounds. Light, handy, fat yearling steers, baby-beef kind, were quoted at $6.00 to $6.75; a good but plain kind of yearlings at $5.00 to $5.75; common to medium light steers and yearlings at $3.50 to $4.75 per 100 pounds.

St. Louis is the best market of all.

McFarlane Commission Company
NATIONAL STOCK YARDS, ILL.

An Expert on the Mule Trade.

Mr. Lan B. Morris, mule salesman for the McFarlane Commission Company, says that feed is too high for dealers at the yard to pay a high price for thin mules in order to feed them. This is the time for farmers to send in good-conditioned mules. Good aged miners, sugar mules with quality and government mules sell very well. Cotton mules are hard to place so as to do the shippers any good. Watch the cotton quotations; if the price of cotton goes up, mules will follow. If the price of cotton continues to decline, the present price of cotton mules will be hard to maintain.

James H. Campbell,

Expert commission salesman, is now at the head of his own organization, with headquarters at the St. Louis market. He is one of the few who were at the opening of the National Stock Yards and is one of the most active men on the market right now —an enthusiastic worker, knowing that he has the best market in the country to back him. Thoroghly competent and with a splendid expert organization, he is holding his old customers by splendid sales and making new ones all the time. Mr. Campbell issues a circular every week of his own composition containing his advice to intending shippers. Write for information to James H. Campbell and consign cattle, hogs and sheep to Campbell Commission Company, National Stock Yards, Ill.

Butcher Cattle at St. Louis.

At St. Louis, in the native cattle division, butcher cattle class, canning sows were selling at $1.50 to $2.35 per 100 pounds; fair cows, called cutters, at $2.40 to $2.90; medium to good cows at $3.00 to $3.50; good to choice cows at $3.60 to $4.25; fancy beef cows at $4.30 to $4.50. In the heifer class, fair to medium grades were selling at $2.75 to $3.50; good at $3.60 to $4.50; choice heifers at $4.60 to $5.40; and fancy heifers at $5.50 to $6.20 per 100 pounds. A fancy lot of heifers did sell at $6.60 per 100 pounds.

Southern Cattle Quotations.

At the St. Louis National Stock Yards, August 31st, the following were quotations for Southern cattle: Choice steers, $4.75 to $5.25; good steers, $4.15 to $4.65; medium steers, $3.65 to $4.10; common grassers, $2.75 to $3.60; good to choice cows, $3.25 to $3.75; fair to medium cows, $2.80 to $3.10; cutters, $2.50 to $2.80; canners, $1.50 to $2.35; bulls, $2.50 to $3.10; fair to choice vealers, $4.50 to $6.00; fair to choice heavy calves, $3.25 to $4.50; yearlings, $1.75 to $2.75—all quotations being at the price stated per 100 pounds.

Fat Cattle at $7.75.

On the 1st day of September, at the St. Louis National Stock Yards, fifteen head choice 1,556-pound steers were sold at $7.75 per 100 pounds and were bought by the United Dressed Beef Company of New York City. These cattle were fed by Lloyd Hayden, of Calloway county, Missouri, and shipped to market by Messrs. Heller & Akeman. They had been on full feed since January 1st and were considered as being a top load of cattle. They outsold all the cattle at Chicago, Kansas City and Omaha on the same day.

The hog and sheep receipts at the National Stock Yards during the month of August were the largest on record at the market. The seven-months' total is also the largest in both departments. This is entirely due to the activity of the trade at St. Louis and the competitive features which are unsurpassed. St. Louis can sell another million hogs a year and another million sheep a year to the advantage of all concerned.

St. Louis an Active Wool Market.

Sheep raisers who have wool on hand will find it to their advantage to write to A. J. Child & Sons, St. Louis, Mo., for their market reports. St. Louis is a splendid wool market, with buyers from many mills on hand all the time. If there is activity anywhere, St. Louis soon shows it. This spring the markets of the country were quiet and sluggish until St. Louis showed an active line of buying on account of interior mills. Messrs. Child & Sons do business promptly and satisfactorily.

WESTERN HORSE PAPER.

We are very much pleased with the horse paper issued at Des Moines, Iowa, and entitled **The Spirit of the West.** It is a very useful and practical publication. It keeps up with national affairs in good shape and gives to Western affairs the closest personal attention. Several writer on **The Spirit of the West** have clear conceptions of how to help a horse raiser in his business. For this reason we have made clubbing arrangements with that paper. Send us a money order for one dollar and ten cents and we will send you **The Spirit of the West** and **The National Farmer and Stock Grower,** both papers for one year. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Your Mind in Order.

Minds that are filled scientifically, like well-packed trunks, with everything in order, hold much more than those into which all manner of things are thrown man fashion, higgledy-piggledy. Woman's Home Companion for September.

The Horse Prices.

At the St. Louis National Stock Yards, at the opening of September, plug horses were selling at $15 to $40 per head; plain, light Southern horses begin to sell at $50 and up to $75 and $85 they are still plain; good Southern horses begin to sell at $100 and enter the driving class at $125 to $155. Substantial driving horses are quoted at $165 to $245. Eastern chunks sell at $110 to $155, and common to fair drafters at $160 to $195. Good drafters sell at $200 to $250. Horses fully up to grade and quality sell well and quickly. There is no premium on faults and blemishes; they cut down the price of a horse materially.

Mule Quotations Are Wide.

Common 14-hand mules at $65, and good ones at $90 to $115; common 14½-hand mules at $80 to $95, and fair to good at $100 to $130; 15-hand mules at $100 to $160, with bulk of sales at $135 to $145; 15½-hand mules at $115 to $175, the bulk of sales at $145 to $155; 16-hand mules at $130 to $225 in car lots, and select pairs at $450 to $650. The size, age, condition, color and quality have a large influence on mule prices, which are wide, because prices of good mules are high and all undergrades are far below the good ones.

Decrease in Horse and Mule Receipts.

In the first seven months of 1908, St. Louis received 68,666 horses and mules; Chicago, 63,693; Kansas City, 37,337; St. Joseph, 14,918; Omaha, 19,954; Indianapolis,13,302; Cincinnati, 11,286; Denver, 7,158; Fort Worth, 6,419; Sioux City, 6,331; and St. Paul, 3,450. The total is 252,508, which is 49,834 less than were received at the same markets during the corresponding period last year.

St. Louis has received as many as 1,231 cars of quarantine cattle in one week this season, which exceeds any other market by 548 cars.

FIVE TO TEN THOUSAND FULL AGE MULES

—can be purchased at the—
ST. LOUIS
NATIONAL STOCK YARDS
any business day in the year.

Many, immense, substantial, well ventilated barns contain every commercial or military grade of Mules, which can be purchased and shipped on short notice.

THE ST. LOUIS MARKET
WAS ALWAYS
FIRST
IN THE MULE TRADE,
AND NOW
IT IS GREATER THAN EVER.

SHIPPERS AND SELLERS
—of—
STOCK AND FEEDING CATTLE
are reminded that the
ST. LOUIS
NATIONAL STOCK YARDS
furnish by far the best market for their stock.

The cattle feeders of the states of Missouri and Illinois are large buyers on the St. Louis market and furnish a demand for more and better cattle all the time.

The Wabash Eastern Railway, the Chicago & Alton R. R., the Vandalia Line, the Big Four Route, the B. & O. Southwestern Railway, the Clover Leaf Route,the Chicago,Peoria & St. Louis R. R., the Chicago and Eastern Illinois, and the eastern branches of the Burlington System, all start out from the

NATIONAL STOCK YARDS,

and their lines traverse a magnificent country, in which live stock feeding is a leading industry. On their valuable lands the stockmen on these lines cannot raise cattle cheaply, but they can feed them profitably. The stockmen of Indiana and Ohio are specially referred to.

The best market for all these successful stock feeders is St. Louis. They have short runs, favorable rates, quick service, small shrinkage. These people get their cattle home in good shape. There is never a glut of stock cattle at St. Louis. Western shippers of stock cattle can get their stock to the St. Louis market just as easily and as cheaply as they can to any inferior far West market, and at St. Louis there is quicker sale, better results, and in the shipping in, concentration, sale and outward shipment there is less expense, less shrinkage and less loss to come out of the cattle.

The market values advance and decline, sometimes in favor of the buyer and sometimes in favor of the seller; but the center in which all can be brought together and distributed at the least expense to all concerned is the best market of all.

THE BEST MARKET FOR ALL—
UNDER ALL CIRCUMSTANCES—
IS ST. LOUIS.

Worth $200 a Bottle.

W. C. Hilton, of Dunkirk, N. Y., says that one bottle of Absorbine, for which he paid $2.00 last year, was worth $200 to him. He bought a driving mare with one hind leg enlarged to four times its natural size, paying $77.50 for her in one of the auctions at the East Buffalo Stock Yards. By using Absorbine according to directions he removed the swelling permanently and within three months sold the mare as absolutely sound for $250. W. F. Young, of No. 106 Monmouth street, Springfield, Mass., is the manufacturer of this remarkable veterinary remedy.

On September 1st, at the St. Louis market, No. 2 oats were selling at 49c. a bushel, and a fancy car sold at 49½c.; No. 3 oats sold at 48c.; No. 4 at 47½c; No. 2 strictly white oats sold at 51½c.; standard oats at 50½ and 51c.; No. 3 white at 49 to 50½c.; and No. 4 white at 48¾ and 49½c.

EARLY LAMBS FOR MARKET.

They Sell High in Spring and Sell Lower Later—The Way to Catch High Prices is to be Ready at the Right Time.

Any Farmer Can Buy a Few Ewes, Breed Them to Get Early Lambs, and Afterwards Fatten the Ewes and Send Them to Market.

The importance of this subject has caused us to refer to it three times in succession. It is not a new idea, but an application of an old and well-tried method to the territory which is tributary to the St. Louis market.

The suggestion is for the individual farmer to buy a number of ewes in the fall to breed them so as to have lambs come as early as he can safely raise them, then feed and force the lambs to suitable weight as fast as he can and ship them to the St. Louis market and afterwards shear the ewes and sell the wool at the proper time and then ship the ewes to the St. Louis market and get through with them.

This is an easy proposition from beginning to end. If the ewes are good and healthy the farmer ought to have no difficulty in carrying them on very little pasturage until lambing time. Farmers will differ very much in their methods; one will have his ewes covered with burrs and another lot will not have a burr on them; but even the burry lot will pay out if the range or pasture is good. If the ewes have good pasturage in a moderate climate, feeding the ewes any amount of grain before lambing will not be necessary; it is altogether necessary, however, that the ewes be in good condition at lambing time and that the lamb have a good start. The ewe must be able to give plenty of milk, because a vigorous lamb demands it and he needs a full ration.

In a very large section of country tributary to St. Louis there is pasturage all the year round. Many sheep and lambs actually come to market that have never had anything to eat except grass, but this experiment requires that the lamb shall be fed grain and fed all he can eat. It also includes the final fattening of the ewes with something besides grass, and nothing fattens easier than a ewe in spring that has just weaned her lamb, as weaned it should be when it goes to market.

Prof. Craig, a sheep expert, when in Wisconsin, began feeding lambs when they weighed 19 pounds and forced them along until they weighed 62½ pounds at a cost for feed (in addition to ewes' milk and what grass they could get) of 18 cents a head. This proposition of ours includes feeding each of the lambs about 18 cents' worth of bran, corn meal and cotton-seed meal—whatever is good for them at the time.

Mr. Joseph E. Wing, another expert, says that there is often danger of the ewes drying up and fattening too soon, therefore no one need be afraid of their not fattening in the end. As a matter of fact, if the ewes are properly handled, they will often sell for enough more in the spring than they cost in the fall to pay all expenses charged up against them and their lambs, leaving the wool and lambs as clear profit. As the lambs at 60 pounds weight ought to sell at $5.00 a head or better, it will pay to give each of them the 18 cents' worth of feed which he needs.

The principal difficulty in this experiment is the care of the flock during the lambing season. This to one man or woman is a pleasure and to others a burden. Lambing, however, is a chapter by itself. Another difficulty is dogs, and that is another chapter by itself.

One thing to avoid in this experiment is the Merino buck. We have nothing against the Merino as a wool-growing sheep, but for raising a quick lamb, Cotswold, Hampshire, Dorset, Lincoln, Leicester, Southdown or Shropshire bucks are better; in fact, absolutely necessary. The ewes might have a little Merino blood and be satisfactory; but a good, large ewe is what is wanted. The purpose is to buy the stock ewes as cheap as possible consistent with getting a good mother.

A Good Buck.

Stock ews are for sale at all great markets. At this time at the St. Louis National Stock Yards stock ewes fit for such an experiment are selling at about 3½ cents a pound, and fat ewes at about 4¾ cents a pound. The market is always changing, but there will probably remain a fair margin between the price of the stock ewe and the fat ewe. There would be a freight bill to get the ewes home.

This method of lamb raising for the spring market is a sure winner in the country tributary to St. Louis. St. Louis is becoming more important as a sheep and lamb market every year. The lambs sell according to weight and quality at 7 to 12 cents a pound. Sixty-pound fat lambs arriving on the April and May markets average from $4.20 to $7.20 per head, as the case may be, and the ewes' fleece ought to bring $1.50, and does so. one year with another.

The method suggested originated on the outskirts of the city of London. The farmers there never raise lambs to be a year old. They do not even keep bucks on their premises, as the ewes are bred in the western counties and then driven and sold to farmers of the counties of Kent, Surrey and Middlesex, where they are expected at the proper time, and each farmer buys a few ewes, knowing that he will have one or more lambs in addition to the mother ewe to sell in the spring. The English farmers produce lambs for the London market weighing 80 to 120 pounds, but we do not have to make them so heavy.

Another Good Buck

Farmers on railroad lines entering St. Louis can get their supply of ewes at the stock yards, or if the stock-yard supply is short, they can buy them upon the sheep ranges. On railroads that have one end at the market and the other end on the sheep range, this opportunity stands out very clear. The Cotton Belt Route, for instance, approaches the St. Louis market through Alexander, Union, Randolph, Jackson, Monroe and St. Clair counties, Illinois, and in all these counties there are but 15,000 sheep, whereas there are 250,000 sheep within the borders of the six counties adjoining that of Coryell, where the road terminates in Texas.

There is no better country for our lamb-raising method than the 200 miles between St. Louis and Springfield, Mo., through which the Frisco road runs. All the counties—seven of them—contain 65,000 sheep, whereas in Texas, at Brady, the end of one of the branches of the system, there are a half million sheep in seven or eight counties. If one asks, where can the ewes be obtained? this furnishes the answer to the question.

To return to the main subject again we desire to say that any farmer who desires to add to his income will find it to his advantage to study this simple proposition. One great advantage is that it does not require so much pasturage as where the ewes are kept all the year round. Eight months is all the time required. One week to receive and breed the ewes, twenty-one weeks before the lambs arrive, and in ten to twelve weeks thereafter to market the lambs, the wool and the ewes. From September 1st to May 1st is all the time necessary, except it may pay to hold some of the slow-growing lambs a little longer.

It is a simple experiment to buy the ewes in the fall, breed the ewes to lamb as soon as possible after the opening of the new year; give special care to the lambs that they may grow quickly to the marketable age; then sell them before grass lambs arrive in market; shear the ewes; sell the wool; fatten the ewes as well as you can and send them to market, so that no sheep remain on the farm except the bucks, and the bucks will pay their board bill with big fleeces.

The experiment can be conducted with either five ewes, fifty ewes, a car-load or a dozen car-loads, just according as the circumstances permit and there is safe pasturage for them. Let a few careful farmers' sons or farmers' daughters start off this special manner of handling sheep and we will be able to sell millions of early lambs and fat ewes each year at a good price on the St. Louis market, where there is a growing demand for them.

Using Cooper's Dip.

At the Royal Show in England there were 147 exhibitors, and 124 of them used Cooper's Dip. The total number of sheep exhibited was 1,124, and 1,023 of them were dipped in the Cooper Dip.

Premiums awarded were 268 and winners of 243 ribbons were Cooper dipped sheep. There were 20 breeds exhibited and 16 of them used Cooper Dip exclusively.

Comment is unnecessary.
Figures do not lie.

Blowing Her Horn.

Teddy had never seen a cow, being a city boy. While on a visit to the country, he walked out across the fields with his grandpa. There they saw a cow and Teddy's curiosity was greatly excited.

"What is that, grandpa?" he asked breathlessly.

"Why, that's only a cow!" was the reply.

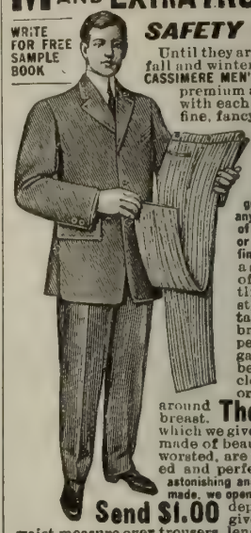
"And what are those things on her head?" was the next question.

"Those are her horns," was the grandfather's answer.

The two walked on. Presently the cow mooed loud and long. Teddy was amazed. Looking back, he exclaimed: "Which horn did she blow, grandpa?"—Farm and Home.

MENS FINE SUIT AND EXTRA TROUSERS $4.95

WRITE FOR FREE SAMPLE BOOK



SAFETY RAZOR FREE

Until they are gone, we will sell 15,000 fall and winter weight, NAVY BLUE, WOOL CASSIMERE MEN'S SUITS at $4.95, and as a premium and adv., we will give free with each suit at $4.95, a pair of fine, fancy stripe, worsted trousers, and if you order within 30 days we will throw in as a special premium with the suit and extra trousers at $4.95 a high nickeled, full size, safety razor guaranteed to shave as perfectly as any $5.00 safety razor, regardless of name or make. **The Suit** is a finest grade navy blue cassimere a splendid fast color fabric of perfect weave and beautiful changeless finish, handsomely stylishly made up by expert tailors in latest single breasted sack style to fit perfect, is serge lined, elegantly finished; guaranteed better than exclusive clothiers' $8 to $10 suits or no sale. Sizes 33 to 48 around breast. **The Free Trousers** which we give with the suit at $4.95 are made of beautiful dark fancy striped worsted, are very stylish, finely tailored and perfect fitting. This is the most astonishing and wonderful clothing offer ever made, we openly challenge any firm to equal it.

Send $1.00 deposit, mention No. X, give chest measure over vest, waist measure over trousers, length of inseam and height and weight, and we will send the fine navy blue cassimere suit and extra pair of elegant, fancy striped worsted trousers and fine safety razor by express subject to examination at the express office, you to pay the balance, $3.95 and express charges, after you examine the clothes and find them perfectly satisfactory, a perfect fit, the greatest clothing bargain you ever saw, and equal to any suit and extra trousers you ever saw at $10.00 to $12, and as stylish an outfit as there is in your neighborhood regardless of price; otherwise we will promptly refund your $1.00. Order the outfit today or send for our big cloth sample book which contains 175 fine cloth samples of readymade and made to order suits and overcoats at $4.50 up, trousers 98c up, fur coats $10.00 up, and complete stocks of duck, leather and corduroy clothing, cravenettes, mackintoshes, rain coats, etc. Made of best fabrics from World Famous Woolen Mills, critically assorted to suit every taste and every age. Order the outfit or write for the sample book today. Do it right now. We are headquarters for **Men's Furnishing Goods** at wholesale prices. Winter underwear 39c up, flannel shirts 39c up, leather gloves 22c up, winter caps 21c up, hats 45c up, silk ties 9c up, and every kind of apparel worn by men and boys at correspondingly low prices. THE FREE SAFETY RAZOR

we give with each suit and extra trousers outfit at $4.95 is full size, high nickeled, complete with blade of finest razor steel, perfectly ground, honed and stropped, guaranteed to shave clean, cool and comfortable as any $5.00 safety razor or your money back immediately.

JOHN M. SMYTH CO. 150-194 West Madison Street **CHICAGO**

A VERY FINE BLOUSE OR SHIRT WAIST.

This is May Manton Pattern No. 6010. The simple shirt waist made in tailored style is absolutely necessary to comfort, and this one is tucked after an exceptionally attractive and becoming manner. In the illustration it is made of natural colored pongee stitched with Belding silk, and pongee is much in vogue for waists of the sort while it has a great many practical advantages; but the model is appropriate for all the seasonable waistings. Linen and madras, both white and with stripes and figures of color are much used, and this season there is a great fancy for making cross-barred dimities, batistes and the like in tailored style. The waist is made with the fronts and the back. There is a regulation box plait at the center front and a neck-band finishes the neck. The collar is of the turn-over sort and can be made from striped material as illustrated, or to match the waist, as liked. There are regulation sleeves with straight cuffs.

The pattern 6010 is cut in sizes for 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address on receipt of 10 cents; or, for 25 cents we will send the pattern and our interesting sixty-eight-page monthly **Universal Magazine** for one year. Address, **Hule Publishing Co., 3550 Vista avenue, St. Louis, Mo.**

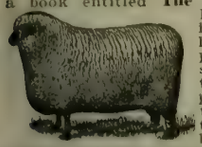
Don't Sell Your Eggs

When they are cheap; pack them with my new method—will keep two years—will be as fresh as new laid eggs. No special place required to store them. Cost only ½c. per dozen to pack them. Write me for circular.

MRS. B. F. WILCOXON,
Ft. Des Moines, Ia. Box 50.

THE DOMESTIC SHEEP.

There is one modern writer on Sheep Industry who has made his mark. It is Dr. Henry Stewart. He has written a book entitled **The Domestic Sheep.**



It is up-to-date in every particular. There are 384 pages, and besides going into the subject in a practical way there are illustrations of every breed and every subject belonging to the industry. For $1.50 we will send **The National Farmer and Stock Grower** for one year and one copy of **The Domestic Sheep.** This is the time to study the sheep business. There is money in it. Address,

HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

Use Pure-bred Rams.

The greatest mistake one ever makes in breeding sheep is to use a ram of mixed or cross breeding, no matter how good an individual he may be. The best quality a ram can possess is prepotency, the ability to fix his characteristics upon his offspring. No matter what good qualities he may possess, if he has not the power to transmit these good qualities to his offspring, he is of no value as a breeding animal, and we have learned by experience to look for this prepotency in pure-bred registered animals. By a long series of breeding and selection there has become fixed in these pure-bred animals the ability to transmit the desirable qualities that we want in domestic animals, and if we want these desirable qualities we must look first to the ability of the animal to transmit these qualities to his offspring, and you need never look for this ability in an animal of mixed breed, because experience shows in ninety-nine case out of an hundred that such animals have no prepotency; they are likely to produce animals inferior to the common ewes you would use in these cases and are also likely to breed back to some former unimproved type. There is very strong reason, then, for using pure-bred ram in these cases, and for using no other kind.—Wm. H. Underwood.

Turn Lambs Into Corn Fields.

The ideal pasture for the lambs, after weaning, is in the corn field. It is good for the field, because the lambs will eat d wn the weeds, and the corn blades make first-rate fly crushes. Of course, if your corn ground is clean, the lambs will eat the lower leaves of the corn, but this will do no harm. If the lambs are lightly grain-fed while they are grazing on the corn field, they will not be so likely to reach up after the ears of corn. It is best to carry out any stalks which have blown over. Lambs soon learn what is farther up the stalks, and they also quickly learn how to throw themselves upon the stalks and bear them to the ground. Whenever they get to doing this it is time to take them out. The lambs should be rounded up every evening to make sure that they have plenty of water. A few hot days in the field without water may mean heavy losses. Lucky is the man who has some rape coming on either in the stubble or in the corn field.

Feeding in the San Luis Valley.

The writer has just returned from a twelve-days' trip through the San Luis valley holding Farmers' Institutes. The attendance was larger than ever before and the interest greater. The San Luis valley stands almost alone in one particular this year. It has feed for fattening cattle, hogs and sheep in abundance and that will cost no more in other years. All appearances are that this will be the best year the valley has seen for profitable feeding, where judicious methods are followed. In the other chief lamb-feeding centers of Colorado there is not over half a crop of alfalfa hay, and the number of lambs fed is necessarily limited to the supply of alfalfa. In some sections of Colorado where alfalfa is fed to lambs, corn is fed with it, and all reports from the corn-growing states indicate a very short crop and extremely high prices. This means high-priced feed for the lamb feeders of Eastern Colorado. The field peas of the San Luis valley are in remarkably fine condition, and with proper care for the rest of the season will make a full yield at the usual low cost.

With these conditions in the San Luis valley every feeder should use his utmost endeavors to get the greatest gain from all his crops when fed to fattening animals.

With the peas left standing and the stock turned loose in the fields to gather them, the following average gains are made per acre: With lambs, 100 pounds; with pigs, 400 pounds. Careful tests show that where the peas are harvested and fed to the animals confined in small yards, at least double these gains can be made. In a test made one year ago hogs turned loose in a pea field gained 400 pounds per acre of peas. Hogs confined in pens and fed peas and vines gathered from the field made a gain of 800 pounds per acre of peas. The great difficulty has been a practical method of harvesting the peas. For years some of the farmers have harvested part of the crop by cutting the peas with a mower, raking, cocking and stacking the same as for hay. This requires a great deal of labor and the peas shell badly.

Last year a Manassa farmer tried an experiment of gathering the peas without mowing them. He used a regular hay stacking outfit, gathering the uncut pea vines with bull rakes and put them in the stack with an ordinary stacker. Where the bull rakes first entered the pea field some of the vines were missed; but after two or three forksful were gathered on the rakes the vines were taken up clean and there was no shelling. Using this method, three teams and five men will put twenty acres of peas in the stack each day.

This expense is small compared with its effect in doubling the gains on fattening stock.—H. M. Cottrell, Colorado Agricultural College, Fort Collins.

Sheep and Wool.

E. A. Van Sicklen, of Weiser, Idaho, has marketed 3,000 half-blood Shropshire lambs weighing 75 to 77 pounds. They were this spring's grass lambs and were sold in the middle of August and were not much over four months old.

Sheep raisers on the Western ranges are gradually improving their flocks in the direction of the mutton breeds. It is no longer any use to raise sheep that will not give a good lamb, and sheep raisers are finding it out.

Wool growers of the West are establishing storage warehouses for the purpose of dividing the sale of their wool into twelve months of the year rather than have it all dumped on the market at shearing time. The first warehouse was constructed at Omaha and the amount handled during the season was 4,000,000 pounds. It saved much wool from being sacrificed and the growers were able to secure advances that enabled them to hold for the restoration of the market.

In regard to the sheep proposition as advertised in this paper, Mr. F. W. Harding, of Waukesha, Wis., Secretary of the American Cotswold Registry Association, says as follows: "Referring to article on the raising of early lambs, will say that the proposition as outlined by you is working out all right and is really no experiment. I would only suggest that the class of ewes purchased for this purpose should have a predominance of English blood; that is, sired by rams of English breeds. By taking this precaution one will get ewes that will fatten more readily than ewes of Merino blood. They will also give more milk and raise their lambs better."

At a public sheep sale held by Chandler Bros., of Iowa, thirty-five head of Shropshire bucks sold at $51.17 per head, and the ewes averaged $26.33 per head. Mr. Jas. Miller, of West Point, Iowa, paid $107.50 for the top-priced lamb, and W. A. Graham, of Macksburg, Iowa, paid $77.50 for the top-price pair of ewes. Their show ram, Whittington Leader, brought $100, and went to J. A. Williken, of Youngstown, Mo.

Forage catch crops, such as rape, sown in the corn field at the last cultivation is the best way to insure breeding ewes being in good condition for early lambing at nominal expense.

Professor Shaw, of Iowa, says: "A car-load of lambs will do more good than harm to a forty-acre corn field, providing it is not lodged. They will clean up the weeds and the lower leaves, and if they are given a little grain in addition they will make the cheapest gains that can be made on the farm by any class of stock under any condition."

FREE DEAFNESS CURE.

A remarkable offer made by one of the leading ear specialists in this country. Dr. Branaman offers to all applying at once two full months' medicine free to prove his ability to cure permanently deafness, head-noises and catarrh in every stage. Address, Dr. G. M. Branaman, 1264 Walnut street, Kansas City, Mo.

Prime beeswax is selling at St. Louis at 28 cents a pound.

Castor beans are selling at St. Louis at $1.50 per bushel in car lots.

Choice sorghum is selling on the St. Louis market at 50 cents a gallon.

GALVANIZED RUST PROOF IRON

For Roofing, Siding or Ceiling

POSITIVELY THE BEST AND MOST LASTING COVERING MADE.

Requires no painting. Economical and easy to put on; no previous experience necessary. Absolutely guaranteed. Brand new, clean stock. Bright as a dollar. Sheets are full size. Comes in Corrugated, "V" Crimped, Standing Seam or Plain Flat Sheets. Heavily galvanized on both sides, with the most approved galvanizing material that will adhere forever. "Galvanized" means that the Iron has been coated with liquid Zinc, which makes it absolutely rust and weather-proof; not affected by heat or cold. Makes buildings warmer in Winter and cooler in Summer. Drains perfectly and does not soak. Does not taint rain water. Fire and lightning-proof. Makes your insurance cheaper. Sold direct from our own roofing factory—the largest in the world. Chicago House Wrecking Co. sells more roofing material than any other concern. We sell thousands of squares of "Galvanized Rust-proof" Iron every week. It is used in all climates and for every kind of building. Painted Steel Roofing at $1.25 per hundred square feet.

Also in stock a full line of painted Steel and Iron Roofing, Siding and Ceiling, all styles at prices from $1.25 per 100 sq. ft. up. Fill in the coupon below. We will send you samples free of charge together with a vast amount of roofing information. On application we quote FREIGHT PREPAID PRICES

ROOFING SUPPLIES OF EVERY KIND

FREE OUR 500-PAGE CATALOG NO. 319 It is full of information for the shrewd, careful and economical buyer. Lists thousands upon thousands of rare bargains. Price offers that command orders. Millions of dollars' worth of merchandise, bought at Sheriffs', Receivers' and other forced sales, are plainly described in this book. Send coupon below and get a copy free.

FREE BOOK OF PLANS! If you are going to build or improve, we will send you free, our book of plans, containing many illustrations and descriptions of modern residences, farm homes, barns, etc.

FREE BOOK OF BUILDING MATERIAL! It will put you in touch with the wonderful situation in the lumber market. Contains thousands of money saving offers.

FREE SPECIAL FURNITURE CATALOG! Showing Rugs and Linoleum in their natural colors and designs. We save you from 30 to 50 per cent

FAIRY WHEAT STORY.

The Idaho Man's Discovery in Alaska —Hard Wheat 222 Bushels an Acre—Winter or Spring Planting Equally Good Results.

His name is Abraham Adams, of Juliaetta, Idaho.

He went to Alaska in search of gold and he discovered that which is worth more than gold to himself and to his fellow-men.

There farming is limited to a few acres, but far away from even this experimental agriculture of Alaska he found that which could not have been planted by human hands.

In an isolated corner he came across a small patch of bird-eaten wheat. There were but few ears, and all of them had been picked over, yet even with his unpracticed eye he saw that he had made a discovery.

Packing his treasure away, he brought it to his own ranch in Latah county, Idaho, and there he sowed it, not expecting much return, but to his surprise the fall-sown wheat, amounting in all to an ounce or two at most, produced seven pounds of wheat the following spring.

And such wheat as no man had ever seen before. The kernels were four times as large as ordinary wheat and of a far better color.

Having demonstrated his seed was winter wheat, he passed up the fall sowing of 1905 and sowed the seven pounds in the spring of 1906, with the result that he harvested 1,545 pounds of spring wheat.

He did not skip the fall of 1906, but planted his 1,545 pounds of seed, and, notwithstanding hail storms of the worst kind, the harvest of 1907 gave him 53,000 pounds of seed, although other wheat crops in the same vicinity were a failure.

Examination by the chemist of the Idaho Experiment Station placed it No. 1 grade, with high protein content, in the spring samples.

The head of this Alaska wheat is about four inches long and from one inch to an inch and a half broad in its broadest part.

Adams' Alaska wheat yields up to 222 bushels per acre, whereas the average yield of the United States is less than twenty bushels.

This is practically the statement sent to the office of The National Farmer and Stock Grower before the publication in the Saturday Evening Post.

We have also received a sample of Adams' Alaska wheat amounting in quantity to one pound.

We have shown it on the floor of the Merchants' Exchange.

As far as the general appearance is concerned, it is considered very good.

The milling qualities are not yet proven.

The large yields are in doubt—there are no proofs — and the evidence so far is against the large yields.

The grain is hard—extremely hard.

Seedsmen refuse to believe that it will grow to do any good in a moderate climate.

Our sample arrived the day we print the paper.

Next month we will know more about it, and if there is any good reason for doing so we will obtain a sample for every subscriber to this paper.

In the meantime a sample of this wheat can be found at the Secretary's office of the Merchants' Exchange of St. Louis.

How Trees are Made Symmetrical.

The correction of the forked or defective crotch that is found to a great extent in our soft maples and elms and to a less degree in almost all our landscape trees forms a large part of the "tree surgeon's" work, says Cement Age, New York. This form of crotch usually has its origin in the destruction of the original head or leader. In a case of this kind a double head is formed by the forcing out of two lateral buds. As these shoot up, forming the new top, the old stump at their base gradually decays, allowing water to penetrate into the crotch. Nature tires desperately to heal this wound, but the imperfect joint is constantly forced open by the wind and prevented from uniting by the old stump, until finally, weakened by decay, the tree splits. Many of the finest trees are ruined every year by the splitting of these defective crotches.

These cases are often exceedingly difficult to treat. The decayed matter must first be removed with great care and thoroughness—in fact, the dentist is not more conscientious in removing decay from a tooth than is the "tree surgeon" in cleaning out these cavities. The opening is then packed tightly with cement or a preparation of oakum, tar and paint. Cutting watersheds in these crotches often takes all the workmen's ingenuity and patience, for, working in the narrow limits of the fork, as he is compelled to do, it is excedingly difficult to use his tools. But here most of all a perfect watershed is required, as the water running down the limbs and trunk would otherwise find lodgment behind the filling. In the case of a large tree the additional precaution is taken of putting a bolt directly through the crotch, while a chain is placed some twelve or fifteen feet up.

The old method of placing an iron band around a tree to prevent splitting often caused death, or at least deformity, for as the trunk or branch grew in circumference the stricture cut off the flow of sap, depriving the top of nourishment. The improved method consists in placing bolts directly through the limbs and securing them on one end by washers and nuts, while on the other a hook is formed, over which a chain is placed. This serves as a stay, enough play being given in the chain to allow the crown sufficient swing or way.

Fully half the cases of decay of the limbs or trunk were originally caused by improper pruning. Eight out of ten men in cutting off limbs will leave a stump projecting five or six inches. The bark along the circular edge deprived of nourishment dies back, leaving the face of the cut exposed. The unprotected cells cannot resist exposure, and, decaying, leave the heart of the tree exposed to myriad enemies. In many trees the cavity caused by the decay of the heartwood is large enough for a man to stand upright in, the entire trouble having been originally caused by a cut of not over eight inches.

Every cut should be made as close as possible, in order that the sap rising through the cambium layer may cover the wound with new bark. Where large branches are to be removed, the first cut should be made from below, so that as the branches fall there will be no tearing down of the sapwood or bark. The second cut is then made from above. In order to protect the exposed cells they are painted with a preparation of coal tar and paint. Where the cut is soft or of unsual size, a cap of zinc is fitted to the exact size of the cut just inside the bark and nailed tightly down to prevent moisture from reaching the exposed wood. The new layer of bark will eventually completely cover the zinc, leaving little or no scar.

WOOL MEN!

We can interest you. Do you know that St. Louis is a spot cash market? In 20 years we have handled **more separate lots of wool**, each season, than any other commission house here. Over **40 years' experience** in the business, and your shipments receive our personal attention. We guarantee **top prices, quick sales** and **prompt cash returns.** Write for our 1908 Wool Circular, giving full particulars and points in regard to the preparation of wool for market. Wool Sacks, Shipping Tags, Market Reports, etc., sent Free upon request. Write what you have to offer.

A. J. CHILD & SONS, St. Louis, Mo.

I'll Give You Plenty of Time to Prove that the CHATHAM Fanning Mill is the Best Seed Grader and Cleaner Made

Clean your grain—before you **sell** it—or before you **sow** it. **$1,000,000** lost by Farmers in every state each season by selling **dirty grain** is a low estimate. You are "docked" on the price because of **dirt** in every bushel. Pay me on time for a **CHATHAM Fanning Mill. Cleans** wheat for market. Takes oats, cockle, garlic, mustard and chess out of wheat. Cleans red clover—takes out buckhorn plantain. Cleans alsike clover and alfalfa. Cleans beans, oats, barley. Grades corn. Cleans timothy seed. **CHATHAM FREE BOOK** tells 100 ways you'll profit by having a Chatham. Illustrated—gives terms and low factory prices—full particulars. 30 Days' Trial without any advance payment, to prove it will do what we say it will. 250,000 sold already in U. S. and Canada. Experiment Stations indorse them and Agricultural Papers recommend them. **Write nearest office** for New Catalog.

POLLED ADMIRAL—Polled Hereford bull. This bull is No. 179,209 in American Hereford Record and No. 295 in American Polled Hereford Record. This bull when photographed at two years and four months old weighed 1,727 pounds. He was bred in the herd of Warren Gammon & Son, of Des Moines, Iowa, and is now the property of the Wyoming State Agricultural College. This picture is published to show the grand conformation of a true beef bull. See article on Double Standard Polled Herefords in another column.

The Aerial Mail Trolley.

This is a great step and time saver for people who live back from their mail boxes. Instead of having the mail box stationary at the mail route, it is bolted to a carriage and passed back and forth between your mail route and your door along a cable by means of a crank wheel

This device is simple in construction, very durable, and moderate in price. Make a happy move by sending the names of five people who live 300 or more feet from the mail box, and in return receive a descriptive price list and find out all about it.

Address, The Handy Carrier, Box 10, Godfrey, Ill.

Benj. F. Yoakum, the well-known railroad veteran, says that in order to pay $240,000,000 in dividends the railroads also pay $840,000,000 a year for labor, besides other great expenditures.

A Clayton apple grown by C. M. LeGrand, of Meridian, Okla., weighed 17½ ounces and measured 14¾ inches in circumference.

England Has Queer Auction Custom.

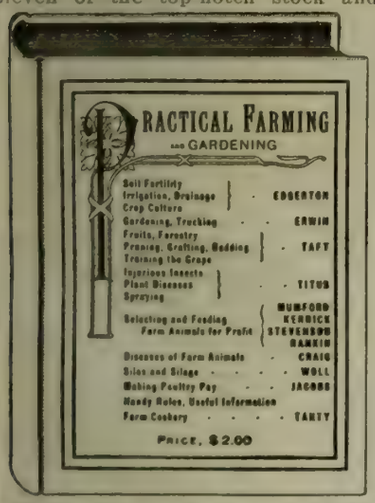
"Candle auction" is an ancient custom which still survives in Somersetshire, England. A valuable piece of meadow land in the village of Tatworth was sold recently by auction while the candle burned. The ceremony consists of the burning of an inch of candle, the last bidder before the candle's final flicker becoming the tenant for the ensuing year. Previous to the auction freeholders assembled for a supper of bread and cheese, beer and pickled herrings, the funds for this being provided from the "colting" of the new tenant. Fines are also imposed for speaking, nose blowing, laughing out loud and moving, other than bidding, while the candle is burning. —Pittsburg Chroncile-Telegraph.

Best Dehorners on Earth.

The dehorning clipper long and favorably known and of interest to cattle owners which has done the work satisfactorily for many years, is advertised in our columns by the manufacturers, the Leavitt Manufacturing Company, Urbana, Ill., who will supply this instrument direct to parties who are unable to procure it through local dealers. Correspondence invited.

Practical Farming and Gardening

is a book that weighs thirty ounces ready for mailing. It is a book of 500 pages 6x7¾ inches to the page. It is a complete farmer's instruction book. The feeding chart, which is the frontispiece, is worth more to a stock farmer than any publication heretofore issued. It is worth a ten-dollar bill to any stock farmer. The book itself is a wonderful production. Soil fertility, irrigation, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, hog, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. Eleven of the top-notch stock and



agricultural experts compiled this book. They did the work so that farmers and farm boys could understand it. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. We buy large quantities at one time. We obtain this book for a very low price considering its value. Send One Dollar and we will send you **Practical Farming and Gardening**, postage paid, and The National Farmer and Stock Grower for one year. This is a grand offer Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Land Matters.

J. H. Lipscomb, of 306 Fidelity Trust Building, Kansas City, Mo., is very successful in obtaining sole control of first-class properties. He is advertising 11,000 acres in Missouri which will cut up finely. The wholesale price is only $4.50 per acre, and there is plenty of retail margin in it. Mr. Lipscomb is a land expert, thoroughly acquainted with the possibilities of the lands which he handles.

The Club Ranch in Texas, being cut up by Lott, "The Land Man" of Kansas City, is one of the best farming properties in the state. See the land advertising columns in this paper.

Several tracts of Mississippi lands are advertised very cheap. They are located in the northern part of the state, near the line of the Southern Railway, also near boat landings on the Tennessee river. These lands are now the cheapest lands in the United States and will not be so a few years hence. It is a good, healthy country, and The National Farmer and Stock Grower is opening up an experimental farm of 280 acres.

Growing Raspberries.

I have grown raspberries for a number of years and have always obtained a good price for the fruit, both in my local and the distant market. Some are of the opinion that raspberries can be grown successfully on any kind of soil, but I wish to state from my own experience that to produce raspberries of first quality the soil must be rich.

In preparing the ground, I plow very deep and put it in the best possible condition. I lay the rows off six feet apart and set the plants three feet apart in the row. This allows sufficient room for cultivation and afterward to pick the berries.

As to the best varieties to plant will depend to some extent on the locality in which they are to be grown. Some varieties will answer for one section, while others will not. For this reason it is best to obtain the advice of some local nurseryman, and, if possible, plant home-grown varieties. I am convinced of the fact that some have failed to be successful in growing raspberries simply because they tried to grow kinds that were not adapted to their soil and climate.

I usually plant raspberries in the fall, in October or November, as I have found that they do as well as when planted in the spring. The first season after planting I grow potatoes or some quick-maturing corn between the rows, which does not injure the plants, and at the same time practically pays for all expenses. I use the hoe freely and plow with a two-horse cultivator.

Red raspberries reproduce themselves by suckers; therefore, as the branches become older these suckers, if not kept off, will so completely fill the ground with a thick mat of plants as to produce very small and inferior berries. But if the suckers are cut off as soon as they appear for the first year or two, and kept well cultivated, they will continue to bear for many years.

It is a very easy matter to have plenty of red and black raspberries. All one has to do is to plant a row through the garden, each plant being three feet apart; plant half to red and half to black, or devote one row to red and one row to black, give good culture, and an abundant supply will be obtained.—Wm. H. Underwood.

MAGNETIC FORCE CURES DISEASE
WITHOUT A DROP OF MEDICINE

Fill the system to overflowing with Magnetic life and the vital organs must do their work in a healthy, vigorous manner.

The blood is the life of the body, but MAGNETISM IS THE LIFE of the blood.

In our new book "A PLAIN ROAD TO HEALTH," FREE TO ALL who send us statements of their cases, we tell you how and why Magnetism acts to cure every known disease. We show that Magnetism holds the key for the establishing of harmonious vibration in the system.

We have demonstrated that more than 75 per cent. of all so-called incurable diseases can be cured with our powerful Magnetic Shields. There is no power on earth that can do what Magnetism is capable of doing. It is the one and only revitalizing agent in Nature. It can no more fail to do good when applied to the human organism, than oxygen can fail to do good when breathed into the lungs. Magnetism never has failed, it never will fail, and it never can fail to increase the circulation, for it is the primal energy in Nature. It is the very substance of all life.

We can show you the most incontestable proof that we have cured cases of Paralysis, Bright's Disease, Dyspepsia, Consumption, Locomotor Ataxia, Rheumatism, Neuralgia, Insanity, Diabetes, Nervous Prostration, Tumors, Obesity and a hundred-and-one other diseases that are called incurable. We have cured these cases after they had been given up to die, and the patients are sound and well to-day.

We will give you the names of doctors, lawyers, educators, merchants, ministers, and all other classes of people that we have cured of all so-called incurable diseases. You can make inquiry yourself of these people in order to substantiate our claims to your own satisfaction.

Read the following letters from grateful patients who have been cured by Magnetic Shields.

Think of living inside of a garment that is radiating over 800 streams of Magnetic force into the trunk of your body, feeding the nerves and vital organs with new life and energy. Keeping you constantly bathed in a stream of this revitalizing force. Such a garment is our MAGNETIC VEST, fitting the body like a glove. We make other Shields for every part of the body. All described in our New Book, **"A Plain Road to Health."**

CATARRH OF STOMACH AND BOWELS AND BORDERING ON PARALYSIS COMPLETELY CURED AFTER ALL HOPE OF CURE HAD BEEN GIVEN UP.

Jan. 16th, 1906:

For the benefit of the sick and suffering I wish to make the following statement:

I had been afflicted with catarrh of the stomach and bowels and general debility, bordering on paralysis, for the past fifteen years. For two years I lived altogether on fresh fish and dry bread and milk. After a while I had to quit fish, and for three months I lived on toasted bread and milk, and kept getting worse until I had to quit work, having no strength left. Myself and friends thought that my time in this world was short, having all this time been in the hands of twelve doctors, some noted specialists, and the doctors all diagnosed my case as catarrh of the bowels and stomach. After I had given up all hope of getting well again, a friend of mine who had taken Dr. Thacher's treatment advised me to consult the doctor. I wrote him and he advised me. I made up my mind to make one more effort and give him a trial, and the result was to-day I am as well and sound as ever I was, am attending to my business, which requires from sixteen to twenty hours a day. I eat anything that is set before me, having perfect digestion, and I think Dr. Thacher's treatment is a blessing to suffering humanity, and would advise persons with chronic diseases to consult him, as I honestly believe he can do for others what he has done for me. Yours truly,

J. Y. KECK,
17 E. Third Street, Pottstown, Pa.

A WONDERFUL CURE OF SPINAL DISEASE—HELPLESS FOR MANY YEARS—NOW COMPLETELY RESTORED.

Dear Doctor Thacher:—My experience has convinced me that there is no other healing agent like Magnetic Shields.

I used them for spinal trouble and the Shields did the work of lifting me from a chronic invalid to a well and busy woman, at the same time reducing my weight from 250 pounds to 180 pounds.

Obey nature's laws, wear Dr. Thacher's Shields, and you do not need to be sick. May the light of truth dawn on the intelligent minds and teach them the way to be healthy and happy. May God's blessing rest on your good work. Very truly yours,

MISS ADA DICKINSON,
Farmdale, Ohio.

Send a statement of your case today for our FREE advice, and get the new book "MAGNETIC VIBRATION A PLAIN ROAD TO HEALTH," by C. I. Thacher, M. D.

THACHER MAGNETIC SHIELD CO. INC., Suite 249---169 Wabash Ave., Chicago, Ill.

At East St. Louis, September 1st, two cars of clover-mixed hay sold at $7.50 per ton, one car at $8.00, one car at $9.00, two at $9.50, one car at $10.50; one car No. 2 timothy sold at $8.00; one car at $8.50; two cars at $9.00; two cars No. 2 at $10, two cars No. 2 at $10.50; one car scant No. 1 at $12, three cars No 1 at $12; and three cars good No. 1 at $13, including St. Louis delivery. At St. Louis two cars prairie hay sold at $8.00 per ton, and two cars alfalfa at $12.50 and $13, and one car No. 1 at $14 and $15.50.

A NEW EGG FARM.

Stoddard's book entitled **A New Egg Farm**, is, in our estimation, the best book for a young poultry raiser to study. It shows the way to profitable production of eggs and poultry. He compares the best locations for the business. Tells how to build the houses for layers, breeders, sitters or chicks, adapted to the colony system, the yard system and other methods. How to breed and manage. How to breed and select. Choice of breeds and crosses. Management for mild or severe climates. How to feed fowls and keep them at exercise without hard work. How to manage hundreds of sitters with little labor. How to raise brooder chicks and keep them alive and growing. There are 320 pages of useful, attractive, illustrated information. The book is nicely bound, and we will send this book by mail, postpaid, and include a year's subscription to **The National Farmer and Stock Grower**, for one dollar. Address,

HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

New Ground For Poultry.

An English fancier of prominence has about twenty-five acres of land in poultry yards. He has this land divided into five poultry fields, and in use these yards are rotated.

In doing this the fancier has the idea of not only giving the poultry new ground every few months and with it a supply of green grass, but also a crop of insects, which the fowls hunt with enthusiasm.

An American fancier is trying to follow this method on a small scale and says that he gets good results with it. He does not depend on the grass alone, but in his rotation of poultry yard he includes an occasional supply of some crop like rape.

This is perhaps better than depending on a continual succession of rape. Where the poultry have a grass plot to use up in one period and a plot of rape to use in another, with a return to grass, they probably thrive better than when they continually feed on one kind of herbage.

But whether grass is grown, or rape, or some other crop, such as oats or rye, it is better to give new ground every few months. This prevents the contamination of the ground by the droppings of the fowls, which now and then contain disease germs.

On the farm this is a good course to follow if the poultry are confined. Even if they are allowed the run of the farm, it is a good plan to have several poultry yards in which may be grown crops of grass, rape, oats or rye, and into which they may be turned occasionally.

A week's confinement in a rape plot will result in the fowl eating more succulent food than would be the case if they have the run of the farm, especially in the fall of the year, when the drouth has affected the succulence of the ordinary grass growing on the farm.

By giving new ground the natural forces are given a chance to destroy the germs that may be in the droppings and also to annihilate the eggs of intestinal parasites that play some part in the lives of our fowls, though we have as yet paid little attention to that phase of insect life.

Keeping flocks on old ground is a fruitful source of disease. Fowls do not take diseases as quickly or as readily as people generally suppose, and a few germs in an old poultry yard will generally perish before they can do damage; but when the fowls remain in the same yard for a year at a time, and some of the fowls have diseases, the number of germs in the yard, on the surface of the ground, or in the top soil, runs into the millions, and the systems of the well fowls finally are unable to ward off the repeated attacks.

The newly-turned earth is a great purifier, and the turning under of germs that require sunlight and air will help to destroy them. This is an ally that the poultry raiser should enlist in his efforts to keep the poultry yard free from disease.

The First Step in Selecting Your Farm Power.

There is a gasoline engine made at Freeport, Ill., that seems to suit all farm-power users. Don't overlook it on any account if you are going to buy. It is a very simple, and, therefore, very dependable engine, made by an old, reliable concern, the Stover Engine Works. We feel that it must commend itself to you as being just what you are looking for. Write and get their free engine book and study the Stover Engine. The modest advertisement elsewhere in this paper cannot tell all the engine's virtues; but the book will give you reasons for its superiority that you can understand. Don't fail to write for it if you want reliable power for the farm or any other purpose. The book is free and sent postpaid. Address, Stover Engine Works, 47 River street, Freeport, Ill.

Money in Poultry.

At the Poultry Institute held by the Colorado Agricultural College in Greeley, August 17th, Prof. W. G. Chambers exhibited a Rhode Island Red hen that had laid 200 eggs in one year.

Professor Chambers keeps from forty to fifty hens on a town lot and has to buy all his feed. He keeps an accurate account of all expenses, and last year for feed, louse killer, straw and all incidentals, the cost was one dollar per hen.

He uses trap nests and keeps no hen that lays less than 120 eggs in twelve months. The average for his entire flock is a little over twelve dozen eggs a hen per annum.

The average price in the open market for the year for eggs has been 25 cents a dozen. This makes at market price an income of three dollars a hen for the year—two dollars a hen more than the cost of feed where all feed has to be purchased.

Professor Chambers has made more than this amount, because he has sold some of his eggs for hatching.

Professor Chambers ascribes his success to intelligent feeding, good care and trap-nesting.

His hens are given dry feed entirely. He gives a light fed of whole wheat and corn three times a day, scattering the grain in the litter.

He keeps before his hens all the time in self-feeding hoppers a dry mash made of the following mixture:

Bran.....	...200 pounds.
Alfalfa meal.....	200 pounds.
Corn meal.....	100 pounds.
Shorts..	100 pounds.
Linseed meal.....	100 pounds.
Meat, bone and blood.	100 pounds.

All mixed with a little salt and cayenne pepper.—H. M. Cottrell, Colorado Agricultural College, Fort Collins.

Send to J. Wilkes Jones, 606 Bee Bldg., Omaha, Neb., for the premium list of the National Corn Show.

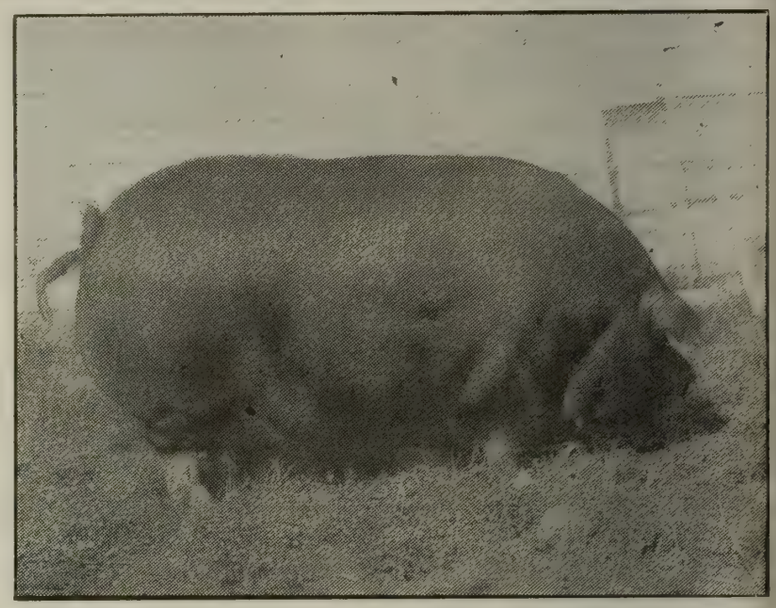
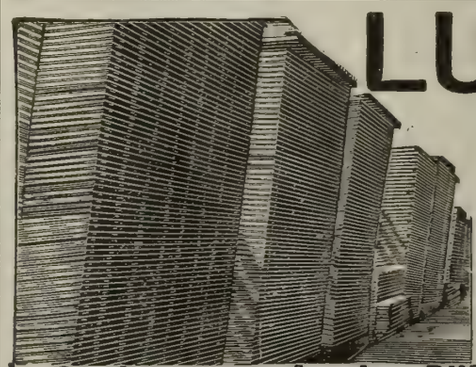
CENTURY MANUFACTURING CO.
Dept. 153 EAST ST. LOUIS, ILL.



REPRESENTATIVE POLAND-CHINA SOW—First-prize winner and champion at the Minnesota State Fair, 1907. At the Kansas City market recently a load of Poland-China hogs fed at Dwight, Kansas, were eighteen to twenty months old, and averaged 535 pounds at home. Although these hogs show the wonderful capacity of the Poland-China to put on fat and to make money, the market report was obliged to say that they were too heavy for the market. Had they been sold at ten months old, weighing 300 to 325 pounds, they would have topped the market; but as it was, they were the grandest lot of hogs and the heaviest of their age ever known to be marketed anywhere, and were sold at a discount. These hogs were too heavy to be driven; the ordinary hoist could not raise them to the packers' killing floor without pulling their legs out, and they had to be raised in a net. Under up-to-date conditions, a load of Poland-Chinas, 335 pounds average, can be raised, fed and fattened on the feed that was required to put on the last 235 pounds on these extreme heavy hogs. At St. Louis, the best hog market of all, 275 pounds is as heavy as hogs ought to be.



LUMBER
BARGAIN PRICES.

A wonderful opportunity is offered you to buy lumber and building supplies of every kind at ***Prices that will save you big money.*** Such a chance seldom occurs. Lumber for your house, church, barn, meeting house, crib, store, factory, and in fact, buildings of every kind. We can furnish absolutely everything needed in construction material. Have your carpenter or builder make a complete list of everything you require, including Lumber, Sash Doors, Nails, Roofing, Siding, Ceiling, in fact, anything you may need in building material or merchandise of any kind.

Send us your Lumber Bill for Our Estimate.

We bought at Manufacturers' Sale over 50,000,000 Feet of all kinds of Lumber and Finishing Material We are making special concessions, to those who buy at once. Even if you have no use for this lumber at once, it will pay you to buy now. Our prices will save you 30 to 50 per cent.

We cheerfully invite inspection of our Lumber stock and will be glad to have you come to our warehouse and yards at Chicago, see the lumber we are offering, and you will recognize that it is all what we say of it; make your own selection and see it loaded. It is not necessary to come to Chicago; we can easily sell you by mail. We can quickly convince you of the wisdom of placing an order with us. Just send us your lumber bill, and we will easily ***"Show You."*** On application we will send copies of letters from customers who have bought. They saved money why can't you? Write us to-day. ***WE PURCHASED EVERY EXPOSITION, INCLUDING THE $50,000,000 ST. LOUIS WORLDS' FAIR. Send for our Free 500 page Catalog No. C.H. 319.*** It quotes low prices on Furniture, Household Goods, Building Material, Machinery and Supplies.

CHICAGO HOUSE WRECKING COMPANY, 35th and Iron Sts., CHICAGO.

Poultry Facts Wanted.

Do you raise poultry? If so, what kind? How large a flock have you? What did your sales amount to last year? How many eggs did you gather during the year? How many during the best month? The poorest month? How do you house and feed your birds? Have you a good local market? Secretary Geo. B. Ellis, State Board of Agriculture, Columbia, Mo., will appreciate answers to these questions; also anything else concerning your experience with poultry. Mr. Ellis would also like to get some pleasing poultry pictures to be used in a pamphlet soon to be issued. We hope that many of our readers will write to him.

Poultry Notes.

Don't let the young and old stock run in the same flock yard if you can help it. Have them as near as possible all of the same age in each yard. Keep the birds busy by throwing the whole grain into the litter of some kind. Fowls will not exercise for the sake of exercising. When given a full feed in the morning, they will doze around until they are prompted by hunger to move.

A flock of chickens in an orchard will pick up thousands of insects and worms and the eggs that hatch them. Scatter grain occasionally in the orchard to encourage chickens to scratch.

One of the reasons why a small flock of hens does better than a large flock is because table scraps form a large part of the small flock's rations and they are an evenly-balanced ration. Poultry raising is similar to farming in that it is not so much the number of acres owned, but the number properly handled that gives the profits. Small, well-cared-for flocks always bring the best returns.

On the farm we should have utility in view all the time. Our standard breed should be one made up of table qualities, laying powers and hardiness.

It is the man who does one thing at a time, and that done well, who will succeed with his business. Begin with one breed and make a mark in poultry and success will come finally.

It costs about 80 cents to feed a capon from shell to market, and good capons should weigh nine to twelve pounds, and bring on market 14 to 24 cents a pound. Many capons do not reach the top in quality or the top of the market, but capon raising and fattening is a good business for those who are determined to succeed in it. To sell capons at $1.75 to $2.50 each looks like cashing chickens very well.

One capon grown and fattened by Mr. H. Dana Smith, of Massachusetts, weighed 14½ pounds, and sold at 30 cents a pound, bringing $4.28. This is from an article by A. F. Hunter in the American Poultry Advocate.

Instructive Chapter on Boilers.

About 200 B. C. Hero built the first steam engine, which was a sort of combination of boiler and engine. Since that time steam has been used for a number of different purposes, but in late years as a motive power, where it will no doubt continue to be used so long as it be regarded as less costly than other forms of motive power.

Boilers and vessels in which steam is generated have undergone great changes since their introduction. One of the first forms was spherical, made of cast iron or copper. This form came into use about 1700.

Boilers may be classified either from their forms, or the purpose which they serve—stationary, portable, locomotive and marine.

After the spherical came the Haystack, or Balloon boiler, so called because of its shape, and this in turn gave way to the one introduced by James Watt and called the wagon boiler from its resemblance to an old-fashioned wagon top.

Eary in the past century, what we may call the modern types of boilers began to be used. The simplest form of these is the plain cylindrical, set so that half of the circumference is exposed to the fire. In order to increase the heating surface without increasing the length or diameter of the boiler, the internal flue was introduced. First, one flue was introduced then two, and as a natural step from this we have our modern multitubular boiler. Flues are usually formed by bending sheets of iron into cylindrical form and riveting at the seams, while tubes are drawn or rolled, the seams being lapped and welded.

Time and space will not allow a detailed description of the different types of boilers, so the name and a few principal points of some of the boilers which have brought us to our present standard will be considered.

The Cornish boiler has but one flue, with the fire-box inside this flue. From this idea of the fire inside the flue the locomotive type was developed. Next, the Lancashire boiler, with two flues and a fire in each. The Galloway boiler, having the flues braced by hollow pillars forming a sort of water-tube boiler. The French, or Elephant boiler, having two smaller water cylinders just below the main cylindrical part and connected to it by means of water tubes or legs. From such types as these last no doubt developed the different styles of water-tube boilers of to-day.

The vertical fire-tube boiler is quite extensively used to-day, especially in small sizes and where floor space is lacking. A common form of this boiler is the one with tubes extending from the fire-box to the upper head, thus passing through the steam space, and therefore their upper ends liable to injury from overheating when heavy firing is employed.

A better form is the one with the upper ends of the tubes below the water line, thus keeping the tubes from overheating if the water level is kept where it should be.—F. N. Langridge, Assistant Department of Mechanical Engineering, Colorado Agricultural College, Fort Collins.

The Chicago International.

Intending exhibitors and all others interested can obtain a copy of the premium list for 1908 by writing to B. H. Helde, General Superintendent, Union Stock Yards, Chicago, Ill.

This great show opens November 28th and closes December 10th. The success in former years justifies the change in the closing date from the 5th to the 10th.

The entries in the individual classes close November 1st, as usual, and in the car-load classes on November 21st, one week prior to the opening date of the show.

The premium list shows that additional prizes have been offered for a competition of the live cattle entered in the slaughter test.

Additional special awards have been offered by Rosenbaum Bros. and Ingwersen Bros. in the "short fed special" classes.

Many new and additional awards are offered by breeding associations and individuals in the sheep department.

Special prizes offered by Wood Bros., with a view of encouraging an extension of the sheep industry on farms in the Central West, and another for the best four original papers on flock management by farmers' sons.

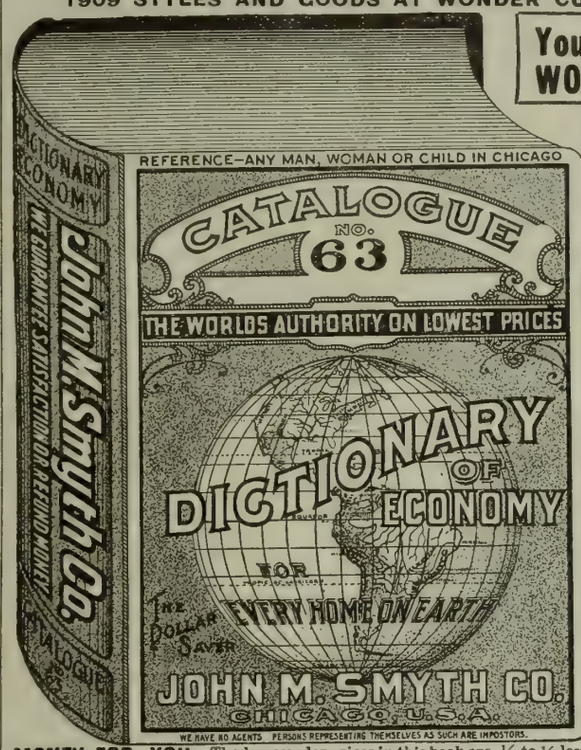
Many additional awards and trophies are offered in the horse department, and last, but not least, numerous prizes are offered to the stockmen of the future, in connection with the students' judging contest.

Copies of the premium lists will be mailed to any address on application, and the application should be made at once.

On August 27th the St. Louis market reported cider quotable at $6.50 per barrel, with none offering.

JOHN M. SMYTH COMPANY'S
MAMMOTH 1200 PAGE CATALOGUE NOW
FREE TO READERS OF THIS PAPER

IT'S THE BRAND NEW FALL AND WINTER CATALOGUE JUST PRINTED. CONTAINS ALL THE LATEST 1909 STYLES AND GOODS AT WONDER CUT PRICES THAT WILL SAVE YOU MUCH MONEY.



REFERENCE—ANY MAN, WOMAN OR CHILD IN CHICAGO
CATALOGUE NO. 63
THE WORLDS AUTHORITY ON LOWEST PRICES
DICTIONARY OF ECONOMY
FOR EVERY HOME ON EARTH
JOHN M. SMYTH CO.
CHICAGO, U.S.A.
WE HAVE NO AGENTS PERSONS REPRESENTING THEMSELVES AS SUCH ARE IMPOSTORS.
John M. Smyth Co.

You can save at least $25.00 on every $100.00 WORTH OF GOODS YOU BUY FROM THIS BOOK

WE WANT TO GIVE YOU and every reader of this paper one of these wonderful money saving books as soon as possible therefore we print below a coupon application which we respectfully request you to fill out, cut out and mail to us, and we will promptly forward you one of these latest and greatest of all catalogues, free of charge, with our compliments. Don't delay but send it now—to-day.

EVERYTHING AT WHOLESALE PRICES. Residents of Chicago, New York, Boston, Philadelphia, or no other city in the world can buy goods at their stores as cheaply as you can from this wonderful book, neither can they see, even in their largest stores, the great stocks and abundant variety of goods that you can by referring to the pages of this great, mammoth, reference book of merchandise. From us, through this book, you can buy everything. You can buy of us at wholesale price a tombstone or a plow, a dress pattern, clothing for men, women and children, furniture, a diamond, a watch, a set of harness, a buggy, a sewing machine or an organ or a piano. You can buy of us, at wholesale price, a violin, a mandolin, millinery, furnishing goods, household furnishings, a telephone or a churn. You can buy of us at wholesale price, hardware, groceries, guns, revolvers, or sporting goods of any kind. You can buy of us, at wholesale price, books, wall paper, paint, binder twine, carpets, curtains, cameras, talking machines, pictures, stoves, silverware, chinaware, a bicycle, or anything else you can think of at **lower prices than your home dealers can buy their goods for in carload lots. Get our Catalogue, buy as cheaply as merchants do and keep the retailer's profit in your own pocket, where it belongs.** Be your own dealer and **save several hundred dollars a year on your supplies.**

YOUR STORE KEEPERS GET RICH AT YOUR EXPENSE without giving you any service, value or return for the profit you give them. They make a big profit on every penny's worth of goods you buy of them. You don't need them at all. You can buy goods in any quantity, no matter how small, direct of us through the medium of our great catalogue, **as cheaply as retail merchants can buy their goods in carload lots. You can save hundreds of dollars a year.**

DON'T PAY RETAIL PRICES to any one. It is unnecessary and extravagant and wasteful. Buy direct as dealers do.

FIVE MILLION DOLLAR STOCKS. This marvelous Catalogue represents enormous stocks of merchandise, valued at over five million dollars. It is two inches thick and contains 1,200 large pages each 8x10½ inches in size on which **we illustrate and describe over 100,000 articles.** The great index of this wonderful dollar saver is wide and wonderful in its scope of subjects. Every article of necessity, luxury or amusement is listed there in proper classification, and will be found on the page as indexed finely illustrated and truthfully described in **plain English.** Exaggeration is rigidly barred from our book.

APPLICATION COUPON FOR YOUR FREE CATALOG.

John M. Smyth Company, Chicago, Ill.

Gentlemen: Enclosed find 15c to help pay the 21c postage on your great 1,200 page catalogue. You agree to send me a due bill coupon, good for 15c, with the catalogue, which you will accept the same as gold, silver or currency on my first order of $3.00 or over.

*Name*_____

Post Office _____

*State*_____ *R. F. D.*_____ *Box No.*_____

MONEY FOR YOU. The low wonder prices in this book are ¼ to ⅓ less than your storekeeper's. If his price is $10.00 for an article you can buy the same thing of us for $7.50 or less, and if his price is $100.00 for a bill of goods, you can buy the same bill of goods from us for $75.00 or less. This applies to all classes of goods. It applies to groceries and calico and staple goods of all kinds. It even applies to binding twine, sugar and flour, which are the most staple articles manufactured. This great saving is money in your pocket, the same as if you had worked hard to earn it. Don't pay retailers' profits any longer; be independent—keep them yourself.

BOOK COSTS US $1.00. FREE TO YOU. This great book costs us $1.00 to print and mail yet it is free to you. All we ask is that you fill out, cut out and mail the coupon application to us, with 15c in currency or postage stamps, to partly pay the postage on the catalogue (which alone is 21c.) and by return mail we will send you one of the mammoth catalogues, together with a due bill good for 15c., which you can apply just the same as cash on your first order to us of $3.00 or more. We ask this temporary deposit of 15c. simply as a safeguard against children and people who would order the catalogue through mere curiosity if we did not establish this means of protection. You can use the 15c. coupon which we send with the catalogue any time you send us an order for $3.00 or over, even in ten years from now. The coupon is always good for 15c. in trade on any $3.00 or over order you send us. It's the same as cash. Address,

JOHN M. SMYTH COMPANY, 150-194 West Madison Street, **Chicago, Ill.**

The Twice-a-Week St. Louis REPUBLIC

is a magnificent newspaper, containing all the latest home, foreign and political news. It is undoubtedly the best Democratic newspaper in the United States. We highly recommend this paper.

The National Farmer and Stock Grower is a nice, clean, general farm monthly publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. It is published at 50 cents a year, or three years for one dollar.

COMBINATION OFFER.

On account of the interest in the present political campaign we are able to combine both of these papers for the price of one.

SEND US ONE DOLLAR

and we will mail to your address **The St. Louis Republic Twice-a-Week Edition** for one year; also **The National Farmer and Stock Grower** for three years.

Address,

EVANS SUBSCRIPTION AGENCY,
3552 Vista avenue, - St. Louis, Mo.

How Do We Fertilize For Winter Wheat?

Editor National Farmer and Stock Grower:

Winter wheat favors a heavy, strong soil. Land previously occupied by fallow, rape, clover, peas, or any leguminous plant, is best fitted for winter wheat, as these plants draw a large amount of nitrogen from the air. Wheat demands easily available plant food in order to yield good crops. It prefers the original strength of the soil to dung. Fresh barn-yard manure often exposes wheat to rust and blight.

The strengthening of wheat soil by means of mineral fertilizer is highly recommendable. Use from 300 to 600 pounds per acre of a fertilizer containing:

Nitrogen, 2 per cent.; actual potash, 6 per cent.; available phosphoric acid, 8 per cent.

Bulletin No. 62 of the Maryland Experiment Station says that the fertilizer which has been found best for wheat at the Station contained 2 per cent. nitrogen, 9 per cent. available phosphoric acid and 7 per cent. potash.

To obtain such a fertilizer, the following materials may be used, which will furnish about equivalent quantities of nitrogen, phosphoric acid and potash, respectively:

Pounds of Material to be Used Per Acre.

Nitrogen—75 to 150 pounds nitrate of soda; or 60 to 120 pounds sulphate of ammonia; or 120 to 240 pounds dried blood.

Available Phosphoric Acid—160 to 240 pounds acid phosphate; or 140 to 280 pounds dissolved bone; or 200 to 400 pounds bone meal.

Potash—25 to 50 pounds muriate; or 25 to 50 pounds sulphate; or 100 to 200 pounds Kainit.

Out of these the farmer may choose the composition of fertilizer which is best and cheapest for him to obtain under existing conditions. A fertilizer composed solely of phosphoric acid is not sufficient for best results. Fertilization with nitrogen may be omitted if the wheat follows after red clover or another leguminous crop.

Special care should be taken to keep the soil clear from weeds. In the Southern States spring wheat is of little value on account of its liability to be killed by rust. Wheat should be sown rather early to avoid the Hessian fly; say at least two months before the usual time for heavy frosts. If the stand of winter wheat is weak, its condition can be improved in the spring by an application of muriate of potash. The use of liquid manure in winter time, and even in the spring, will help to bring on good results to the farmer without the risk of damaging his crop.—F. F. M.

Sweet Potatoes $10 a Barrel.

In St. Louis county, at Nursery, Mo., is the establishment of Weber & Sons, well-known nurserymen. This business was established by Mr. Henry J. Weber, who has given up the management of the business to his sons.

In talking over old times recently, Mr. Weber said that in the year 1869, finding that he had time to cultivate a little more ground, he decided to plant two acres in sweet potatoes, a crop he had very little knowledge of, but his father told him how to store and keep them over winter and he had splendid success. About the time he had stored them, along came some buyers from the Lucas Market, which was the best market in those days, and they said they heard he had sweet potatoes for sale. They had four empty barrels in the wagon.

Mr. Weber confessed to having a few sweet potatoes for sale, and in the absence of any knowledge of the market he offered to sell at $5.00 a barrel, which he thought a pretty good, stiff price, but they paid it. A few days later they came on for more, and they kept those four barrels going backward and forward.

Mr. Weber then began to think that the middle man was making too much money, and he went to town to see what was going on, and there he found them selling the sweet potatoes, not by the barrel, or by the peck, but by the single potato, and he went home and raised the price. The buyers came out and paid him $6.00, $7.00 and $8.00 a barrel, and left a standing offer of 50 cents more per barrel than anybody else would pay, and in this before all the sweet potatoes were gone he was selling four barrels at a time at $10 a barrel. He sold all the sweet potatoes that were delivered at the Lucas Market that season.

As characteristic of market conditions forty years ago, Mr. Weber said that naturally his success caused others to follow his example and the next year he knew of twenty acres in sweet potatoes, and the result was that sweet potatoes were sold at a uniform price of 50 cents a bushel, or $1.25 to $1.50 per barrel. Although two acres kept the market high and excited, twenty acres swamped it.

Corn Show Premium List.

If we published all the interesting articles concerning the National Corn Show which will be held at Omaha in December, we would have nothing else in the paper.

The Special Premium List is out. It gives rules governing contests. It gives rules governing club exhibits. It gives a complete list of special premiums, and it will be followed by the complete premium list. Every farmer should write to J. Wilkes Jones, Manager, 606 Bee Building, Omaha, Neb., and obtain the premium list.

Welfare Work by the Harvester Company.

Under this title appears in Harper's Weekly a finely-written article by Mr. John Kimberly Mumford, one of the foremost writers of the day. It relates to the humane side of the International Harvester Company. It speaks of the lives of the men and women employed in the great plants. It speaks of the educational work which is constantly going on. In this edition we can only take an extract relating to the heads of the working departments, as follows:

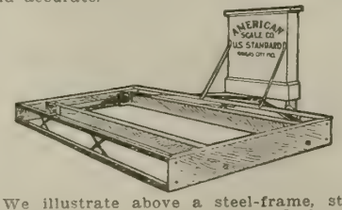
"What singleness of spirit means I first discovered by going to a monthly dinner of the department heads of the Deering plant, an enormous institution away over on the North Side. It was a rainy night, as bad as bad could be, but a hundred and twenty of them were on hand when we got there, and dinner was ready on the long table. You might have thought it was a lodge meeting, there was that measure of fellowship. When the feast was cleared way, a big blackboard was brought, and E. C. Clarage, proprietor of a big steel plant in South Chicago, lectured for an hour and three-quarters on the chemistry of steel-making. The eagerness of these men to know was written in every lineament of them. The interest never waned until the lecturer stepped down. Then the fun-making began. There were two pianists and a 'cellist from the works; there was a man out of the rolling-mill who sang as good songs and did as good impersonations as you would be apt to see on Broadway. The cigars were as good as the dinner, and the spirit was better than all. They called on the General Manager for a speech without any warning, and he gave them a masterly digest of one of the Harper's Weekly articles on "Opportunity," and brought down the house. It's that sort of alacrity and good judgment that has made him manager of a $120,000,000 corporation.

A quiet, bearded man who bade us good night at the mill door was Christopher Borg, Superintendent of the whole big Deering establishment that in normal times employs 5,000 men. One morning in October, 1882, "Chris" Borg was hired from among the crowd of men at the gate at the Deering Works as a day laborer to do service by the day with pick and shovel. He is a whole chapter on what a man can do for himself in corporate employ."

THE AMERICAN SCALE.

Every farmer should own an accurate and reliable scale. It enables him to run his farm on a business basis, and will soon pay for itself.

In purchasing a scale, it is very important to buy one that is well made, simple, strong and accurate.



We illustrate above a steel-frame, steel-joist pitless scale manufactured by the American Scale Company. This scale has ball bearings, direct levers and automatic leveling device. This company has been manufacturing scales for fourteen years and they give an unlimited guarantee. If you are interested, they will send you free catalogue and special thirty-day offer on request. Write to the American Scale Company, 105 Indiana Ave., Kansas City, Mo.

The KEELEY Treatment Has Stood the Test of Time,

Having been used with **unparalleled success** for 22 years in curing Alcoholism, Morphine and other drug-using, Cigarette and Tobacco habits, and Nerve Exhaustion. Half a million cured men and women in the United States are our testimonials. Remedies and treatment absolutely free from any injurious or harmful effects. Will power, intellectual activity, health, business capacity and the confidence of family, friends and business associates recovered. For full information, consult or write in confidence,

THE Keeley Cure

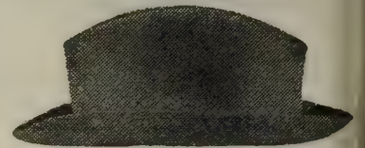
SAYMAN, 2404 Franklin Ave., ST. LOUIS, MO.

A GREAT OFFER.—We will give every reader of this paper an 18-months' trial subscription to that handsome farm and stock magazine **FARM LIFE**, printed in colors, for only 25 cents. Send the quarter to **FARM LIFE**, 310 Coca Cola Bldg., Chicago, Ill.



The National Farmer Hat.

The sizes are from 6⅝ to 7. They are hats suitable for men and boys. They are of good material, well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. The hats are black and steel gray. We send black unless steel is called for. These hats wear as well and last as long as any $2.00 to $3.00 hats in this market. They will give entire satisfaction. We believe this hat will make a first-class subscription premium. The subscription price of The National Farmer and Stock Grower is one dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us one dollar to us for two-years' subscription to The National Farmer and Stock Grower and we will send you by mail one of these fine, wool crusher National Farmer hats as a premium. Be sure to mention the size and color. A million and a half of these hats have been sold.

Address, **The Hale Publishing Co., St. Louis, Mo.**

On August 31st, at St. Louis, pecan nuts were selling at 2¼ to 3¾c per pound; walnuts at 35c. per bushel; hickory nuts at $3.00 per bushel; shellbark and 35c. for large; hazel nuts at 4c. per pound.

Spasms
St. Vitus' Dance

Many persons who suffered untold agonies from epilepsy, fits, spasms, and St. Vitus' Dance are today well. The strengthening influence of Dr. Miles' Nervine upon the shattered nerves having restored them to perfect health.

"I endured agony that words cannot express from St. Vitus' dance, which followed a very severe spell of rheumatism. I doctored with a physician; but the more I took of his medicine the worse I got. My mother's devotion saved me. After she had become almost heart-broken, as well as physically exhausted from constant care, by the advice of a neighbor she procured a bottle of Dr. Miles' Nervine. From the first dose to the last a continual change for the better was noticable, and when I had taken eleven bottles I was well, and in robust health."
EDWARD D. REAM.
North Manchester, Indiana.

"Our little boy Harry, had spasms for three years, and although we doctored with many physicians, he continued to grow worse until he had ten spasms in one week. About that time our attention was called to Dr. Miles' Nervine. We began giving it to him. His improvement seemed slow, but when he had finished the fourth bottle the spasms had disappeared, and have not been seen now for years. We shall always recommend Dr. Miles' Nervine."
MRS. BELLE M. TINDALL,
Hastings, Neb.

Dr. Miles' Nervine is sold by your druggist, who will guarantee that the first bottle will benefit. If it fails, he will refund your money.

Miles Medical Co., Elkhart, Ind

Modern Wheat Growing.

Wheat growing in the Central ates has passed through various ages until it has become one of the ain crops of the section. From e sickle and cradle to the self-nder has been a matter of comratively short time, a generation, a little more, perhaps.

Our good old fathers of three score d ten or four score often relate cidents of days when they swung e cradle along with their neighbor, llowed by other neighbors, who und the grain ready for the shock. kewise, methods of threshing have anged just as rapidly. Where the ntle old horse used to walk round d round on the wheat until the ain and straw were separated, lor to the fanning operation, now e steam engine easily pulls a resher into the field, and after a w minutes the wagons loaded from e shocks drive in pairs alongside e self-feeder. The bundles are rown onto the carrier and the next oment the straw, separated from e wheat, is blown far away from e fan in the rear, while the eaned wheat comes tumbling into e grain box, from which it is mped automatically into the wait-g two-bushel bags, just so many unds (usually thirty) each time.

Truly, these are wonderful anges. They have made it posble for farmers to handle it more dily and quickly. But have they de it possible to grow more shels per acre? No. The wheat rvester can only harvest and the dern thresher can only thresh the wheat after it is grown. They have nothing to do with the amount of wheat which the land produces. This is determined by other things.

Now, it would seem that the most essential thing would be the production of the wheat rather than the harvesting and threshing. These are important, but surely the amount of wheat grown is more important. But have methods of growing shown such improvement as methods of harvesting and threshing? Surely not. Certainly the yield of wheat per acre is no better than it used to be. We might truthfully say the yield on thousands of the older farms is much smaller than it was when the cradle was in use. But this is not the fault of the new methods of harvesting and threshing nor of the better methods of seeding.

The reason lies deeper, farther back. It lies in the treatment of the soil. It lies in the effect of many seasons on the soil. It lies in the growing of wheat after wheat for years. It lies in the burning of straw, which used to be common, and is sometimes practiced in the Central States now. It lies in the hauling of crops away from the farm. It lies in the waste of manure. It lies in the absence of clover or other legumes. In short, it lies in the depletion of the former stores of humus and plant food in the soil.

The wheat plant must have ten or twelve elements for its proper growth. Practically all soils contain an abundance of these elements with three exceptions — nitrogen, phosphoric acid and potash. These are apt to be deficient. Sometimes one, sometimes two, sometimes all. But in any case the deficiency will be shown in a reduced yield of wheat. In many cases an analysis may show plenty of plant food, especially potash, but it must be remembered that by far the largest per cent. of the plant food in a soil is not available. It exists in certain insoluble compounds which must be split up by action of weather, cultivation, presence of humus, and in other ways, before the plant can use it.

Just as the yield of wheat is reduced when the humus and available plant foods are lowered so the yield is larger when these things are increased. And just here lies the essence of the discussion of soil fertility so ably handled by Secretary Wilson and Hon. J. J. Hill at the Governors' Conference in Washington in May. They, like many of our earnest scientists and thinkers, recognize the pressing need of maintaining and increasing soil fertility and made suggestions such as have been made frequently by Experiment Stations and the agricultural press. Those methods for increasing soil drainage, thorough tillage, good seed, crop rotation, clover or other legumes, manure and commercial fertilizer.

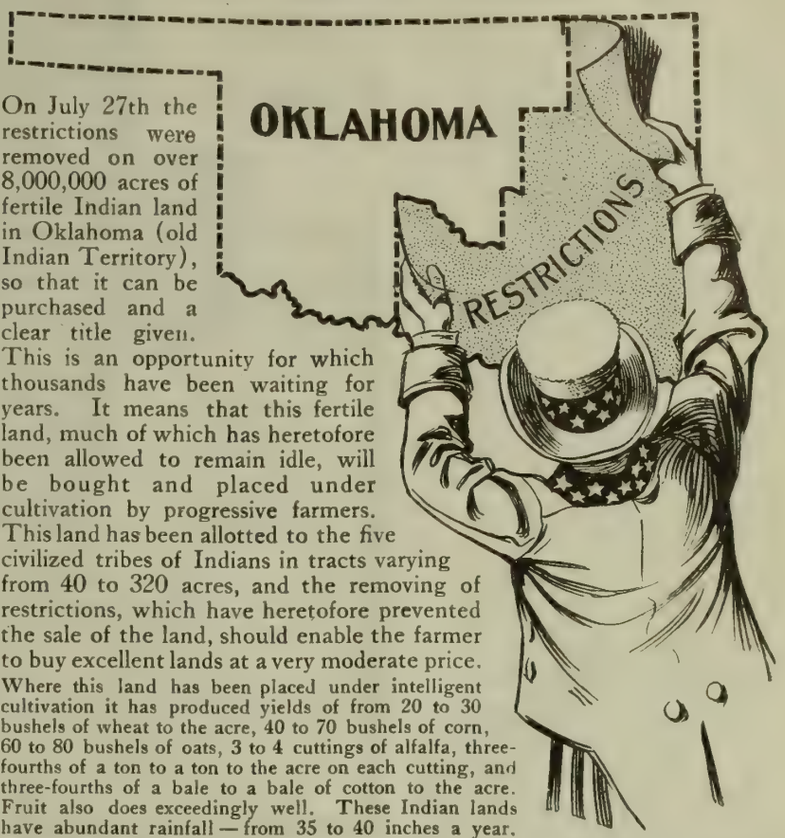
Inasmuch as unwise crop growing has reduced the store of available plant food so that the yield of wheat on hundreds of farms is barely enough to meet the cost of production, it is evident that this available plant food must be restored before profitable crops can be grown. Many farmers are doing this. More could do it at a big profit. After using crop rotation, clover and manure, the available food supply can be rapidly and profitably increased by the use of commercial fertilizers. In fact, this is the most feasible plan to maintain the supply of available potash and phosphoric acid in the best proportions.

These supplements to the successful farm contain available plant food in concentrated forms. An application of 200 to 300 pounds per acre of a good, high-grade fertilizer will pay for itself and give a big profit on the money invested. In the writer's locality some farmers used fertilizers on the wheat crop and recent threshing records show enough increase to pay for the fertilizer and give 50 to 75 per cent. profit on the money invested. This in addition to the increase in clover, which shows the good effects of the fertilizer plainly.

They used a fertilizer containing 3 per cent. nitrogen, 8 per cent. phosphoric acid and 6 per cent. potash. In one case the addition of fifteen pounds (about 37 cents) muriate of potash gave seven bushels of wheat.

It might be noted that numerous experiments in the wheat belt show that the average wheat fertilizer would be more profitable if the per cent. of potash were doubled. This can be easily done by adding, say, 10 or 12 pounds muriate or sulphate of potash to every 200-pound bag of fertilizer. The amount used per acre can also be profitably increased to 200 or 300 pounds. The real question is not what is "necessary," but how much and what kinds of plant food will give the greatest profit consistent with maintaining the productiveness of the land.—J. G. Gentry, Spencer county, Indiana.

Uncle Sam Removes Restrictions on Indian Lands



On July 27th the restrictions were removed on over 8,000,000 acres of fertile Indian land in Oklahoma (old Indian Territory), so that it can be purchased and a clear title given. This is an opportunity for which thousands have been waiting for years. It means that this fertile land, much of which has heretofore been allowed to remain idle, will be bought and placed under cultivation by progressive farmers. This land has been allotted to the five civilized tribes of Indians in tracts varying from 40 to 320 acres, and the removing of restrictions, which have heretofore prevented the sale of the land, should enable the farmer to buy excellent lands at a very moderate price.

Where this land has been placed under intelligent cultivation it has produced yields of from 20 to 30 bushels of wheat to the acre, 40 to 70 bushels of corn, 60 to 80 bushels of oats, 3 to 4 cuttings of alfalfa, three-fourths of a ton to a ton to the acre on each cutting, and three-fourths of a bale to a bale of cotton to the acre. Fruit also does exceedingly well. These Indian lands have abundant rainfall — from 35 to 40 inches a year.

This territory has hundreds of towns and cities, many of which have all the advantages of older settled communities, such as schools and churches, hotels, libraries, electric lights, telephones and telegraph lines, street railways, etc. Only 11% of the present population of these Indian lands are Indians and they are civilized, law-abiding citizens. If you are not satisfied with the opportunities where you are now located, this is your one **great** chance to better your condition. Take a trip down there and look around; find the farm that just suits you and buy it while it is cheap.

The Rock Island-Frisco Lines have over 1300 miles of railway in the territory where the restrictions have been removed—over three times as much as any other line. Purchase your ticket over the Rock Island-Frisco-Chicago & Eastern Illinois Lines and you will see the best. Low round-trip rates will be in effect to all points in these lands and other parts of the Southwest on September 1st and 15th, October 6th and 20th, and the first and third Tuesdays of other months.

Rock Island

SELECTED POETRY.

THE CRICKET'S WARNING.

Outside my window there's a thicket
Where hawthorn branches intertwine,
And there, all night, a fretful cricket,
By accident or by design,
Proclaims that summer's on the wane,
Insists that autumn winds ere long
Will blow across the hills again
And leave the world bereft of song.

I wake at midnight from my dreaming
And restlessly toss to and fro,
What time the cricket keeps on screaming:
"The autumn winds ere long will blow!
The peaceful, restful summer days
With summer's joys will soon be past;
The sumac will be ablaze,
The nights are growing longer fast."

Out on you and your sad complaining,
Oh, foolish little pessimist!
I know the summer time is waning,
Therefore you may as well desist;
Prate not to me of autumn's ills,
Nor scold because the nights grow long,
For when the haze is on the hills
My dreaming quickens into song.
—Chicago Record-Herald.

PETER AND PAUL.

I came near falling the other day,
I wanted some money to give away,
And was strongly tempted at charity's call
To take from Peter and give to Paul.

Paul has money but Peter has none,
But Paul is the minister's only son,
And Peter a sinner with a judgment small,
So it sounds more tony to give to Paul.

It's easy to sell poor Peter a coat
For twice its worth and by taking his note,
And charging him interest a little tall
You'll have an extra for wealthy Paul.

It's often done by many a man,
He sells to the poor for all he can,
For the rich have power by a simple scrawl
To steal from Peter to honor Paul.

Now, hearken, my brethren, a warning take
And in giving your alms for the Savior's sake,
For God will not smile on your gift at all
If you rob poor Peter to honor Paul.

Let truth and honesty rule each heart,
And when from these earthly things we part
To stand at the judgment one and all,
We can see poor Peter and wealthy Paul.

And now if you've only a penny to give,
I will try my best as long as I live
To be honest with God and never fall
By taking from Peter to give to Paul.
—F. L. Roe

AN OLD STORY.

"I haven't any chance," he said; "the world
has closed the door
Of opportunity that opened unto men of
yore.
The songs have all been sung. The mighty
tasks are carried through.
The world, no longer young, leaves nothing
more for youth to do!"

And he watched the steamship hasten on
its journey far away
To lands that oped their treasures to us
only yesterday.
He saw the locomotive as it labored hard
for speed,
Its efforts insufficient for a waiting public's
need.
He heard the voices calling from the wil-
derness so deep;
"Come ye, with hearts of courage; come
and waken from their sleep.
The harvests that for centuries have
waited 'neath our soil,
Impatient for the cheery call of common
sense and toil."
The air is all a-whisper with the messages
that fly
To tell of years more wondrous than the
wondrous years gone by.

And still he cries: "I have no chance!"
And still the world sweeps on,
Nor heeds the plaint that it has heard
Since ages past and gone.
—Washington Star.

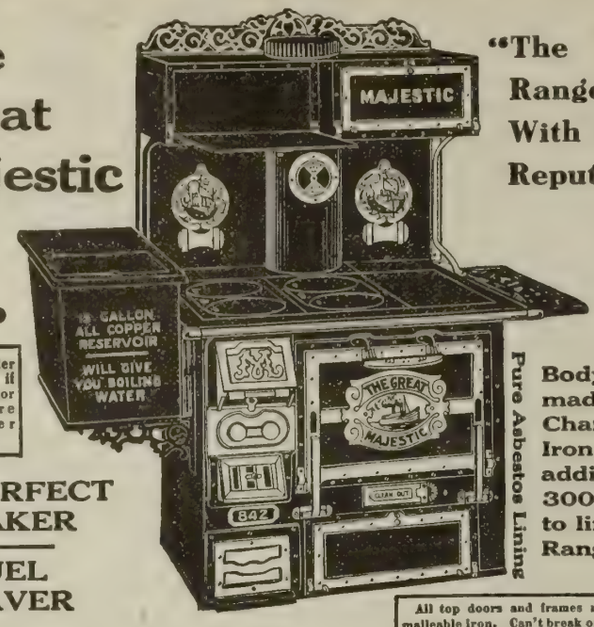
LOST.

From Paradise, one day, an angel brought
A radiant gem and placed it in the hand
Of one who waited. "Cherish it. Let naught
Its lustre mar; forget it not," he said.
"Its light, now flashing, it will steadfast
shed
As you are loyal to your love, and true.
It is the only one will shine for you."

The mortal looked upon the glowing thing
Exultingly. A great joy filled his heart
Like a bright dewdrop, where the sunbeams
cling.
Light shafts reflected, it lay glistening
there,
While in its pure, surpassing ray
The very kernel of all life, all truth,
The center of the heart of love of youth

As time went on the mortal's wonder died
That such a priceless gift should be his
own.
He tossed it high in foolish, boyish pride,
To watch its splendid rays flame in the
sun;
He felt himself of gods the favored one,
Till once, in careless mood at fatal day
He put it down forgetting, let it stay

The Great Majestic



"The Range With A Reputation"

With water fronts if wanted for pressure or other boilers.

Pure Asbestos Lining

Body made of Charcoal Iron, adding 300% to life of Range

PERFECT BAKER

FUEL SAVER

All top doors and frames made of malleable iron. Can't break or crack.

You don't buy a range every year. Therefore when you *buy* one, *buy* the *best.* At first the Great Majestic may cost you a very little more than an ordinary range, but in the end it is *much cheaper.* It has *durability* and will out-last three ordinary ranges. It is scientifically built—*no heat can escape or cold air enter*—will *save half* on your *fuel bill.* A perfect baker—*not one day good—next day poor—but always uniform.* Will save you from disappointment and poorly cooked meals. Your Best Guarantee: 1st—The reputation of the plant behind the range. 2d—Hundreds of thousands in use every one giving satisfaction. We want you to see *The Great Majestic.* If no dealer near you has it, write us—we will send you free our booklet "Range Comparisons," and tell you where you can see a Majestic—the range that gives satisfaction and out-lasts all others.

THE MAJESTIC MFG. CO., St. Louis, Mo.

The Great Majestic Is For Sale In Nearly Every County In Forty States

[Please mention National Farmer and Stock Grower.]

Then did he miss the light in two gray eyes
That he was used to see, complacently,
The light that beams with Love's sublime
surprise,
That touches earth with heaven's divinity;
The jewel! Vain the search. Swift penalty!
The angel's warning words remembered
Told him the gem was gone, that Love was
dead.
—Life.

THE CALL OF THE TOWN.

Oh, sing no more of the sylvan shade,
And the bee and the butterfly,
And the flowered expanse and the perfumed
glade
Where the hours go drifting by.
For the mind grows weary of branches
tossed
And the salt of the ocean spume,
And sighs as it dreams of autumnal frost,
"Sing hey for my furnished room!"

Somewhere there's a spot where you may
alight
From a swift, convenient car;
Where electric lamps will illumine the night
Instead of a distant star;
Where the katydid doesn't sing unbid
And mosquitoes do not presume
To follow, no matter where you've hid—
"Sing hey for my furnished room!"

Somewhere there's a place where the
warmth you'll get
Is measured by pipe and screw,
And the roof's 'way off, where you can't
get wet
If the rain comes trickling through.
No doubt ere long we will sadly miss
The breeze and the bounteous bloom,
But at present the song that soothes is
this;
"Sing hey for my furnished room!"
—Washington Star.

BE A BOOSTER.

When you hear a fellow knocking, 'cause
the times to him seem hard,
Be a booster!
Just slap him on the back and say: "Come,
now, cheer up, old pard!"
Be a booster!
You will find that knocking never helps,
while boosting always pays;
That a cheery smile will brighten up the
very darkest days;
So if you'd choose the surest of the joy-
inspiring ways,
Be a booster!
—Memphis Appeal

THE LAZY MILKMAID.

"I wish you'd turn to milk, she said,
"And save me all this clutter."
And Mooley winked the other eye
And turned instead to butt her.
—New York Press.

A LITTLE CHILD.

I paced one day along the dusty street
With heavy heart and inattentive mind,
When suddenly, with tiny, pattering feet,
A little child came softly up behind.

He joined me, and we walked on side by side,
Some spell of silence I could not define
Was on us; then, with blue eyes opened wide,
He looked at me and placed his hand in
mine.

A baby's hand, and yet so firm and strong,
It held my tired one with kindly grasp,
And as we walked still silently along
My heavy heart found healing in that
clasp.

What sweet, mysterious influence led him
there
I can not tell, but thus it seemed to me—
His guardian angel guided him to share
My burden with unconscious sympathy.

Unconscious, for as yet his tender mind
Had never learnt that love is kin to pain,
And this is sympathy, whose links can bind
Their heart to heart as with a golden
chain.

He needed naught of mine, he would not
miss
Me when we parted, nor would understand
My thanks, but on his brow I left a kiss,
And thanked God for the kindly baby
hand.
—Penny Post.

THE BREAD WINNERS.

We make the cotton that clothes us,
The corn for the bread we eat,
An' the stills that make the moon-shine,
An' the cider, sharp an' sweet!
Then it's "Hoe yer row!"
An' the world will know
That the country's hard to beat!

Don't care for the Wall street money
Where folks are takin' their ease;
The hives—they drip with honey,
An' plenty's left for the bees!
Then it's "Hoe yer row!"
An' the world will know
It's come an' go as you please!
—Frank L. Stanton.

WHOOP 'ER UP.

When business' growin' dull
Whoop 'er up!
The greater grows the lull!
Whoop 'er up!
And when times begin improving,
Keep a-hustling, keep a-moving,
Whoop 'er up!
Whoop 'er up!
Whoop 'er up!
Tri-State Fair.

MILK AND SUGAR.

The milkman and the grocer
Were walking on the strand.
"I dearly love the water!"
The former chuckled. And
The grocer with a wink averred
He just adored the sand!
—New York Press.

Insect Ways.

In some parts of the East the army worm is reported as making great havoc among the orchards, completly denuding the branches of apple trees. The late frosts led people to believe the fruit crop a hopeless loss, hence trees were not sprayed. When the enemy was really discovered the foliage was so dense that sprays failed to penetrate properly. The frost scare proved false, and now people are beginning to see that they have not only lost a fine yield of fruit, but their trees are in danger of weakened vitality if not death. Moral: It pays to keep at the spraying.

In other localities similar complaints come from the canker worm, and the same remedy is offered.

Don't get scared if you see something unusual in the realm of lower life. It may be a friend in disguise. There is scarcely a more repulsive-looking insect than the ichneumon fly, with its long ovipositor, which is usually mistaken for a stinger. Yet this fly deposits its eggs in the larvae of the Polyphemus, common upon the oak and elm, and its young literally devour the host worm.

If the ants are especially thick among your house plants, examine them for honey dew, a sticky substance deposited by the plant aphis. This calls the ants, and should also call attention to the presence of the pest, though our industrious insect friend preys upon its eggs and young as well as upon the sweet secretion afforded by them.—Bessie L. Putnam.

The Blame Was His.

Harrison Bowser, who lives near McGrann postoffice, in Pennsylvania, some days ago went to a celebration where he looked on the wine. When he reached home and could not find his wife he came to Kittanning and inserted in the town paper an "ad" that his wife had left his "bed and board."

Mrs. Bowser reached home later. A very badly battered Mr. Bowser paid for the following "ad" in the country paper:

"Last week I advertised that my wife had left my bed and board. That was only imaginary. My wife was on a visit to neighbors, and when I returned home under the influence of drink I imagined she had left me, and without any cause hastened to advertise that she had gone. I do this now to assure the public that there was no blame on my wife; that it was all mine."

To Economize Space in Clothes Presses.

"We have equipped each of the clothes presses in our house with long, nine-inch screw hooks, such as are used to suspend bird cages from," says a writer in Woman's Home Companion for September. One hook easily holds six skirt or waist hangers. Not only is the available space greatly increased, but 'finding things' is much easier than in a press where small hooks are used and things hang one over another."

AN EXCELLENT ATLAS

Offered as a Premium to be Selected by Those Who Pay One Dollar in Advance For a Three-year Subscription to The National Farmer and Stock Grower.

The subscription price of The National Farmer and Stock Grower is fifty cents a year, or one dollar for three years. We are glad to obtain subscriptions on credit, payable at the end of the first year, but we are better satisfied if the dollar is paid in advance; therefore we offer premiums to induce advance payments.

OUR MOST VALUABLE PREMIUM.

Our very best premium for the purpose of inducing the three-year subscription to be paid in advance is **HAMMOND'S HANDY ATLAS OF THE WORLD,** and it is remarkable what this wonderful book contains.

HAMMOND'S HANDY ATLAS OF THE WORLD consists of 107 pages, 6x8 inches; is printed in colors and is bound in a durable red-cloth cover, just as shown in the illustration. It contains seventy full-page maps of every state and territory, with new railroads and towns.

Every country in the world is shown by maps from the latest plates.

All maps are carefully printed in colors on best cream-laid paper, boundaries distinct, names of towns in graded type, indicating their size. A work of rare beauty and usefulness.

This Atlas contains arranged lists of cities, giving the latest census figures of all states and territories and foreign countries.

The chapter on the United States Reclamation Service, illustrated with a comprehensive map, gives latest and most complete data in regard to irrigation in our Western States.

A detailed description of the final plans for construction of the Panama Canal, accompanied with a profile and complete map of the Canal, is given.

Among other valuable features is a condensed biography of each of our Presidents, with likenesses in half-tone.

OUR SUBSCRIPTION OFFER.

We will send you **The National Farmer and Stock Grower for three years and send you absolutely free, prepaid, Hammond's 1908 Handy Atlas of the World, all for One Dollar.**

SUBSCRIPTION BLANK.

National Farmer and Stock Grower, 3550 Vista avenue, St. Louis, Mo.:

I enclose One Dollar to pay for my subscription to your paper for three years in advance, on condition that you send me, free and prepaid, one copy of **Hammond's 1908 Handy Atlas of the World,** as per your guarantee above.

Circumstantial Evidence.

In a criminal case one day Senator Vest urged that no man should be convicted on circumstantial evidence.

"Why," he said, "when I was a boy I knew another lad who, while his parents were absent, went into the pantry and nearly devoured a custard pie. Then, fearing the consequences, he looked about for means of hiding the traces of his guilt.

"He seized the cat, smeared her face and paws with the custard, and then took the innocent animal into the back yard and shot her. As he did so, the boy observed to me:

" 'There goes one more victim of circumstantial evidence.' "

Vest won the case.—Philadelphia Ledger.

Our Debt to the Bugologist.

We have been inclined to treat the study of insects as a joke, and some of us possibly have looked at the dollars spent by Uncle Sam in maintaining a department for this purpose as money wasted. Yet now we are getting returns with big interest, and figures quite bewilder us with the possibilities of what might be in a very few years without this knowledge which their study has contributed.

A few years ago careful and conservative estimates placed the annual loss by insects at more than $700,000,000. Forest insects damage the great timber of the West more than the forest fires. The loss of life through malaria scattered by mosquitoes and flies is another recognized horror fearful to think of; while yellow fever, typhoid, Texas cattle fever and other calamities to man and beast have been traced to similar source.

The work of late has been upon the cotton boll weevil, Hessian fly, gypsy moth and San Jose scale, the worst four of pests to the farmer, brown-tail moth, white fly, insects attacking deciduous fruits, field crops and vegetables. Their direct economic relation to man has taken a most practical turn, and while much is yet to be done, the fact that $100,000,000 to $200,000,000 is saved annually on the wheat crop, $6,000,000 or more on apples, and the oranges and lemons saved from annihilation only by the introduction of an Australian lady bug is proof that the entomologists have richly earned their salary.—Bessie L. Putnam.

Low Priced Roofs.

Some ready roofings have so little protective quality of their own that they require painting every year, although there are better grades which can be left as long as three years without this protection.

The cheapest way out of the difficulty is to buy a roofing which **needs no painting whatever.** Such a roofing is Amatite, which our readers will find frequently advertised in these columns.

The mineral surface of this material scorns the protection of paint and faces the weather boldly. Rain, snow and wind have no effect whatever upon it, and it will give good service year after year in the most extreme exposures without any care or attention.

A sample of Amatite can be obtained by requesting same on a postal card addressed to the nearest office of the Barrett Manufacturing Company, New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Pittsburg, Cincinnati, Kansas City, Minneapolis, New Orleans.

Three generations of Simpsons have made

SIMPSON

EDDYSTONE PRINTS

Founded 1842

Ask your dealer for

Simpson-Eddystone Black & Whites

The celebrated old "Simpson" Prints made only in Eddystone.

Not ordinary calicoes that get flimsy and fade, but beautiful designs on substantial cloth. Absolutely fast color. Standard 65 years ago—standard today. Some designs in a new silk finish.

If your dealer hasn't Simpson-Eddystone Prints write us his name. We'll help him supply you. Decline substitutes and imitations.

Simple Instructions in Music.

Investigate the Simplex School of Music advertised in these columns. The subject is an interesting one. A free book will be furnished if you write for it. Address, Conservatory 12, Simplex School of Music, Kansas City, Mo., and state if you have a piano or organ.

To Sharpen Scissors.

Cut them rapidly on the neck of a small glass bottle, or, better still, on a ground-glass stopper. It trues the edges and makes them cut like new. —Woman's Home Companion for September.

Why He Was Afraid.

Ralph W. Smith, the bondman, was dictating to his stenographer the other day when a woman entered the office, according to the Denver Post.

"Is this Mr. Smith," she asked.

"It is," was the reply. "What can I do for you?"

"I'd like to see you in private," said the woman.

"I never see anybody in private," Mr. Smith said. "Go ahead and talk right here. My stenographer knows all my business, anyway."

"No," said the woman, hesitatingly. "I want to see you in private."

"Impossible, madam."

"Not even for a moment?"

"No."

The woman smiled scornfully. "I suppose you're afraid of me just because it's leap year," she said.

Farmers' Institute Workers.

The next annual meeting of the American Association of Farmers' Institute Workers will be held at Washington, D. C., November 16th and 17th.

At the same place and beginning November 17th will be held the annual meeting of the Association of American Agricultural Colleges and Experiment Stations. The Secretary of the Association of Colleges and Stations writes: "It seems impossible to secure reduced railroad rates."

Notice is sent out thus early in order that the Farmers' Institute Workers of the country may have time to arrange for attendance upon this meeting. A programme of the exercises will be published before the date of the meeting.

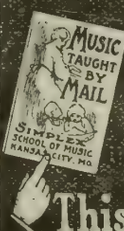
John Hamilton, Secretary and Farmers' Institute Specialist, can be addressed care Office Agricultural Experiment Stations, Department of Agriculture, Washington, D. C.

Civil Service Book.

The International Correspondence Schools of Scranton, Pa., issue a free Civil Service Book, which contains the requirements necessary to pass government examinations. Young men and women who desire to better their condition educationally are invited to write for it. Address, International Correspondence Schools, Box 1153, Scranton, Pa.

At last reports the St. Louis beet market was firm at 50 cents a bushel.

Learn Music By Mail



This FREE BOOK Tells How

By our wonderful Simplex System—one of the greatest inventions of the age—anyone of ordinary education can learn by mail to play piano or organ

IN 20 EASY LESSONS

You need not know the first principles of music. By this wonderful system you can in 20 lessons become a capable musician. The work is easy and fascinating—you will be wonderfully surprised at the progress you will make. In a few weeks, by this method, you can play popular, sacred or classical music. Considered better than a 3-year conservatory course as a time and money-saver—teaches the practical and usable in music and does away with all unnecessary theory. You should have this course of lessons. The cost is a mere trifle compared to the real worth. Send for our **Free Book** today. State whether you have piano or organ.

A GRAPEVINE PREMIUM.

A Splendid Introduction to Grape Growing Under the Most Favorable Circumstances.

Every farmer or owner of a suburban home will find it pleasant and profitable to grow a few grapes. To enable our friends and patrons to make a favorable introducion to grape growing we will furnish them a collection of grapevines which will grow nicely on a trellis of which the diameter is fourteen feet.

Grape trellis which can be easily constructed.

The trellis is not necessary, however, the first or second year, as stakes can be driven to each vine. The trellis can be constructed when it becomes necessary. The time for planting is now until the ground freezes. We have arrangements with the best grape nursery in the country to mail out for us a special collection of the twelve grapevines indicated on the diagram showing the ground plan of the trellis.

Twelve grapevines: The **Concord,** black; the **Niagara,** white; **Catawba,** red; **Moore's Early,** black; **Elvira,** white; **Massalla,** red; **Ives,** black; **Moore's Diamond,** white; **Perkins,** red; **Norton's Virginia Seedling,** black; **Martha,** white; and **Aroma,** red; constituting the best possible collection of grapevines.

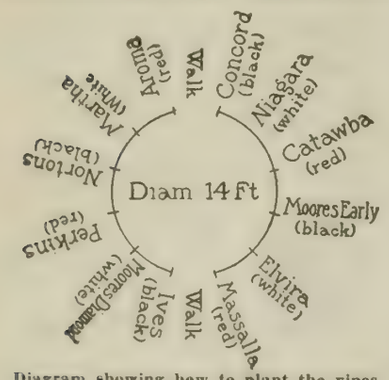

Diagram showing how to plant the vines.

Send us one dollar and fifty cents and we will credit you with two-years' subscription to this paper, The National Farmer and Stock Grower. We will also send you the twelve grapevines.

Each variety undergoes a local test. Those best adapted to climate, soil and local conditions and to tastes of the grower can be selected. The collection will furnish grapes for all of the family. Anyone having a small yard can grow these vines to excellent advantage. Address, **Hale Publishing Co., 3550 Vista avenue, St. Louis, Mo.**

Ordinary maple syrup is quotable at 75 cents a gallon, with Ohio and Canadian up to $1.00.

Poisoning Prairie Dogs.

Attempts made last spring at poisoning prairie dogs in national forests on an extensive scale seem to have been highly successful in ridding selected areas of these small pests, and plans are now being made to carry on the work much more widely next year.

The first experiments in this line were made in New Mexico by a stockman who has since entered the Forest Service. In 1901, Dr. C. Hart Merriam, Chief of the Division of Biological Survey of the Department of Agriculture, made a report upon "The Prairie Dog of the Great Plains," in which the damage done by the dogs was pointed out, and various methods of poisoning them were suggested. This report of Dr. Merriam's may be said to have blazed the way for practical work in prairie-dog extermination.

Prairie dogs are very obnoxious to the stockmen, for they devour much grass and undermine the surface of the ground with their burrows. Where they establish themselves the destruction of the range is only a question of time.

Range improvement in national forests is one of the chief objects of regulating the grazing. For this reason the Forest Service is leaving no stone unturned to prevent range deterioration. Stockmen who had suffered heavily from the prairie-dog pest were solicitous to have the work taken up, and gladly offered to cooperate with the service in furnishing men and horses to distribute the poison.

To ascertain what success could be had in ridding considerable areas of the pest, a selection was made of parts of the Leadville and Pike National forests, which were badly infested. The region in these forests upon which the dogs were located aggregated 300 square miles or more. In order to demonstrate the effectiveness of the work an area of some 60,000 or 75,000 acres of actual dogtown was selected for the test. From 80 to 90 per cent. of the dogs were killed with the first distribution of the poison. It will be necessary to go over the ground a second time and by "spotting" the occupied holes the remaining dogs will easily be killed with a very small amount of the poisoning material. The average cost per acre for the poisoning material was only one and one-half cents, and even then it was found that more material had been used than was necessary.

The poison is prepared by coating wheat with a preparation of strychnine, cyanide of potassium, anise oil and molasses. When a sufficient quantity is ready, the poisoned wheat is carried to the field of operations. There the stockmen supply men and horses, the wheat is given out to the riders, and distribution begins.

Each rider carries the wheat in a tin pail supported by a gunny sack slung across his right shoulder and hanging at his left side. His left hand is free for the reins. With his right hand he uses a tablespoon to measure out the poison and drop it near the entrance of the holes. A little practice enables the men to drop the wheat while keeping their horses at a sharp trot. By crossing the town, to and fro, like a man sowing grain, they can cover a large area in a surprisingly short time.

The action of the poison is almost instantaneous. Most of the prairie dogs in a town are dead within an hour or two after the bait is dropped.

The work is considered to have demonstrated the entire feasibility of fighting the prairie dogs in this way. It was found, however,that to be succesful the poison must be scattered in the spring, when the dogs first come out from their winter quarters and before the green grass is offered to appease their hungry appetites. Next spring the poisoning will be undertaken much more extensively. Stockmen and others who wish to try the dog medicine on their own account can obtain the formula for its preparation and directions for its use from the Forest Service.

Getting Alfalfa Started.

Many who sowed $10-a-bushel alfalfa seed last fall are discouraged. Fields are overrun with weeds and grass, and the alfalfa plants have literally been crowded to death. This has been a season more favorable to the germination of weed seeds, and they have made the best of it. We wonder sometimes how so many of these seeds can find lodgment in a square foot of soil, but they manage to get in there from some source, and what a healthy, vigorous lot they are. In making some crop investigations in Central Illinois, the condition of many alfalfa fields was very noticeable. Many were so dominated by weeds that only an occasional alfalfa plant could be seen.

Alfalfa growers may just as well make up their minds that the tiny alfalfa plants cannot compete with hardy, vigorous-growing weed plants, and that a stand of alfalfa may be secured only when its plants have sole possession of the ground. Hence, unless one can sow his alfalfa seed in a clean seed-bed, he might as well leave alfalfa alone. A good seed-bed, mechanically, and a clean seed-bed are the things necessary to start alfalfa. The live weed seeds in the soil must be gotten rid of, and the only way to do that is to get them to grow.

The ground intended for alfalfa seeding this fall should have been plowed, or perfectly disced, two months ago, and then it should have been cultivated weekly up to this time. If this has been done, most of the weed seeds will have germinated and been killed by the cultivations. It is essential that this work be done thoroughly, for enough weeds and grasses creep in afterwards to make trouble until the alfalfa becomes well established.

The disc is the best weed destroyer, both before the seed goes into the ground and after the alfalfa has started. If new fields of alfalfa are well disced early in the spring, weeds and grasses are killed or kept in check, and the alfalfa plants appreciate the cultivation. Keep the disc busy until the alfalfa covers the ground. If the situation is so bad that discing will not clean the ground, then I should disc and cross-disc the entire field and seed down again. It seldom pays to bother with a very thin stand. The thing to do is to make the conditions more favorable, get some good, clean seed and try it again.—L. C. Brown.

KWITURFIGURWURY.

Malone's School of Figures, Block 43, St. Louis, Mo., will send by mail for 25c. their rapid calculator—Kwiturfigurwury — introducing Malone's System of Figuring. Business demands more rapid calculators, and their methods will make your figuring easy. There is no book like it and it is worth more to anyone.

30 FLOWERING BULBS FOR 10c

Together with our Catalogue and a complete treatise on the culture of Hardy Bulbs. All by mail, 10 cts.

These 30 Bulbs, 6 kinds, 5 of each, different colors, will make beautiful pots of flowers for winter, or lovely clumps of early spring flowers for your garden. Pot or plant them now.

The sizes are from 6⅝ to 7½. They are hats suitable for men or boys. They are of good material, well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. These hats are black and steel gray. We send black unless steel is called for. These hats wear as well and last as long as any $2.00 to $3.00 hats on this market. They will give entire satisfaction. We believe this hat will make a first-class subscription premium. The subscription price of The National Farmer and Stock Grower is one dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us one dollar to pay for two-years' subscription to The National Farmer and Stock Grower and we will send you by mail one of these fine, wool crusher National Farmer hats as a premium. Be sure to mention the size and color. A million and a half of these hats have been sold.

Address, **The Hale Publishing Co. St. Louis, Mo.**

Selling Gowns to Americans in Paris.

Grace Margaret Gould, the Fashion Editor of the Woman's Home Companion, tells in the September number some of the ways the Parisian dressmaking establishments sell their goods to American women. Here is one ruse that she saw worked in one of the biggest establishments in Paris:

"There was a sudden and evident commotion among the employes. 'The Princess! The Princess! She has arrived!' they cried.

"American eyes began to bulge.

"Out from a magnificent equipage stepped a regally-gowned grand lady, attended by footmen and maid, and received the whole bowing establishment, to the neglect of all other customers. She was in a gracious mood this day, and easy to be pleased, praising their past efforts and selecting several of their new creations without regard to cost. After she had made her departure amid like ceremonies, there was no need of the saleswoman bothering her head over suggestions. Every American woman present wanted a gown copied from the one the Princess had bought, and she got it after much pleading and at a price far beyond the limit she had set.

"And the point of this fable is this: The Princess was no Princess, but an employe of the house.

"Every French gown has two prices—an American and a French price. It is needless to say which is the greater price.

"Along about April the cry goes up: 'The Americans are coming!' and then the prices go up, too.

"Along about November, when the Americans have left, you might almost say they are giving away gowns, only the Frenchman never does give away anything. Then it is that the Frenchwoman in general and the French actress in particular selects her wardrobe."

Sulphur Bleach For Fruit Stains.

Stained table linen follows the return of the fresh-fruit season as surely "as night follows day." For removing such stains there is nothing more effective than the sulphur bleach. Lay a spoonful of sulphur on a plate, and sprinkle with a few drops of alcohol. Over this place a tin funnel with the point upward. Touch a lighted match to the alcohol; wet the stained linen, and hold the spot over the opening in the point of the funnel. The sulphur fumes will remove the most obstinate stain, seldom requiring more than one application. Rinse and wash the linen at once, to prevent rotting the material. — Woman's Home Companion for September.

The Majestic Range.

This is a St. Louis manufacture and stands amongst ranges as a diamond amongst jewels. There are hundreds of thousands in use, giving perfect satisfaction. It is not constructed to be sold at a low price, but is manufactured to sell at a fair profit and to last for a lifetime and to always be the best range in the community. Write to the Majestic Manufacturing Company, St. Louis, Mo., mention this paper, and ask for book entitled "Range Comparisons."

Washing Ginghams.

Many of the nice ginghams and percales that are warranted washable have a tendency to run and fade when they are subjected to the careless washing they often receive in the common laundry, yet it is possible to wash such material without having them faded and colorless in a few weeks. Nice ginghams will be freshened if the color is set before washing the first time, and to wash delicate ginghams without fading, add a tablespoon of turpentine to a gallon of warm water and soak the garment in this for an hour, then wash in clean, warm suds. If the color is green, a little vinegar should be added to the rinse water; if lilac or any shade of purple, a little ammonia; and delicate shades of pink or blue should be rinsed in salt water in which a small lump of alum is dissolved. The best way to preserve the color in nice gingham waists and dresses is to wash the garment in nice, clean suds made by stirring enough Pearline in warm water to make a good lather, and they should be washed, rinsed and dried as quickly as possible. Nice colored garments should always be turned wrong side out and hung in a shady place to dry, then they should be ironed on the wrong side with good, hot irons.

It is a good plan to wash and dry the irons every two or three weeks, and to keep them clean while ironing, rub them over coarse salt or a piece of green cedar. With a little care in the laundry one may dress one's self and children in any of the pretty ginghams, which often look fresher than new when washed and ironed in exactly the right way. Ginghams shrink considerably, and tucks should be taken in the waist, sleeves and skirt when making the garment, so they can be let out as needed, and, while this is more trouble at first, it certainly pays when you come to alter them.—A. M. H.

The Wants of the Army.

The Duke of Connaught is telling an amusing story of his recent tour of inspection to Egypt. While he was in Cairo he went for a stroll one morning, and on his way back to his quarters he came face to face with an old Englishman wearing the ribbon of the Indian mutiny on his breast. The Duke stopped and spoke to the man about his military service for some little time.

Presently the man said, not knowing, of course, to whom he was speaking: "Are you in the army yourself, then, sir?"

The Duke smiled and admitted that he was.

"Getting on all right?" was the next question.

The Duke smiled again and said that he had not very much to grumble at on the whole, though perhaps he was not doing quite so well as he could wish.

"No, and you never will, my boy," was the surprising retort of the veteran. "What you want in the army to-day is either brains or a tremendous amount of influence behind you. You take my tip, old chap, and chuck it!"—Boston Herald.

What Makes Good Seed Corn.

A Coles county (Illinois) farmer wrote to me the other day about his fine prospect of getting a great corn crop grown from seed selected from the crib just before planting time, while a neighbor who selected his seed out of the field in October had but half a stand. This is not to be wondered at; but ninety farmers out of every hundred would not have been as fortunate as this Coles county correspondent, simply because their corn was not in fit seed condition when it was put into the crib in the fall. I would rather take my chances on seed corn which I could personally select out of a crib in the spring than seed which was improperly cared for during the first three months after it was gathered. One who goes into his crib to get his seed corn will select thoroughly matured ears, and such ears will make the safest seed. I certainly do not advocate crib-selection of seed corn, because while you may get seed that will grow, you are working contrary to the natural laws of improvement in not selecting the best ears from the best stalks.

There is one thing which I am not in favor of; that is, selecting seed ears out of the field before the ears are fully matured. I believe that our whole trouble of recent years with late maturing corn has been brought upon us by using seed thus selected before it has fully matured, or by using seed which had been dried by artificial heat. I contend that corn which will not ripen sufficiently for seed within the normal growing season in the region where it is grown is out of its zone, and the longer such practices of seed selection are followed the worse will be the condition of our corn crops when frost strikes them. We are really worse off in the central corn belt than farther north. In the central belt early maturity has been sacrificed for a great, big stalk and a big, sappy ear. There is also another feature which has tended towards late maturity; that is, the depth of the kernel. We all know that it takes a kernel which is three-fourths of an inch deep longer to mature and longer to dry out to seed condition than a half-inch kernel.

Here are some things to think about. Let us be more particular about maturity. On the stalk is the natural place for corn to ripen. If you try to improve upon nature's reproduction methods you are working against natural laws, and not many succeed along those lines. Our Coles county friend found good seed in his crib last spring because it was good when it was husked and cribbed. But had his corn been immature when it was husked I will venture that not 25 per cent. of it would have grown. See that your seed corn is mature this year.—L. C. Brown.

Use It 30 Days

Before you pay one penny or decide to buy

We mean that exactly; please take us at our word.

Simply ask us to show you the "1900" Gravity Washer. We will send it to you, freight prepaid. You pay no deposit, give no security; you are under no obligation.

Use it for 30 days; do four washings with it. Learn how it saves your labor, and how it saves your clothes.

Then, if you want it, pay a little each week, or a little each month. No hurry; just suit yourself. If you don't want it, simply send it back.

The above offer—just as we state it—is open to anyone who is responsible.

Don't you want to see a washing machine that will stand such a test as that?

The "1900" Gravity is a machine that every woman will have when she knows it. That's why we want you to see it. It does washing solely by forcing soap and water through the meshes of the clothes. No rubbing, no stirring, no paddling; no wear of any sort on the clothes. They are simply held still, while the soapy water is forced back and forth, up and down, through the meshes.

Clothes are washed perfectly clean in this way in six minutes. It does away with the tub and washboard. Makes washing almost fun. Saves all the wear of washing, which means nine-tenths of all the wear on clothes. Cuts wash-bills in half.

We control this machine by patents which have cost us $50,000. So no other washer does what this does. It has built for us the largest washer business in the world.

The "1900" saves so much, and costs so little, that it is far cheaper to have it than to go without it. So send us this coupon now for our new Washer Book, showing the different styles. Then tell us which you want to see, and we'll send it. Do this in justice to yourself.

TRANSPORTATION IN CHINA.

By Coolies, Pack Mules, Donkeys, Peking Carts and Mule Litters.

The following information regarding the means of transportation in the interior of China is furnished by Consul Wilbur T. Gracey, of Tsingtau, to the Bureau of Commerce and Labor:

"This (burden-carrying coolies) is the greatest means of transportation throught the Empire. A bamboo or wooden pole is slung across the shoulders with a burden attached to each end, or a long pole goes to the shoulders of two coolies, or more, with the parcel hanging halfway between the two. In Southern China this is the only means of transport. The climate being hotter in Southern China, and the coolies having less strength, not quite so large a load will be carried as in Northern China, nor will the distance covered in a day be so great.

"A Shantung coolie, carrying a load suspended from the two ends of a pole slung over his shoulder, can carry about 80 catties (106 pounds) or 40 catties (53 pounds) at each end. Packages should be so made that they will, as nearly as possible, approximate this weight. A coolie with a load of 106 pounds can travel about 80 li (27 miles) per day, and costs in Shantung Province approximately 50 cents Mexican (22 cents gold) per day.

"Two coolies will carry a load suspended in the middle of a pole slung between them, weighing 160 pounds. They will carry such a package a distance of about 28 miles per day, and cost 22 cents gold per day each. The cost per pound per mile for transportation by this method is, therefore, about the same as when carried singly, but a larger package can be carried.

"The best size package for one coolie is about that of a case of kerosene oil, or, say, 12 by 18 inches. A square or oblong package is usually preferable to any other shape for transportation in China.

Transportation by Wheelbarrows.

A Chinese wheelbarrow is so arranged that the wheel (which is about three feet in diameter) is in the exact center of the barrow, protected by a rough wooden crate, making it necessary to place packages on the two outriders on either side of the crate. Certain sizes of packages are much more adaptable to transportation on these barrows, and one of the most convenient is the cases in which the two tins of kerosene oil are packed. Six of these cases can be packed on either side of a barrow, making twelve cases in all.

"A Shantung one-man barrow will carry a load, over the usual Chinese country roads, weighing from 266 to 333 pounds. He can travel with such a load over the average roads in the dry season about 27 miles per day, and costs from 31 cents to 37 cents gold per day. In rainy weather the distance will be somewhat less.

"Two men with a wheelbarrow will carry a load of from 533 to 666 pounds. They can travel with this load about 27 miles a day, and cost from 28 cents to 33 cents gold each. Two men with a wheelbarrow to which a small donkey is attached will carry a load of from 800 to 933 pounds and will travel about 27 miles a day.

Pack Mules, Donkeys and Peking Carts.

"A large pack mule can carry a load of from 400 to 466 pounds. It can travel about 33 miles a day and costs 33 cents gold a day. A donkey with a pack can carry a load of from 266 to 333 pounds, can travel about 33 miles a day, and costs 28 cents gold per day.

"A large Peking cart with one large mule can carry a load of from 533 to 666 pounds, and can travel with such a load 33 miles per day, at a cost of 75 cents gold per day.

"A cart with two large mules can carry a load of from 1,200 to 1,333 pounds, and will travel 40 miles, at a cost of from 83 cents to $1.40 gold per day. A cart with three large mules can carry a load of from 1,333 to 1,860 pounds, and can travel 40 miles, at a cost of from $1.40 to $1.86 gold per day.

"A cart with four large mules will carry a load of from 2,000 to 2,666 pounds, and will travel 40 miles a day, at a cost of from $1.86 to $2.33 gold per day.

"Mule litters are also used to a considerable extent throughout Shantung, but practically never carry cargo, except such luggage as may be accompanying their passenger. They will carry one or two passengers, or three on occasions, and can travel about 40 miles a day, at a cost of from $1.40 to $1.86 gold per day."

My Fellow Plow Joggers."

In Lanesboro, a little hamlet in the county of Berkshire, Mass., the state of Massachusetts honored the memory of Jonathan Smith, a farmer, who, in 1788, by a speech addressed to "My fellow-plow joggers," carried the Massachusetts Convention in favor of ratifying the Constitution of the United States.

A boulder of flint, bearing a marker, was unveiled by Walcott Colt Treat, a descendant of Jonathan Smith. Lieutenant-Governor Draper, of Boston, brought the greetings of the state to the occasion. The historical address was made by former Attorney-General Herbert Parker, of Boston.

The memorial bears a bronze tablet with an inscription written by President Eliot, of Harvard. The inscription reads:

"In memory of Jonathan Smith, a plain farmer of Lanesboro, who, by a speech full of good sense and good feeling, carried the Massachusetts Convention, September, 1787, February, 1788, by a vote of 187 to 168 in favor of ratification of the Federal Constitution."

The Louisiana State Fair will be held at Shreveport, November 2d to 7th. L. N. Burggerhoff is the Secretary. Specially liberal terms are offered to manufacturers who desire to exhibit.

Address, **The Hale Publishing Co. 3550 Vista avenue, St. Louis, Mo.**

MAY MANTON PATTERNS.

Very Elegant Fashion Service, With Full Instructions For Ordering and Making.

Girl's Jumper Dress.

No. 6056.—Fresh and new designs for pretty jumper dresses are perpetually making their appearance, and here is one that is dainty and charming yet perfectly simple withal. The little skirt is made with two flounces, one of which is joined to and the other is stitched on over a foundation, and the blouse portion opens prettily to the waist line at front and back, so revealing the guimpe beneath. As illustrated, the dress is made of flouncing and, as all its edges are straight, it suits every variation of the bordered materials peculiarly well, but it is equally available for plain ones, for these always can be trimmed to give the effect. Lawn, batiste, chambray, the finer organdie and embroideries, all materials of the sort, are appropriate for warm weather wear, while for the cooler days, which are apt to seem even in midsummer, the pretty, simple, light-weight silks, challis and the like, are charming.

The dress is made with separate over blouse and skirt, which are joined by means of a belt. The blouse includes prettily-shaped sleeves and is laid in wide tucks over the shoulders. The straight flounces of the skirt are gathered and the foundation skirt is gored and simply fitted.

The quantity of material required for the medium size (ten years) is 5¼ yards of flouncing 13 inches wide, with 5 yards 8 inches wide and ¾ yard of plain material 36; or 6½ yards of plain material 24, 4¾ yards 32, or 3⅝ yards 44 inches wide.

The Pattern 6056 is cut in sizes for girls of six, eight, ten and twelve years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Girl's Dress With Nine-gored Skirt.

No. 6043.—To be made with high or low neck, long or short sleeves. Long, slender lines are as much in vogue for the school girls as they are for their elders, and this dress is constructed with direct reference to the fact. The skirt is nine-gored, so making a number of seams, and the blouse is laid in tucks, which are trimmed at their outer edges. In this instance the material is white linen, and the trimming is embroidery worked onto the material and embroidered insertion.

The dress consists of the blouse and the skirt. The blouse is made with fronts and back and is laid in tucks, at the outer edges of which the trimming is arranged. Whether the sleeves are long or short, they are gathered into cuffs. The skirt is nine-gored and laid in inverted plaits at the back.

The quantity of material required for the medium size (twelve years) is 7 yards 24, 5½ yards 32, or 4 yards 44 inches wide, with 14 yards of banding.

The Pattern 6043 is cut in sizes for girls of eight, ten, twelve and fourteen years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Girl's Semi-Princesse Overdress.

No. 6049.—The dress that is worn over a separate guimpe is always a charming and girlish one, in addition to which it has practical advantages. Guimpes, being made of washable material, can always be kept fresh and dainty, while the dress itself can be made either from linen and cotton fabric or from the pretty wool and silks which are available at seasons, being not over warm for the cool days of summer. This one is suited to almost the entire range of girlish fabrics and becomes adapted to school or more dressy occasions, as one or another is chosen. In this case plain linen is trimmed with plaid, but pongee in pretty bright colors, and other simple silks are used for girls just now and are exceedingly practical as well as fashionable, while among the cotton and linen fabrics there is almost limitless variety, and such wools as cashmere and challis will be found admirable.

The quantity of material required for the medium size (ten years) is 6⅝ yards 21 or 24, 4½ yards 32 or 3⅛ yards 44 inches wide, with 1½ yards 27 inches wide for trimming.

The Pattern 6049 is cut in sizes for girls of six, eight, ten and twelve years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

French Chemise.

No. 6052.—To be made with or without trimming, and with or without frill at lower edge. The simple French chemise is one in great demand. It can be finished simply with a hand-scalloped edge and with button-holes through which ribbon is threaded; it can be more elaborately embroidered by hand, or it can be trimmed with lace or embroidery applied over it. Again, it can be worn over or under the corsets, and this one is laid in inverted plaits at the back, which give fullness in the skirt portion, while the garment is plain above. In the illustration it is held at the waist line by means of ribbon threaded through beading, but such treatment is optional. The trimming shown is a pretty one of lace applied over indicated lines, and there are touches of hand embroidery on the front, while an embroidered frill finishes the lower edge. Batiste, nainsook, thin silk, all the materials that are used for garments of the sort, are appropriate.

The chemisette is made in three pieces, there being a center back seam as well as those at shoulder and under arms.

The quantity of material required for the medium size is 3¼ yards 36, 2⅜ yards 44 inches wide, with 5 yards of insertion, 1¼ yards of narrow, 1½ yards of wide beading, 3 yards of edging, 4 yards of embroidery for frill to trim as illustrated.

The Pattern 6052 is cut in three sizes: Small, 32 or 34; medium, 36 or 38; and large, 40 or 42-inch bust, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Princesse Gown.

No. 6057.—Every variation of the Princesse model is being met with enthusiasm just now and many women who find the more severe style trying are sure to welcome such a pretty modified one as this.

The gown is made with a fitted lining on which the panels and the blouse portions, that are cut in one with the sleeves, are arranged. The chemisette is separate and is arranged under the blouse, so that if liked the lining can be omitted, making a thinner and lighter gown, which can be utilized for the simpler washable materials as well as for those already mentioned. The skirt portion is made with two gores at each side, which are joined to the panels, and the front and back edges of these gores and the edges of the panels are arranged to form inverted plaits.

The quantity of material required for the medium size is 10¾ yards 24 or 32, 7 yards 44 inches wide, ⅝ yard 18 inches wide for the chemisette, ½ yard 27 inches wide for the yoke and cuffs.

The Pattern 6057 is cut in sizes for a 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Please address all pattern orders to **Hale Publishing Co., 3550 Vista Ave., St.Louis,Mo.**

Cherry Jelly From Apples.

To make cherry jelly out of apples, throw a handful of cherry leaves into the jelly while boiling. After the leaves have boiled some time they can be lifted out. Jelly made this way tastes exactly like cherry jelly.—Woman's Home Companion for September.

To Keep Salt Dry.

"To prevent salt in saltcellars from becoming damp and lumpy, when filling them put in ten to twelve pieces of rice," says Woman's Home Companion for September. "This will not come through the holes in the cover of the saltcellars, but will break the lumps of salt and gather the moisture; thus the salt is always dry and fine."

A Sample of Hoosier Justice.

When "Jim" Watson, Republican candidate for Governor of Indiana, was practicing law in Winchester, he had a case before a local Justice involving the ownership of a pig. Testimony was submitted and the Justice reserved decision.

The Justice was a candidate for Mayor of the town, and Watson and the opposing counsel thought they saw an opportunity for a little fun.

"See here, Judge," said Watson, meeting the Justice on the street one day, "unless I get judgment in my favor in that pig case I'm going to oppose your election as Mayor."

The opposing counsel met the Justice and talked in the same strain. A couple of days later they went together to the Justice's office. He was out, but his docket lay open. Opposite the pig case was the entry: "Disagreed."—Indianapolis Star.

What's an Inch of Rain?

The rain fell in buckets, the thunder racketed terribly, and the lightning drew zigzag lines of bright gold upon the violet sky.

"So you, too, don't know what an inch of rain is exactly," said the weather clerk, as he looked at his rain-measuring instrument. "Very few people do, it seems. I'll explain it to you.

"An acre is 6,272,640 square inches. An inch of water on an acre is, therefore, 6,272,640 cubic inches. That amount, at 227 cubic inches to the gallon, equals 22,000 gallons, or 220,000 pounds, or 100 tons.

"An inch of rain is, in other words, rain falling at the rate of 100 tons to the acre."—Philadelphia Bulletin.

Texas pecans at 7 cents a pound; Western at 6½c., the St.Louis market report says. Lots not kept in cold storage and exposed to the heat sell for less.

CANCER CAN BE CURED

My Mild Combination Treatment is used by the patient at home. Years of success. Hundreds of testimonials. Endorsed by physicians, ministers, etc. The local application destroys Cancerous growth, and the constitutional treatment eliminates the disease from the system, preventing its return. Write for Free Book "Cancer and Its Cure." No matter how serious your case, no matter how many operations you have had, no matter what treatment you have tried, do not give up hope, but write at once. DR JOHNSON REMEDY CO., 1233 Grand Ave., Suite 103, Kansas City, Mo.

THE UNIVERSAL MAGAZINE A TREAT.

The **Universal Magazine** is published monthly, and is an elegant sixty-eight-page publication. During this month we will issue to every new subscriber a set of the famous colored 6x8-inch pictures entitled the Sun-bonnet Twins. These pictures are most interesting and pleasing. Not less than a million sets have been issued by the publisher and the demand is still growing. The

Universal Magazine is fine. There are nice illustrated articles and interesting stories. The subscription price is 25 cents a year, including the twelve Sun-bonnet Twins picture supplements. Be sure you ask for the right supplements. Address **Hale Publishing Co., 3550 Vista avenue, St. Louis, Mo.** Club raisers' rate, five sets and five yearly subscriptions for one dollar.

The Oat Situation.

Growers of oats find themselves in about the same situation that growers of spring wheat did a few years ago. Oat yields have been going from bad to worse on the majority of farms, and it seems we are unable to check the downward trend of yields. Spring wheat growers were forced out of growing wheat for many years, because the yield run down from eight to ten bushels per acre. After a while some ventured to sow winter wheat in what was considered strictly the spring wheat belt. The result was almost magical. From the beginning winter wheat was a success, and it has been raised with profit on the same farms for upwards of twenty years. This proved that the land was not exhausted, but merely plants of different habits found the soil congenial. From this beginning the winter wheat zone has been crowded north clear up into the Dakotas and Minnesota.

Up to this time no winter oats have been found which can be depended upon above latitude 40 degrees, and until such varieties are introduced and proved successful we must make the most of our spring varieties.

One thing is certain: We will never make much headway by sowing the quality of seed which was commonly used last spring. Growers have found that oats weighing but 22 to 26 pounds per bushel produce weak plants, which, under anything but very favorable soil and weather conditions, grow slowly, stool miserly and come to maturity in poor shape. There are sporadic cases of yields running from 35 to 50 bushels per acre this season and much above the average quality. These fields were sown with heavy, vigorous seed. In two threshing rings, in which there were twenty-seven growers, all in one county in Central Illinois, the highest yield was 30 bushels per acre. This was the crop produced on land worth from $150 to $200 per acre. No wonder oat growers are apprehensive.

There is no question that the habit of some varieties of oats better suit them for certain soils than other varieties. The early "Sixty-day" oats on one field (rich, black soil) produced thirty-seven bushels for every bushel sown. This was on a small acreage, but they were grown under ordinary farm conditions. In another instance "Swedish Select" outyielded all other varieties nearly two to one. The thing to do is to watch every local experiment with oats. If a neighbor has been successful with some particular variety, it is not unlikely that the same variety would do well with you. It certainly is high time that growers and Experiment Stations were concentrating some vigorous work on oat varieties and better methods of culture.—L. C. Brown.

THE CEMENT WORKERS' HANDBOOK.

This book is designed to teach anybody how to work with cement. How to mix mortar of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

THE NATIONAL FARMER AND STOCK GROWER Is a nice, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers.

Anyone who sends in One Dollar to pay in advance a three-year subscription to **The National Farmer and Stock Grower** can select the **CEMENT WORKERS' HANDBOOK** as a fee premium.

Address,
THE NATIONAL FARMER AND STOCK GROWER, 3550 Vista Ave., ST. LOUIS, MO.

The Dairy Show.

One of the features of the Third Annual Dairy Show is a contest and programme for the managers and secretaries of local creameries and cheese factories. At the suggestion of the Dairy Division, Washington, D. C., the National Dairy Show Association has placed at its disposal the sum of $2,000 to be divided pro rata among local creamery and cheese factory managers and secretaries. The contest and programme are under the supervision of Mr. B. D. White, Dairy Division, Washington, D. C.

Early Shredding of Fodder.

Those who have harvested their corn expecting to shred it for fodder, should take every pains to get it shredded and under cover at as early a date as possible after it is sufficiently dry. The time required to put it in the proper condition will vary with the condition of the corn at the time it was harvested, the size of the shocks and the weather. Generally corn can be shredded in four to six weeks after it is harvested.

The reason why it should be shredded early is that from the time it is properly dried out until it is consumed, corn in the shock deteriorates quite rapidly in quality. It makes prime feed in November and December. By January it becomes weather-beaten if left standing in the shock. In February it is still worse, and in March it is of comparatively little value, at least in the judgment of an experienced cow. She eats corn fodder rather unwillingly, not because, as some suppose, she is tired of it, but because it has lost feeding value, particularly in the important matter of protein.

Shredded fodder will not keep if it contains more than 25 per cent. moisture, or about the same amount as clover hay when put in mow or stack. I never pack shredded fodder when mowing it away.—Wm. H. Underwood.

St. Louis root quotations, August 31st: Golden Seal at $1.55 per pound; Ginseng—Wild at $5.50 to $5.75—large more; cultivated at $5.25 to $5.50; Lady Slipper at 18c.; Seneca, 32 to 33c.; Pink, 28 to 30c.; Black, dry, 8c.; May Apple, 3c.; Snake, 29 to 31c.; white, 2c; Angelica, 5c.; Wahoo—Bark of root, 15 to 18c.; bark of tree, 5c.; Blood, 4½c.; Blueflag, 5c.; Sassafras—Bark of root, 6c.; Wild Ginger, 11c.; Spikenard, 4c.; Skull Cap leaves, 8c to 9c.

Child & Sons Mercantile Company, 511 North Main street, St. Louis, Mo., have a special roofing offer in this paper on page 13.

HAPPY, THANKFUL PEOPLE
My Illustrated Book tells of a method by which people from every State in the Union, Canada and other foreign countries were cured of chronic Eye and Ear troubles, Deafness and Catarrh in their homes by My Mild Medicine. Most of these cases had been pronounced incurable by other doctors but they wrote for my book, followed its advice and today are cured.
DR. F. G. CURTS, The Great Eye and Ear Specialist.
MY FREE OFFER
TO ALL SUFFERERS FROM
Catarrh, Deafness, Eye and Ear Troubles
I want to place in your hands the instruments, the medicine and advice that will prove to you the really great value of my treatment. I want to send you my Nasal Douche or my Aluminum Eye Cup, 5 days' treatment and my illustrated book, all as a generous free gift, so that you can put me to the test, and so that you can prove that I always do exactly as I agree. No doctor has ever made it so easy for you to cure yourself of Catarrh, Deafness, Eye or Ear Troubles right in your own home and it will pay you to accept my free offer today.
TEST MY TREATMENT AT MY EXPENSE
Every year I successfully treat thousands of cases in all parts of the United States. There is scarcely a town or hamlet where I cannot point to a cured, satisfied patient.
NASAL DOUCHE
FREE TO YOU
MY EYE CUP FREE
My Nasal Douche is a practical invention, constructed on scientific principles, easily cleaned, perfectly sanitary and so simple that any child can use it. I've proved its value in thousands of cases of Catarrh, Hawking and Spitting, Headaches, Discharging Ears, Head Noises, Ringing or Buzzing in the Ears, etc., etc., and I want to convince you that I can cure you. Simply send your name and address and I will send my 50c Nasal Douche, five days' treatment and my illustrated book—all free.
My Aluminum Eye Cup is the newest, up-to-date and most effective way of applying remedies to the Eye. Is easily worth 50c to any sufferer. I care not whether you are suffering with the most serious and complicated disease of the Eye, whether you have inflammation of the Eye Ball or Granulation of the Eye Lids, or whether your Eyes are tired out and ache, burn or smart, you should have one of my Eye Cups in your house. I will send you one without a cent of cost so that you may prove its value.
All my dealings will stand the closest investigation. I claim most emphatically that in all probability I have cured more cases of Eye and Ear trouble and Catarrh than any other doctor. My Mild Medicine Method makes it unnecessary to submit to an operation. There is no necessity for seeing a doctor, and no interference with your daily duties. The larger portion of my patients I have never seen. By the aid of my Mild Medicine Method I am able to treat my patients as successfully as though they were to come to my office. I believe that any person having Catarrh, Eye or Ear troubles should read my book, which I will gladly send free to any afflicted one. It will bring them tidings of great joy. It will show them how easy it is to regain perfect sight and hearing.
My Illustrated Book acknowledged to be one of the greatest works of its kind ever published—full from cover to cover with information and advice you can't afford to be without.
It tells how to quickly relieve and cure Distressing Head Noises, Ringing and Buzzing in the Ears, Discharging Ears and Catarrh. It tells how deaf people, except those born deaf, may be restored to perfect hearing. It tells in plain, simple language how all diseases and defects of the Eye, such as Failing Eyesight, Cataract, Granulated Lids, Scums, Sore Eyes, etc., etc., may be successfully treated by my patients in their own homes. It tells all about my Mild Medicine Method which has cured so many Catarrh sufferers and has restored Hearing and Sight to scores of supposedly incurable patients.
BLINDNESS DEAFNESS AND CATARRH
THIS ILLUSTRATED BOOK FREE
Send No Money Simply your name and address in a letter, or a Post Card will do, and you will receive by return mail my Nasal Douche or Aluminum Eye Cup (whichever you need), my 5 days' treatment and my new illustrated book.

Well-drilling Apparatus advertised in this paper on two pages. There is money in them.

Horse Remedies are advertised on page 14 of this edition.

A splendid line of May Manton Patterns will be found advertised on page 28.

The Majestic—the Diamond of all Ranges. See page 26.

POLLED DURHAM HEIFERS—First and second prize winners at the Iowa State Fair. Polled Durham cattle are Shorthorns without horns. It is a fine family of domestic cattle. The Polled Durhams are not a numerous family, because the breed was only started in 1888, but they are fully up to all Shorthorn standards, and the champions of the Polled breed would give the champions of the horned breed a hard contest for show-ring honors.

THE ST. LOUIS DEMAND FOR LIGHT FAT CATTLE.—We wish to say a few words about the great demand which always exists at the St. Louis market for light, handy, fat beef steers and heifers which class as fancy. At the time of writing this item, steers of the kind mentioned, about 1,000 pounds average, are quoted up to 7 cents a pound, and the heifers averaging from 700 to 900 pounds are quoted up to about 6 cents a pound. Early in September, the only yearling steers near the class mentioned averaged 1,092 pounds and sold at $6.75 per 100 pounds, and the best load of heifers sold early in the month averaged 760 pounds and sold at $6.20 per 100 pounds. We have interviewed every buyer in the National Stock Yards concerning this class of cattle, and they all say the same: "We never get enough of them." No matter if the market is high or low, the strictly fat, choice-quality, light steers and heifers always outsell everything excepting the prime heavy steers that are just as fat and just as good quality. The market receives a few hundred such light cattle every month, but there is sale for twice as many thousands. A pure-bred bull of one of the beef breeds—Aberdeen-Angus, Shorthorns, Herefords, Galloways—if crossed on good, healthy grade cows will produce the quality required in the heifer and the steer that the market calls for, and when the quality is there they fatten quickly to the market finish. The ideal country for the production of the best light steers and heifers is distinctly tributary to St. Louis. On September 29th, Mr. W. A. Kuhlman, of Cole county, Missouri, marketed a few 956-pound steers at $6.65 per 100 pounds, and T. J. George, of Cass county, Missouri, sold fifty-five head 1,181-pound yearling steers and forty-seven head 990-pound yearling steers, all of which sold at $7.00 per 100 pounds. These are the cattle that can be best sold on the St. Louis market and best raised in the country tributary to St. Louis.

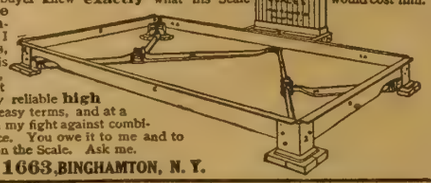
NOW LISTEN TO ME!

For 44 years I have been making a line of Wagon and Platform Scales, and you know that every word that I have said in regard to my Scales has been the **exact truth.** You know that I was the **first** man who dared to fight the **Scale Trust;** the first man who gave the farmer a chance to buy direct, and the first man to "**pay the freight,**" so that the buyer knew **exactly** what his Scale would cost him. You know that I am still **fighting the trust,** and am controlled by **no combination.** You also know that when I say I have invented a new **Pitless, Steel Frame Stock Scale** that is absolutely accurate under all conditions, perfectly **simple** in construction, built on scientific principles, and **guaranteed** to be the only reliable **high grade Scale** of this kind that is sold on **free trial,** easy terms, and at a fair profit, that I am telling the truth, because I, **alone,** in my fight against combinations made it possible for you to buy a Scale at a fair price. You owe it to me and to yourself to get the introductory discount that I am making on the Scale. Ask me.



JONES, "HE PAYS THE FREIGHT," Box 1663, BINGHAMTON, N. Y.

KING CUMBERLAND—Junior champion Shorthorn bull at the Iowa State Fair, and now on the circuit winning more honors. Among the young show bulls of the year 1908 he is probably the most outstanding winner. At the Iowa State Fair, in a class of fourteen excellent yearlings, he "wore the crown without dispute." KING CUMBERLAND was exhibited by H. H. Powell & Son, of Linn Grove, Iowa. It is not easy to obtain good photos of champions at Fairs in all kinds of weather, therefore it is not claimed that the picture does KING CUMBERLAND justice. Stockmen will recognize his good qualities. KING CUMBERLAND was calved January 26, 1907. His sire was Cumberland's Last, and his dam Miss Walpole. At the age of eighteen months (549 days) this great young bull weighed 1,500 pounds. It is not every stockman who can afford to buy a KING CUMBERLAND to head his herd, but there are hundreds of good pure-bred and registered yearling Shorthorn bulls that will add ten to twenty dollars a head to every calf they get when crossed on any common cow in the country, and they can be had around a hundred dollars a head. St. Louis is the great market for high-quality steers that can be fattened to marketable age as yearlings. Formerly it used to require four-years' growth and two-years' fattening to make a first-class steer, whereas now one can be raised in a year and a half. It cannot be done, however, by old-fashioned bulls running with common cows.

Time to Halt Soil Robbery.

Bumper crops mean that unusual amounts of crop-making elements have been taken from the soil. So it must follow that when soil is put in such good condition that crops grow abundantly and produce above the normal yield, that greater pains must be taken to return a much larger amount of fertilizing material.

This very thing was brought to my notice a few days ago while I was traveling through Central Illinois. The case in point was a splendid farmer, who had a thoroughly-kept farm. He had worked out successfully the problem of keeping his land in good condition. This he had done by a carefully-laid system of drainage and by knowing when to plow a field and when to leave it alone. Up to twelve years ago mixed farming was practiced here, and a considerable portion of the farm was constantly kept in meadow and pastures. Twelve years ago stock feeding was stopped and the whole farm was turned into grain fields. The natural result was that that farm soon became famous for its big yields of corn, oats and wheat. These unusual crops were taken off for nine years and then the yields fell off very alarmingly. What was the trouble? No doubt there is still a large amount of nitrogen in the soil, but it has been thrown out of balance by drawing too heavily on some other elements. Thousands of fine farms in Central Illinois are in precisely this condition to-day. Upon these farms cattle and hogs used to be fed, and little, if any, of the crops were ever hauled away from the farm. But after twelve or fifteen years of 75-bushels-per-acre corn crops, farmers find that they have gotten to the bottom of one of their soil bins. If these lands are handled right they are good almost indefinitely. But allow this one-sided cropping system to go on and on and the soil conditions here will soon be on the same basis as the southern section of the state. The thing to do is to keep this land in condition to produce bumper crops, but not to lose sight of the fact that a forty-bushel wheat yield per acre has used up a correspondingly large amount of food elements.—L. C. Brown.

Points on Fattening Cattle.

The digestive organs of cattle are very similar to the digestive organs of human beings, and are thus easily thrown out of perfect action by irregularity, just as human beings are frequently made sick by irregularities in eating.

This is due to the fact that certain juices required in digestion are produced at times when the digestive organs have been in the habit of digesting the food. Therefore it is extremely essential that cattle being fattened be fed regularly. At the regular periods of feeding the amount of digestive juices is greater than at any other time, and food taken in at that time is utilized to the greatest possible extent. In this time of high prices of feed, every particle should be utilized to its greatest extent, and this can only be done in case of absolute regularity.

It was long ago noted that regularly-fed animals fattened faster than those irregularly fed, but little attention was paid to it. It was not till cattle began to be scientifically handled and studied that regularity in feeding assured its real importance in the minds of those most closely observant. Even now, a great many feeders of cattle consult their own convenience in feeding rather than the eating habits of the animals. They pay for this in a reduced rate of gain in weight of the animals.

Changing the location of cattle on feed is always bad, especially if the animals have been long accustomed to a certain locality and certain animals. Farm animals are very susceptible to homesickness, and when feeding animals are changed into a new locality the mental disturbance occasioned by the loss of the old surroundings causes a derangement of the digestive system, which is followed by loss of appetite. The nerves that connect the brain and stomach are mutually affected. Therefore as much as possible animals that are being fattened should be kept in the same place.

Unlike people, animals do not seem to enjoy a radical change in their food supply. This is noted by careful observers of feeding operations. Thus, one feeder of cattle says that he feeds silage to his cattle as a large part of the ration the year around. The old silage gives the best results, and his animals seem to dislike being changed from the old silage to the new silage at the end of the summer. Animals like a variety of feed, but it is necessary to make all changes gradually.

Carrying feeding cattle through the winter is an expensive operation; that is, after the feeding period has actually begun. In a multitude of cases it has been proved that it costs more to make a pound of gain in the winter than in the summer or fall.

A common mistake with some in feeding fattening cattle is trying to work in straw as part of the ration. This gets rid of the straw, but it checks the gains of the animals. Straw contains such an excessive amount of fiber that it is not profitable to feed to cattle being fattened, where it is desirable to fill them with food easily digested.

Potassium Points.

[Written specially for this paper.]

Potassium is absolutely necessary for the growth of plants. Had not the Creator spread this element widely, the earth would be now mostly a desolate waste. Here and there are localities deficient in potassium, and in those localities it is impossible to grow any plants of value. The illustration is found in many of our reclaimed swamp lands. Even hills are often found that lack the element and have been barren for ages. Doubtless many of our hill tops, that are now bare ledge, had on them, after the passage of the glaciers, an abundance of soil, but lacking potash. Being unable to cover itself with vegetation, the soil was in time entirely washed away by rains.

Much of the potash in soil comes from the decomposition of feldspar. Some comes from the decomposition of mica and like substances. Most clay soils contain some potassium, and it is the fact that makes the clays so retentive of fertility under severe systems of tillage and cropping.

The fact that potash is widely used in manure is indicated by the large amount of it found in the ashes of plants. The process of getting lye out of ashes resulted in the securing of a residue known as potash. This term has now become generalized and is used by people instead of the word potassium. Potash is used of different forms of the mineral, though not strictly accurate, from the standpoint of the scientist.

Potassium is not only found in the ashes of plants, but also in the ashes thrown up by volcanoes. On the sides of Mount Aetna in Sicily and also on the sides of Mount Hecla in Iceland are found a substance known as palagonite, which contains a great deal of potash and which decomposes so readily that it began to be extensively used for fertilizing purposes. But the opening of the German potash mines put the palagonite out of business as a fertilizer, or rather prevented its extensive use.

The amount of potash found naturally in soils depends on the source from which the soils came. Even some soils made largely by the grinding up of rock are poor in potash, because the original rocks had in them only a small amount of potash. Such soils respond very decidedly to applications of potash.

Gravelly drift soils are frequently very poor in their supply of potash, and on such soils applications of potash in almost any form give bountiful returns. Unfortunately, some of the farmers that have such soils have been cultivating them for many years without suspecting the real cause of their lack of productivity or how easily they might be brought to a high state of fertility.

Storer, the great writer on agriculture, bears testimony to one phase of potash lack as follows: "On a certain farm in Scotland, not far from Edinburgh, it was proved that clover sickness, as manifested in that locality, was caused by a lack of potash. At all events, those farmers of that region who had applied Strassfurt potash salts to land that was formerly clover-sick now raise splendid crops of clover. And they notice that their clover is no longer thrown out in the winter months, as was apt to be the case before potash was used."

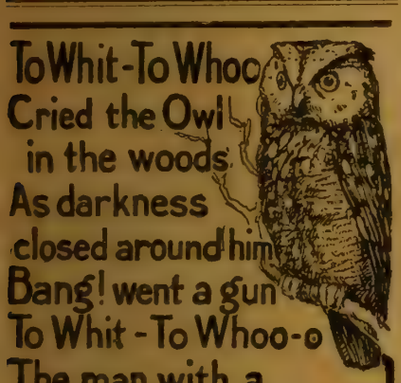
BEAU CARLOS—First-prize two-year-old Hereford bull at the Iowa State Fair. Exhibited by Cornish & Patten, Osborn, Mo. Stockmen who are raising scrub cattle and selling steers in market for less than half what a good, fat, well-bred steer will bring, are invited to take a good look at the picture of this fine young bull. The Herefords constitute a distinct beef breed; they raise their calves, but they do not claim to be dairy cattle. It is claimed that they are pure-bred way back to the time when Jacob ran stock on shares and was entitled to the white-face and line-back cattle. They have been bred straight for an hundred years in England. A pure-bred Hereford bull turned loose with a lot of young common cattle will make the owner feel better every time he looks at the calves. The calves will outrustle the common cattle, and when fed liberally will top the market as baby beef. At this writing, fat yearlings, Hereford bred and strictly fat, 900 pounds average, are selling at 6½ to 7 cents a pound, and common cattle of the same age are weighing 250 to 300 pounds less, and are selling at 3 cents to 3½ cents a pound. Read the market reports and understand the difference between tops and tailings.

How Late to Sow Wheat.

A Monroe county, Indiana, correspondent asks how late wheat may be safely sown. In the latitude of this correspondent I should say any time from October 1 to October 15 will be all right. Seeding all over the winter-wheat belt is bound to be much later this year than usual. The ground has not been in fit condition to plow, and many have been holding off for rains. Proper soil condition really has more to do in making a wheat crop than the time of seeding. That is, ten or twelve days later than usual will not likely prove any setback to the crop, providing the seed starts growth at once after it is sown. Wheat has been sown even so late as October 25, but that is rather late for the plants to make any material fall growth, and with unfavorable winter conditions the entire crop would likely winter kill. My advice is to get the wheat ground into condition just as soon as possible now, and sow as nearly the normal time as possible, using a little more seed per acre as the season advances.—L. C. Brown.

Great Days For Oklahoma.

A number of special days have been arranged for at the Oklahoma State Fair, October 1 to 10, each one of which will be replete with interesting events. Thursday, October 1, will be Oklahoma City Day; Friday, October 2, and Saturday, October 3, will be given over to the west and east side, respectively. A sacred concert will be given on Sunday, and Monday, October 4, will be Farmers' Day. A number of speakers of national prominence will be present October 6. October 7 is State Day; October 8, Derby Day. The last day of the Fair, October 10, will be Traveling Men's Day.



STEVENS

found him.

Your bird will drop every time, when you pull trigger on a Stevens Rifle or Shotgun.

It's easy to get a good and quick aim, because of the absolute accuracy of the Stevens sights, either peep or open; and because of the perfect balance of a Stevens—when you swing it to your shoulder, you find it steady and true to your aim. Then a Stevens is wonderfully far-and-straight-shooting, hard-hitting, and quick-firing. Stevens hold more records than any other make of gun.

Send for Stevens Catalog

describing all Stevens firearms —Rifles, Shot guns, Pistols. Then you will realize how thoroughly well made they are, how moderate in price. Yours for 5 cents for postage.

And you will want Dan Beard's book, "Guns and Gunning" —full of the lore of the woods and the camp. Of birds and small game. Of hunting and shooting. Sent prepaid, 20c. paper cover, or 30c. in cloth, stamped in gilt.

In nearly every town there's at least one dealer who sells Stevens firearms. If your dealer can't supply the genuine, write to us and we'll ship, prepaid, on receipt of catalog price.

390 Grove Street
Chicopee Falls, Mass.

Paint That Will Wear

The house-owner wants paint which will not become spotted or streaked or scaly. White Lead, *if pure*, mixed with pure linseed oil, makes paint which never scales nor spots.

It is possible to know the purity of the White Lead before painting if you have a blowpipe, and this we will furnish free for the asking.

We could not afford to make this exposure if our White Lead had a grain of adulteration in it. The "*Dutch Boy Painter*" trade-mark guarantees the purity of our White Lead.

Send for Free Test Equipment No. 30.

which includes blowpipe, instructions and paint booklet.

HANDY CARRIER, Box 10, Godfrey, Ill.

Selecting Seed Corn.

The annual advice about early selection of seed corn is now freely offered by the editor of nearly every farm paper in the land. These writers advise us to go into the fields during September and select the earliest-matured ears for next year's supply. I wish to condemn this practice. The whole theory of the value of early selection rests upon the idea that the ears which mature earliest this fall will produce an earlier crop next season. If an earlier-maturing crop is what we are seeking for, there is a much quicker way to get it than by this early selection. Simply plant an earlier-maturing variety. But that is not the object usually sought by most corn growers; rather an earlier-maturing strain of our biggest varieties is the thing most growers are striving for. My objection to the selection of the earliest-matured ears from the stalks is that this early maturity may not be due to any early-ripening characteristics of the stalk, but rather to the favorable condition of growth. Go into most any corn field and notice the disparity in the growth of even adjacent hills, and it will not take one very long to conclude that it is not the stalk itself that induces early ripening of these earliest ears, but rather it is the condition of the soil. I believe it is the greatest mistake to go into the fields during September and select seed ears.

There is only one thing that would induce me to select ears from stalks. If I wanted to breed corn for some particular characteristic of stalk or root growth, then I should practice field and individual stalk selection. But that particular phase of the work belongs to seed breeders and not to the general corn grower.

The safest corn to grow is the variety which will thoroughly mature within your own normal corn growing season. This very thing of trying to make a 140-day variety fit into a 100-day growing season, by selecting ears from stalks before the ears are sound, is responsible for the millions of acres of soft corn during the last five years.

We want thoroughly matured corn. We want corn that will mature on the stalk by September 20th. If you are growing that kind of corn, the best place to select your seed ears is right out of the wagon as you unload. Then you get the general run of your field. I have studied this seed-corn question for a good many years, and I believe we have overdone the thing. I advise every corn grower to keep these two things in mind—matured corn and the greatest amount per acre. Breeding corn for fancy points is good, but leave that to the corn breeder. Breeding corn for yield is good, but it takes several years to make much headway, and this work should also be left to the corn breeders. I believe that growers generally will find it much more profitable to plant well-know varieties, those which have been tried for several years under local conditions, and then handle their land so as to induce early ripening.

What advantage is an early-maturing variety of corn if it is put in late, or if the soil is in poor condition? I saw an illustration of this thing in Will county, Illinois, last week. Two neighbors own the farm machinery jointly. One planted his corn on a well-drained field; but before the second could plant his undrained field a heavy rain fell. The variety of corn planted was the same on both fields. There was only four-days' difference in the planting of the two fields, yet the first field is almost dead ripe, while the second is maturing very unevenly and is fully two weeks behind the first field. So I say, plant corn that will mature within your normal growing season; select the best ears from your general crop, and then put your ground in condition to push the crop from germ to maturity.—L. C. Brown.

LAND MATTERS.

The Club Ranch in the Red River Valley, Archer county, Texas, is being divided into tracts of 80 to 640 acres. There were 40,000 acres when they started cutting it up, and now there are less than 20,000 acres. It is a fine country to live in, and all that is raised of grain, vegetables and live stock can be sold to good advantage on the St. Louis market. See advertisement on page 8.

A number of farms in Tishomingo county, Miss., are being advertised on page 8. Iuka, the county seat, is on the Southern Railway, 114 miles east of Memphis; 21 miles east of Corinth; and Tishomingo county is just west of the Alabama state line. The new branch of the Illinois Central Railway between Jackson, Tennessee, and Birmingham, Ala., runs through the western part of the county. It is a good, healthy, well-watered and timbered section, easily accessible to good, active, competitive markets. Iuka has mineral springs, and is a delightful health resort.

We recommend our readers who wish to buy Missouri farms to correspond with Geo. W. Hamilton & Son at Fulton, Mo. Fulton is the county seat of Calloway, one of the richest of Missouri counties. Surplus products sold and shipped out last year to the amount of $2,539,939, including a million dozen eggs and a million and a half pounds of dressed poultry. Canned vegetables amounted to a half million pounds. Calloway county is also famous for live stock production.

There is a general and steady advance in land prices. High-priced lands are sold for what they will bring and not for what they are actually worth, but lands at $10 to $35 an acre will be forced up higher, because the cheap lands are becoming less and less each year. The farmer should settle himself on his permanent home as soon as possible, in order to get the benefit of the inevitable advance in values.

Ringbone Cured—Was Worth $100.

I had a horse that had been lame with ringbone for five years. Another horse had a curb, and a third had a bad blemish. I cured them all with one bottle of Gombault's Caustic Balsam. I then left the remainder of the bottle to neighbors and they cured several blemishes on horses. The ringbone cure was worth $100 to me.—LAWRENCE FITZPATRICK, Cape Wolf, Canada.

We cannot mention all the breeders who are advertising in this paper, but we wish to say that so far as we know they are selling good stock at very moderate prices. It is all very well for the breeder who is maintaining a show herd to obtain immense prices for one or two extra fine specimens that have a show-ring value, but the good which pure-bred stock does to the farmer is by the moderate-priced pure-bred animals that are the sons and grandsons of these champions. The best blood in the country and some of the best individuals are advertised by firms represented in this paper.

COUGH AND DISTEMPER TROUBLES

Should be guarded against with the approach of frosty weather. Craft's Distemper and Cough Cure will ward off the danger if given as a tonic. A small portion of this liquid is a preventive which has no superior. Those who neglect to use it as a preventive will find it a reliable cure if used promptly according to directions. It is recommended by many veterinarians and by the experience of a multitude of horse owners. Druggists should supply it. The readers should notice announcements in our columns from time to time of the manufacturers, The Wells Medicine Co., 17 Third street, Lafayette, Ind.

At St. Louis, October 1st, No. 2 rye was selling at 77 to 77½c. a bushel.

At St. Louis, on October 1st, No. 2 corn sold at 76½ to 77c. a bushel; No. 3 at 76 to 76½c., and No. 2 white corn sold up to 78c., delivered.

The Use of Belting.

Motion communicated by cords, bands or straps is remarkably smooth and free from noise or vibration, and on this account, as well as from the extreme simplicity of the method, it is always used in preference to any other except where motion must be conveyed in an exact ratio.

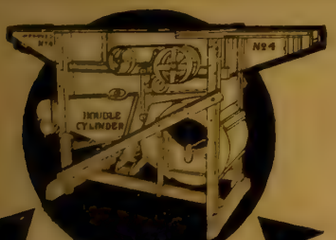
The communication of motion by the cord, band or strap is maintained by frictional adhesion between them and the wheel, and it may happen that it may fail through the band sliding on the pulley, but this is an advantage, for it enables the machine to stop or give way when some unusual strains are opposed to it. For example, suppose the pulley on a machine to which motion is communicated were to be suddenly stopped, the pulley at the other end of the drive would not stop at once, but would continue until the friction of the band upon the two pulleys had destroyed its motion, or the band had slipped off one of the pulleys.

It is a well-known fact that the looser a belt can be run the less power it takes to drive that belt, and in order to run the belt loose it must be in good order; so taking care of belts means less fuel for power and longer life to the belts.

Do not use any belt dressing that will make the belt stick to the pulley. Leather belting, if properly taken care of, will never need any patent belt dressing. The use of a little good oil occasionally, such as neatsfoot, to keep the leather soft and pliable, will give the very best results.

In the use of leather belts, always place the hair side (smooth side) to pulleys, for if the rough side is used, then what is lost in contact must be made up in strain on the belt, and this should be avoided as much as possible.

The ultimate strength of a single belt one inch in width and one-quarter inch thick is about 750 pounds, but from the weakening effect of the several methods of joining the ends not more than 200 pounds per inch in width should be depended upon for ultimate strain.



DO YOUR OWN THRESHING

If you raise one acre or more of Beans or Peas, we have a Special Thresher Proposition to offer you, which is the most liberal ever made by any manufacturer. If you write us about it we will also send you free our new book on Bean and Pea raising. This book will show you how the

OWENS

BEAN and PEA THRESHERS

pay for themselves in a short time; how they are made in four sizes to suit both the small and large grower as well as the jobber; how they thresh directly from the vines without splitting the Beans or Peas, and separate the vines and pods. Write to-day for our special proposition and free book.

Belts will transmit a force of about fifty-five pounds for every inch in width, and taking the average thickness of belts at one-sixth of an inch, this means a strain of 330 pounds per square inch of section.

The horse power of a laced belt becomes a maximum at a speed of 87.41 feet per second, or 5,245 feet per minute.

One good method for lacing a belt is to punch the holes in two rows and zigzag; thus a six-inch belt would have seven holes, four nearest the end. The first row should be about three-quarters of an inch from the end of the belt and about the same from the sides. On larger belts the distance would be somewhat increased. Begin the lacing in the center of the belt and lace both ways; keep the ends of the belt in line and the tension on both ends of the lace the same. The lacing should not be crossed on the side of the belt that runs next the puiley, so that the lacing on that side will be parallel with the edges of the belt, while on the other side it will be at an angle. —F. N. Langridge, Colorado Agricultural College.

Make Ready For Winter.

Now is a first-rate time to clean up about the stables and feed yards. Haul out the manure and scatter it on the meadows or pastures; then when rains come, whatever leaks out will sink into the soil, where it is most needed. Many feeders make an annual cleaning-up of yards and pens this month. It is a good thing to do.

If the straw stacks are in the barn yards, keep them well cleaned up. Whatever straw is pulled out by the stock should be used for bedding, and the bottom of the stack should be kept so neat that stock will eat up all the chaff and grain. If one wants to be economical with his straw, better keep stock away from the stack altogether and use the straw under the sheds or in the stables.

The sheds and root cellars may need fixing up a bit. Do it now. Get the feed in handy for winter.—L. C. Brown.

GLENFOIL THICKSET, 2d—Champion Aberdeen-Angus bull. Exhibited by O. V. Battles, Maquoketa, Iowa. Aberdeen-Angus cattle reputation rests on beef excellence and nothing else. In Scotland their origin is not clear, but one man, who died in 1865, bred them fifty-six years. In this country they date from 1873. Bulls weighing 2,200 pounds are not unusual, and cows are easily fed to weigh 1,400 pounds. Aberdeen-Angus cattle stand high in market. Four times out of eight Aberdeen-Angus cattle won the grand championship in single steers and in car lots at the Chicago International Show. We have been asked which great beef breed we favor as best, and the answer is that either breed is best if you make your selection and stick to them through thick and thin to the end, and then let the second generation do likewise.

Fall Setting of Fruit Trees.

[Written specially for this paper.]

Fruit is something that we must have on our farms if we would provide the best food for our family. This I consider it our duty to do, and we cannot have the most healthy food for the children unless we have a variety of fruit. Someone has said that he considered it the moral duty of every land owner to grow at least enough fruit for his own family. I think this is right, and if all enjoy fruit as I do, we would not have to beg and advise one another to set out fruit trees. I do enjoy fruit, especially the apple, and know I feel better when I eat fruit daily with the meals, and think that sometimes an apple between meals is good for one.

The fruit is health in itself, and we know that the man who eats plenty of fruit does not require the doctor as much as the other man who does not eat any. I want fruit in plenty on our farms, and I especially want it on my own.

The only way to have fruit is to set out trees, and as trees do not live forever, we have to keep setting them out, if we want a continuance of fruit year after year. I have found that the most practical way for the farmer to have plenty of fruit is to keep setting out trees each year; just set a few each year and a variety of them, and you will have plenty and all kinds of fruit. We have always done this and were never without fruit unless there was a failure of the apple crop as there sometimes is, and then we have a variety of other kinds, for we always set out a variety, but we do miss the apples.

Some claim that spring is the best time to set the trees, and some think that fall is the best time. I think that if the trees are taken care of that there is no difference, and as we possibly have more time in the fall, it would be well to set some each fall; better still, set a few trees each fall and spring. One time is as good as another. We had better set some in the fall for fear we will neglect it next spring.

Some years ago we set an orchard in the fall. The land was in grass, and this was plowed and ordered before the trees were set, then we set the trees and a little extra care was given in setting. A hole was made in the ground and a mud puddle was made that the roots of the trees might stand in this for a time before setting. We then dug the holes good and wide and deep, and the tree was carefully set, then the dirt that came from off the top surface was placed around the roots, and about a half bucket of water poured in, and in a short time some more ground was put in and tramped, and last of all the clay which came from the bottom of the hole was scattered on top. I will say that we did not lose a tree of the apples, but did lose some of the peach trees, as some claimed it was too wet for the peaches.

We know of another orchard that was set at the same time and the trees came from the same nursery, and that orchard was all gone before it came into bearing.

Fall is as good a time as we can get to set trees, but trees need some care later, and if we do not intend to give this care, we had about as well not set them out at all.

We are going to have fruit at our house if there is any possible way of getting it, and so we keep setting trees each fall and spring, so that we will have plenty for our own use and occasionally a few to spare.

Often we can get better trees in the fall, as many do not believe in planting at this time of the year, and the nurserymen often send out the best trees in the fall.

Many of us are crowded with work in the spring, and, as I said before, if we set trees this fall, we will have more time and attend to them right. It pays to do a thing right, and there is something in the way we dig a hole for a tree. Get the trees this fall, and have them out of the way when busy spring comes. I do not see how some people think of getting along without fruit. A big apple or two at each meal is healthy and saves medicine.—E. J. Waterstripe.

PRACTICAL BARN PLANS.

This is the name of the best book out. Every farmer needs it. No matter what kind of buildings he may have on his property, he needs it anyway. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.

A Practical Farm Barn.

Each and every plan in the book is accompanied by a lengthy written description, explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

Any carpenter or builder, or even a farmer himself who is handy with tools, can take our "New $5,000 Barn Book" and put up many of the buildings.

A Valuable Work.

We hope we have impressed you with the value of this book and that the nominal price asked is nothing by which the practical value of the book should be measured. This book is 8x10½ inches, contains 156 pages, is handsomely bound in cloth, stamped in two colors, and printed on fine glossy paper. Order to-day while you are in the mood. That's what to do. **Price, $1.00, Prepaid,** including one-year's subscription to this paper.

A Sample of Seed.

The importance of insisting upon clean seed may be seen in the results of a recent analysis of Kentucky blue grass seed. This sample of grass seed was submitted to the writer with the understanding that it was "strictly pure." The analysis reveals that a pound of this "strictly pure" seed contains, approximately, 13,000 bad weed seeds and nearly 10,000 other grass seeds. Rather a mixed lot for seed sold as "strictly pure." One may imagine what the lower grades of this seed would contain. The safe way to buy seed of all kinds is to buy only upon a purity and germination guarantee. Growers of seeds sometimes make the objection that it is not practical for them to make such guarantees. Then they have no business selling and disseminating seeds. The time is past when one should buy seeds with his eyes shut. Every seller of seeds should stand behind his goods and sell his goods upon their merits. Then if buyers prefer low-grade seeds, at a low price, rather than clean seed, at higher prices, it is their own lookout. But it is foolish to consider one grade of seed as good as another. We are using a greater amount of all kinds of grass and clover seed every year, and if farms are to be kept free from weeds, these grass and clover seeds must be watched closely. Analysis is the only way to reveal just what any lot of seed contains. The other day a sample of a 125-bushel lot of timothy seed was sent me, with the statement that it was absolutely clean, as no weeds were seen in the growing crop. Analysis showed that it contained buckwheat, buckhorn and ox-eye daisy—three of as bad weeds as may be found. The thing to do is to insist upon clean seed, backed up by analysis.—L. C. Brown.

Clean Up the Machines.

If there is ever any cause for a show of bad temper let it be laid to rusty tools and machines, which have stood without proper cleaning since they were used the previous season. After a plow or cultivator has stood a few days with dirt on, it has been practically ruined, for no amount of grinding or polishing will restore its good condition. Severe cutting away, by grinding, destroys the fine edge of the plow share or cultivator shovels, and it is then a hard matter to get them to cut true. If each tool, machine or implement is carefully cleaned as soon as you are through with it for the season, and then painted over or carefully greased, and then put under shelter, there will be the minimum amount of trouble the next season, when the things are taken out to use again.—L. C. Brown.

Missouri State Fair at Sedalia, October 3—9.

The attendance at the State Fair promises to be large this year. More interest is being manifested in it than ever before and the attendance will be a record breaker. The Business Men's Association of Sedalia have organized the Bureau of Information on a larger scale than ever. Mr. J. W. Mellor, Secretary, is in charge, and promises that everyone who comes will be well taken care of and at reasonable rates. The Bureau of Information will be located where it was last year, at 404½ Ohio street, opposite the Court House.

The citizens of Sedalia will throw open their homes for the accommodation of State Fair visitors.

"STOVER"
Before you make up your mind on a gasoline engine let us tell you about the "Stover."
The All-Service Gasoline Engine
It's the greatest worker of them all, the simplest, easiest controlled, the most economical. You want to make sure of getting a power that will perform right at all work, in all weathers. We can prove to you that the "Stover" is that engine. Write and ask for our engine book.
STOVER ENGINE WORKS
47 River Street Freeport, Ill.

BOWSHER SWEEP MILLS
Different from all others. 4 or 2 horse. Geared 10 to 1 or 7 to 1. Grind Corn with shuck or without. And all small grains including Oats and Wheat. (Also make 7 sizes belt mills.)
L.N.P. Bowsher Co., South Bend, Ind.

Growing Plants From Cuttings.

Every land owner can easily secure a nice lot of grape vines and currant bushes with only a little labor. They are grown commercially from cuttings of the present season's growth. All that is necessary is to put the ripened wood in the ground, where it will start to grow next year and form a plant which will be suitable to transplant one or two years later.

Grape cuttings are made with either two or three buds. Well-ripened, short-jointed wood should be selected, and the lower cut made squarely across and close under the bud; the upper cut slanting and an inch or two above the bud. In this way the cuttings can be planted right side up. Currant cuttings are made six to eight inches long in the same manner, but they contain several buds.

The cuttings may be tied in bundles, with the lower ends even, and buried in moist sand over winter. The ends will callous over and they will be ready to put out roots as soon as planted in the spring. They can also be planted in the open ground as soon as made. The cuttings should be placed somewhat slanting in rich, mellow soil several inches deep and covered to the top bud.

A light mulch of coarse manure, when the ground freezes, will help to protect them from being thrown up by the alternate freezing and thawing. They should be planted in rows two and one-half to three feet apart and set four to six inches apart in the row. In one or two years they will make fine, handsome plants of the variety from which the cuttings are taken.—Wm. H. Underwood.

Getting Bigger Yields.

There are two factors in producing a crop of grain which are well worth bearing down upon at just this time. These two factors will put any crop away above the average, yet on thousands of good farms they are not employed.

The most important is proper condition of the soil. I have watched fields this season where manure and mineral fertilizers have literally been piled on, and yet the fields show the poorest kind of returns. The crop results from these fields simply prove that application of fertilizers alone will not produce a crop, but that good mechanical condition is the first essential before manure or other fertilizers may become available to the growing crops. A piece of ground may have in it all the elements necessary to make an eighty-bushel corn crop, but unless that ground is so handled that these elements are available at the proper growing stages of the crop, one is more likely to get a thirty-five-bushel crop. It is commonly stated that the analysis of any crop will show just the amount of fertilizers which should be applied to land to produce such crops. That may be correct as far as it goes, but the proper handling of the land is far more essential, in order that the crop may be fed continually throughout its growth.

The matter of adapted varieties is the other most important factor. Undertake to grow a crop out of its native zone and it will have to make a fight with untoward conditions. But use seed which finds the soil comfortable, and it will at once begin to make use of the food in the soil. The thing to do is to use seed which will do best under normal weather conditions. We have not learned yet to foretell just what the seasons will be, and it is foolish to be constantly changing about from a late-maturing to an early-maturing sort, or from wet-season to dry-season plants. If you have normally 120 days of good corn weather. I should grow the heaviest-yielding corn that will mature in that time, and then in an unfavorable season handle the ground so as to induce seasonable ripening. This will keep the cribs full much easier than shifting about from one variety to another.—L. C. Brown.

How Soils Are Spoiled.

This has been a season that has tried the resourcefulness of many good farmers. The condition has been just right for spoiling soils. That is to say, there was plenty of moisture during the spring, but this was followed by dry and hot June and July, and untimely plowing has left many fields in a badly-baked condition. If the results of such conditions lasted but one season the matter would not be so serious, but it has been frequently observed that land badly puddled and subsquently hard baked cannot be retrieved in many years. It is really more of a job to reduce such soil than the toughest hard-pan. Many have learned by costly experience that it requires several seasons of careful work to bring these soils into good condition again. We all know that it is a bad practice to stir ground when it is wet, yet the thing is done every spring. Commence with the seeding of oats. Crops are puddled in year after year, until it is a wonder that we get any crops at all from these fields. Such fields are the first to dry up when summer drouths strike us, for capillarity has been so completely destroyed that the crops cannot draw upon the water reserves, and the elements needed for growth of the crops are so securely locked up in the clods that they are not available. I have seen fields this season covered with clods from the size of an apple to those that would weigh forty or fifty pounds. These clods were baked almost as hard as stone, and no amount of rolling would reduce them. These fields were plowed late, because the ground was so wet early that teams could not be driven upon them. Most of these were undrained fields. Worse cases of puddling and baking I have never seen.

The natural tendency of all soil is to become firmer. It is tamped down by even the gentlest rains, and beating rains will render it almost impervious to water. Good farming must undo this work; that is, by stirring break up these crusts and thus keep the soil in good condition. All practical farmers know that soils are best by being plowed and cultivated at just the right time, but not many have the patience to stand by, when the season is getting late, or put off cultivation and allow weeds to get the upper hand. I agree with some writers. I believe there is more to be gained in properly working our soils than in fertilizing them.—L. C. Brown.

According to the Egg Reporter, the August receipts of eggs at the great markets were the highest since 1903, and the price, 20¾ cents a dozen, was the highest in six years. This applies to the New York market.

Slaves of the Lamp

By John E. Kennedy

HERE are *eight* lamps—waiting to be *cleaned!* They are Parlor Lamp, Dining Room Lamp, Upstairs Hall Lamp, Kitchen Bracket Lamp and three Bedroom Lamps.

Besides all these there is the Lantern, maybe.

Consider for a minute what *unpleasant* work these lamps call for *365 days in the year.*

1st.—Collecting them and carrying them to the kitchen.

2nd.—Taking off shades and chimneys carefully.

3d.—Scrubbing off soot from awkward inside of each chimney.

4th.—Careful snuffing and level trimming of dirty wicks.

5th.—Unscrewing of every burner or cap to let in Kerosene.

6th.—Filling bowl of each lamp with Kerosene.

7th.—Screwing on burners or caps again after filling.

8th.—Wiping off dirty old flies and Kerosene from bowl and stand of every individual lamp in the eight.

9th.—Screwing on cover of Kerosene Can and carrying it out to safe place in cellar or shed.

10th.—Putting on chimneys of every single lamp.

11th.—Carrying *each* lamp back to *its* particular bracket or place in the *eight* different parts of the house, and putting on shades.

12th.—Cleaning up table, storing away filthy old Kerosene cloths, and *trying* to wash from hands and clothes "the smell that *won't* come off."

* * *

Think of all *that!*

Ninety-six different processes to go through—while the stale Kerosene disgusts, soils and sickens.

And *this* must be done *365 days* in *every* year, wherever Kerosene lamps are used for lighting.

Get on your thinking cap, madam!

What does all this everlasting *daily* Lamp Slavery cost?

—In time, comfort, appetite, health and the days' happiness—what *does* it cost those who live in country homes?

Would any sane person choose to do that *kind* of work, year in and year out, for 2 cents per lamp, if they could avoid it?

Well, 2 cents per lamp means 16 cents per day, *exclusive* of breakages, new wicks, and waste of Kerosene.

Sixteen cents per day amounts to $58.40 per year, *without cost of Kerosene.*

—Then the soot and smell—the burning up of life-giving Oxygen in the air—the giving out of poisonous Carbonic Acid Gas from lamps, to be breathed and rebreathed by children, parents and guests in the homes.

Then the mean *yellow* light, the clouding chimney, the unevenly charred and smoking wick which *will* go wrong when you most need good light.

All *this* because "Mother used Kerosene lamps!"

Why don't you *stop* it?

You may if you *will*—and save money.

How would you like to roll all these dirty disagreeable 96-processes-per-day into a *once-a-month* session of *fifteen* to *thirty* minutes?

Thirty *minutes* per month instead of 30 *hours* per month.

You *can* save 25 hours lamp cleaning per month—if you want to.

You can *dispense* with Kerosene lamps and the dangerous Kerosene Can *forever* if you'll just *be modern* and use Acetylene Gaslight instead.

* * *

An up-to-date Acetylene Lighting Plant can now be completely installed in the average country home—ready to light up—in two-days' time without injury to ceilings, floors or walls.

And when once installed it will give you the *same* amount of light as you now use for *one-third less* than regular lamps will give with Kerosene at 12 cents per gallon.

That's *modern* Acetylene Lighting.

No more lamp-cleaning, filling, chimney-wiping, wick-trimming, breakages, soot nor smell of vile Kerosene.

Instead, Acetylene Light from permanent handsome polished brass brackets on the walls and neat brass chandeliers from the ceilings—city-like, elegant, up to date and out of the way.

Can't tip over (like Kerosene Lamps) where there are children—can't do anything but give you brilliant, beautiful, *white* light, whenever you merely turn a tap on wall bracket or chandelier.

Acetylene Light which does *not* need mantles, wicks nor chimneys.

Acetylene Light which is so pure, so free from soot and color-fog that you can distinguish pale blue, pale pink or pale yellow under its rays as clearly *at night* as you could in broad daylight.

Once a month the hired man must clean out and refill the generator in the basement. Takes him 15 minutes to 30 minutes *per month* to do this, if he isn't lazy—30 minutes per *month.*

"The cost of all this?" you ask? So *small* comparatively that the plant soon *pays for itself* through what you *save* on labor and chimneys and on the difference between the cost of Carbide and the Kerosene you are now using.

Shall we give you more *precise* figures about this "Rural Gaslight" Acetylene?

Then write us to-day how *many* rooms you've got in house, or hotel, or how large a store to light, so we can answer intelligently and to the point.

Address Union Carbide Co., Dept. B, 156 Michigan Avenue, Chicago, Ill.

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published Monthly
By THE HALE PUBLISHING CO.
Philip H. Hale, Managing Editor.
Claude A. Cour, Advertising Manager.

Charles H. Hopkins, 150 Nassau street, New York City, Eastern Representative.

Entered at Postoffice at St. Louis, Mo., as second-class matter in January, 1901.

Subscription Price in the United States, 50 cents per year, or three years for one dollar.

Office of Publication, 3550 Vista avenue, (corner of Vista avenue and Carr Lane avenue), St. Louis, Mo. Bell Telephone: Grand 400.

We are publishing pictures of prize winners at the State Fairs which are taken by our own special photographer. We consider these pictures worthy of more extended notice than is usually given them in farm papers. We will continue to publish these pictures every month until the list is exhausted.

If our readers will stand by us a little while they will see good pictures of nearly all the Western show champions of the season of 1908. We are making a collection for the purpose of interesting our friends and patrons.

We publish The National Farmer and Stock Grower at 50 cents a year, and we publish the Universal Magazine, three columns, thirty-two pages, at 25 cents a year. We club them together for 60 cents a year for both papers. The Universal Magazine is a very nice publication, full of interesting stories, poetry, information, etc.

A Useful Association.

During the month of September the editor of The National Farmer and Stock Grower had the pleasure of attending the third annual meeting of the Military Tract Shippers of Live Stock Association, with headquarters at Monmouth, Ill., and had the privilege of addressing them upon the subject of the evolution of live stock markets. This association of live stock shippers was formed for the purpose of organizing themselves for mutual support and protection to secure better rates and facilities and to adjust railroad claims of its members upon an equitable basis for all concerned. It appears that under the conservative guidance of the officers of the association the stock shippers and the railroad officials are working in harmony and friendship, and that much has been done on both sides for the betterment of the live stock shipping interest. The officers of the association are: President, Wm. Firoved, Monmouth; Secretary, J. B. C. Lutz, Monmouth; Treasurer, S. Musgrove, Kirkwood. Other Directors—Edgar Rankin, Biggsville; R. H. Capron, Kirkwood; Samuel Laughead, Alexis; A. C. Clore, Berwick; A. L. Duncan, Seaton; and Eli Dixon, Roseville. We take this opportunity of thanking the officers and members of the association for many courtesies extended to the delegation from the St. Louis National Stock Yards which attended the meeting.

Three Great Herefords.

We beg to call attention to the three Herefords we will sell at the Combination Sale, October 13th, held during the Kansas City Royal Show.

One entry is the senior yearling bull "Chance," who won first prize in a large class at the Kentucky State Fair. This bull is by a prize-winning son of the $6,000 Protector and out of a Cherry Boy dam. He is the smooth, blocky type, with almost perfect head and horn. He is sure to prove a good sire as well as being a show bull.

We will also offer "British Corker," a son of the champion Britisher and from a Beau Roland dam. This calf has been to the leading State Fairs and is always in the money. He is level, smooth and full of quality. Both of these bulls are good enough to head the highest-class herds.

Our third entry will be a daughter of Britisher. This heifer is a beauty, with size and quality, and should be seen to be appreciated.

Prospective buyers should look these cattle up during the Royal and inspect them before the sale.

We are offering at private sale a great lot of young bulls and heifers. They are sired by such noted bulls as Britisher, champion of England and America; Acrobat's Beau Donald, champion beef bull of the South in 1905 and 1906; and Beau Roland, one of the best sons of the famous Beau Brummel.

We can fill orders for car lots of range bulls and have the best lot on hand we have ever owned, and we think we ought to know good range bulls, as we have been supplying some of the very best ranches in the West for a great many years. We would be willing to trade car lots of bulls for good steer calves, and parties in need of range bulls would do well to write us before making any purchases. We can also supply your wants in any kind of Kentucky stallion, brood mares or business horses.

We will be glad to hear from anyone desiring anything in our line.

GILTNER BROS., Eminence, Ky.

The greatest act of friendship which can be extended to this paper is to pass it around and interest others in it. When this is done we usually obtain a few new subscribers because there is valuable matter in every edition.

The state of Missouri averaged a wheat crop of only 10.7 bushels per acre. The excuses are too much rain, rust and overflow. But that is not all. When we condemn Alaska wheat as a fake, although they raised 35 bushels to the acre in a bad year, we ought to look for the fakes in Missouri. There is something radically wrong with a crop of less than 11 bushels per acre.

We would like to have the experience of a few farmers who are using hurdles in pasturing sheep.

FARM AND RANCH LANDS.

ALABAMA COAL LANDS.—Fifteen thousand acres of mineral land. Right in the heart of the Warren coal lands of Alabama. These lands were purchased direct from the state under the land act of 1892. Lands in this section have yielded over $1,000 per acre on royalties of five cents per ton on coal.

The Illinois Central Railway has a survey completed through this body from Jasper, Ala., to Birmingham, which is expected to be built in the near future. The reason why the present owner is influenced to part with it is the need of ready money. No one need apply who has not the cash. Such a purchaser can get a bargain if taken up at once. Deed to this body of land will give purchaser title to over 6,000 acres good coal land worth when opened $100 per acre or more. This is an opportunity for a capitalist who can wait a few years to multiply his money. It takes fifty thousand dollars to buy and carry this proposition. Address, JOURDAN ESTATE, care National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

Arkansas.—Fine lands on the Cotton Belt Route in Texas. All very valuable but cheap at this time. See page 30 and read the advertisement of **E. W. LaBeaume**, G. P. & T. A., 1551 Pierce Bldg., St. Louis, Mo.

Mississippi.—160 acres land; four miles north of Iuka, Miss.; three miles from the Tennessee river. This can be made a good home. Has about 20 to 25 acres cleared; balance in small timber; also pretty good farm house. A quick buyer can get it for $500. What do you think of that? **J. W. Jourdan**, Iuka, Miss.

Mississippi.—320 acres, eight miles south from Iuka, Miss., and four miles from the I. C. Railroad. About half is fine bottom land and all has good growth of timber. Well adapted to corn and cotton and would make a good stock farm. Price, $1,600. It is worth $25 an acre. Address, **J. W. Jourdan**, Iuka, Miss.

Mississippi.—320 acres; a great bargain; on Yellow creek, twelve miles north of Iuka, Tishomingo county, Miss., and not far from the Tennessee river. This would make a fine stock farm. It is the cheapest piece of land in Mississippi and will not be on the market long, as it can be had for $2.00 an acre. **J. W. Jourdan**, Iuka, Miss.

Mississippi.—240 acres, two miles south from Iuka, Tishomingo county, Miss. About 30 acres clear land; has also 50 acres canebrake, which can be reclaimed and made worth $50.00 per acre. This will make a fine stock and fruit farm. Price, $4.00 per acre. **J. W. Jourdan**, Iuka, Miss.

NORTHERN MISSISSIPPI.—About 1,200 acres, consisting of six quarter sections and some small pieces. This land with poor cultivation produces 25 to 30 bushels of corn per acre, also one-half bale cotton without fertilizer; also 100 bushels of either Irish or sweet potatoes. It is only two miles north of Iuka, on the Southern Railway, towards the Tennessee river; about 100 acres in cultivation and 400 acres level ground, worth $20.00 an acre. Well watered with springs and live creeks. Good farm house and outhouses; also good orchard and pecan trees. Ten thousand cross ties can be made from growing timber. This tract of land can be had with clear title at $6.00 an acre. It is a great bargain. An active man who knows his business can clear a first-class income. Near to market, at Memphis; live stock can be shipped by boat to St. Louis by driving a few miles. Two crops of sorghum, millet, peas in corn, and every known vegetable. White clover, spontaneous growth. Address, JOURDAN ESTATE, 3550 Vista Ave., St. Louis, Mo.

Mississippi.—20 Acres.—A fine gravel hill. On line of Southern Railway, two miles east from Iuka, Miss. Will mine 100,000 carloads of what is famous as the Tishomingo gravel. Will cement together and make fine ballast for railroads or public roads and streets. It is accessible to railroad with cheap rates. Cash price, a thousand dollars. Buy it quick as a bargain. **Jourdan Estate**, care National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

WATER POWER AND BUILDING STONE in Northern Mississippi—120 acres—which includes a fine water power where a successful cotton mill was run until destroyed by fire. Water can be had in abundance with good fall and short dam between solid stone bluffs. The entire 120 acres are covered with fine building stone in quantities to quarry for the next century. Millions of tons of the finest building stone can be quarried in any size or shape. Owner would take some stock in company to develop this property. A spur can be put in from the new Illinois Central Line between Corinth and Birmingham to haul this stone. Prices and terms easy to the right party. Address, JOURDAN ESTATE, care National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

CENTRAL MISSOURI FARMS.—For farms and homes that will prove both satisfactory and profitable, write for new illustrated list; 100 farms described and priced. **G. W. Hamilton & Son**, Fulton, Mo.

OZARK FARMS For Cattle, Sheep and Poultry raising. Horse or Mule breeding. Fruit, General or Dairy Farming or Market Gardening. Beautiful climate, running water. Ideal conditions. Write to-day for our lists—No property to exhange.
PICQUET-HARTRICH REALTY CO., 55 Liggett Building, St. Louis, Mo.

NORTHERN MISSISSIPPI — 410 acres. Four miles from railroad at Iuka, Mississippi, and four miles from boat landing on the Tennessee river. This tract of land is one of the most valuable in the United States. A stock farmer can take this ground, obtain free and clear and guaranteed title for $1,800 cash down. It is a splendid property, and can be used as a dairy, vegetable, stock or fruit farm. Except a fair house, improvements are not much. Splendid climate. It is an hundred times a bargain. You deal direct with the owner. Write to HARRIS ESTATE, care National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

MISSOURI. 800 ACRES. MISSOURI. The best bargain. Adjoins railroad station. Two hours from Kansas City; six hours from St. Louis; twelve hours from Chicago. The land will grow 60 to 80 bushels of corn to the acre; 40 acres winter apple orchard. Improvements worth $15,000. It is just the farm for an Illinois man who is used to good land. Too fancy to describe. Price, $75.00 an acre; one-third cash, balance long time, six per cent. Also smaller farms. Write for particulars. **J. H. LIPSCOMB**, 306 Fidelity Trust Bldg., Kansas City, Mo.

Missouri.—11,000 acres at $4.50 per acre. The greatest bargain on earth. See on page 13 the advertisement of **J. H. Lipscomb**, 306 Fidelity Trust Bldg., Kansas City, Mo.

MISSOURI.—Fine Home Ranch. 1,000 acres; eight miles from this city, and five miles to another good railroad town. A fine ranch and a model home. Good house and barn. All necessary outbuildings. Good orchard. Fenced and cross fenced. Well watered by springs and creek. 375 acres bottom. About 475 acres in grass and cultivation. Rest in timber. A snap at $16 per acre. Smaller tracts for sale. Write for list of good and cheap lands. **Wright & Waterstripe**, Marshfield, Mo.

Montana.—Thousands of acres, fine lands, for sale cheap. Government homesteads close to towns yet available. Write for description, maps, etc. Address, **Geo. B. Haynes**, Immigration Agent, 348 Marquette Bldg., Chicago, Ill. See page 23.

Oklahoma.—8,000,000 acres rich Indian lands on which restrictions have been removed. Can now be bought cheap with perfect titles. See advertisement on page 25 and write for particulars. Address nearest office, **John Sebastian**, 1768 Frisco Bldg., St. Louis, Mo., or 1768 LaSalle Station, Chicago, Illinois.

Texas.—Farm lands; rich soil; nearness to market; mild and healthy climate. Two crops a year. Green pastures all the year round. See page 30 and write for free literature concerning lands which are valuable and cheap on the line of the Cotton Belt in Texas and Arkansas. Address, **E. W. LaBeaume**, G. P. & T. A., 1551 Pierce Bldg., St. Louis, Mo.

Texas.—Fine Colonization Tract—10,000 acres ten miles west of Falfurrias Station, on Alice Branch of the San Antonio & Aransas Pass Railroad. All red and black sandy loam soil, artesian water strata at 265 feet, water rises to within nine feet of top. Will grow all fruits, vegetables and other crops that can be grown anywhere in Texas. Adjoining land being sold at $25.00 per acre now. Price of entire tract $9.50 per acre; the price is $10.00 per acre in 3,000-acre tracts. Terms, half cash, balance one and two years at eight per cent. interest. **H. M. & P. H. Thompson**, 215 Alamo Plaza, San Antonio, Texas.

Texas.—12,000 Acre Ranch For Sale! All together or in parts, in Uvalde county, Southern Texas, nine miles from Sabinal, an up-to-date and rapidly-growing town with fine schools, 71 miles from San Antonio, on the Southern Pacific Railroad. Principal grasses, mesquite and rescue. An abundant and inexhaustible supply of pure water. The tillable soil is black hog wallow and chocolate and produces alfalfa, wheat, cotton, corn, rye, sorghum, broom corn, vegetables, fruits, etc.

No other locality is better adapted for the successful raising and fattening of cattle, hogs, sheep, horses and mules. The land all the way from town to this ranch is under cultivation. Owner being a non-resident, price, $7.00 per acre.

Address, **A. D. Evans**, National Stock Yards (East St. Louis), Ill.

Club Ranch (CLUB RANCH)

IN the famous Red River Valley, Archer county, North Central Texas, has been divided in tracts of 80 to 640 acres. Had 40,000 acres; sold 20,000 to actual farmers from the East, North and West. Grow corn, 40 bushels; wheat, 16 to 30; oats, 40 to 70. Rich, red loam soil; water 12 to 40 feet; 21 miles Fort Worth market; 1 to 8 miles county seat and railroad. PRICES, $8.00 to $18 Per Acre. Only ¼ down, balance two to five years. Your crops pay for it. Go along October 6th and 20th. Only $17.60 round-trip from Kansas City. Free sleepers. Send for illustrated book, samples wheat and oats. Beautiful map Texas, 25 cents, stamps or silver. Address, LOTT, "The Land Man," 115 W. 8th, Kansas City, Mo.

Texas.—1,107 acres in Jackson county, Southern Texas, four miles from town. A bargain at $10.00 per acre. Good for vegetables, fruits, cotton or live stock. Address, **Box 84, National Stock Yards, Ill.**

Texas.—Large and small farms for sale in the southern part of the state from $2.50 upwards. It will pay buyers of Texas land to address **Box 84, National Stock Yards, Ill.**

VIRGINIA FARMS, $5.00 Per Acre and upwards. Easy payments. Catalogue free. Loans made on country real estate. **George E. Crawford & Co.**, 1009 East Main St., Richmond, Va. Established January, 1875.

CASH FOR YOUR FARM OR BUSINESS, no matter where located. If you want to buy, sell or exchange any kind of real estate or business anywhere, at any price, address, **FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago, Ill.**

A Bird's Eye View

of a city doesn't do justice to it, because it only gives an idea.

The same applies to this advertisement; it only gives a small idea of the Tubular qualities.

We want you to have a thorough understanding of the benefits derived from a Tubular Separator.

The simplicity, durability and efficiency of the Tubular are admitted by our competitors and vouched for by thousands of satisfied users.

It is built to skim clean and last a life time; and it does and will.

The Tubular bowl is so simple and so easy to handle that it can be cleaned in two or three minutes.

There are so many points of excellence to be found in the Tubular, that to get a thorough knowledge of them you must read Catalog 232.

SEPTEMBER MILK 14 CENTS.

Programme of the Missouri and Illinois Milk Producers' Association For October and November.

The Milk Producers' Association centering on St. Louis will hold a Directors' meeting on Monday, October 26th, and the annual meeting on Monday, November 23d. The Directors' meeting will be held at the office of the Secretary, Wm. A. Fischer, 409 Franklin avenue, St. Louis, Mo. The November annual meeting will be held at the rooms of the Produce Association of St. Louis.

A regular meeting of the officers and Directors of the Milk Producers' Association was held on Monday, September 28th, at the office of the Secretary, for the purpose of hearing from the Milk Committee and from Mr. Wm. Nolle, who attended the hearing before Commissioner Prouty in regard to the rates on milk and cream.

The Hon. D. I. Furbeck, President of the association, made the report in behalf of the Milk Committee, stating that the principal dairy companies of St. Louis had agreed to pay 14 cents per gallon for uncontracted milk belonging to members of the association that was delivered in September.

Mr. Wm. Nolle reported that he had gone to Chicago according to the instructions of the association; that he had attended the session an entire week, and that said session was adjourned until December 2d, when the Interstate Commerce Commission would listen to the arguments of the attorneys and render their final decision.

Mr. Nolle reported that the railroads were very strongly represented, also the large and small creameries. Milk dealers and city distributors, dairy associations, etc., were there in full force. From St. Louis the Colonial Creamery was represented by J. H. Curran, and the Grafeman and other dairies by Mr. Chas. Mannebach. The testimony before the Commissioner was voluminous, and much of it was ruled out as being on the order of asking reduced rates for themselves and high rates for their competitors. It was quite apparent that although the hearing was brought about by a contest of creameries, the entire milk schedule was involved. Railroads intended to put in higher rates last year on milk and cream, but being enjoined by the courts, after representation by the milk producers, they were reaching for the same result by using the cream dispute in order to advance rates generally.

Mr. Nolle reported that nothing further could be done; the evidence was all in, and after counsel is heard the Commission would render a decision. The Commissioner did rule that so far as the milk cans are concerned, the rate paid the railroad included the return of the cans without charge, and the railroads were responsible to the shipper for the return delivery.

Before adjournment, by resolution, a vote of thanks was extended to Mr. Nolle for his services in appearing before the Commissioner.

The Secretary announced to the meeting that for the first time in several years the association was in need of funds to defray current expenses, and the Directors were requested to round up delinquent members and to encourage others to join and assist in paying for the work that was being done in their behalf.

Between meetings the Secretary will receive communications for the good of the association.

Hand Cream Separators.

The farmer or dairyman who handles the milk from five or more cows for profit in butter-making or cream-selling should own a hand separator.

The hand separator, working under favorable conditions, leaves from one-fiftieth to one-twentieth of a pound of butter-fat in 100 pounds of skim milk. The gravity and the dilution (water separator) systems of securing the butter-fat, will leave, under the most favorable conditions, from one-third to three-fourths of a pound of butter-fat to each 100 pounds of skim milk.

The farmer who handles the milk from ten cows which produce 80,000 pounds of milk per year, should not lose over forty pounds of butter-fat in the separator skim milk. By the water separator (dilution) or gravity methods there would be a loss of 275 to 600 pounds of butter-fat per year. Figuring butter-fat at 20 cents a pound, there would be a loss between the hand separator and the other methods of from $45 to $110 a year. Thus the saving in one year would pay for the separator, and it would be good for many more years of service.

Advantages of the Hand Separator.

1. The machine not only secures practically all the butter-fat, but it delivers the skim milk in a sweet, warm and undiluted condition ready for the calves or pigs.

2. Less labor and dairy utensils are necessary than with the other systems.

3. The cream is of uniform richness. It has removed much of the fibrous and foreign matter.

4. The milk has had no chance to absorb bad flavors and odors from standing around, and the cream is produced in excellent condition.

5. There is a gain in the quality as well as the quantity of the butter obtained.

6. City dairies can improve the quality of their milk very much by running it through the separator and afterwards mix the skim milk and cream before bottling it. The milk is not only aerated, but many of the impurities are removed, thus making it sweeter and giving it better keeping qualities.

Size of Separator to Buy.

Hand separators may be procured in sizes varying in capacity from 150 pounds of milk (18 gallons) an hour to 1,200 pounds (144 gallons) an hour. The prices vary from about $40 for the smaller size, to $175 for the larger size.

The capacity of the machine per hour should not be less than fifty pounds for each cow milked. A ten-cow herd would then require a 500-pound capacity separator, and an eighteen-cow herd a 900-pound capacity.—H. M. Bainer, Professor of Farm Mechanics, Colorado Agricultural College, Fort Collins.

Note by the Editor.—We are advertising three cream separators—the De Laval on page 11; the Sharples on page 9; and the United States on page 10. These cream separators are all standard and the best three in the market.

UNTIL Amatite was put on the market a few years ago, practically everybody who used ready roofings had to paint them regularly. Some of the roofings required a coat every year; others every two or three years.

In all cases a good deal of expense and trouble was involved.

The popularity of Amatite is largely owing to the fact that its use does away with all such trouble and expense. This is due to its **real mineral surface** which is far more durable than any paint made. It is not affected by weather and will last indefinitely.

All that is necessary after laying an Amatite roof is to leave it alone. Leaks and dissatisfaction are left behind.

Every practical man will doubly appreciate the "no-paint" idea when we add to that statement the fact that Amatite is lower in price than most of the "paint-me-every-two-years-or-leak" roofings.

In addition, Amatite with its smooth lap edge, is easy to lay, and the necessary nails and liquid cement for laps are supplied free, packed conveniently in each roll.

Can any reasonable man ask more!

A Sample Free. Write to-day

Illustrations at top, from left to right, show: Chas. Johnson's Residence, Atlantic City, East Machias Lumber Co., East Machias, Me., A. J. Priebe's Barn, Petoskey, Mich. All covered with Amatite.

BARRETT MANUFACTURING COMPANY

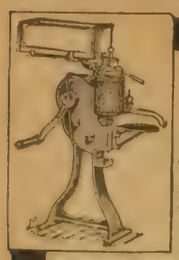
New York Chicago Philadelphia Boston Cleveland Cincinnati St. Louis Minneapolis New Orleans Pittsburg Kansas City London, England

2 H.P. Stationary Engine $29.50

Runs pumps, cream separators, churns, grist mills, corn shellers, washing machines, lathes, sawing machinery, etc. Uses alcohol, gasoline, naptha, distillate, kerosene, etc., without change in equipment. Starts without cranking, drop forged crank shaft, best grade babbit bearings. Other sizes proportionate prices. Free catalog tells how to save half cost of hired help. All sizes in stock ready to ship.

Detroit Engine Works,
383 Bellevue Ave., Detroit, Mich.

Alvey Bros., of Meriden, Kansas, have the O. I. C. swine that have been advertised in this paper before. They are reliable breeders, and we first met them in the show ring, where they were winning many prizes. Interested parties will be pleased with pigs bought of this firm.



The 1908 Improved

U. S. CREAM SEPARATOR

Meets every emergency in the Dairy

It has a solid, low frame; waist low supply can without the back breaking low crank; simple yet thoroughly efficient bowl, holding World's Record for cleanest skimming; is thoroughly lubricated, as gears run in a pool of oil, and has ball bearings at high speed points, making it the easiest running separator made.

Do not delay longer in the purchase of a separator and buy no other until you have seen our catalogue No. 125 sent to any address on receipt of a postal.

Vermont Farm Machine Co., Bellows Falls, Vt.

Prompt deliveries from 16 distributing warehouses in the U. S. and Canada

How to Handle Sick Stock.

Place the sick animal in a well-disinfected and dry box stall with plenty of bedding and sunlight (avoid drafts). In cold weather, place a blanket on the animal, feed sparingly with digestible food, such as bran mashes made of linseed tea; keep manger sweet and clean. Water should be pure and clean and warmed when necessary. It is always necessary for new milch cows to be given warm water. An injection of warm water (per rectum) should be given all sick animals, excepting those afflicted with looseness of the bowels.—Dr. David Roberts, Wisconsin State Veterinarian.

The Oklahoma State Fair.

The Oklahoma State Fair of 1908 will be held in Oklahoma City, October 1 to 10, inclusive. It will be larger than many older Fairs. No industry will be neglected. It will not be strong in some particulars and weak in others, but every department will be equally attractive. Fully 200,000 visitors are expected to attend the Fair.

Clean Up the Feed Yards.

Now is the best time of the year to give the feed yards and barn yards a general cleaning-up. In fact, it would have been much better had the manure in these yards been scraped up, loaded into the spreader and scattered upon the wheat ground before the ground was plowed. It is surprising how a thin treatment of manure will push the wheat along. I saw a small field of wheat this season which had been covered with manure last August. It was double disced and harrowed and then seeded without further cultivation. That piece of wheat was worth going across the township to look at. It seemed that discing in the manure put it just where it was available, and the plants made the best of it. While plowing stubble ground is the usual practice, yet the results from this disced field show that the mechanical condition of the seed-bed is what counts.— L. C. Brown.

Succulent Food For Cows.

It is both uphill work and costly to undertake to run milch cows through the winter on dry feed alone. The man who intends to milk five or more cows will be thankful if he has put up silage for feeding during the winter and early spring. If that has not been done, better lay in a good supply of some other sort of succulent food. Most farmers grow a patch of either mangolds or sugar beets. These may be fed with profit. Turnips or rutabagas are perhaps the latest crops that can be grown in the fall. These are all right, but one must know when and how to feed them to get nicely-flavored butter. Mr. Hyatt was a firm believer in turnips. He fed tons of them to his milch cows every winter, and he supplied butter to the most fastidious Chicago trade. He knew how to feed turnips. By all means put in a supply of some of these roots for the cows this winter.—L. C. Brown.

RECREATION AT THE HARVESTER WORKS.

Extracts From an Article by John Kimberly Mumford in Harper's Weekly.

In the last edition of The National Farmer and Stock Grower we published an interesting sketch relating to the humane side of this great company. We now print another interesting extract from the same article, as follows:

"It would take a long time to enumerate the things that are done here and in other plants in the hope of bettering conditions and making people healthier, happier and safer. There are picnics up the lake in the summer time, rival ball nines and bowling teams; there are tennis games, fire drills in all the plants, and in musical Milwaukee a band of sixty pieces, which plays at the noon hour. There are physical-culture classes that work for an hour after closing time. There is a regular system of sick calls. The nurse, Miss Louise Palmer, who reports at the plant-surgeon's office morning, noon and night, and at a good many other times, is eternally on the go through the neighborhood.

The important question, however, is whether the purpose of the corporation, as enunciated by its President, pertains equally to all its establishments. In an office at the end of the long hallway in the company's headquarters in the International Harvester Building, Chicago, I found Miss Marie Goss. Miss Goss was for years employed in the offices of the Plano Works, another of the Chicago plants. When she was installed as Welfare Manager for the the International Harvester corporation, she took a big contract. There are fourteen plants in different parts of the country, all with different surroundings, different classes of employes, different local demands.

"There are a good many live wires in this work," said Miss Goss. "When a group of workmen think they would rather bring sandwiches, go get a pail of beer and sit on the curbstone to eat, they are apt to consider it interference if we send down the push-cart with an electric coil and kettles of hot soup and steaming coffee at noon. But two months after we started in doing this in one plant, the saloon-keepers came over and begged us to stop it, because it was driving them out of business. But we have a better and healthier workman, and the workman's wife has a steadier husband, with the beer habit cut out. To that extent paternalism pays.

"There has been too little education in some places, too much in others—education of the wrong kind; too much devotion to purely esthetic attempts, things that don't make for bread-winning. Technical training is of the first importance. We are looking only for practical benefits. The company believes that everybody ought to have an opportunity to work under the best possible conditions, and outside of work ought to have a chance for the best kind of fun.

"One of the most necessary things is to guard against accidents and to provide the best plan for medical and surgical treatment. In some of the plants this is well looked after, although not by the same system in all places. Where six or seven thousand hands are employed, where a hundred and sixty or more shops are full of diversified machinery, men are bound to be hurt, and where the population is ignorant of sanitary and physical laws, men are bound to be sick. Dr. Fisk and his assistant in the McCormick Infirmary treated twenty-five thousand cases last year. Sixty per cent. of these were surgical. While the great majority of the injuries were scratches, cuts and small abrasions, it is, of course, clear that prompt attention to them prevented no end of blood-poisoning and other ill results. Of amputations there were seventy-five, but only a few serious ones, which were removed to a neighboring hospital under Dr. Fisk's charge. The company keeps an ambulance for this purpose. In the course of the year he attended five hundred employes who were ill at home. There were three deaths from injuries recived in the works, one by the breaking of a grindstone, one from a collision in the freight yards, and one from the collapse of a section of flooring.

"Sanitary improvement will do away with a lot of medical cases, but to prevent accidents we will establish not only effective safety appliances, if possible, on all machinery, but shop rules which will do away with the carelessness of workmen.

"A 'relief' system is about to be put into effect also, to apply to every establishment we have. The technical schools for employes are to be widely extended, and here"—laying her hand upon a huge pile of letters—"are details of every industrial pension system in vogue in the United States. When, by study and comparison, the best features of all these can be combined, the International Harvester Company will adopt it.

"What we are trying to do as rapidly as may be is to get the whole situation systematized. When the plan is complete, getting it into operation will not be so difficult."

It is plain to see, and to feel, as you touch the personal mechanism of the International Harvester Company at its various points, that the work that is being done for the betterment of conditions has the best guarantee of success, to-wit: the appreciation and co-operation of everybody all down the line.

See about a Manure Spreader at once

A MANURE spreader is one of the best investments you can make. Don't delay.

It keeps up your soil's fertility, makes the manure go twice as far and saves you half the labor.

You are working at a disadvantage when you spread manure by hand. See the International agent in your town and talk the matter over and take a catalog along home with you.

The agent will be able to explain to you the strong features of the I. H. C. spreader he handles.

"Kemp 20th Century"—Return Apron Spreader
"Cloverleaf"—Endless Apron Spreader
"Corn King"—Return Apron Spreader

These machines are all made simple and strong, so that they give the least possible trouble in operation.

They are easy to operate and they handle manure perfectly in all conditions.

They are built to give many years' service. The materials and workmanship are of the best. With any one of the I. H. C. spreaders you will not be laying it up in the shed or driving it off to the shop for repairs every little while.

It pays every farmer to own a manure spreader.

It pays to buy the best spreader.

You know the International local agent, handling any of these lines. He will not misrepresent things to you. Go to him for a manure spreader catalog or, if you prefer, write direct to

INTERNATIONAL HARVESTER COMPANY OF AMERICA
(Incorporated)
Chicago, U. S. A.

The Ridd Milking Machine.

It appears that New Zealand is to furnish us Milking Machine No. 2 as well as the greater part of Machine No. 1.

The following are extracts from the New Zealand Dairyman of June 20th, 1908:

"We reached the milking shed in a semi-frozen condition (winter in June in New Zealand) and found things humming right merrily—they had just commenced on a herd of fifty cows. Most of these were spring calvers, and were, of course, in various stages of drying off. Mr. Buchanan, who greeted us very cordially, said that he would have turned them out long ago, but for the machine. Mr.Buchanan's brother was bringing in the cows, leg-roping them, and working the machines. Each machine consisted of a bucket with tubes and teat cups (to milk two cows simultaneously), attached to the lid. The pulsator is not in the lid of the bucket, but overhead at one end of the shed, and is a very simple-looking affair, consisting principally of a small wheel worked by a band off the main shaft, which opens and shuts a valve and gives about forty-five pulsations per minute. The pipe which carries these pulsations to the teat cups is a separate and smaller one from that which carries the suction from the vacuum tank. We noticed that the dial registered from thirteen to fifteen inches pressure.

"To turn on the taps and fix the cups on the cows' teats requires less than half a minute.

"Mr. Buchanan's brother informed us that he had, the other morning, driven in, bailed up, leg-roped and milked, with the machines, thirty cows in the hour.

"Mr. Buchanan, who was doing the stripping, showed me a little milk in the bottom of a bucket, the drainings of four cows. It did not amount to half a pint. He only did this stripping, he said, to see what the milk of each individual cow was like. If there was anything wrong with any of the herd, he was enabled thus to detect it. Sometimes, too, a cow would hold up her milk, but would give it down when hand-milked. In many cases there was nothing to be got from the cows after the machine had finished with them.

"The cows all stood very quietly during milking, and did not manifest any uneasiness even when the cups were being fitted on.

"The machine was installed in February, and had been working continuously ever since.

"During that time it has not once stuck up its owner, refused to do its work in a satisfactory manner, nor has it cost him one penny for repairs or renewals. No wonder he speaks with unreserved approval of his investment.

"The plant is driven by a three-horse-power oil engine, though we were informed that a two-horse-power would be amply sufficient. The owner spoke in delightful terms of this make of oil engine. It ran sweetly and smoothly all the time, and gave no trouble.

"We noticed, too, a pump at work, and were told that it did its work well, and was no trouble to look after.

"The simplicty of the whole plant from start to finish impressed itself very forcibly upon our minds. In fact, Mr. Buchanan endorsed our opinion very emphatically upon this point by saying that the farmer who could not run a Ridd Milking Machine had ceased to justify his existence for a day longer on the earth, and ought to be strung up."

Note by the Editor.—The principle of the Ridd Machine appears to be the same as the only machine which is now on the market in the United States; but it is the first time we have read anything so thoroughly conclusive in favor of any milking machine.

No Favoritism in Rates.

At the hearing in regard to milk and cream rates, Commissioner Prouty, of the Interstate Commerce Commission, did not appear inclined to favor rates for the purpose of assisting or destroying any industry. "You may assume," he is reported to have said, "that the Commission will endeavor to adjust these rates according to usual principles, not for the purpose of assisting either side nor for the purpose of interfering with anyone. It is perfectly evident that both forms of the industry will be allowed to survive and all the testimony as to the commercial effects has only a remote bearing on the final decision."

This attitude on the part of the Commissioner was very discouraging to those who were at the meeting for two purposes—first, to get a good rate for themselves; and,second,to get the rate raised on their compentitors.

Dairy and Creamery Notes.

A writer in the Farmer and Stockman claims that painted cans keep milk cooler than the bright ones. He says: "I have found that of two cans, one painted and the other not, other conditions being exactly alike, the cream in the painted can remained at a temperature eight degrees below that of the other. The reason for this is that bright surfaces retain heat, while plain surfaces do not."

At the Minnesota State Fair, the top butter scores were 97½ by A. L. Radke, of Hamburg, and 97 by Alfred Anderson, of Litchfield. There were 399 tubs of butter exhibited.

Under the supervision of Chief Ed. H. Webster, of the Dairy Division, Department of Agriculture, there will be held a Dairymen's Convention at the Third Annual National Dairy Show, which takes place in Chicago at the Coliseum, December 2 to 10, inclusive. It is the purpose of this convention to deal with subjects of national importance, and the programme will be filled with men who will be eminently capable of dealing with subjects of the highest interest to dairy farmers.

The cheese exhibit at the Minnesota State Fair resulted in a tie score of 98½ points by J. T. McCarthy and Chris. Martig, both of West Concord. There were twenty-four exhibits in the class for American full cream—twins.

The New York Produce Review says: "A new method of purifying cream and milk has been devised by W.F.Jensen, of the Jensen Creamery Company, Salt Lake City, Utah. Mr. Jensen has devised a machine in which the cream is subjected to treatment with rarefied air, his claim being that the action on the germ life in milk is as effective as the application of heat."

At the Iowa State Fair, two lots of butter, made, respectively, by P. N. Peterson, of Rake, and L. P. Anderson, of Algona, scored 97½ points. It is very seldom that such a high score is reached.

EVERYBODY
BUYING
DE LAVAL
CREAM
SEPARATORS

The wonderful improvements made in the 1908 DE LAVAL CREAM SEPARATORS—added to their THIRTY YEARS record of ONE MILLION prosperous users throughout the world—have convinced practically all WELL-INFORMED buyers of their overwhelming superiority, as well as actual cheapness, and they are being bought in even greater proportion this fall than in the spring or ever before.

A catalogue to be had for the asking shows the reasons WHY.

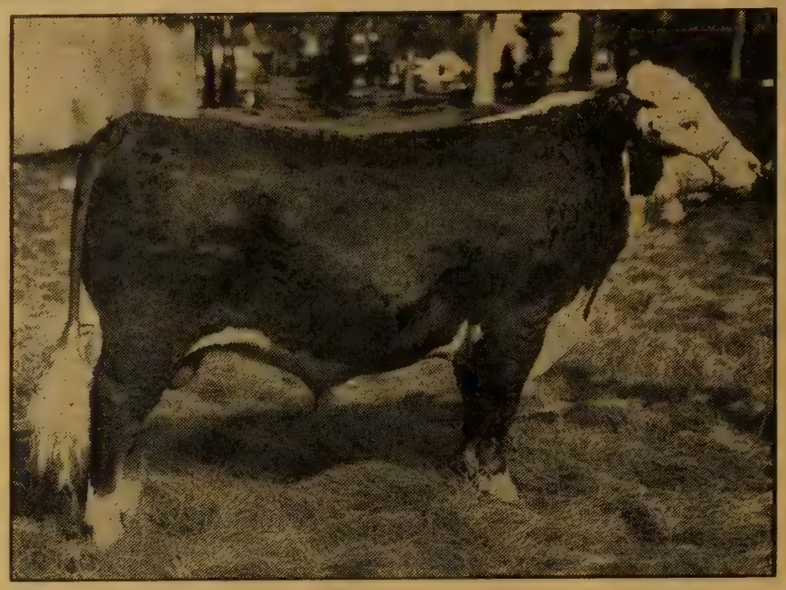
TUESDAY, WEDNESDAY AND THURSDAY, NOVEMBER 10, 11 AND 12.

One day being devoted to each breed. Entries solicited for each of the three days.

W. C. McGAVOCK, Sale Manager, Springfield, Ill.



CASTOR—Hereford yearling bull, calved January 1st, 1907, and now weighing about 1,375 pounds. Bred, owned and exhibited by Dr. J. E. Logan, proprietor of the Sunset Herefords at Kansas City, Mo. His show record for 1907 as a calf includes six first prizes at State, Interstate and International Shows, including the junior championship at the Chicago International. He started his show career of 1908 with a first prize at the Iowa State Fair, taking the prize in competition with twelve of the finest young bulls in the West; he thus presents an unbroken prize-winning record. CASTOR was sired by young Beau Brummell, the last living son of the famous old bull Beau Brummell. His dam is the Duchess of Sunset Farm, a daughter of St. Grove by St. Louis. There is no better pedigree in the Hereford family, and many good judges believe CASTOR to be the finest yearling of the breed. We understand that this magnificent bull will be sold at auction during the American Royal Show at Kansas City, which will be open October 12th to 17th. Our special interest in this bull is to ask our friends and patrons to consider the advisability of producing high-grade cattle, instead of producing and marketing a lot of low-grade scrubs. On account of unusual qualities, this particular bull will probably sell at a high price and be placed at the head of some great herd, but there are hundreds of good, blocky, pure-bred Hereford bulls selling around a hundred dollars per head that will do several thousand dollars' worth of good in producing the young beef calves that the market pays high prices for. A first cross of a Hereford bull upon any plainly-bred, healthy cow will produce a calf that will sell for twice as much as a calf that is sired by any bull that is not pure-bred. Choice steers that produce the high-priced cuts on the butcher block can only be produced with certainty by pure-bred bulls of the beef type; and the Hereford is one of the breeds on which no mistake can be made if you are looking for the beef type.

Blooded Stock.

M. W. Magnusson, proprietor of the Safe Herd of Large English Berkshire Swine, reports that he has a good supply of Berkshires of all ages that are healthy and doing well. His present herd boar, Charmer's Duke, 27th, 91,877, which has sired many of his fine hogs, is now for sale or exchange. He was sired by the noted Premier Longfellow, 68,600. He is coming three years old, will weigh about 600 pounds, and has a nice disposition. In order to reduce the size of his herd before cold weather sets in, Mr. Magnusson will make exceptionally low prices, and those wanting Berkshires for what they are worth should write at once.

In this issue of The National Farmer and Stock Grower appears the advertisement of Charles Dorr, offering 100 head of Duroc-Jersey spring pigs for $8.00 per head, mostly sired by a son of the great Kan't Be Beat, the $6,000 boar. Mr. Dorr is on Route 6, Osage City, Kansas, one mile north of Peterton, on the Santa Fe Route. He has a fine herd of Durocs, and sells them cheap.

A. A. Owen & Bro., of Bunker Hill, Ill., only thirty-nine miles from St. Louis, have a fine herd of Poland-Chinas. They are 1¼ miles from town, on Rural Route 17. They have a fine lot of pigs for sale, with color, bone, quality, size and top-notch breeding. Considering how hogs are selling in market, these pure-bred hogs, which are market toppers, are sold at very reasonable prices.

ALVEY FARM O. I. C. HOGS, where the progressive kind are bred. We have twenty head of June Pigs; they are bred right; are right, and will be priced right. Can furnish them not akin. They are strictly pure O.I.C. that are white and breed right. **ALVEY BROS., Meriden, Kansas.**

4,000 FERRETS for sale. Write for price list and catalog; it's free. **De Kleine Bros.,** Jamestown, Michigan, Box 13.

TWIN CEDAR STOCK FARM.

I am now offering Poland-China Spring Pigs, every pig sired by a Blue Ribbon sire and out of matured sows, at farmers' prices. Farm 2½ miles from Belle, on Rock Island Railroad. **C. O. Fritts,** Steen Prairie, Mo.

SAFE HERD OF LARGE ENGLISH BERKSHIRES. Herd is headed by an excellent son of the St. Louis World's Fair Grand Champion. I have bred Sows for sale, also bred and unbred Gilts that are hard to beat, and fifty head of early Pigs. Can furnish pairs not akin. I also have S. C. W. Leghorns, Barred Rock Chickens and M. B. Turkeys. Eggs for sale and a few pairs of Peafowls. The breeding of this stock and poultry is the best and will be sold at prices in keeping with the times.

M. W. MAGNUSSON, Owner, Safe, Mo.

FOR PURE-BRED BERKSHIRE HOGS, Shropshire Sheep and Fancy B. P. Rock Poultry, write or call on **E. L. JOHN,** owner of Broadway Herd, **Broadway, Maries Co., Mo.**

Mill Creek Stock Farm,

The home of the noted Starlight family of Jacks and Jennets for the past thirty years, is located seven miles southeast of Nashville, Tenn., on the N. C. & St. L. R. R., at Asylum Station, and has on hand at all times a nice lot of Jacks, Jennets and Stallions, all of the best blood, from six months to six years old, for sale at reasonable prices. Write me for catalogue. Also Jersey cattle.

Care of the Brood Sow and Litter.

It is very essential that brood sows be given good care and the right kind and amount of feed at farrowing time, otherwise bad results will follow. Some farmers have fixed rules and amounts for feeding for a certain period after farrowing; have water so the sow can get a drink as soon as she comes out of bed. Experience teaches us that we must be on the lookout for what the sow demands.

If my sows seem restless and hungry, I feed sooner and more than if they are quiet. I give a bran mash with a little middlings as the first feed, being careful not to give too much. I increase the feed gradually until the sow is on full feed, which is about two weeks from the time she farrowed.

In case the sow becomes feverish, it is likely to produce what is known as white scours in the pigs. To stop it, give her a little air-slacked lime in slop, which brings about the desired results.

The main ration of the sow should be that to produce a good flow of milk, but care must be exercised not to get her stuck on her feed. My sows are given bran, middlings, ground oats and all the good clover hay I can get them to eat. I keep close watch on the pigs, and if they become constipated I give the sow some oil meal in slop. As soon as the pigs begin to crack corn I provide a pen with a creep so they can be fed by themselves. I feed them corn, slop made with skim milk and ground oats with the coarse hulls screened out. Where one has not the milk, tankage is a good substitute. The ration for the pigs while growing is strong in muscle and bone-making elements. They have free access to charcoal, ashes and salt at all times and plenty of pure water.

One of the most important things is to judiciously determine the increase of feed for best results. I never make a radical increase, but let it be gradual, just as the pig increases in size and capacity I increase the feed. The pig's increase depends on the increase in the ration.

I do not let the pigs stop thriving, for the sooner they are brought to the weight wanted—those to be sold for slaughter—the more profit. For the finishing and fattening period I increase the corn ration for the last two months. I let the protein food of those I retain as breeders predominate. I often hear that pigs are ruined by overfeeding. This is true in some cases, but if the ration is balanced for growing or fattening as to end desired, pleasing results will follow.—Wm. H. Underwood.

CEMENT ON THE FARM.

This book is designed to teach anybody how to work with cement. How to mix mortar of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

The National Farmer and Stock Grower is a nice, clean, general farm publication, full of practical, interesting and instrutcive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers.

Anyone who sends in One Dollar to pay in advance a three-year subscription to The National Farmer and Stock Grower can select the Cement Workers' Handbook as a free premium.

Address, The National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

Salt and Ashes For Hogs.

When the hogs have the run of the pastures and can nose around among the grass roots they find all the minerals that the system requires. So when these hogs are shut up in yards for fattening, they relish an occasional dose of hard-wood ashes and salt. In fact, they will greedily pitch into coal cinders or any other mineral stuff which may be thrown into the yards. One of the most successful hog raisers I know of hauls out from town several wagon-loads of these coal ashes and cinders every winter and dumps them into his feed yard. Where cattle are fed, it is a good plan to rake the cobs about the yards into heaps and burn them. These leave something for the hogs to work over, and one will see these ash-pits surrounded nearly always.

Mr. Theo. Louis used to tell how he managed to always keep his hogs healthy. He kept the cobs about his feed yards well cleaned up. They were reduced to ashes and charcoal in the pits, then mixed with salt and copperas. When these home-made supplies are not to be had, hard-wood ashes may be bought cheaply. At all events, keep the ash-pits or the trough well filled with ashes and salt, and it will go a long ways in keeping the herd in thrifty condition.—L. C. Brown.

Remington
AUTOLOADING SHOTGUN
Loads itself with its recoil
Has a solid breech ITS SAFE
This is the greatest game gun in the world. Old hunters write us that it is hard hitting, quick in action and safe. The city sportsman, who shoots only occasionally prefers it, because of its light recoil. The Kick reloads it and you have 5 shots at your command. Five shots, solid breech, hammerless.

11,000 ACRES ONLY $4.50

This land will subdivide into small farms in a few years at from $25 to $50 an acre. In its present condition it will fatten 3,000 head of steers from April 1 to November 1. I think 50 per cent. is tillable; the balance will grow the finest clover, timothy, blue grass and other grasses. Only 4½ miles to railroad station; 130 miles to St. Louis; 200 miles to Memphis and 300 miles to Kansas City. It has an average annual rainfall of 43 inches. Average January temperature, 35 deg.; average temperature for July, 76 deg. At present the finest blue stem prairie grass grows in the open; white and red oak timber. The timber will pay for this land three times over. You can cut out all the small timber and the little underbrush, and the annual growth of the timber left standing will pay big interest on cost of land and cost of clearing. You will have the pasture free and the increase in value of the land will be net profit. Where can you beat such an investment? You are close to schools, churches and fine people. One acre of this in its present condition will pasture more cattle than 10 acres in the Panhandle or Western Kansas. Abundantly watered with clear springs, creek and branches. The timber will cut from 8,000,000 to 9,000,000 feet. Don't neglect. Look this up. Smaller and larger tracts in same locality. A home and fortune await the purchaser.

J. H. LIPSCOMB,

306 Fidelity Trust Building, Kansas City, Mo.

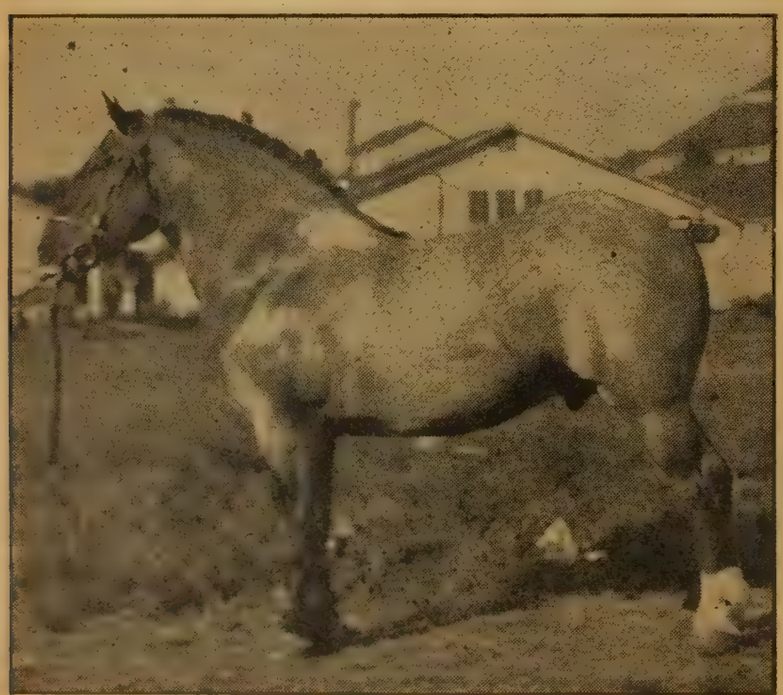
All above ground. Steel frame, only 8 inches high. Octagon levers. Tool-steel bearings. Compound beam. Most accurate and durable. Write for catalogue and price.

KANSAS CITY HAY PRESS COMPANY, 425 Mill Street, Kansas City, Mo.

WRIDELAND'S STARLIGHT—Champion Shire mare. Imported, owned and exhibited by Truman's Pioneer Stud Farm, Bushnell, Ill. The age of this wonderful mare is eight years; she stands 17 hands high; weighed 2,410 pounds the day her photograph was taken. She is sired by one of the very best horses in England; in fact, her grandsire on both sides is Harold (3,703), the best Shire stallion that ever lived. She has to her credit no less than forty-six first prizes, eleven championships and thirteen Society gold medals, all having been won in England. She has been shown twice since arriving on this side, which was at the Iowa State Fair, where she won the championship, and at the Indiana State Fair, where she again won the same honors. This mare was purchased by Mr. Truman for more money than ever was paid for a draft mare for export to the United States. She is simply in a class to herself, and as Mr. Truman had an opportunity of seeing all the leading prize winners of England this year, it is safe to say that there is no mare in England like her.



MARTIN DU HAYOIR—Bay Belgian stallion. First-prize winner and champion of his breed at the Iowa State Fair, 1908. Exhibited by Finch Bros., Joliet, Ill. Belgians are a straight, every-day, heavy-weight, draft breed of horses. A great middle and big ends are characteristic of the breed. Stallions that do not weigh 2,000 pounds are a disappointment.

Horses on Alfalfa.

There seems to be an almost universal opinion among horsemen, and especially among those that are raising heavy horses, that no other grass or combination of grasses equals or even approaches the value of alfalfa as a pasture for horses; and from an economical point of view it certainly has no equal, as it will furnish so much more feed per acre than any other grass. It will not only pasture more horses per acre, but it will produce horses of greater weight, larger bones and stronger muscles.

A horse that has been reared in an alfalfa pasture and fed a light ration of alfalfa all winter makes one of the finest horses to be found in any market to-day. To produce a horse of the highest type, with the cleanest bone, the best-developed muscle, the best temperament and the greatest action and finish, nitrogenous feed must be used, and in no other feed can this most essential element of nutrition be so cheaply and so abundantly supplied as it can with alfalfa.

The most successful producers of both heavy and light horses are today using alfalfa extensively in the development of their young horses. Its value for this purpose is not recognized by the Kansas feeder alone, for after seeing Kansas alfalfa-grown horses, Eastern breeders, where alfalfa cannot be grown, are sending their colts to Kansas alfalfa fields to be developed as they could not be at home.

A majority of horse owners are inclined to waste hay in feeding horses, i. e., they feed more than is necessary for the maintenance of the horse and more than he can economically take care of. This is true of other kinds of hay as well as of alfalfa.

Either heavy or light horses that are doing regular, steady work should not, if one wishes to feed economically, have more than one pound of hay per hundred pounds of live weight. That is, a thousand-pound horse should receive 10 pounds of hay per day and a 1,500-pound horse 15 pounds per day. A 1,500-pound horse that is doing steady work should have about 4 pounds of hay with his morning feed, the same amount at noon, and about double the amount at night. Many horses will eat 30 or 40 pounds of hay a day if they have free access to it. If a horse is allowed to eat such quantities, half of it is wasted, and if he is eating that amount of alfalfa hay, it is worse than wasted, for it does the horse an injury. From two to two and a half pounds of digestible protein is all that an ordinary horse can utilize in a day, and in 100 pounds of alfalfa there are 11 pounds of digestible protein. This fare of alfalfa, if too heavily fed, is likely to cause kidney disorder, and may even be responsible for abortion in pregnant mares that are fed too liberal a ration of it. It it does not cause abortion, weak, unhealthy foals will be the result.

Have alfalfa fed judiciously to pregnant mares, heavy or light work horses, and it is beneficial and should be used wherever it is obtainable, but it should never be used as the exclusive roughage. Some objection is made to it on account of causing looseness of the bowels and making the horses soft and easy to sweat. This is due to their having it in too large quantities. Alfalfa hay should be fed as part of the grain ration rather than a roughage. If fed in this manner its use will be found very satisfactory.—Kansas Agricultural College Bulletin No. 155.

Horse Notes.

The Spirit of the West says: "Don't put your horse away without examining seat of collar and the seat of the pad. Should there be any soreness at these places, have the collar and pad repaired."

There is a general idea that the so-called American Trotting Derby was a success and that future events of the same kind will be popular. It ought to be called the Socialistic Derby, with the largest prize for the slowest horse. Future events of the same kind will not fill with fast-record horses, or we are much mistaken.

WESTERN RANGE HORSES.

Two Sales Held in September, Two More in October and One in November.

In the month of September, Campbell & Reid and the Western Sale Stables Company held two auctions of Western range horses at the St. Louis National Stock Yards. About 3,000 horses changed hands. Most of the sales were in car lots. A bunch of 1,200-pound mares and geldings topped one sale at $90, and a bunch of 1,100-pound mares and geldings topped the other sale at $84. Other sales included 1,000 to 1,100-pound geldings at $43 to $80 per head, according to condition and quality; loads ranging from 850 pounds to 950 pounds sold at $35 to $53 per head. Other mixed loads, all light and inferior, sold at $12.50 to $40; and some of the fair to better class of two and three-year-olds sold at $32 to $44.50 per head; and $42 was paid for a good bunch of yearlings and two-year-olds. An extra good lot of weanlings sold for $29 around. Sales are scheduled for October 6th and 20th and November 10th. All these sales are held on Tuesdays.

THE VERY BEST MARKET, THE MOST CENTRAL HORSE MARKET ON THE FACE OF THE EARTH

—is at the—

ST. LOUIS NATIONAL STOCK YARDS, in Illinois, right opposite the city of St. Louis.

Auction sales of Horses are held MONDAYS, TUESDAYS, WEDNESDAYS, THURSDAYS and FRIDAYS.

Horses are also bought and sold by personal contract every day in the week.

The concentration of Horses should be where all can be assembled, sold and distributed at the least possible cost. For this reason the growth of the St. Louis Horse Market is the Marvel of the Age.

THE CENTER OF GRAVITY IN THE HORSE TRADE IS AT THE ST. LOUIS NATIONAL STOCK YARDS.

Grade Stallions No Good For Breeding Purposes.

"The grade stallion may be, and sometimes is, a 'good looker' and possessed of superior vigor, by reason of hard work in harness, but there is little of any breed prepotency back of his good looks. His pleasing appearance often is like the thin layer of silver that gives a plated article its look of reality, but merely covers base metal; and as the base material predominates in the make-up of both, so in the scrub and low-grade horse the prepotency comes from the predominant elements which were derived from scrub ancestors and merely gives the owner the power of transmitting like undesirable elements. He may be stronger than many a pampered pure-bred, so far as begetting numerous rugged offspring is concerned, but he stamps all of them indelibly with the seal of the scrub. There is much need of making some of our pampered pure-bred stallions more vigorous and virile by work, exercise and sensible feeding, that their colts may be more numerous and more robust, but the unnecessary weakness of some pure-bred stallions is an insufficient argument for the general use of grades throughout the state.

"Water cannot rise above its level; neither can the grade or scrub stallion, however muscular and hardy, raise the 'blood level' of his progeny above that of his own veins in quality. The use of such sires, therefore, usually means no progress, no grading up and on, but mere maintenance of a dead level with a possibility of retrogression where unsound, unfit horses are employed."—Dr. Alexander, of Wisconsin.

CASTILLE—Champion Percheron mare. In the class of aged mares at the Iowa State Fair there were twenty-three magnificent animals shown, and CASTILLE was easily the winner. She was also champion mare of her breed at the show. Exhibited by Burgess & Son, Wenona, Ill. The picture herewith shows how perfect the Percherons are. It is not enough to have them broad and massive, but they must show for less than they really weigh. In other words, they must not be clumsy and sluggish, but strong, active and stylish. CASTILLE, one of the heaviest of the Percheron females, does not look her weight by several hundred pounds.

Tenth Range Horse Season.

The Tenth Range Horse Season at the St. Louis National Stock Yards is drawing to a close. These sales are conducted by Campbell & Reid and the Western Sale Stables Company. These sales opened on June 30th. October sales will be on Tuesday, the 6th and 20th, and the last sale of the season will be held on November 10th. All sales are held on Tuesdays. Particulars can be had by writing to J. J. Searcy, Secretary, National Stock Yards Ill

Monday Auction at St. Louis.

Do not forget it that the old, tried and true firm, the McFarlane Commission Company, hold the horse auction at the St. Louis National Stock Yards every Monday in the year. Shippers who wish to get good, reliable market information that "hits the spot" should be sure to write McFarlane to put them on the Monday market report list. It will help you, because it will fit in just right. That St. Louis is the best market for horses and mules is because such men as McFarlane have done great work to make it so. Keep your eye on the Monday auction. The McFarlane equipment includes Lan B. Morris, patient, persistent, perfect mule salesman. R. L. Hawkins, S. B. Howell and Eddie O'Connell are expert horsemen. Col. I. H. Howard is auctioneer. Remember McFarlane Commission Company, postoffice address National Stock Yards, Ill.

A Magnificent Percheron.

Under date of September 23d, Mr. J. G. Truman, Manager of Truman's Pioneer Stud Farm of Bushnell, Ill., wrote as follows:

"Yesterday we sold to those enterprising Percheron breeders, Messrs. J. H. Serven & Son, of Prairie City, Ill., the imported Percheron stallion Gedeon (70,236) at, we believe, one of the higest prices ever paid for a two-year-old Percheron stallion in this country. Before I left Europe this summer, Messrs. Serven practically gave me an order to buy the best two-year-old Percheron stallion I could find in France, and to this end, at least in their judgment, I found him.

"Gedeon is a dark grey, foaled April 26, 1906; weighs in ordinary condition 1,920 pounds; sired by Bath (54,319), dam Coquette (54,559). He is one of the thickest and widest colts I saw in France; stands on the very best of feet and joints, with plenty of bone, and is one of the wide-as-a-wagon sort. In purchasing this extraordinary colt, Messrs. Serven have the support of the leading breeders in their vicinity, who are to be congratulated in having a colt of this high character available."

Warranted to Give Satisfaction.

Gombault's Caustic Balsam

Has Imitators But No Competitors.

A Safe, Speedy and Positive Cure for Curb, Splint, Sweeny, Capped Hock, Strained Tendons, Founder, Wind Puffs, and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.

As a Human Remedy for Rheumatism, Sprains, Sore Throat, etc., it is invaluable. Every bottle of Caustic Balsam sold is Warranted to give satisfaction. Price $1.50 per bottle. Sheep and Lamb Market.

Sheep and lamb receipts at the St. Louis National Stock Yards, in September, were 63,915 head, the largest for the month since the establishment of the market. Closing prices included good mutton sheep at $4.00 to $4.10, and coarse and inferior ewes at $3.50 to $3.90 per 100 pounds. Good to choice lambs sold at $5.00 to $5.50, but the majority of the lambs were thin and inferior; they were fair at $4.50 to $4.90, but all kinds of culls and inferior lambs sold at $2.00 to $3.00 per 100 pounds. Good breeding ewes were selling at $4.25 to $4.40, and inferior stockers at $2.50 to $3.75; bucks at $2.00 to $2.50.

A native stag sold on the St. Louis market weighed 1,580 pounds and sold at $5.50 per 100 pounds. This is $86.90 for a worn-out bull that probably cost $100 as a yearling and sired a thousand calves.

James H. Campbell,

Expert commission salesman, is now at the head of his own organization, with headquarters at the St. Louis market. He is one of the few who were at the opening of the National Stock Yards and is one of the most active men on the market right now—an enthusiastic worker, knowing that he has the best market in the country to back him. Thoroughly competent and with a first-class, expert organization, he is holding his old customers by splendid sales and making new ones all the time. Mr. Campbell issues a circular every week of his own composition containing his advice to intending shippers. Write for information to James H. Campbell personally and consign cattle, hogs and sheep to Campbell Commission Company, National Stock Yards, Ill.

OUR REFERENCE IS EVERYONE WHO HAS EVER SHIPPED US A CONSIGNMENT — OUR GOOD WORK IS OUR REFERENCE.

Twenty-five Cents Difference on Tops.

Average price of top hogs at Kansas City during the first three weeks in September was 25 cents per 100 pounds less than the average top at St. Louis. Shippers of choice hogs should keep in touch with the St. Louis market, where quality counts.

Hog Market at St. Louis.

On October 1st, at the St. Louis National Stock Yards, the best price for hogs was $7.00 per 100 pounds for several loads of choice butcher quality, weighing 222 to 290 pounds. The bulk or the hogs averaging 200 pounds and upward sold mostly at $6.75 to $6.90. On the same day, Kansas City did not sell any hogs above $6.80. Light hogs at St. Louis, 150 to 190 pounds, sold largely at $6.40 to $6.65. The demand for hogs is remarkably good at the St. Louis National Stock Yards, especially for top quality, which is very scarce.

More Sheep Wanted at St. Louis.

Sheep receipts at the St. Louis National Stock Yards, so far this year, gained 62,000 head over the first nine months of 1907, and although this is an excellent showing, there is a larger, unsatisfied demand at St. Louis for sheep and lambs than there is at any other market. This was paticularly the case during the first six months in the year. Sheep raisers will find it to their interest to keep in touch with the market at the St. Louis National Stock Yards.

The St. Louis Sheep Opportunity.

Every farmer can buy a few ewes in the fall and breed them to have lambs early in the following year, then feed the lambs so as to sell them as spring lambs, then shear the ewes, sell the wool and afterwards sell the ewes on the market. This can be done with 10 ewes, 100 ewes, or 1,000 ewes, and it is always done at a good profit. The St. Louis market is always a quick buyer for fancy lambs at a high price when they come at the right time.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' interests ARE OUR INTERESTS, and our rapidly-increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

Try us once. We can keep you posted. We have a great and expanding Market at St. Louis.

Evans-Montague Commission Company

Box 68,
NATIONAL STOCK YARDS, ILL.
FORT WORTH, TEX., and at KANSAS CITY.

Valuable Market Information.

The Godair-Crowley Commission Company, with headquarters at the St. Louis National Stock Yards, have made a thorough canvass of the cattle, hogs and sheep on feed and of the grain production of the states tributary to the St. Louis market. In order to do this they have communicated with stockmen and farmers and have received thousands of replies. This information has been carefully tabulated and is at the service of the friends and patrons of the firm. Messrs. Godair-Crowley Commission Company are one of the leading firms in the trade and have a card in this paper. If you are interested in marketing live stock, you can do no better than write to Godair-Crowley Commission Company at National Stock Yards, Ill.

Truman's Pioneer Stud Farm, Bushnell, Ill., have an importation to leave England in October. It will include the aged Shire stallion Mazemore Harold (20,706). He weighs about 2,350 pounds, is the widest and thickest horse in England, and standing on the very best of feet, joints and legs. Another is the two-year-old Bilsby Charmer (24,938), prize winner in England as a foal, yearling and two-year-old. They are fine horses—the pick of the tops on the other side.

Consignments For the Sale.

Mr. W. C. McGavock, of Springfield, Ill., will hold a public auction of pure-bred cattle on November 10, 11 and 12 at the St. Louis National Stock Yards. There will be one day for Aberdeen-Angus cattle, one day for Shorthorns, and one day for Herefords. Entries are solicited. Mr. McGavock is an energetic, capable, expert manager, and will do everything that is possible to bring about a good sale. Write to him at once.

Milch Cattle at the Stock Yards.

An immense difference in the quality and condition of the milch cattle at the Stock Yards is the cause of an extreme range in price. There are common, thin cows with common, thin calves at $15 to $25; fair milkers, $26 to $35; good milkers at $37.50 to $45. A good string of sure-enough dairy calves will always sell on the market close up to or better than quotations.

The GODAIR-CROWLEY COMMISSION CO. . .

solicit your consignments of Cattle, Hogs and Sheep for sale at the St. Louis National Stock Yards, where there is a splendid market and where our selling force has no superior. We are energetic and careful, that our shippers obtain the highest prices and best service on the market.

For market information; for loans to buy feeders; for all facilities and courtesies, write or call on

GODAIR-CROWLEY COMMISSION CO.,
NATIONAL STOCK YARDS, ILL.,
Fort Worth, Texas. Kansas City, Mo.

At St. Louis, on October 1st, No. 2 red wheat sold at $1.03½ to $1.04½ per bushel; No. 3 sold at $1.01 to $1.02½; No. 4 at 95c. to $1.00 per bushel.

Government Mules.

While we were present at the National Stock Yards, one day in September, a car-load of government mules went by, consigned to Seattle and from there to the Philippine Islands. The mules were pack mules, 13½ to 15 hands. The government requires a 13.3 pack mule to weigh 850 pounds; 14-hand mules, 875 pounds; 14.1-hand mules,925 pounds; 14½-hand mules, 950 pounds; 14.3-hand mules, 975 pounds; and 15-hand mules, 1,000 pounds. All of these weights are hard to get in shipments from the country.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. Every courtesy known to the trade is extended. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their customers. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Illinois.

Sixteen Per Cent. Gain.

Hog receipts at the St. Louis National Stock Yards during the first nine months of the year 1908 were 1,852,583 head, which is a gain of 267,000 over the previous year. The increase amounts to sixteen per cent., against a gain of six per cent. in Chicago. The increase is the natural consequence of the great activity and good prices paid at the St. Louis National Stock Yards.

Hog receipts at the National Stock Yards during the month of September were the largest in the history of the trade.

SHIPPERS AND SELLERS
—of—
STOCK AND FEEDING CATTLE
are reminded that the
ST. LOUIS
NATIONAL STOCK YARDS
furnish by far the best market for their stock.

A majority of the stock feeders of Missouri, Illinois, Indiana and Ohio prefer to buy their feeders at St. Louis. They have short runs, favorable rates, quick service, small shrinkage. These people get their cattle home in good shape. There is never a glut of stock cattle at St. Louis. Western shippers can get their stock cattle to the St. Louis market just as easily and as cheaply as they can to any inferior far West market, and at St. Louis there is quicker sale, better results, and in the shipping in, concentration, sale and outward shipment there is less expense, less shrinkage and less loss to come out of the cattle. The center in which all can be brought together and distributed at the least expense to all concerned is the best market of all.

THE BEST MARKET FOR ALL
—UNDER ALL CIRCUMSTANCES—
IS AT THE ST. LOUIS NATIONAL STOCK YARDS.

Horse Market Receipts.

At the St. Louis National Stock Yards, in the month of September, 9,935 horses and mules were received, making a total of 90,444 head during the first nine months of the year. At Chicago the receipts of horses and mules were 7,290 head during the month of September and 76,147 during the first nine months of the year. The St. Louis nine-months receipts were 14,297 in excess of Chicago, and 2,900 in excess of Chicago in September.

The Mule Market.

To all appearances the market was active, but at the end of September the dealers called the trade dull. One dealer said that his September sales were several hundred less than during the same month last year. Dealers buy only the mules they can surely class and sell. Even the matched teams of the best class were slow sale. Good miners and sugar mules sell readily. All quotations are indefinite. Fourteen-hand mules, $65 to $115; 14½ hands, $85 to $130; 15 hands, $95 to $155; 15½ hands, $115 to $175; 16 to 16½-hand mules, $130 to $225. There are several thousand mules on feed at the St. Louis National Stock Yards.

McFARLANE COMMISSION COMPANY. . .

HORSE and MULE COMMISSION SALESMEN

AUCTION EVERY MONDAY IN THE YEAR.

These Monday sales at the St. Louis National Stock Yards are the best attended of all sales and produce the most satisfactory results for the shipper.

We also solicit consignments of Mules to be sold by the most competent salesmen on the best market in the country.

McFarlane Commission Company,
NATIONAL STOCK YARDS, ILL.

How Native Steers Were Selling.

On September 29th, at the St. Louis National Stock Yards, thirty-one head of 1,498-pound steers sold at $7.35 per 100 pounds. They were pretty near top cattle, the highest possible quotation on same day being $7.50. Sales also included 1,481-pound natives at $7.15; 1,408-pound steers at $7.00; and 1,181-pound yearling steers at $7.00 per 100 pounds. They represent the top end of the cattle and the market. Other steers of all grades and weights sold from $3.50 to $6.75.

Horse Market at St. Louis.

At the close of September the horse and mule market at the St. Louis National Stock Yards was reasonably active for top Southern horses and good broke drivers, which were selling extra good. There was a quiet demand for chunks and drafters. The thin, aged, small and leggy stuff was hard to sell. The quotations were as follows: Plugs, $15 to $45; Southern horses, inferior and plain, $50 to $85; fair to good, $90 to $125; tops and extra, $130 to $155; drivers, choice to extra, $165 to $245; Eastern chunks, $110 to $155; drafters, light and common to fair, $125 to $165; heavy drafters, choice to extra, $175 to $250.

Several 1,400-pound native cows sold at $4.50 per 100 pounds, which is $63 per head for old, fat, worn-out cows that are well bred.

FIVE TO TEN THOUSAND
FULL AGE MULES

—can be purchased at the—
ST. LOUIS
NATIONAL STOCK YARDS
any business day in the year.

Many, immense, substantial, well ventilated barns contain every commercial or military grade of Mules, which can be purchased and shipped on short notice.

THE ST. LOUIS MARKET
WAS ALWAYS
FIRST
IN THE MULE TRADE
AND NOW
IT IS GREATER THAN EVER.

Quarantine Division Cattle.

At the St. Louis National Stock Yards, opening of October market, good to choice Texas steers were quotable at $4.35 to $5.00 per 100 pounds; medium grades at $3.70 to $4.25; and common to medium grassers at $2.75 to $3.65. Canning cows were selling at $1.75 to $2.40; cutters at $2.45 to $2.70; butcher cows at $2.80 to $3.00; and good to choice cows at $3.15 to $3.50. Not many good cattle were coming, and the demand was particularly active for good steers.

Stock Cattle Market.

The market for native stock cattle at the St. Louis National Stock Yards is increasing in importance all the time. During the drouth period the trade was dull, but it has improved since the rains. Inferior to fair stock cows are selling at $2.00 to $2.75 per 100 pounds; fair to medium stock heifers at $2.50 to $2.95; good stock heifers at $3.00 to $3.25. Inferior and light stock steers are to be had at $2.50 to $3.20; medium to good at $3.25 to $3.50; feeding steers, 800 to 900 pounds, at $3.25 to $3.75; feeding steers, 1,000 to 1,100 pounds, fair to strictly good, at $3.80 to $4.25.

The Thursday Horse Auction.

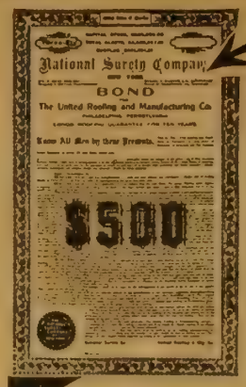
The great event in September at the St. Louis horse and mule market was the opening auction of the horse and mule commission firm of Holland, Gilroy & Conway. This firm is the practical successor to the late John S. Bratton. They have acquired the Thursday horse auction franchise at the St. Louis National Stock Yards. Robert Conway, the mule department manager of the new firm, is famous as mule expert and salesman, and has the confidence and patronage of leading shippers, due to the magnificent work he has done in their behalf. He has been so long and favorably known on the market as to need no formal introduction; he was several years a strong factor in the Bratton organization.

Messrs. T. H. Gilroy and T. H. Holland, the new arrivals, are from Kansas City. Their opening auction on the 17th with 415 horses shipped by old friends and patrons, indicates that it is a thoroughbred team which has come to add another hundred thousand head per year to the horse and mule trade of St. Louis. Col. Holland is an auctioneer of the first class—clean-cut, fair and impartial, with unusual staying qualities and getting the best from the bidders without apparent effort.

Tom Gilroy, of twenty-two-years' experience in handling horses, is organizer of the firm. His ten-years' service at Kansas City gave him many valuable connections that will derive great benefit by reason of his removal to St. Louis, where he can serve them better.

The firm has started under favorable auspices. They have helped to attract greater attention to the market in anticipation of the busy season, and they will enlarge the receipts so that buyers of all classes of horses can fill out their loads without loss of time. All shippers and buyers will be furnished correct and reliable market information by addressing Holland, Gilroy & Conway, National Stock Yards, Ill.

SHROPSHIRE RAM—First-prize yearling and champion. Exhibited at the Iowa State Fair, 1908, by J. M. & L. E. Bauer, Jameson, Mo. "For the production of prime fat lambs there is no better ram than the Shropshire, and the result is equally favorable where the ram is put to cross-bred ewes." There are many fine breeds of mutton sheep in England, and all are represented in the United States, and there are more Shropshires than any other one breed. If you have decided upon what buck to use—no matter to which English mutton breed it belongs—stick to it—don't change it; but if you are in doubt—take the Shropshire.



A SURETY BOND WITH EVERY ROLL OF NEVER LEAK CONGO ROOFING

Congo is the only ready roofing on the market *backed by a Surety Bond.* We can afford to make our guarantee so strong because Congo itself is as strong as the guarantee.

Our ambition has been right from the start not only to make Congo the best all-round practicable and serviceable Ready Roofing, but to back it up by a guarantee so *sure* and *complete* that it will be the aim of every owner of a building to use Congo when needing roofing.

This bond covers a period of 10 years and gives to the user of 3-ply Congo the most reliable guarantee. It is issued by the National Surety Company of New York, one of the largest and most substantial companies in the country.

Congo doesn't cost much. It is extremely waterproof and *always stays so,* and it's very easy to lay. The new galvanized caps (a new feature with Congo) do not rust and cause leaks like tin caps or nails.

Write for a Sample to-day and further information.

SPECIAL NOTICE—If any Congo rolls that you purchase do **not** contain Guarantee Bonds, write us at once, telling us where and from whom they were purchased, and we will at once mail you the missing bonds.

Sheep on Alfalfa.

The use of alfalfa cannot be too strongly urged with sheep, either the breeding or fattening stock. As the method of farming has become more intensified and the open range grows less each year, an acre of alfalfa must be made to take the place of many acres of range pasture.

Sheep, being ruminants, are able to handle a much more bulky feed than horses. A breeding flock of sheep can be carried through the winter season very successfully with but little grain in addition to alfalfa hay. The College flock, consisting of Hampshires, Shropshires, Dorset, Rambouillets and Cotswolds, have been wintered almost exclusively on alfalfa for the past three winters, and each spring have brought forth a good, large crop of strong, vigorous lambs. Ordinarily, the first cutting of alfalfa is not as good for sheep as the second and third cuttings, as it is usually coarse and stemmy and sheep do not eat these stems readily.

It is about as safe to pasture old sheep on alfalfa as it is cattle. They thrive on it and make excellent gains, but sheep bloat easily and there is likely to be some loss from this source. Lambs can be pastured on alfalfa with but little danger of bloat, and the way they grow on alfalfa is a delight to the shepherd. They should never be put on the pasture when they are empty and hungry, and it is always well to allow them access to some dry feed and keep them off the alfalfa until the dew is off; also on damp days. A mixture of alfalfa and brome-grass or alfalfa and orchard-grass is a safer pasture than alfalfa alone. A flock of ewes and lambs can be grazed for a short time each day on alfalfa with but little danger of loss. If a lamb-creep can be arranged from the sheep corral to an alfalfa pasture the lambs will soon learn what it is intended for and will do far better on it than if confined to a dry yard.

Newly-seeded alfalfa can be pastured with less danger of bloat than an old field, and the packing of the ground by the sheep passing over it is frequently a great benefit to the alfalfa. As a roughage for fattening sheep, alfalfa hay has no equal, and cases of bloat from the hay are exceptionally rare. Many prefer this method of feeding, claiming that there is less waste by it.

In feeding experiments at this Station with sheep we have never found any other roughage or any combination of roughages that would equal alfalfa for fattening sheep. In a feeding experiment at this Station, alfalfa and prairie hay were compared as roughages for fattening Western lambs. In the test the grain ration was corn and cotton-seed meal for both lots. Those receiving alfalfa hay made an average daily gain of 0.335 pounds per head, while the lot on prairie hay made only 0.188 pounds per head daily, the alfalfa lot making almost twice as great gains. The alfalfa seemed to give the lambs a better appetite and they were always ready for their grain, and as soon as their grain was cleaned up they were ready for the alfalfa.—Kansas Agricultural College Buleltin No. 155.

Select the Ram Early.

It never pays to wait until the flocks have been picked over, if one is at all particular about the sort of ram that is to head his flock next year. The first buyer always gets the best animal, providing he knows what to pick for. If one can go into the flock it makes his selection so much the easier. It is a good thing to see both sire and dam. If one is buying on mail order, be sure to bear down upon four points: Insist that the ram you get shall have short, wide face, short neck, deep chest and good width across his shoulders. Then, keen, alert eyes and carriage are characteristics to look for. I want a vigorous, confident ram. The slow, easy-going, sluggish ram is never a success. There are not many of just the right kind in any flock, so it pays to get your pick early.—L. C. Brown.

Two years ago not over 250 sheep were pastured on alfalfa in the warm valleys of Southern Arizona, whereas now 35,000 are kept in this manner. This is a change from the open dry range to irrigated farming.

Tunis lambs dropped in November at the Arizona Agriultural Experiment Station averaged 7.97 (nearly 8 pounds) at birth and averaged 74.75 pounds (nearly 75 pounds) the following April, when they were six months old. They were from native ewes by a pure-bred ram and raised on alfalfa pastues.

At the Arizona Experiment Station a few ewes which cost $4.50 per head realized $9.00 per year for each ewe.

LUMBER BARGAIN PRICES.

A wonderful opportunity is offered you to buy lumber and building supplies of every kind at ***Prices that will save you big money.*** Such a chance seldom occurs. Lumber for your house, church, barn, meeting house, crib, store, factory, and in fact, buildings of every kind. We can furnish absolutely everything needed in construction material. Have your carpenter or builder make a complete list of everything you require, including Lumber, Sash Doors, Nails, Roofing, Siding, Ceiling, in fact, anything you may need in building material or merchandise of any kind.

Send us your Lumber Bill for Our Estimate.

We bought at Manufacturers' Sale over 50,000,000 Feet of all kinds of Lumber and Finishing Material We are making special concessions, to those who buy at once. Even if you have no use for this lumber at once, it will pay you to buy now. Our prices will save you 30 to 50 per cent.

We cheerfully invite inspection of our Lumber stock and will be glad to have you come to our warehouse and yards at Chicago, see the lumber we are offering, and you will recognize that it is all what we say of it; make your own selection and see it loaded. It is not necessary to come to Chicago; we can easily sell you by mail. We can quickly convince you of the wisdom of placing an order with us. Just send us your lumber bill, and we will easily ***"Show You."*** On application we will send copies of letters from customers who have bought. They saved money why can't you? Beef Calves in Fall and Winter.

During the fall and winter beef calves should receive as good care as is given to dairy calves. I notice that a good many farmers give their dairy calves particular care but neglect their beef calves. They think that to get a good cow they must give the calf good feed and good care, and their opinion is founded on good reasoning. But the same is true of the beef calf.

An animal once stunted loses a great deal. What it is that interferes with future development I do not know, but certain it is that if a beef calf is underfed the first and second winters of its life it will get setbacks that may never be overcome. It is as necessary to keep the beef calf growing as it is the dairy calf.

The beef calf is often neglected, both in his feed and in his shelter. Being a young animal of the beef breeds, it is thought that the beef calf can stand a great deal of exposure without suffering anything. It is true that such calves do not require the amount of shelter that some have advocated, but they do require dry quarters, well sheltered from the cold winds. They also require as good food as at any other time of their existence.

Because they are not immediately productive some lose sight of the feeding of the beef calves, and I have seen such calves forced to make a large share of their living out of the straw stack. When an animal has filled up on straw he has packed his stomach with something that cannot possibly give him the nourishment required to make good growth.

Those that have analyzed the various straws to ascertain their food values assert that a half-grown calf would have to eat and digest 200 pounds of straw a day to get out of it the nourishment required to make a good growth. A little straw will serve as a help to other foods, but foods must be given that have in them a larger amount of digestible constituents.

There is no reason why the beef calves should not be given the same kind of food as the cattle that are being pushed forward to the time when the final effort shall begin. Good clover hay, good corn stalks and good silage are as profitable to put into a calf as into a maturing beeve.

If the calf is fed also some concentrated feeds, the same as the other cattle, and kept growing, he will make a larger frame than he otherwise would and will the more economically put upon it the meat necessary for profitable marketing. The man that neglects his calves saves a little money at first, but he will lose double the amount later on. —Wm. H. Underwood.

The Income of Farm Laborers.

The happiness of any rural community depends to a certain extent on the income of the farm laborers. Because of this, we find considerable difference in the prosperity of different agricultural communities in which general conditions are about the same.

Where the income of farm laborers is sufficient to provide for all reasonable needs we find little shifting about, and this is a condition that is to be desired. Also in such a community we find a considerable number of married men with families, and these are a part of the community life.

The farmer that tries to get his farm labor at the lowest possible price is not serving either his community or himself. A man with a family must have a certain amount to live on and properly support his family. If he has so little that he is in a state of semi-destitution all the time he will not have much enthusiasm about his work. A man must have his heart in his work to do that work successfully.

Where the farm laborer has a family, it is quite easy for the ordinary farmer to pay him good wages without greatly lessening his own income. There are many products of the farm that can be drawn on to increase the income of the laborer in addition to his cash salary. This addition should come not as charity but as wages.

Some employers of labor hold the idea that it is better to give these extras as donations rather than as wages, to make their own charitable inclinations the more apparent, but this is humiliating to the laborer of the right kind of spirit.

Some of our best farmers have the payment of these extra things carefully enumerated. If the laborer is to have the use of a cow, that is carefully specified. And, by the way, the use of a cow is one thing the laborer with a family should have as part of his salary. A good cow can be bought for fifty dollars and the interest on that is but three dollars a year, and if the cow lives five years (she generally lives more) the cost per year will have been but thirteen dollars. The pasturing of an extra cow is often not noticed, and the manure goes back to the land. This costs the employer a little, but it is a very considerable increase in the income of the farm laborer.

A part of the income of the farm laborer should be a house in which to live. The house should be of fair size, as this will help save the self-respect of the laborer and his family. The writer knows of one big farm on which the houses for the laborers are all small, mere shanties. The family living in such a house would lose its self-respect. The result on this particular farm was that none but single men could be induced to work on the farm. It was no wonder that the lady of the mansion became tired of being surrounded with such neighbors and finally insisted on moving herself and children to the city, leaving her husband to keep "bachelors' hall."

We understand that within six miles, two creameries at Hazen, Ark., are running with a big output, which is shipped to Little Rock, Hot Springs and Memphis. The Union Creamery Company has just opened up, making a total of fifteen creameries in the state. T. P. Young is President, and A. Benish, Secretary and Treasurer. The other is the Hazen Creamery Company, operated by W. A. Crow and J. S. Cartwel, the latter formerly of Little Rock.

Early spring lambs can be raised in St. Louis territory and result in rich lands and rich farmers.

H. W. JOHNS-MANVILLE CO. 501-505 N. Third St. St. Louis, Mo.
Home Office: 100 William St., New York

SHROPSHIRE EWE—Picture taken at the Iowa State Fair, after winning the female championship of the breed. Imported, owned and exhibited by Chandler Bros., of Chariton, Iowa. This is probably the best Shropshire ewe in the United States to-day. The picture is presented for the purpose of showing the standard of perfection as a Shropshire ewe. Every sheep raiser cannot produce grand champion ewes, but every sheep raiser can have a profitable flock of Shropshire sheep if he will only determine to breed towards the standard by the persistent use of pure-bred and registered Shropshire bucks. It is useless to breed to grade bucks. Half-breeds and three-quarter breeds make good market lambs and good wethers, but if they are used as bucks they are just as likely to get common lambs. To breed upward, pure-bred bucks are necessary; to breed downward, any good-looking grade buck will do.

Starting Cattle on Corn.

There should be no break in gain when steers are taken from pastures and started on corn. In fact, the change should be made so easy and gradual that the steers never lose one pound. I do not believe that it is a good practice to try to force stock of any kind onto a different sort of food. I get better results by placing the food before them and allow them to gradually work up to it. The first month after changing from grass to corn is the most trying time for the feeder. Some manage to get fine results by scattering well-dried fodder out on the pastures, while others prefer to get the steers started to eating at the bunks just as soon as possible. If shock corn is fed, be sure that it is nice and sweet, and fairly well matured. The trouble with so much shock corn is that it is cut too early, and if steers are crowded onto it it is apt to produce bad results. The practical feeder knows how important it is at all times to deal out nothing but sweet, wholesome food to fattening stock. Musty hay or fodder has a bad effect on the appetite of a hearty steer.—L. C. Brown.

Standard For Draft Horses.

Mr. J. D. Carroll, prominent in horse circles of New York City, is quoted by the New York Herald as saying that the standard weight for animals of the draft type has been steadily and rapidly raised in the last ten years, and is now close to a ton, while the minimum is around 1,500 pounds. Brewers, truckmen, contractors and others who use big horses want the weight because it helps the horse to work with ease to himself. A twelve-hundred-pound horse that is game and well-bred will often rival a Clyde or a Percheron five hundred pounds heavier in starting and moving a load, but he has to do it by sheer muscular exertion and nerve force and cannot keep it up day after day. The heavy drafter can accomplish as much or more with less exertion, because he can throw so much more weight into the collar. His weight alone enables him to move ordinary loads without really pulling, and when he is obliged to buckle down to work before a heavy load his weight makes it possible for him to utilize his muscular powers to the utmost.

Light For Farmers' Houses.

On a Burlington train going from St. Louis to Monmouth, Ill., to attend a meeting of live stock shippers, the editor of The National Farmer and Stock Grower was a passenger in the chair car. It was brilliantly illuminated—all the globes were frosted so that there was not a sharp light in the car—but never was anything so handsomely bright, until after 10 o'clock most of the light was turned off. As the conductor passed us, we asked him: "What's this car lighted with?" and he answered: "Acetylene."

It was a revelation to us. Here we have hesitated to recommend the Acetylene to farmers, and yet the conductor on the moving train said: "The best, the cheapest, the brightest, the safest light we ever had."

An article in this paper, on page 5, is entitled "Slaves of the Lamp." This relates to the displacement of oil lamps by Acetylene in farm houses and suburban homes. The fact of the matter is that there never was and never will be a well-lighted house with oil lamps, and there cannot be an ill-lighted house if it is once lighted with Acetylene. We are asked why farmers' sons leave home; why farmers daughters are dissatisfied? It is the dark farm houses which are hundreds of years behind the time.

The lighting of the farm home is a great subject. Ask for light upon it. Write to the Union Carbide Company, Dept. B, 156 Michigan avenue, Chicago, Ill., and ask for information. No farm house is too large or too small. Acetylene is now used for lighting bicycle lamps.

How to Tell Mammoth Clover.

A correspondent from Piatt county, Illinois, asks how to tell Mammoth from common red clover seed?

You simply can't tell the seed apart. The only safe way to do is to buy seed either from a grower direct or from some seedsman who will guarantee the seed he sells Some people who sell clover seed will not give any statement whether it is Mammoth or common red, and from just such sources one is very apt to get uncertain seed.

One of my neighbors complains this summer that his clover did not head out as soon as his neighbor's, and after it was cut for hay the field seemed to stop growing. That is not to be wondered at. Of course he got hold of some Mammoth seed. This does not mature so early as common red, nor does it grow much of an aftermath.—L. C. Brown.

Where the Profit Comes In.

With a bunch of pigs on hand and with high-priced corn as the best fattening ration, will feeding make us any money this season? Much depends upon the make-up of those pigs. If they come from thrifty sows, and have the capacity to turn feed into pork, they will make some money for the owner. But if they lack that capacity, these fine-looking pigs may turn out very expensive feeders. This is a season when it will pay big to cut out all boarders on the farm. You may find several right among your best-looking shoats. It will pay to watch every animal on the farm. I believe in liberal feeding, but I do not like to pour feed into pigs unless I can see some gain. Keep the pigs going from now on. Turn out the kind of stuff that gets top prices. I can see some money in that kind of feeding. —L. C. Brown.

YOU CAN MAKE MONEY
In the REAL ESTATE BUSINESS

The Real Estate Business offers greater opportunities to the man without capital than any other line. The field is unlimited and there is plenty of room for you. I will teach you the business by mail and appoint you my **Special Representative** and I will give you splendid chances to make money from the start. You can work all or part of your time. Many real estate men make

$3,000 TO $10,000 PER YEAR

My company is constantly handling some of the best real estate propositions in America and no matter what you are doing now, I can help you make money if you will join my big co-operative force. This is the greatest real estate organization in the world, and if you would like to know all about our splendid plan, write me for my book, which tells how you can start a successful real estate business. **This book is absolutely free. Write me today.**

BUILD A BUSINESS FOR YOURSELF.

One of the most profitable and pleasant of modern businesses is the buying and selling of **real estate.** This business has grown to **enormous proportions** and to-day it offers

the ambitious man, especially if he is without capital, splendid opportunities for money making. The man who desires to enter the business will be especially interested in the work of the **GRAY REALTY COMPANY** of Kansas City, Missouri, a concern which offers co-operation and money-making propositions to every reputable man who desires it. The **GRAY REALTY COMPANY** gives a special course of correspondence instruction in the real estate work to its representatives, enabling them to do successful work without previous experience. The company is handling a number of splendid real estate propositions, and if you want to go into the business for yourself, it will pay you to write them. Address, **GRAY REALTY COMPANY,** 620 Century Building, Kansas City, Mo.

According to the State Labor Bureau, in the year 1907 the state of Missouri marketed vegetables to the value of $5,635,625. Naturally, St. Louis county comes first with a valuation of $1,447,636; Buchanan county, supplying the city of St. Joseph, comes second with $777,-682; and Jackson county, supplying Kansas City, is third with sales amounting to $561,534.

The fur market at St. Louis is the largest in the world. The prices paid are in full accordance with the circumstances governing the market. The best way to keep posted is to write Myers-Boyd Commission Company, 207 North Main street, St. Louis, Mo., for their price list mentioning all furs from all sections. This is particularly addressed to trappers and traders.

A 20-Year Old Remedy—Try It.

James Law, Professor of Veterinary Science in Cornell University, writes: "Abortion in cows is either contagious or non-contagious." It is a common mistake to assume that if a cow loses her calf, or a mare her foal, that there must have been some accidental injury. As a matter of fact, abortion is almost entirely due to a disease which is commonly known as Contagious Abortion. H. W. Kellogg, a Wisconsin dairyman, suffered so much from this disease that he sold his herd only to find that he had not gotten rid of the disease. This was 20 years ago. To-day the Kellogg cure for contagious abortion which he then developed is recognized by thousands of breeders and large dairymen as the only satisfactory treatment. It cures abortion, failure to breed and failure to clean after calving. It is effective for horses, hogs and sheep; and is administered in the animal's salt, or in bran. Our readers are invited to write H. W. Kellogg Company, 959 Iglehart Ave., St. Paul, Minn., for booklet.

WHOLESALE PRICES DIRECT TO THE USER

We will sell you a **High Grade "Old Hickory"** buggy at the lowest wholesale price. We will **save** you **$25.00** on **any vehicle** you buy. We have a complete line of the newest automobile seat buggies and surries manufactured, also **spring wagons, driving wagons, farm wagons,** carts and pony vehicles.

Every sale is made under a **written guarantee for two years.** "Old Hickory" vehicles are absolutely **high grade** in material, finish and workmanship.

FREE CATALOG Don't wait but **write today** for our handsome illustrated catalog of vehicles and wagons quoting wholesale prices direct to the consumer. You save all of the retailers and middlemans profit and get better quality. You are protected by our **binding guarantee** and our 30 day trial offer.

30 DAY TRIAL Every vehicle we sell is subject to 30 days trial. If you are not thoroughly satisfied after comparing it with other vehicles and examining it thoroughly we will take it back and **refund the purchase price** together with all freight charges you have paid. It will not cost you one cent to see and try one of our **"Old Hickory"** vehicles.

JONES BROS. MERC. CO. 918 Hickory St., KANSAS CITY, MO.

RAILROADS WANT AMBITIOUS YOUNG MEN.

Railroad business has shown a remarkable growth during the past ten years, and last year the railroads were not able to handle the traffic. During the past few weeks there has been a great revival following the general depression. The indications are for a very heavy fall business, and it is prophesied by some that the year 1909 will be the biggest in the history of the railroads. Railroads need hundreds of young men as firemen and brakemen, but they expect applicants for these positions to have some knowledge of the work, before taking employment. The National Railway Training Association supplies hundreds of young men for these positions, and we recommend that all who wish such employment, correspond with the Association in response to its advertisement on page 18.

Practical Farming and Gardening is a book that weighs thirty ounces ready for mailing. It is a book of 500 pages, 6x7¾ inches to the page. It is a complete farmer's instruction book. The feeding chart, which is the frontispiece, is worth more to a stock farmer than any publication heretofore issued. It is worth a ten-dollar bill to any stock farmer. The book itself is a wonderful production. Soil fertility, irrigation, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, hog, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. Eleven of the top-notch stock and

agricultural experts compiled this book. They did the work so that farmers and farm boys could understand it. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. We buy large quantities at one time. We obtain this book for a very low price considering its value. Send One Dollar and we will send you **Practical Farming and Gardening,** postage paid, and The National Farmer and Stock Grower for one year. This is a grand offer. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

It is guaranteed to be just as we describe it and you will be proud to wear it. We are giving away these handsome fobs to get acquainted with you and to get you acquainted with our splendid and instructive farm paper, "FARM AND STOCK," an up-to-date magazine devoted mainly to corn and live stock. The Watch Fob and a three months' trial subscription given you absolutely free on receipt of 10 cents in coin or stamps to pay for mailing. We will also send you our liberal proposition whereby you can secure other handsome premiums free by giving away several of these fobs to your neighbors. You are sure to be delighted with both fob and paper, so send 10c at once while they last to

FARM AND STOCK

Box 355, St. Joseph, Missouri

Alfalfa For a Dairy Farm.

Alfalfa holds a unique position among the crops produced upon the dairy farm, because it is so well adapted to the feeding of dairy cows. It is palatable and contains a large amount of protein, the constituent so essential to growth and to the elaboration of milk. Where alfalfa is available for dairy cows, the amount of protein that is necessary to feed in the form of expensive concentrates is materially and profitably reduced. For cows that do not give large yields of milk, a balanced ration can be made by feeding alfalfa hay and ensilage. This makes a home-grown ration that can be produced cheaply, a very important factor in the economical production of dairy products.

At the New Jersey Station a test was made with two lots of dairy cows to determine the comparative value of alfalfa and a combination of wheat bran and dry brewer's grain as a source of protein. In this test the alfalfa ration produced a daily yield of 20.8 pounds of milk and 1.06 pounds of butter, while the bran and brewer's-grain ration produced a daily yield of 21.8 pounds of milk and 1.08 pounds of butter, only a slight difference in favor of the more concentrated protein foods. Bran and dried brewer's grain each cost $17 per ton, on which basis alfalfa hay proved to be worth $11.16 per ton.

The New York Station reports the results of feeding home-grown rations, consisting of alfalfa hay and corn silage, feeding four cows for sixty days, in comparison with a purchased feed ration for the same number of cows for the same length of time. These rations cost respectively $30.03 and $47.05, or 12.5 cents and 19.6 cents per cow per day. This is a net gain of 24.3 cents per hundred pounds, and a half of a cent per quart of milk, or a saving of 33.7 and 31.5 per cent., respectively, for milk and butter in favor of the home-grown ration. They estimate that when purchased feeds average $25 per ton, alfalfa is worth $16.50 to feed with corn silage.

At the Maryland Station, alfalfa and corn meal gave better results than silage and commercial foods. Where alfalfa and silage were fed with and without grain, the grain feeding proved the more economical.

Experiments conducted at the Tennessee Experiment Station tend to show that one and one-half pounds of alfalfa will replace one pound of wheat bran.

The New Jersey Station concludes that three pounds of alfalfa are equivalent in feeding value to one pound of cotton-seed meal.

The Nebraska Station compared feeding alfalfa hay with the feeding of prairie hay, and decided as a result of these tests that alfalfa produced 10 per cent. more milk from less food.

The Utah Station found that adding corn stalks to a corn and alfalfa ration gave larger returns per unit of dry matter than alfalfa without stalks.—Kansas Agricultural College Bulletin No. 155.

The Unsung Durango Ram.

"I have before me a newspaper clipping which is headed: 'The Unsung Durango Ram.' The story goes on to state that a gentleman in Durango, Colo., had shipped from Vermont a very valuable ram for breeding purposes. He had not had the ram long when it was found dead on the range. A post-mortem examination revealed the cause of death was clogging of the stomach with little balls of gum. The little balls were taken to a chemist for analysis and this revealed the fact that they possessed all the property of India rubber. The story goes on to state that this was really the starting point of Colorado's rubber industry.

"We don't know anything about the truth of this story. It may be true. However, it is easy enough to manufacture a story to account for any unusual phenomenon. The fact remains that the story is perfectly possible and fits the conditions so perfectly that it would cause us to suspect that the story was manufactured to account for a condition—the rubber-weed industry—as the result of the experiences of the Durango ram.

"The so-called Pinguay weed, or rubber plant, is the cause of the death of thousands of sheep on the Western range.

"I have mounted specimens of the plant in my poison weed herbarium. At the same time, we know that the plant is not really poisonous, but that it does kill sheep because of the indigestible mass which finally accumulates in the digestive tract, producing fatal impaction.

"We are informed that the plant does not give a good quality of rubber; but to get the business on a commercial basis is a different proposition.

"The story of the Durango ram, however, is a good one, whether it is true or not."—Geo.H.Glover,D.V.M., Colorado Agricultural College, Fort Collins.

Why Pay More?

$24.05 with Tea Kettle Attachment on back

We have been selling stoves for 25 years and have built up our trade until we now probably sell more high-grade stoves than any firm in the world. Don't buy a stove of any kind until you've seen our catalog. A new edition is now ready showing the finest line of Stoves, Ranges and Heaters we have ever seen. Prices are greatly reduced this year—**LOWER** than ever. Let us send you our stove catalogue for you to examine.

If you need a stove, get a good one, but don't pay too much. See our catalogue. Our new 1908-9 Windsor Stove Catalogue will post you fully on the Palace Windsor Heater and our full line of Steel, Malleable and Cast Ranges, Cook Stoves, Oak Stoves, Airtights, Ventiducts, etc., burning wood coal, cobs, oil, gas, &c.

Get Posted. Save Money. Get the Best Made.

You can buy the best Base Burner, Self-Feeder and Double Heater for $24.05. That is the price of the handsomest and best Heater on the market as sold only by us, and we ask you, **Why Pay More?**

Palace Windsor

is a beautiful stove, ornamenting any room, excelling in every desirable quality. Good to look at. Holds fire all winter. Regulation absolute and simple. It gives abundant heat. $20.00 below usual price—enough to pay half your coal bill this winter, or more.

The PALACE WINDSOR comes in three sizes:

CS12—Firepot 12in. Floor space 25x25. Height 66¾ in. to top of urn. Weight 405 lbs. Price..... **$24.05**

CS14—Firepot 14in. Floor space 27x27. Height 67¾ in. to top of urn. Weight 470 lbs. Price..... **$26.65**

CS16—Firepot 16in. Floor space 29x29. Height 69¾ in. to top of urn. Weight 540 lbs. Price..... **$31.25**

These prices to you are actually lower than factory prices to dealers, on stoves of comparative merit. They are the lowest prices in the world; and every stove is perfect and guaranteed to suit you in every way. The Palace Windsor is shipped to you direct from factory, all blackened and polished and ready to set up and use; strongly crated. You do not want to buy a stove every year or two. Your stove must last and give satisfaction. And when you can get a stove that will last long, look attractive, burn little fuel, one that is easy to regulate and perfect in every way, and can do so at a very decided saving in money, it is certainly for your interest to give us your order. Our strong guarantee protects you in every way, and insures you perfect satisfaction in your purchase.

Get a stove that is adapted to your need and one large enough to do its work right.

Order your stove or range in time to have it travel the distance and get to you before you "must" have it. Allow at least two weeks for its being on the road. Railroads are often congested with freight and this causes delays. Order in ample time.

Whatever your stove wants we can supply you **best and most economically**

Useful Roofing Information.

Anyone who is considering the roofing proposition should secure the booklet on Amatite which has just been published. This booklet is full of practical information. It gives pointers that will enable you to know what's what in the roofing line. This booklet is published by the oldest roofing manufacturers in the country and may be relied upon for accuracy. It is mailed free to anyone sending their name and address. A sample of Amatite, with its mineral surface, which has made such a success as a lasting protection against the weather, is also sent with the booklet. Both are free and are well worth inspecting.

Address nearest office of the Barrett Manufacturing Company, New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Pittsburg, Cincinnati, Kansas City, Minneapolis, New Orleans.

If you write to the Wenthe Correspondence School, Dept. S. R., 168, Freeport, Ill., they will send you the free booklet regarding the employment of railroad men.

A NEW EGG FARM.

Stoddard's book entitled **A New Egg Farm**, is, in our estimation, the best book for a young poultry raiser to study. It shows the way to profitable production of eggs and poultry. He compares the best locations for the business. Tells how to build the houses for layers, breeders, sitters or chicks, adapted to the colony system, the yard system and other methods. How to breed and manage. How to breed and select. Choice of breeds and crosses. Management for mild or severe climates. How to feed fowls and keep them at exercise without hard work. How to manage hundreds of sitters with little labor. How to raise brooder chicks and keep them alive and growing. There are 320 pages of useful, attractive, illustrated information. The book is nicely bound, and we will send this book by mail, postpaid, and include a year's subscription to **The National Farmer and Stock Grower**, for one dollar. Address,

HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

Saving Labor in Poultry Raising.

For the value of stock, more labor is required in poultry raising than in any other kind of live stock husbandry. It is this that keeps down the size of flocks, both on the farms and in villages.

It will pay every owner of a flock of poultry to sit down and figure out what can be done to lessen the amount of labor required daily. One will be surprised to find out how many useless steps are taken in the care of poultry on most farms.

In the first place, the drinking arrangements may easily be made such that several trips a day will not be required to keep the fowls in clean drinking water.

There is one principle in hydraulics that should be understood by every poultry raiser and that is, that if a jug full of water be inverted in a pan of water the water will run out only so fast as it is reduced in the pan. It is the pressure of air that holds the water back. The man that understands this principle can modify it to almost any extent. He can give the fowls a supply of water that will last one day or many days and which will flow out automatically only so fast as it is used by the poultry.

Self-feeding arrangements can be utilized quite extensively, especially in the feeding of oats. These self-feeders are hoppers that are filled with grain and let it out automatically at the bottom as fast as the grain is eaten out of the little space below the hopper.

Grit can well be supplied in the same way, and this is a common practice on some of our poultry farms. The advantage about supplying grit in this way is that there is no danger of the grit being eaten by rodents or birds or growing moldy from the presence of moisture. A supply for any length of time can be used.

Where the poultry flock is a large one, it will pay to run a pipe in the ground below the frost line, from the well or other water supply to the poultry house. This will cost something, but it is an initial expense that will not have to be repeated, and it will greatly reduce the amount of labor connected with supplying the poultry with drinking water and also in washing out the poultry house by use of the hose, which is a very good means of keeping down the army of mites that will invade about every poultry establishment.

The doors and windows should be constructed that they may be opened and shut with the greatest of ease, and some of them should be self-closing, with buttons to keep them from closing when it is desired for any reason to have one of them remain open.

Where a poultry house is cleaned out every day or every few days, the perfectness of the arrangements for cleaning will count for a great deal.

It is well for the poultry raiser to investigate the different appliances on the market to ascertain what he can secure to save his own labor. Many inventors are now laying awake nights trying to think up labor-saving devices in the care of poultry.

Good For Chickens.

Now that meat is so high a great many farmers are butchering their own beeves and hogs. In some communities they have co-operative societies for supplying the members with fresh meats, one member butchering one week and dividing the carcass among his neighbors and another member the following week, and so on till all have butchered. In nearly all these butcherings the blood of the animal is allowed to go to waste and here is where we want to speak for the hen. This blood, if saved and mixed with corn meal, makes the best kind of feed for laying hens. If it is desired to keep the blood for some days, it can be placed in a pot on the stove and cooked, when it will thicken and keep for quite a length of time.

Small and Large Numbers.

When hens are kept in small numbers and given free range, they do well almost anywhere. The reason why many poultry raisers fail to meet with success when they increase their flocks is that they fail to increase their accommodations in proportion; they fail to recognize the fact that large flocks are difficult to feed so that each individual may secure its allotted share; that various ailments have to be guarded against where large flocks are kept.

A great deal depends upon the location and construction of a plant. The scratching shed will more than pay for itself in an increased egg output. Houses should face the south. The scratching sheds should be more open than the laying house. But above all, the houses should be dry, warm and sunny. The house should be kept clean, so that no germs lurk in the floors and yards. Disinfect the floors by sprinkling with a solution of one pint crude carbolic acid to three gallons of water. The drinking vessels should be scalded out frequently to kill all germs of disease. The best way to handle a large flock is to divide it up into small flocks. The best way to increase the flock is to start a new yard or colony. Fifty hens in one flock is usually too many, but can be handled all right by careful poultry keepers.

Making Hens Moult.

One of the difficulties in poultry raising is to get the hens to moult early so that they will be ready to lay early in the fall when eggs are high.

Left to themselves, hens will take a long time to moult, and will not finish until cold weather sets in. They will not then lay much until January 1st, and all the profits for October, November and December are lost.

At the Poultry Institute held in Denver by the Colorado Agricultural College, J. R. Wilson, a poultryman of long experience in Colorado, gave

Chicago House Wrecking Co., 35th & Iron Sts., Chicago

his method of controlling the moulting of hens.

Mr. Wilson turns his hens for three weeks in July on alfalfa, feeding them in addition dry bran only. Under this treatment they get thin. The 1st of August he starts feeding them a mixed ration of grains and meat, giving a light feed in the morning and all they will eat at noon and at night.

Under this treatment they finish moulting quickly, get new feathers and begin laying the 1st of September. By October 1st they are in full laying and make a profit through the fall months.—H. M. Cottrell, Colorado Agricultural College, Fort Collins.

Poultry and Pet Stock Notes.

The principal interest we have in poultry raising is in the production of eggs and meat for market. "How can we produce a ton of chicken as cheaply as we can a ton of beef?" That is the question for which an answer is desired. We believe that the question can be answered all right.

Leghorns are good layers of fertile eggs and the cockerel makes a good broiler. They are the rustlers of the hen family. They are easier to raise and cost less to feed than the heavier breeds. They begin to lay when four to five months old, when the pullets of the larger breeds require about eight months. Thus in Poultry does Frank L. Morris boom the Leghorns.

A Utah man claims that a Columbian Wyandotte yearling hen lay 33 eggs in thirty-four consecutive days in midwinter. We don't like to say that it is a fairy story, but he is probably giving the favorite hen credit for some other hen's eggs.

I. K. Felch, famous poultry writer, is on record as saying that the Brahmas are the best large breed on earth, and very likely always will be.

There is some excuse for considering fancy points in poultry, but the fancier ought to be behind the breeder. The poultry shows seldom contain anything except exhibitions of feathers.

We are asked concerning Belgian hares, and all we can say is that Belgian hare meat can be produced cheaply and sold high; but the fakirs who wished to sell fifty-cent rabbits at $5.00 each caused people to expect too much, and the consequence is that Belgian hares are at a discount, because they do not represent a gold mine.

We are sending the Reliable Poultry Journal; Green's Fruit Grower; the Universal Magazine and The National Farmer and Stock Grower, all four first-class, interesting, instructive publications, one year for one dollar. All you have to do is to send us one dollar and we will see that the papers are sent regularly for one year. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

A writer in the Reliable Poultry Journal says that the capacity of a hen to lay is bred in her. Special feeding will assist nature but not increase the number. What is necessary is to obtain a guaranteed laying strain and prove it by the trap nest. Another writer in another paper says exactly the reverse—that no system of breeding equals liberal feeding of the proper kind of feeds.

The red comb may not be an indication of a hen that is a large layer, but it is a pretty sure indication that the hen is laying or preparing to lay. If you wish to obtain layers at once—letting the future take care of itself—pick for the red comb.

It is a pretty good flock of pullets and hens that will be able to prove a laying average of twelve dozen eggs a year. Such hens can cost $1.00 for feed in a year and then show a profit of $1.40 per hen per year. This is according to The National Farmer and Stock Grower standard. It is difficult, however, to keep close to the business of egg laying when egg hatching and chicken selling interfere. The poultry business, however, is the only one that will pay two hundred per cent. per annum on the cost of the original stock.

The best tonics you can give your poultry are fresh air and exercise.

A healthy hen is always on the go; she is not mopish. When she has the fields to wander over in the summer, she always goes into winter quarters in a bright, healthy condition; and it is up to us to have her come out of it in the spring in the same condition.

It is utility that the keeper of farm poultry has in view. His standard should be one made up of table qualities, laying powers and constitutional hardiness. He may attach more or less weight to table qualities or laying powers, according to circumstances, but both must be kept in view. Make your choice. Utility first; beauty afterward.

We cut down the profits when we keep the old hen or by keeping the ones that are never found on the trap nest. Can you go among your flock and pick out the best layers? It pays well to be able to do this. The matter of knowing which are the profitable hens is really much more important than the majority of people think. This difference will prove a source of great surprise to you if you have not been a careful observer.

Do not hold back when you find what you want. If you need it, it is worth the price asked. Strive to do your best in getting those things you need in your poultry work, and before long you will be selling quality birds at the long prices that such birds command. Follow this into all the lines of your work.

The quality of the poultry in this country is improving rapidly. The improvement seen in the poultry shows during the last five years is nothing less than astonishing. Is this true of your flock, or are you contented to go along year after year in the old rut?

Hard times find the poultryman in better shape than many of his fellows. The public still want and will pay for what he has to sell. Luxuries may be dispensed with in times of financial depression, but the poultryman still finds a ready market for his produce.

Diet has an important effect upon the fertility of the eggs.

Sick birds should be isolated, as many diseases are contagious.

Boiled oats makes a good laying food; also other boiled grain.

Observation should teach one whether they are feeding their poultry enough food to get good returns.

The best breed is the one we like best. One may be successful with one breed, while another will be equally successful with some other breed. A great deal depends upon the man behind the feed pail.

Our hen houses should be warm for winter. I find that a hen will lay very few eggs in a cold house.

In Musselshell Valley Montana—Profits

Where a few years ago settlers in Montana were engaged principally in stock-raising, diversified farming is now being successfully carried on at great profit.

Large yields of wheat, oats, barley, potatoes, vegetables, alfalfa and timothy hay are being produced in the fertile Musselshell Valley, in central Montana along the Pacific Coast extension of the

Chicago Milwaukee & St. Paul Railway

Thousands of acres of fertile lands have been opened to settlement in Montana in the past year through the construction of this new transcontinental line. Land is still cheap there and plenty of government homesteads may still be secured close to the towns on this new line. These towns are growing and will provide additional markets for the crops.

It is well worth your while to make a trip there to see for yourself the opportunities now offered.

Maps and descriptive books regarding the country along the new line are free for the asking.

GEO. B. HAYNES
Immigration Agent
348 Marquette Bldg., CHICAGO

It is better for the average poultryman to confine himself to one variety.

In order to have a hen lay 200 eggs in a year we must give her constant and diligent care. "Aim high" should be our motto in the poultry business as well as in other vocations of life.

On egg farms the profit is derived from eggs obtained in the fall and winter. In my experience in the egg business there has always been a shortage of eggs in the early fall and winter.

Nine-tenths of the diseases that afflict the laying stock come from derangements of the liver. Afflicted fowls have a dark comb, and sometimes it is black.

One of the best foods for making hens lay is lean meat. When the supply of eggs fail, begin feeding lean meat. It will be found to be superior to anything that can be used. It will be found cheaper than grain, because it will make eggs. One reason why the hens fail to lay when they have plenty of grain is that they require a change, and meat supplies the needful. One ounce of meat a day to each hen. Six ounces of food altogether. Try this method and watch the results.

The recent dried-fruit situation at St. Louis was as follows: Fair-grade evaporated rings apples at 5½c.; bright-sun-dried quarters apples would probably bring 4½c., and good sun-dried halves peaches nominally 4c. But nothing reliable or accurate can be said of the market, not enough fruit offering to draw out the extent of the demand or show the position of values.

Beans and peas were selling on the St. Louis market late in September as follows per bushel: White beans—Choice hand-picked at $2.55 to $2.60; machine-picked or screened, $2.40 to $2.45; imported, $2.40 to $2.45; country at $1.75 to $2.00; Scotch peas at $2.65; split peas at $2.10 per bushel or $6.75 per barrel of 3½ bushels; black-eyed peas, $2.50; Lima beans, 6c. per pound; lentils, 6½c.; California pink, 4¾c.; red kidney, 4 to 4¼c.

I Cured My Rupture

I Will Show You How To Cure Yours FREE!

I was helpless and bed-ridden for years from a double rupture. I wore many different kinds of trusses. Some were tortures, some positively dangerous, and none would hold the rupture. The doctors told me I could not cure it without a surgical operation. But I fooled them all, and cured myself by a simple method which I discovered. Anyone can use it, and I will send the cure free by mail, postpaid, to anyone who writes for it. Fill out the coupon below and mail it to me today.

Free Rupture-Cure Coupon

CAPT. W. A. COLLINGS,
Box 516, Watertown, N. Y.

Dear Sir:—I wish you would send me your New Discovery for the Cure of Rupture.

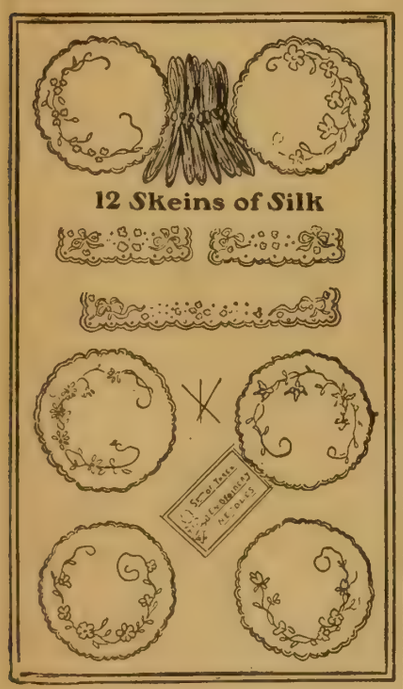
ELEGANT EMBROIDERY.

Everything must have a beginning, and this is the beginning of embroidery. This beautiful trial set consists of six fine linen doilies stamped, assorted designs, one linen collar and cuff set, one package of embroidery needles and pure silk, assorted colors, sufficient to work the same. This is well worth having and will give satisfaction to embroidery experts and beginners.



Send Us 30 Cents and we will send you this embroidery set by mail postpaid. We will also enter up a full year's paid subscription to the new and interesting monthly publication, the **Universal Magazine,** which has been a success from the start. This subscription to the **Universal Magazine** includes twelve beautiful colored art picture supplements, 6x8 inches, called the Sunbonnet Twins. These pictures will please everybody. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Coyote-proof Fence.

Fencing the range to protect sheep from the attacks of predatory animals has met with excellent results in the Wallowa National Forest, Oregon. The problem was to find a strong fence that would make the sheep secure, even without the care of a herder.

The chosen fence, which is built of woven wire with barbed wire on the top, has kept out all the minor animals, such as wild cats, lynxes and coyotes, but has not withstood the attacks of the grizzlies, which are apparently able to pass through it with little trouble.

Sheep numbering 2,200 head were placed in the enclosure with their lambs upon June 20th and have been allowed to graze at their free will with no attention whatever from any herder. They have done splendidly, and, as far as the observation of those in charge of the experiment goes, a given area grazed by sheep under such conditions will carry more sheep per acre than one grazed under the charge of a herder.

Tracks along the fence show that predatory animals come to the fence constantly and follow it around, but, with the exception of the bears, do not seem able to enter.

The hunter employed by the Service for hunting predatory animals in the vicinity of this fenced enclosure has killed no less than six large grizzlies this season, besides numerous other animals of the predatory class.

The results of this experiment are so satisfactory thus far that private individuals are profiting by it. Mr. J. W. Emmons, of Troy, Oregon, has a large area of private land fenced with a special wire fence in which he has this season lambed a herd of 670 ewes without a herder's care and with very little attention and great success. Mr. Emmons is extending his fence, for he finds it pays.

Careful record will be kept of the weights of lambs raised inside this fence with a view of comparing them with the same grade of lambs raised outside the fence on the same class of range, so that any gains or losses in weight and growth may be determined.

FREE WATCH FOR READERS.

A watch fob with your Presidential candidate's picture is a favorite piece of jewelry this fall. In fact, it is distinctly "the thing," much handsomer and more tasteful than the old-fashioned buttons or campaign badges.

Readers of this paper will be pleased to learn that they can have one of these watch fobs free by writing to the lively, interesting magazine, "Farm and Stock," St. Joseph, Mo. That publication has a number of the handsomest fobs yet made which will be distributed to the first applicants. So you stand a better chance of getting one if you write at once. The fob is made of a fine grade of seal-grained Russia leather, nickeled buckle, mother-of-pearl shield, containing a photograph of either Bryan or Taft.

The fob goes as a present with three-months' subscription to the Farm and Stock. The cost of mailing the fob and the paper is 10 cents, which should be sent either in coin or stamps with your letter asking for the fob. The fob itself is worth several times that amount.

When writing, be sure to say whether you want Taft or Bryan fobs, and do not forget the dime for mailing. Address, Farm and Stock, Box 355, St. Joseph, Mo.

Keeping Apples.

On every farm where apples are produced the problem of keeping them is an important one to solve. The man that has only a family orchard is as much interested as any other, for he desires to make the crop from his trees last through the winter as far as possible. If the apples cannot be kept beyond a few months, the owner must either get rid of them at any price or see most of them rot in the barrels and bins.

On the farm it is generally difficult to keep apples, because the temperature in which they are usualy kept is too high. The cellars of the old-fashioned houses were better than the modern cellars for keeping apples, because these cellars had fewer furnaces and stoves.

Even where there are two cellars, frequently the one in which the fruit is stored communicates by a door with the cellar in which the stove or furnace is placed. While the temperature of that cellar is several degrees lower than the cellar most used, yet the average temperature is several degrees higher than it should be to give the best results in the keeping of apples.

In the keeping of apples, thirty-two degrees is considered the minimum temperature, as fruit must not be frozen. In ordinary practice, however, it is found that the temperature in a cellar may be two or three degrees below the freezing point of water and the fruit not freeze. Thus, apples are said to stand as low as twenty-eight degrees above zero without freezing. This is four degrees below the point at which water freezes. Whether this temperature could be maintained for months and the apples not freeze has probably never been demonstrated.

Those that have had much experience in the keeping of apples have noticed the great difference there is in the keeping power of apples. The best keepers are not always the hardest apples. Ben Davis is an exceptionally good keeper, but it is not what might be called a hard apple.

One thing that makes some apples good keepers is the texture of the flesh. The flesh of the Ben Davis is of such a texture that when the apple is bruised on the outside the apple dries up instead of beginning to rot. This is generally but not always the case. Late in the winter the Ben Davis apples reach a mellowness where they will not stand bruising, as they will do in the fall and early winter. The Ben Davis is a rather dry apple, and such apples generally keep well. Juicy apples must be handled with the greatest care to prevent them being bruised and rot starting. If any person wants to notice the difference in two apples in this respect, let him bruise and lay aside for some weeks or months a Ben Davis and a Jonathan.

In keeping apples in a cellar, keep them shut from the air. Barrels should be kept covered, as the air will draw the moisture out of the apples very rapidly. Then keep a thermometer where it will show the temperature of the cellar. A little study of any cellar will enable the farmer to so adjust the supply of cold air from the outside that the temperature will be kept between thirty-two and forty degrees most of the time. Some of the windows in the cellars should be so made that they may admit a small stream of air whenever it is desired to lower the temperature.

BROMO-SELTZER

CURES

HEADACHES

10¢, 25¢, 50¢, & $1.00 Bottles.

Recent quotations for grass seeds at St. Louis were as follows—all quotations being at the price stated per 100 pounds: Timothy—Dark, hulled, weedy, etc., at $2.25 to $2.50; fair grade, $2.75 to $3.00; clean bright, $3.10 to $3.25; high-grade more; clover at $3.00 to $5.00 for trashy and weedy up to $9.55 for best. Red Top at from $2.00 to $3.00 for chaffy to $6.00 and $7.00 for fair, and $11 to $11.50 for fancy; German millet, $1.10 to $1.30; common millet, $1.10 to $1.20; Hungarian, $1.00 to $1.50; mustard at 50c. to $1.00; buckwheat, $1.40 to $1.50; Siberian broom-corn millet, $1.10 to $1.40.

Impatient Susie.

"Oh, I can't thread this needle, ma,"
Was little Susie's cry;
"Just as the thread is going through,
The needle winks its eye."
October Woman's Home Companion.

TO WOMEN WHO DREAD MOTHERHOOD!

Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.

No women need any longer dread the pains of childbirth, or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. He has proved that all pain at childbirth may be entirely banished, and he will gladly tell you how it may be done absolutely free of charge. Send your name and address to Dr. J. H. Dye, 248 Lewis Block, Buffalo, N. Y., and he will send you, postpaid, his wonderful book which tells how to give birth to happy, healthy children, absolutely without pain; also how to cure sterility. Do not delay, but write to-day.

I POINT THE WAY

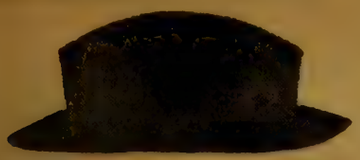
to SUCCESS to ANYONE who will follow my Course. I have shown Farmers, Laborers, School Teachers, Dressmakers and thousands of others HOW TO MAKE MONEY—I can show YOU. My Goods and Business Methods have lifted Mortgages, built Homes and scattered Prosperity everywhere. Get in line and write today for the "SAYMAN PLAN," full particulars and FREE Samples.
SAYMAN, 2404 Franklin Ave., ST. LOUIS, MO.

A GREAT OFFER.—We will give every reader of this paper an 18-months' trial subscription to that handsome farm and story magazine **FARM LIFE,** printed in colors, for only 25 cents. Send the quarter to **FARM LIFE,** 310 Coca Cola Bldg., Chicago, Ill.

DROPSY Cured; quick relief; removes all swelling in 8 to 20 days; 30 to 60 days effects permanent cure. Trial treatment given free to sufferers; nothing fairer. For circular, testimonials and free trial treatment, write
Dr. H. H. Green's Sons, Box K, Atlanta, Ga.

VETERINARY COURSE AT HOME.

$1200 year and upwards can be made taking our Veterinary Course at home during spare time; taught in simplest English; Diploma granted, positions obtained for successful students; cost within reach of all; satisfaction guaranteed; particulars free. **Ontario Veterinary Correspondence School, London, Can.**



A MAGNIFICENT PREMIUM.

The National Farmer Hat.

The sizes are from 6⅝ to 7½. They are hats suitable for men or boys. They are of good material, well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. These hats are black and steel gray. We send black unless steel is called for. These hats wear as well and last as long as any $2.00 to $3.00 hats on this market. They will give entire satisfaction. We believe this hat will make a first-class subscription premium. The subscription price of The National Farmer and Stock Grower is one dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us one dollar to pay for two-years' subscription to The National Farmer and Stock Grower and we will send you by mail one of these fine, wool crusher National Farmer hats as a premium. Be sure to mention the size and color. A million and a half of these hats have been sold.

Address, **The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Fall Bearing Strawberries.

So delicious a berry is the strawberry; so obviously is it the queen of small fruits, or, perhaps as many would concede, of all fruits, that it is not to be wondered that man should endeavor to prolong the season wherein his palate is tickled by this dainty. Up to recent years, however, we have had to be content with a ratification of four or five weeks, no matter how grievously we regretted its ending. Occasionally, to be sure, scattered berries would be found on the old plants in the fall when a long drouth had been followed by soaking rains, but this supply was altogether uncertain and irregular, and was never to be depended upon. Now nature has graciously come to our assistance and at last we have a strawberry that for singularity of bearing is distinctly of its own kind.

This new variety, introduced about three years ago and known as the Pan-American, cannot be correctly described as a fall bearer; it is more than this—it is a true ever-bearer. From the usual season in the spring until cut down by frost, it continues without intermission to bloom and to ripen fruit.

It is a "sport" or variation by bud from the well-known Bismarck, and its berries and general appearance bear much resemblance to its progenitor. It was accidentally discovered in his berry patch by a veteran of the Civil War, Sam Cooper by name, who lives in Northern New York. Walking about one day, he discovered a mother plant and sixteen runners all in bloom at one time in the fall, and the circumstance struck him as so peculiar that he dug up all the plants and placed them where he could observe them with a view of ascertaining whether the ever-bearing habit was a fixed one or not. Their performance the next year convinced him that it was, and he thereupon set out propagating them in quantity.

Another unusual quality then made itself manifest; the plant proved to be unique in making very few runners, and on being forced by nitrogenous fertilizers into the greatest possible growth, made runners more freely indeed, but seemed to lose much or all of their prepotency to ever-bear. Here then was a serious defect which threatened the value of the plant as a commercial variety.

With the hope of obtaining a more ideal kind Mr. Cooper began to raise seedlings from it; in this he was only partially successful; he originated one he called the Autumn, a plant, strange to say, that bore no resemblance whatever to the Pan-American, and which, while it made runners quite freely, was not the equal of its parent in its ever-bearing proclivities.

Other experimenters have also been at work with some of the foreign varieties which showed some ever-bearing disposition, but without success, and it must be admitted that we are indebted solely to a caprice of nature for the only true ever-bearing strawberry ever created.

So far the Pan-American is not widely disseminated, though it has been tested in many sections of the country. The vital question is whether it will ever prove commercially profitable. So far experience answers in the negative. There are numerous reasons why this is so. One is the cost of the plants; at the present rate of propagation they can never become cheap; but there are weightier reasons; during the hot and dry summers of the Mississippi valley it is manifestly impossible to raise this most delicate and sensitive of all berries by ordinary methods. Its fruitage must be limited to the cool and moist fall months prior to frost. Even then it is probable that it will demand a high degree of intensive culture which will so increase the cost of production that a ready market at high prices must be near at hand. This intensive culture must take the form of heavy fertilizing and irrigation, and a copious supply of water is above all indispensable for fine berries. Given these, however, and, in addition, a section where frost comes rarely or not at all, as in the far South or California, there seems to be no good reason why specialists should not find commercial profit and perhaps an unusually good one in this latest novelty of the horticultural world.

In my own garden in Southeast Missouri the Pan-American has been steadily and regularly putting forth fruit stalks every week since April. We are told not to allow it to bear in the spring; but on those plants where this rule was disregarded there is no perceptible difference in yielding qualities at this time.

There is no reason why anyone who desires a family supply of the delicious strawberry during September and October should not be able to secure it on a few square rods by the expenditure of a little care and labor. I should plant on very rich ground, mulch heavily with cut grass or fine manure and give all the water that the plants can absorb without injury. Plant fifteen inches apart both ways and leave paths two feet wide every three plants.—L. R. Johnson.

World's Production of Metals.

The total production of metals of the world for 1907 showed that 713,000 tons of copper were produced; 992,800 tons of lead; 98,700 tons of tin; 738,400 tons of zinc; 14,100 tons of nickel and 19,800 tons of aluminum. Of the precious metals, gold, silver and quicksilver, there were no official reports.

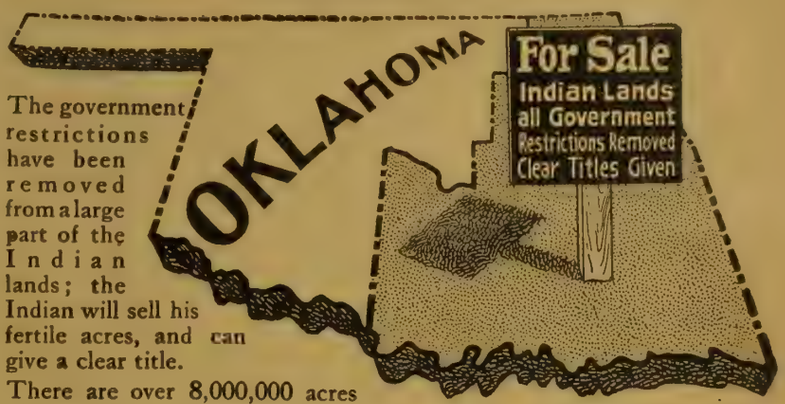
The Outlook For Stock Feeding.

To feed or not to feed must be decided pretty soon now. With corn at present high level it will take good feeding to handle cattle and hogs and show anything for the labor of handling the stock. When cattle and hogs sell around 6 cents, and corn is worth around 45 cents a bushel, the operation will work out usually with some profit. But reverse the prices and put 60-cent corn or 65-cent corn, which the new crop will likely sell for, into 6-cent stock and profits will not be in so easy reach. Much depends upon the men who handle the stock. One man may show a gain, while another will lose. I believe in feeding when odds are not too heavy against it, but this is a season when it will take good work to make the operation show any profit above the selling price of corn.—L. C. Brown.

We are sending Green's Fruit Grower, the best fruit paper; the Reliable Poultry Journal, the best poultry paper; the Universal Magazine and The National Farmer and Stock Grower, all four first-class, interesting, instructive publications, one year for one dollar. Search the world over and you cannot find a subscription proposition to equal it Address, The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Indian Lands For Sale Cheap

Government Restrictions Removed
Clear Titles Given



The government restrictions have been removed from a large part of the Indian lands; the Indian will sell his fertile acres, and can give a clear title.

There are over 8,000,000 acres of these Indian lands on which restrictions were removed July 27th.

The Indian, though a peaceable, civilized citizen, cannot cultivate all his land, and most of them would rather sell it. This is the golden opportunity for the progressive farmer to get a splendid farm at a very reasonable price.

The land varies greatly in character. The rich bottom lands will raise from 40 to 70 bushels of corn to the acre, 20 to 30 bushels of wheat, 3 to 4 crops of alfalfa, averaging three-fourths of a ton to a ton per acre each cutting, or from three-fourths of a bale to a bale of cotton. The prairie lands raise from 25 to 65 bushels of corn to the acre, and other crops in proportion. The agricultural reports give the average yield of all staple crops as about the same as those of Illinois.

There are excellent fruit lands, similar to the famous fruit lands of the Ozarks.
The rainfall is abundant, averaging 35 to 40 inches.
This land can be bought in tracts of 40 to 320 acres at a very low price.
This territory has hundreds of towns and cities, many of which have all the advantages of older settled communities, such as schools and churches, hotels, libraries, electric lights, telephones and telegraph lines, street railways, etc. Only 11% of the present population of these Indian lands are Indians and they are civilized, law-abiding citizens.
If you are not satisfied with the opportunities where you are now located, this is your one **great** chance to better your condition. Take a trip down there and look around; find the farm that just suits you and buy it while it is cheap.
The Rock Island-Frisco Lines have over 1300 miles of railway in the territory where the restrictions have been removed—over three times as much as any other line.
Purchase your ticket over the Rock Island-Frisco-Chicago & Eastern Illinois Lines and you will see the best.
Low round-trip fares to all points in these lands and other parts of the Southwest on the first and third Tuesdays of each month.
You can go via one Rock Island-Frisco Line and return another without extra charge.

Rock Island

If you are interested, write for full information. We will post you on conditions and furnish you with names of reliable men who will aid you to get a desirable piece of land.

JOHN SEBASTIAN, Pass. Traffic Manager
1768 La Salle Station Chicago, Ill. or 1768 Frisco Building St. Louis, Mo.

FRISCO

DON'T BUY GASOLINE ENGINES UNTIL YOU INVESTIGATE "THE MASTER WORKMAN," a two-cylinder gasoline, kerosene or alcohol engine, superior to any one-cylinder engine; revolutionizing power. Its weight and bulk are half that of single cylinder engines, with greater durability. Costs Less to Buy—Less to Run. Quickly, easily started. Vibration practically overcome. Cheaply mounted on any wagon. It is a combination portable, stationary or traction engine. SEND FOR CATALOGUE. THE TEMPLE PUMP CO., Mfrs., Meagher and 15th Sts., Chicago. THIS IS OUR FIFTY-FIFTH YEAR.

SELECTED POETRY.

THE LANDLORD.

The landlord used to come around
As regular as a clock.
Upon the door we'd hear him pound—
Oh, 'twas a glad and joyful sound
To hear that landlord knock.

He knocked upon the entry-way,
He knocked upon the door;
He came around the first of May,
And saw the puppies at their play,
And then he knocked some more.

That landlord used to hand us knocks
Because we had a cat,
A bird, a rabbit in a box,
And half a hundred Plymouth Rocks—
What think you, now, of that?

But when he acted meanest yet
Was over Gwendolen;
When she was born, the little pet,
He growled and said: "You mustn't let
This thing occur again."

We have another landlord now
And he is different.
We've bought a parrot and a cow—
He doesn't holler, anyhow,
Or press us for the rent.

Now Gwendolen has sisters four
And she has brothers two;
They pound the walls and pound the floor
And still this landlord doesn't roar
Like that one used to do.

We've put that landlord mean to rout,
And I will tell you how:
We have a cottage farther out,
With vines and roses 'round about,
And I'm the landlord now.
—American Lumberman.

GOOD COUNTRY TO LIVE IN.

The German emperor and I
Within the self-same year were born,
Beneath the self-same sky,
Upon the self-same morn;
A kaiser he of high estate,
And I the usual chance of fate.

His father was a prince; and mine—
Why, just a farmer, that is all.
Stars are still stars, although some shine,
And some roll hid in midnight's pall;
But argue, cavil all you can,
My sire was just as good a man.

The German emperor and I
Eat, drink, and sleep in the self-same way;
For bread is bread, and pie is pie,
And kings can eat but thrice a day.
And sleep will only come to those
Whose mouths and stomachs are not foes.

I rise at six and go to work,
And he at five and does the same,
We both have cares we cannot shirk;
Mine are for loved ones; his for fame.
He may live best I cannot tell;
I'm sure I wish the Kaiser well.

I have a wife, and so has he;
And yet, if pictures do not err,
As far as human sight can see,
Mine is by long odds twice as fair.
Say, would I trade those eyes dark brown?
Not for an empress and her crown.

And so the Emperor and I
On this one point could ne'er agree;
Moreover, we will never try.
His frau suits him and mine suits me.
And though his son one day may rule,
Mine stands A 1 in public school.

So let the Kaiser have his sway,
Bid kings and nations tumble down,
I have my freedom and my say,
And fear no ruler and his crown;
For I, unknown to fame or war,
Live where each man is emperor.
—Boston Globe.

THE ATTIC.

High over the clamor and riot
We store the things that pass
In the great room dim and quiet—
Flower images under a glass.

Hopes long used and broken;
Dreams that have lost their wings,
Sweet words softly spoken
And priceless unuttered things.

No one would care to rifle
This chamber up in the air;
Where many a battered trifle
Is shrined with sacred care.

There dusty heaps are hidden,
In shadowy corners tossed,
And queer shapes rise unbidden,
For nothing is wholly lost.

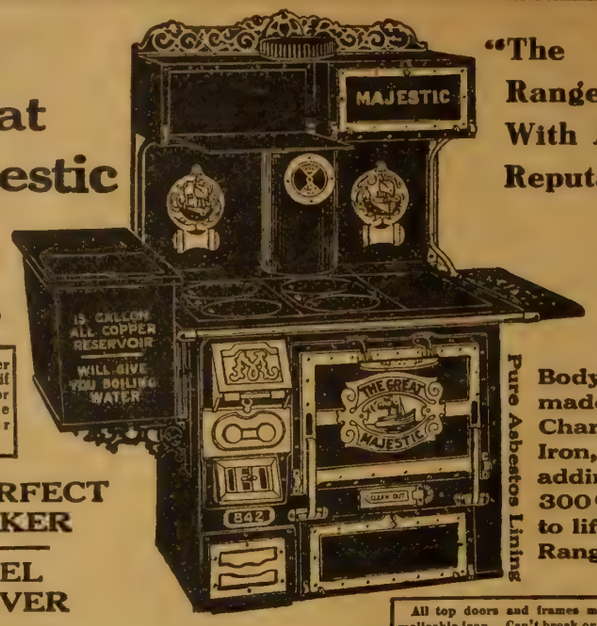
When the house of life is stilly
We creep up the strange old stair;
Where the echoing dusk is chilly
And the silence seems a prayer.

And there when the rain is falling,
Or the weirdly drifting snow
On the winds are voices calling
From haunts of the long agao.
—Ada Foster Murray.

"THE NINETY AND NINE."

There were ninety and nine that safely lay
In the shelter of the fold;
But one was out on the hills away
Far off from the gates of gold.

The Great Majestic



"The Range With A Reputation"

With water fronts if wanted for pressure or other boilers.

Pure Asbestos Lining

Body made of Charcoal Iron, adding 300% to life of Range

PERFECT BAKER

FUEL SAVER

All top doors and frames made of malleable iron. Can't break or crack.

You don't buy a range every year. Therefore when you *buy* one, *buy* the *best.* At first the Great Majestic may cost you a very little more than an ordinary range, but in the end it is *much cheaper.* It has *durability* and will out-last three ordinary ranges. It is scientifically built—*no heat can escape or cold air enter*—will *save half* on your *fuel bill.* A perfect baker—*not one day good—next day poor—but always uniform.* Will save you from disappointment and poorly cooked meals. Your Best Guarantee: 1st—The reputation of the plant behind the range. 2d—Hundreds of thousands in use every one giving satisfaction. We want you to see *The Great Majestic.* If no dealer near you has it, write us—we will send you free our booklet "Range Comparisons," and tell you where you can see a Majestic—the range that gives satisfaction and out-lasts all others.

THE MAJESTIC MFG. CO., St. Louis, Mo.

The Great Majestic Is For Sale In Nearly Every County In Forty States

[Please mention National Farmer and Stock Grower.]

Away on the mountains wild and bare,
Away from the tender Shepherd's care,

"Lord, thou hast here thy ninety and nine;
Are they not enough for thee?"
But the Shepherd made answer: "'Tis one of mine
Has wandered away from me;
And although the road be rough and steep,
I go to the desert to find my sheep."

But none of the ransomed ever knew
How deep were the waters crost,
Nor how dark was the night that the Lord passed through
Ere he found his sheep that was lost;
Out on the desert He heard its cry,
Sick and helpless and ready to die.

"Lord, whence are these blood-drops all the way,
That mark out the mountain track?"
"They were shed for one who had gone astray
Ere the Shepherd could bring him back."
"Lord, whence are thy hands so rent and torn?"
"They are pierced to-night by many a thorn."

But all through the mountains, thunder-riven,
And up from the rocky steep,
There rose a cry to the gates of heaven:
"Rejoice! I have found my sheep!"
And the angels echoed around the throne,
"Rejoice! for the Lord brings back his own!"
—Elizabeth C. Clephane.

THE BARN IN THE RAIN.

Gray barn and draggled meadow,
Blurred green of grass and leaves,
The sky an awful shadow,
For on her gray face weaves

The rain with silver threads,
That fleck the muddy puddle,
That rattle on the sheds
Where the cold cattle huddle!

Then oh, the haymow soft
And deep and dark and warm,
On sweet hay piled aloft—
While overhead the Storm

Sweeps the wet shingles, drips
At eaves, makes music wild—
We listen; the soul slips
Years back and is a child.

Somehow as at the start
We turn from Life's hot foam,
Get in the World's warm heart,
Yea, make Earth's heart our home!

And lie there warm, secure,
Yea, as a child of five,
Heart cleansed, serene and pure,
And glad to be alive.
—James Oppenheim, in Woman's Home Companion for August.

WHY THE EDITOR SWORE.

With a terrific cold in his head,
And his eyelids heavy and sore,
The editor sat in a broken chair
And bitterly, earnestly swore.

A youth had dropped in with a poem,
A man was there with a dun,
A chap had entered to tell him
How the paper ought to be run.

An irate subscriber had told him
That his sheet wasn't fit to be read,
While another had carefully promised
To punch the editor's head.

The foreman was yelling for copy,
And the wind was whistling in at the door,
And this, with a few other reasons,
Is why the editor swore.

But the angel who took it to heaven,
Recorded his verdict there:
"The jury will find in the present case
'Twas a justifiable swear!"
—Rochester Star.

PAIN.

Pain, pain, pain,
'Tis as old as the world is old,
And it never will end till life shall end
And we're laid beneath the mold.
There's the pain of millions moaning,
As they blindly grope for the light,
And the pain of the toilers, brave and true,
Who strive in a losing fight.

Pain, pain, pain,
Of the countless clans who die
Of hunger and cold and withering heat,
As they lift vain arms to the sky.
There's the pain of dreams that were shattered,
And the pain like a faded rose,
And the pain that follows a man to his grave
Where the wind of destiny blows.

Pain, pain, pain,
'Tis the earliest curse of all,
And upon the shoulders of woman-born
The pitiless scourge must fall.
There's the pain that comes at parting
And the pain no words ever told,
And it never will end till life shall end
And we're laid beneath the mold.
—Birmingham Age-Herald.

SORROW.

'Tis sent to make us better
And give us gentle ways—
The sudden grief that pierces
And on our heart's core preys.
Its mordant flame will chasten
And burn away the dross
Of souls that wax impatient
From carrying the cross.
—Birmingham Age-Herald.

MY HEART AND I.

We only know, my heart and I,
What made the day so bright;
We only know the secret, dear,
That turned the dark to light.

And when the brooding wing of night
Enwraps the silent town,
We close the door, my heart and I,
And pull the curtains down.

And there so cozily we sit,
Where none may enter in;
Alone with best of friends, our books,
The happy hours begin.

We understand each other so—
We laugh and sometimes cry—
But there alone, my heart and I,
We all the world defy.

We may by day our service give—
At night from bonds we're free;
Behind the door, where none may come
Except my heart and me.
—Jane Frances Winn.

GRASS.

The rose is praised for its beaming face,
The lily for saintly whiteness;
We love this bloom for its languid grace,
And that for its airy lightness.

We say of the oak: "How grand of girth!"
Of the willow we say: "How slender!"
And yet to the soft grass, clothing earth,
How slight is the praise we render.

But the grass knows well in her secret heart
How we love her cool, green raiment;
So she plays in silence her lonely part,
And cares not at all for payment.

Each year her buttercups nod and drowse,
With sun and dew brimming over;
Each year she pleases the greedy cows
With oceans of honeyed clover.

Each year on the earth's wide breast she waves
From spring until stern November;
And then she remembers so many graves
That no one else will remember.

And while she serves us with gladness mute
In return for such sweet deafings,
We tread her carelessly under foot,
Yet we never wound her feelings.
—Edgar Fawcett, in Kansas City Star.

JOY AND TROUBLE.

Trouble make a lot of noise;
Hardly ever hear our joys;
Trouble is a rampant fellow;
Joy is gentle, joy is mellow;
Trouble talks with roar of thunder,
Joy is soft as whisper wonder;
Trouble makes a lot of fuss;
Joy does quiet good to us.
—Baltimore Sun.

LIFE.

Life has its sorrows
And its tears;
Its heartaches and
Its hopes and fears.
But still with all
Its hurts and wrongs,
Life has its roses
And its songs.
—Detroit Free Press.

WHEN HE WOULDN'T PAY.

During the money stringency lately a certain real estate man, having nothing else for his clerk to do, sent him out to collect some rent that was overdue.

The clerk, being of Swedish nationality had their peculiar twang in his speech.

Returning from his trip, the Swede seemed very jubliant.

The proprietor, noticing his smile, said "Well, what luck did you have?" and the clerk answered: "Purty good."

"Well, did anybody pay you?"

"Yaas, Smith he pay, and Yones he say he pay in Yanuary."

"Are you sure Jones said he would pay in January? He never before has made such promises."

"Vell, I tank so. He say it bane a dam col' day when you get dot money, and I tank dat bane in Yanuary."—Scrap-Book.

30 FLOWERING BULBS FOR 10c

Together with our Catalogue and a complete treatise on the culture of Hardy Bulbs. All by mail, 30 cts

Our Illustrated Catalogue of Hyacinths, Tulips, Narcissus, Crocus, Lilies and all Hardy or Holland Bulbs, and rare new winter-flowering plants free to all who apply.

JOHN LEWIS CHILDS, Floral Park, N. Y.

$5,000 Reward

Will be paid to any person who can find one atom of opium, chloral, morphine, cocaine, ether, chloroform, heroin, alpha and beta eucaine, cannabis indica, or chloral hydrate or any of their derivatives, in any of Dr. Miles' Remedies. This applies to goods in original packages, unopened, and not tampered with. Certain unscrupulous persons are making false statements about these remedies.

"I have been troubled with a terrible headache for the last ten years; the doctors could do me no good. I saw Dr. Miles' Anti-Pain Pills advertised in the Sunday magazine, so I thought I would try a sample. I did so, and they helped me wonderfully. I had headache so badly I could hardly see to work, so I sent to the drug store and got a box. In a couple of hours I was all right, it was the first medicine to do me any good."

A. A. ILLIG, Philadelphia, Pa.
5362 Tacoma Street.

Dr. Miles' Anti-Pain Pills are sold by your druggist, who will guarantee that the first package will benefit. If it fails, he will return your money. 25 doses, 25 cents. Never sold in bulk.

Miles Medical Co., Elkhart, Ind

Mistaken Identity.

Jacob Hope, whose phonograph school for parrots in Philadelphia has given him a deep ornithological knowledge, was praising the gray African parrot.

"It is the cleverest of the parrot family," he said, "and the best talker. You hear some remarkable tales about it, tales that make you think it must have a mind like your own.

"A Nicetown man came in the other day to tell me of a gray African parrot I had trained for him.

"He said that they kept the bird in the nursery, where it showed the most remarkable liking for the baby. It was especially interested in the baby's morning bath. All through the operation of filling the little tub, undressing the tiny child, scrubbing it, and so on, the parrot on its perch quawked and flapped its wings in the greatest excitement and delight.

"Well, one day the parrot was removed to the kitchen while the nursery was being papered. It passed several hours in the kitchen quietly, then, all of a sudden, it uttered a succession of ear-piercing shrieks.

"'Oh, the baby! Oh, the poor, dear baby!' it screamed over and again in accents of terror and despair.

"The entire household rushed to the kitchen. The parrot on its perch flapped its wings and tugged at its chain, while it watched with frantic eyes the cook preparing a little sucking pig for the frying pan.—Philadelphia Record.

Head Cheese.

Take a pig's head (upper parts only, using the lower halves for roasting), thoroughly clean, and let lie in salt water over night. Put on to boil in plenty of water, and boil until the meat drops from the bones. Strain the liquor it was boiled in and set away to cool. When cold, remove the fat, when the liquor will be ready to add to the meat, which must be looked over carefully, to remove any small bits of bone, and chopped very fine. Season to taste with salt, pepper and sage. Put on again to boil for about five minutes. Then pour into dishes and set away to cool If sage is not liked, add any flavoring desired.—October Woman's Home Companion.

Ruskin's Long Sentences.

Ruskin, it is said, has written more sentences of inordinate length than any other classic writer of modern English prose. Frederic Harrison some years ago counted the words in a number of typical sentences, finding that in the earlier books it was no uncommon thing for Ruskin to run beyond the page before permitting himself and his readers the relief of a full stop. But in every case the sense is as clear as day. Wordsworth's poem on the "Character of the Happy Warrior" is a notable example of sustained connections. Apart from the opening and closing couplets, the poem consists of two very long compound sentences almost entirely comprised of adjectival clauses. The longer of the two sentences contains fifty-seven decasyllabic lines. This is probably a record in English verse.

Too Old at ———?

In an age of hurry and "hustle" the value of experience is often overlooked, and the result is seen in the product, whether the work be manual or intellectual. If the older man has lost something of his "smartness," he has not lost the superficiality and carelessness of youth, and the employer who estimates agility above efficiency makes a bad bargain for himself in the long run.—Yorkshire Post.

Useful Remedies.

An excellent remedy for neuralgia and rheumatism is made of equal parts of witch hazel and alcohol, and it is well to rub the affected part with the fluid and then cover with soft, dry flannel; and for rheumatism, take ten drops of the oil of wintergreen on a little sugar two or three times a day; and this is not only a safe but a very pleasant remedy.

If you are nervous or neuralgic, try the olive-oil cure. Get the pure olive oil and take a teaspoonful three times a day, just after eating, or use it in salads at meals, and this is not only a medicine, but a nutritious food. It is fine for throat and lung troubles and is good for stomach troubles, too.

To brush the teeth after each meal is to follow a good rule, and one of the best and safest mouth washes that can be made is to add one ounce of borax to one pint of boiling water, and before this is quite cold add half a teaspoonful of spirits of camphor. This will keep the gums in a healthy condition and will remove tartar. The camphor is healing and soothing and the borax purifies and disinfects, and if the throat is sore, a little of this borax solution in warm water makes a gargle that is soothing and antiseptic, and there is nothing better for an ulcer in the mouth than boracic acid powder put on dry several times a day.—A. M. H.

Three generations of Simpsons have made

AN EXCELLENT ATLAS

Offered as a Premium to be Selected by Those Who Pay One Dollar in Advance for a Three-year Subscription.

The subscription price of The National Farmer and Stock Grower is fifty cents a year, or one dollar for three years. We are glad to obtain subscriptions on credit, payable at the end of the first year, but we are better satisfied if the dollar is paid in advance; therefore we offer premiums to induce advance payments.

OUR MOST VALUABLE PREMIUM.

Our very best premium is **HAMMOND'S HANDY ATLAS OF THE WORLD**, and it is remarkable what this wonderful book contains.

HAMMOND'S HANDY ATLAS OF THE WORLD consists of 107 pages, 6x8 inches; is printed in colors and is bound in a durable red-cloth cover. It contains seventy full-page maps of every state and territory, with new railroads and towns.

Every country in the world is shown by maps from the latest plates.

All maps are carefully printed in colors on best cream-laid paper, boundaries distinct, names of towns in graded type, indicating their size. A work of rare beauty and usefulness.

This Atlas contains arraneg lists of cities, giving the latest census figures of all states and territories and foreign countries, and a vast amount of interesting information.

OUR SUBSCRIPTION OFFER.

We will send you The National Farmer and Stock Grower for three years and send you absolutely free, prepaid, Hammond's 1908 Handy Atlas of the World, all for One Dollar.

SUBSCRIPTION BLANK.

National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.:

I enclose One Dollar to pay for my subscription to your paper for three years in advance, on condition that you send me, free and prepaid, one copy of **Hammond's 1908 Handy Atlas of the World**, as per your guarantee above.

How Thin People Can Get Fat, Free.

Startling Effect of New Discovery Which Puts Flesh on Thin People, Increases Weight and Perfects The Figure.

Prove It By Sending Coupon Below For A 50c. Package, Free.

A remarkable, scientific treatment has been found which increases the weight of scrawny or thin people, puts flesh on those who have been thin for years, whether from disease of from natural tendency; on those who by heavy eating, dieting or other methods, have in vain tried to get fat; on those who feel well but can't get fat, and on those who don't feel well and stay thin. The

Protone, the Remarkable Tissue Builder, Builds Up Cases Like This In Remarkably Quick Time.

new treatment, called Protone, is a powerful inducer of nutrition, increases cell-growth, makes perfect the assimilation of food, increases the number of red blood-corpuscles, and as a necessary result builds up muscle and solid, healthy flesh, and rounds out the figure.

For women who can never appear stylish with anything they wear because of their thinness, this remarkable discovery solves the problem. An addition even of 10 or 20 pounds of flesh, together with ruddy cheeks, works wonders in personal appearance. As a beauty maker for the figure, it probably cannot be surpassed. It will cost you nothing to prove the remarkable effects of this treatment. No dieting or eating of particular kinds of food are necessary. The treatment is absolutely non-injurious to the most delicate system. The Protone Company, 351 Protone Bldg., Detroit, Mich., will send to anyone who sends name and address, a free 50c. package of Protone (with full instructions) to prove that it does the work. They will also send you their book on "Why You Are Thin," free of charge, giving facts which will probably astonish you. Send coupon below today with your name and address.

FREE PROTONE COUPON.

The Protone Company, 351 Protone Bldg. Detroit, Mich.

I want to put on more flesh, so please send me a free 50c. package of your remarkable, scientific discovery, Protone, all charges prepaid, together with your free book telling me why I am thin. As an evidence of good faith, I enclose ten cents to help cover postage and packing.

MAY MANTON PATTERNS.

Very Elegant Fashion Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Every pattern is new and original.

Seven Gored Skirt.

No. 6060.—To be made in round or walking length. The seven gored skirt is always a graceful and attractive one and this model has the advantage of including the very latest features of the season. It is laid in two plaits at each seam, which provides just sufficient fullness for grace, and it can be closed either at the left of the front with ornamental buttons or invisibly at the back as liked. It is adapted to linen, to serge, to mohair, to all skirting and to all suiting materials, but as illustrated is made of Panama cloth finished with sailor stitching.

The skirt is cut in seven gores. The plaits effectually conceal the seams and are stitched flat well below the hips. It can be made either in walking length, adapted to the street, or in the graceful round one that is so well liked for indoor wear.

The quantity of material required for the medium size is 9¾ yards 24 or 27, 5½ yards 44 or 52 inches wide.

The Pattern 6060 is cut in sizes for a 22, 24, 26, 28, 30 and 32-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Boy's Russian Blouse Suit.

No. 6082.—The Russian blouse costume suits the small boy so perfectly that it has become an established favorite, and this one, while it includes some novel features, retains all the inherent fascination of the original garment. It is masculine without being overmature, and it allows all the freedom that the small boys need. The double-breasted coat is a smart and generally becoming one, and the separate shield can be made of contrasting material or the same as liked, while a practical feature is found in the ease with which several can be made to accompany one suit. The Knickerbockers are of the regulation sort that are drawn up by means of elastic at the knees. In the illustration white linen is made with collar and belt of blue, but all the materials in use for boys' suits are appropriate, the wool suitings, the mohairs and the silks, that are used for occasions of greatest dress, as well as the simple washable ones.

The suit is made with the blouse and trousers. The blouse is fitted by means of shoulder and underarm seams and finished with the big sailor collar and is closed in double-breasted style. The shield is buttoned into place beneath the collar and closed at the back, while the sleeves are tucked at their lower edges. The trousers are made simply with front and back portions, joined to waistbands that can be buttoned to the underwaist.

The quantity of material required for the medium size (six years) is 5⅜ yards 24, 4⅛ yards 32, or 2¾ yards 44 inches wide, with 1⅛ yards 27 inches wide for collar and belt.

The Pattern 6082 is cut in sizes for boys of four, six and eight years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Girl's Semi-Princesse Dress.

No. 6096.—The semi-Princesse dress is as great a favorite for the school girls as it is for their elders, and very charming are many of the new models that have appeared in this style. The one illustrated is among the latest and is adapted both to present needs and to the coming autumn. It can be made suitable for school or for afternoon wear, as one material or another is chosen, and as it is treated in one way or another, so that it is an exceedingly serviceable model. In this case a light-weight wool material is trimmed with banding, but were a plain fabric chosen and were the panel and yoke embroidered, the dress would become far more elaborate and adapted to occasions of greater dress. If the three-quarter sleeves are not liked, long ones can be substituted. Washable materials as well as light wools and the pretty simple silks are appropriate.

The dress is made with the yoke and panel, which are cut in one, the blouse portions and the skirt. The blouse and skirt are joined by means of a belt at the side and back and are both joined to the panel at the front. The closing is made at the back. The skirt is straight, gathered at its upper edge.

The quantity of material required for the medium size (ten years) is 6¼ yards 24, 4 yards 32, or 3 yards 44 inches wide, with 9¾ yards of banding.

The Pattern 6096 is cut in sizes for girls of six, eight, ten and twelve years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Fancy Ticked Blouse.

No. 6081.—To be made with long or three-quarter sleeves. The popularity of the fancy blouse is largely due to the fact that it is generally becoming and it consequently is likely to continue in favor indefinitely. This one is novel in many of its features and has the great advantage of being well adapted to the semi-Princesse dresses as well as to separate use. If a gown of the former sort is wanted it could be joined to any skirt and the trimming at the front edges extended down over the belt to give the continuous lines. As illustrated, however, it is designed to be worn with a separate skirt, either in matching or contrasting material, and is made of crepe de chine trimmed with heavy lace banding and with a center front, yoke and undersleeves of Valenciennes all-over, such combinations of heavy with thin lace being one of the notable features of the season. The narrow tucks give the effect of extreme daintiness and can be stitched by machine or sewed by hand as liked. The sleeves are distinctly novel, while the trimming over the shoulders conceals the armhole seams. All the materials that are thin enough to be tucked successfully are appropriate.

The blouse is made with a lining and itself consists of fronts, backs and plastron. The lining is faced to form the yoke at the back, but the tucked fronts are arranged over the plastron and the whole blouse is arranged over the lining, the closing being made invisibly at the back. The sleeves also are made over fitted linings that are faced at their lower portions with lace.

The quantity of material required for the medium size is 3½ yards 24, 2¼ yards 32, or 1¾ yards 44 inches wide, with 1¼ yards 18 inches wide for the plastron and undersleeves, 4½ yards of banding to make as illustrated, 1⅝ yards of all-over lace if sleeves are extended to the wrists.

The Pattern 6081 is cut in sizes for a 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Princesse Gown.

No. 6090.—The semi-Princesse gown is such a graceful one and so generally becoming that it may safely be counted upon to increase in popularity for a long time to come. This one gives a guimpe effect, while the gown is all in one and can be made with the new long-mitten sleeves or with those of three-quarter length as liked. In the illustration one of the new silk and wool mixtures is trimmed with Liberty satin and combined with thin lace, the trimming on the chemisette being of a heavier sort. There are also handsome jeweled buttons, which give a distinctive effect. Almost all the materials that are used for entire gowns are appropriate for this one, however, and it will be found available both for indoor gowns and for street wear beneath the separate coat, which promises to be such a feature of the incoming season. The panel at the front gives the long, unbroken lines, while the fact that the blouse and skirt are joined by a belt at the sides and back relieves it of overseverity.

The gown is made over a fitted waist lining and the sleeves of this lining are faced with lace. If a transparent effect is desired, the sleeve lining would properly be cut from mousseline or similar material. The gown itself consists of the draped portions of the blouse, the plain backs, the sleeves, the panel and the skirt. These are all joined and arranged over a foundation, and the closing is made invisibly at the back.

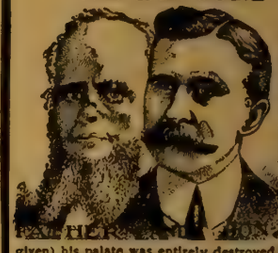
The quantity of material required for the medium size is 10½ yards 27, 9 yards 32, or 5½ yards 44 inches wide, with 1¼ yards of all-over lace for chemisette and undersleeves, ⅛ yards of heavier lace for trimming of chemisette, 2 yards 21 inches wide for folds.

The Pattern 6090 is cut in sizes for a 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Please be sure to give size of pattern ordered and write your own name and address clearly that no mistake can be made to cause delay.

Please address all pattern orders to **Hale Publishing Co., 3550 Vista Ave., St.Louis,Mo.**

The sad story of
MY FATHER'S GREAT SUFFERING
FROM **CANCER**
Read the following and be convinced
WE CAN CURE YOU.



Forty-five years ago my father who was himself a doctor, had a vicious cancer that was eating away his life. The best physicians in America could do nothing for him. After nine long years of awful suffering, and after the cancer had totally eaten away his nose and portions of his face (as shown in his picture here given) his palate was entirely destroyed together with portions of his throat. Fisher fortunately discovered the great remedy that cured him. This was over forty years ago, and he has never suffered a day since.

This same discovery has now cured thousands who were threatened with operation and death. And to prove that this is the truth we will give their sworn statement if you will write us. Doctors, Lawyers, Mechanics, Ministers, Laboring Men, Bankers and all classes recommend this glorious life-saving discovery, and we want the whole world to benefit by it.

***HAVE YOU CANCER,* Tumors, Ulcers, Abscesses, Fever Sores, Goitre, Catarrh, Salt-Rheum, Rheumatism, Piles, Eczema, Scald Head or Scrofula in any form.**

We positively guarantee our great treatment, perfect satisfaction and honest service—or money refunded.

It will cost you nothing to learn the truth about this wonderful home treatment without the knife or caustic. And if you know anyone who is afflicted with any disease above mentioned, you can do them a Christian act of kindness by sending us their addresses so we can write them how easily they can be cured in their own home. This is no idle talk, we mean just what we say. We have cured others, and can cure you. Forty years experience guarantees success. Write us today; delay is dangerous. Illustrated Booklet FREE.

Gran'pa" Smith Talks About the Joys of the Country.

"I know of a case of courtship-by-correspondence. Matrimony-by-mail, you know.

"The woman thought the man had money. But after the honeymoon, she found that the dollars were about as rare as June Days in January.

"So one morning she snapped: 'I thought you were well-off, before I married you.' He said: 'I was, but I didn't know it.'

"I guess it's that way with a good many boys who want to leave the farm. They don't know when they're well off.

"I'm nearly sixty. Seen a good bit of life. In a good many different places. Went to college. And I've been around the country some. So my horizon is a little wider than this township. I don't believe I'm 'provincial' in my way of looking at things. Just got back from six weeks in the city. Staid with my married daughter. And I say, the only place to have plumb good fun is out in the country.

"Take a city fellow. Slaves away fifty weeks in the year so he can have two little weeks in the country. But just the same, a red-blooded city man, if he can get out in the country along in the fall of the year, and get in a couple of weeks good shooting, he thinks it's mighty well worth working fifty weeks for. And I guess 'tis, too. I guess these are the only two weeks he ever really enjoys himself.

"If you give a boy all the shooting he wants, I guess he'll never want to leave the farm.

"I used to have to work pretty hard when I was a boy, but by Jacks, the shooting I got along in the fall and winter was worth it all.

"Along after harvest, we used to have lots of quail and prairie chickens. They're scarce in some parts now—and the 'open season' ain't quite so long—but there's plenty of small game birds of other kinds.

"The first gun I had was a Stevens Rifle. And every gun I've had since has been a Stevens. They're the best guns I ever pulled trigger on. And I've handled a good many.

"With that little Stevens Rifle I used to fetch down a good many partridges, quail and such. I had a dog that was a dandy. And I tell you, we had to be mighty cunning and quiet, to steal up on 'em within rifle range. But getting within gunshot was all there was to it—that Stevens would sure shoot straight and far. And 'twas hard-hitting.

"I used to plug lots of rabbits, too. And chicken-stealing hawks. And crows that pestered the corn fields. Got a good many squirrels, too. My, but they were fine eating. I got a red fox now and then. And once a timber-wolf that had been marauding around eating young pigs.

"Then, when I was pretty well along in my 'teens, I got a Stevens Shotgun. Got it yet—hanging there on the dining-room wall. Used to wing lots of wild-duck with that along in the spring. Then in the winter I'd go up in the woods for a few weeks bigger-game hunting.

"I've got a keen shooting eye yet. Can bring down my bird with the best of 'em. Got one of the newest models Stevens Shotguns. I'm as hale and strong yet as a four-year-old colt. Never sick more n a day-at-a-time in my life. And I believe it's all because of that healthy tramping through woods and fields that I got with my gun and my dog when I was a youngster.

"Yes-siree-Bob. Let a boy have plenty of fun, with a good gun of his own, and he won't want to leave the farm.

"And if he does go to the city, he'll be more of a man—more able to make his own way.

"I taught every one of my four boys how to shoot. And there ain't any stronger or healthier or better men any place than my sons. They've amounted to something.

"And I'm teaching my grandchildren how to shoot, too. Boys and girls both. I sent and got a Stevens catalog—all about all Stevens guns. It tells you how to choose and care for a gun. 'Course I knew, but I wanted the kids to learn, too. I picked out a Stevens Favorite Rifle for one of the boys. It's a dandy—got a telescope sight. And I got a 'Crack-Shot' for my other grandson.

"Then I got 'em both a copy of Dan Beard's book, 'Guns and Gunning.' It tells about everything you could want to know about guns, and about shooting and hunting. About woodcraft, about camping, about small game, and all that. And it costs only 20 cents for paper cover, or 30 cents for board cover. Any boy or any man can get a lot of good from it. I learned a good deal myself—and I've been a hunter all my life.

"I'd advise any farmer or any farmer's boy to send for the Stevens catalog. Just send 5 cents for postage to the J. Stevens Arms and Tool Company, 390 Grove street, Chicopee Falls, Mass. And it'll do you good to get and read Dan Beard's book, 'Guns and Gunning.'"

Are Babies Moral?

"We do not expect paternal feelings in a child of five," says Dr. Woods Hutchinson in October Woman's Home Companion. "Why, then, should we expect any other of those race-regarding impulses which we term 'morality?' Even to appeal to the 'better feelings' of a child of eight or ten is often almost as irrational as the celebrated apostrophe of the emotional Irish barrister, who in the fine frenzy of his peroration whirled upon the judge with the thrilling appeal: "Sirr, was you iver a mother?' To appeal to a child's better nature, while excellent, in moderation, often does little more than make a hypocrite out of him before his time.

"He has got your hair, and his mother's eyes and voice, and some of your little tricks of manner—and temper—now, and he is just as safe to develop your superb self-control and civic devotion and consideration for others if you will only give him time—and set him a good example. Meanwhile preaching to him that he should possess these qualities will expedite matters precious little, and unless backed up by example, not at all. Remember that life and growth of all sorts are but a response to environment, and new responses can only occur as opportunity is afforded for them."

Goods That Don't Fade.

"I am fond of brown, and folks say it is very becoming to me, but I have never been able to get this color in thin dress goods that didn't fade. Do you know of an inexpensive, thin material that doesn't fade?"—A.S.G.

There is a charming material called Simpson-Eddystone Fast Hazel Brown, made by a new process that makes it absolutely fast-color. Frequent washing does not fade it in the least. These goods come in many beautiful patterns, and I should say, would be just what you want. The price is very reasonable, and they make up into as stylish and attractive dresses as the high-priced cottons.

The Universal Magazine.

The Universal Magazine is published by this office at 25 cents a year. It is a nice, illustrated publication, containing stories, poetry and interesting information. Anyone sending 25 cents to pay for the Universal Magazine can select any May Manton pattern advertised in this paper as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Philadelphia Scrapple.

Boil three or four pounds of fresh pork (quite fat) until very tender; then take out the meat, and season the water in which it was boiled, and thicken it with yellow corn meal, as thick as for hasty pudding, and let it cook for a long time, to thoroughly cook the meat. Chop the meat tolerably fine, season well, and add it to the mush. When it is cooked, put it into square bread tins to cool; when cold, cut in slices, and fry in a spider until brown. It should not require any fat for frying. — October Woman's Home Companion.

Four Good Papers For $1.00.

The National Fruit Grower, published monthly; the Universal Magazine, published monthly; the Reliable Poultry Journal, published monthly; and The National Farmer and Stock Grower; all four, one year for $1.00. These papers are all fine—the best in their class. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Do You Hear Well?

The Stolz Electrophone—A New, Scientific and Practical Invention for Those Who Are Deaf or Partially Deaf—May Now be Tested in Your Own Home.

Deaf or partially deaf people may now make a month's trial of the Stolz Electrophone at home. This is unusually important news for the deaf, for by this plan the final selection of the one completely satisfactory hearing aid is made easy and inexpensive for everyone. This new invention (U. S. Patent No. 763,575) renders unnecessary such clumsy, unsightly and frequently harmful devices as trumpets, horns, tubes, ear drums, fans, etc. It is a tiny electric telephone that fits on the ear, and which, the instant it is applied, magnifies the sound waves in such manner as to cause an astonishing increase in the clearness of all sounds. It overcomes the buzzing and roaring ear noises, and also so constantly and electrically exercises the vital parts of the ear that, usually, the natural, unaided hearing itself is gradually restored.

Mrs. C. Lidecka, 238 12th Ave., Maywood, Ill., wears an Electrophone. Less conspicuous than eyeglasses.

Prominent Business Man's Opinion

STOLZ ELECTROPHONE CO., Chicago. —I am pleased to say that the Electrophone is very satisfactory. Being small in size and great in hearing qualities makes it PREFERABLE TO ANY I HAVE TRIED, and I believe I have tried all of them. I can recommend it to all persons who have defective hearing.—M. W. HOYT, Wholesale Grocer, Michigan Ave. and River St., Chicago.

Write or call at our Chicago office for particulars of our personal home test offer and list of prominent endorsers who will answer inquiries. Physicians cordially invited to investigate. Address or call (call if you can).

STOLZ ELECTROPHONE CO., 1310 Stewart Building, Chicago.

Branch Offices: Philadelphia, Cincinnati, Indianapolis, Los Angeles, Seattle, Des Moines, Toronto.
Foreign Office: 82-85 Fleet St., London, Eng.

The **Universal Magazine** is a nice, clean, interesting, thirty-two-page, three-column monthly paper, and it will please everyone. Address, **The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

A Nutting Party.

The child who has a grove of nut trees at her command need have no fear that she will not be able to entertain her playmates for an afternoon in the most enjoyable manner.

There need be no premeditated program for the afternoon. With nuts in reach or even in sight, the children will find no trouble in passing away time.

The refreshments may be simple. Use nut filling for the sandwiches, made by grinding hickory nuts fine, seasoning with salt and using between the slices of bread and butter. A bit of cream or mayonnaise dressing may be used with a part for variety. Press halves of hickory or walnut into the top of each cooky and cover with granulated sugar just before they are put into the oven.

Add a teacupful of chopped hickory nuts to any good cake, bake in layers and fill with a nut dressing between the layers made as follows:

Heat a teacupful of milk. When this thickens like cream, add a teaspoonful of sugar and a heaping teaspoonful of flour, first stirred together and moistened with enough milk to flow readily. When this thickens like cream, add a teacupful of chopped nut meats and remove from the fire.

Frost the top with a soft icing made by boiling half a cup of sweet milk and a cup of sugar until it hairs. Remove and stir in a teaspoonful of corn starch or flour, stirring continually until of the right consistency to spread after adding a cupful of chopped nut meats. The cake can be frosted first and halves of hickory or walnut meats pressed in in fancy designs after the frosting has partly set, if preferred.

Delicious candies can be made by adding nuts, whole or chopped, to any good recipe for fudge. Half walnuts candied and other fanciful designs will suggest themselves. Salted home-grown nuts will be found quite as delicious as salted peanuts.

After the refreshments are served copies of this little story may be passed to each guest, with pencil to fill in the blanks with the names of nuts:

A monkey from—(nut) sat in a—(nut) chair on the porch, taking peas out of a —wishing they were—nuts. Presently it rolled its—eyes around until they met the—eyes of the Oriental servant, and proceeded to crack a joke which all pronounced a —. It leaned back against the—(nut), finished up with slice of bread and —(nut), and then ran off to play upon the—(nut).

After all are ready, compare answers and award prizes. The complete list reads as follows:

Brazil; hickory; pecan (pea can); peanuts; hazel; almond; chestnut; walnut; butternut; beechnut (beach).

For the prize, select one of the whitest and most shapely hickory-nuts. Pencil eyes, eyebrows, hair and mouth, using the prominence in the nut for the nose. Make a stylish costume of tissue paper, including a quaint or daintily-colored sun bonnet. The head can be fastened to the body by a bandage concealed by the big bonnet. If one is good at the use of paint and brush, the facial markings may be done in colors; and unless the nut is a very white one, a touch of "complection" paint may be added if desired.

Let the booby prize be a comical little old lady with a white cap or bandana handkerchief covering the brown hickory-nut head. A three-cornered shoulder blanket, old-fashioned dress and apron may complete the costume of Dame Nutt.

Those skilled with brush or pencil and wishing a more elaborate table will find suggestions for ornamenting place cards in the creamy tassels of the chestnut blossoms or the simple outlines of the familiar leaves. A cluster of green leaves of the various nut trees brightened by the yellow autumn tints of the hickory will find favor as a centerpiece.

Gilded beechnut burs tied with fancy ribbon are quickly made and acceptable favors. If there is a boy with a taste for whittling in the family, and the gathering is a small one, quaint and enduring little baskets may be shaped from hickory nuts. Yet it is unnecessary to exert unduly for remembrances of the afternoon—the children will have made it one not soon to be forgotten! —Bessie L. Putnam.

Thought King a Culprit.

A service paper relates a good story of King Louis of Bavaria. His majesty was much annoyed on one occasion when the soldier on guard at the palace gates neglected to present arms. The truth was the soldier did not know his majesty by in sight.

"Why don't you present arms?" the latter asked, angrily. "Don't you know to whom you are indebted for your daily bread?"

The sentry glared angrily at the King, and, imagining him to be the army baker, replied: "So you are the miserable son of a baker who furnishes the soldiers with bread, are you? Well, I should like to have you by yourself in some quiet place. I'd spread your ungainly anatomy over three kingdoms. I'd make dough of you."—New York Herald.

The American navy has just ordered 1,275,000 pounds of canned meat of Schwarzschild & Sulzberger Company, said to be the largest single contract for meat ever made in time of peace.

You can't afford to wait any longer—Go now, while land is still to be had at about one-fourth of its value.

Go where you can find new and profitable fields—where conditions are better and brighter, and where you are sure of wealth and independence.

You will make no mistake if you locate in Arkansas or Texas along the **Cotton Belt Route.**

Here are the Advantages You're Offered.

A rich soil—capable of producing all the staple grains that feed the world. Fruits, berries and all kinds of vegetables mature early, and when the Northern markets are bare of competition and bring the highest possible prices. Two crops a year can be raised. A climate that is mild and healthful. You can work out of doors the year round. No long drawn out winters to contend with. Live stock can graze nearly all year. No expensive barns needed. Markets are convenient and shipping facilities good. Plenty of rainfall and good, pure water. Good schools and churches. Don't you think it time to get away from your present location? **Better go now** and take advantage of the wonderful opportunities in Arkansas and Texas. On the first and third Tuesdays of each month, home-seeker's tickets are sold by the Cotton Belt Route at very low rates for the round trip. Go and see the country for yourself, that's the best way.

Let me send you **free** Southwest literature—brimful, cover to cover, with **facts** about Arkansas and Texas. Each book contains a map in five colors. You ought to have a copy. Write to-day. Fill out and mail this coupon. Do it now. It means success.

E. W. LaBEAUME, Gen'l. Pass & Ticket Agt., St. L. S.-W. Ry. Co.

Be sure you ask for eight supplements. Address **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.** Agents' rates, five sets and five yearly subscriptions for one dollar.

An Amusing Autograph.

In Clyde Fitch's large collection of autographs there is none that he values more than a letter of the eccentric and brilliant jurist, H. H. Breckenridge, on dueling.

Breckenridge, a youth at the time, replied to the challenge of a British officer with this amusing letter. He said:

"I have two objections to this duel matter—the one is, lest I should hurt you; the other is, lest you should hurt me. I don't see what good it would do to put a ball through your body. I could make no use of you dead for any culinary purpose as I would a rabbit or a turkey. I am no cannibal to feed upon the flesh of men. Why, then, shoot down a human creature, of whom I can make no use? A buffalo would be better.

"You might make a good barbecue, it is true, being of the nature of a raccoon or opossum; but people are not in the habit of barbecuing anything that is human now. As to your hide—it is not worth taking off, being little better than a two-year-old colt's.

"As to myself—I do not like to stand in the way of anything that is hurtful. I am under the impression that you might hit me. This being the case, I think it most advisable to stay in the distance. If you mean to try your pistol, take some object—a tree or a barn door—about my dimensions. If you hit that, send me word, and I will acknowledge that if I had been in the same place you might also have hit me."—Minneapolis Journal.

The Uses of Hot Water.

The best methods of using hot water are as follows: For sprains of the ankle and wrist, or any joint, the part should be thoroughly soaked for half an hour at a time, night and morning, in very hot water. Anyone suffering from a severe sprain will not require more than the first soaking to convince them of the advantage of hot over cold water. A flannel bandage should be applied firmly after each treatment. For bruises very much the same method should be followed, although the application need not be continued for so long a time. For wounds and sores the best method is to drip or pour for a few minutes. For styes and inflamed eyelids, and even for sore eyes, use hot water as hot as can be borne, by sopping. To stop the bleeding, very hot water applied to the raw surface will be found efficacious. For many forms of dyspepsia and biliousness, particularly a catarrhal condition of the stomach, a goblet of water, drunk after the night's fasting, will give relief. For continued application, in the form of a poultice, as in catarrh of the breast, pleurisy, pneumonia, etc., a jacket of cotton batting wrung out in very hot water by means of a towel and covered with oiled silk or waxed paper should be used.—The Family Doctor.

The Kind Captain.

At Portsmouth, N. H., where they were to unveil a statue to the memory of T. B. Aldrich, the painstaking writer, during an authors' argument on international copyright, Thomas Nelson Page broke up a rather acrimonious discussion by deftly interposing a story.

"After all," he said, "there is not much real help in that idea. It is such an idea as emanated from the mind of a hard, cruel sea captain.

"In midocean the cook approached the captain timidly.

"'Captain,' he said, 'the men are growling about the beef. They say they can't chaw it nohow. They say it's only fit to mend their sea boots with.'

"'How much beef are you giving 'em, cookie?' the captain asked.

"'A pound apiece a day, sir,' said the cook.

"'Well,' said the captain, gently, 'give them half a pound apiece from now on. I should be sorry to force 'em to eat what isn't to their taste.'"—Rochester Herald.

Scotch Hospitality.

George Conklin, the famous animal trainer, was talking to a reporter at the circus in New York:

"The secret of animal training is gentleness. Nothing sudden or brusque must be done. An unexpected caress may anger an animal more than a kick in the ribs.

"Sudden, brusque, unexpected things never go, no matter how well they are meant. Once I was showing in Scotland."

Mr. Conklin smiled.

"We trainers," he said, "supped one night with a Scotch admirer. The old man was the soul of hospitality, but I admit I was rather startled when he leaned toward me and said:

"'Stick in, man Conklin, stick in. Yer frien' Coot's two muffins aheid o' ye.'"—Rochester Herald.

ENTERPRISE

Meat and Food Chopper

"Enterprise" Meat and Food Choppers *cut* the meat with a revolving steel knife against a perforated steel cutting plate without tearing or crushing. Easily cleaned. Practically unbreakable, and will last for years.

The No. 5 "Enterprise" Chopper costs only $1.75. No. 10, shown in cut, $2.50. They are standard family sizes, and not only save half the work at butchering time, but are useful in the kitchen every day in the year.

Doing Away With the Painting Nuisance.

Everybody recognizes now-a-days that the so-called Ready Roofing proposition has made good so far as giving thorough protection is concerned. There has always been the objection, however, that these materials were expensive in the long run because they required coating with a heavy paint about every two years. This objection has now been met by the well-known Amatite Roofing.

Amatite is provided with a top surface of crushed mineral. This surface needs no painting, nor indeed any care whatever. It is perfectly capable of withstanding any kind of weather, and will give continuous satisfaction without attention or repairs for many years.

Doing away with the painting nuisance removes the last obstacle to the wide use of ready roofings, and a great boom in this kind of business can be confidently predicted.

A sample of Amatite Roofing will be sent any inquirer on request. Address the nearest office of the Barrett Manufacturing Company, New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Pittsburg, Cincinnati, Kansas City, Minneapolis, New Orleans.

CANCER CAN BE CURED

My Mild Combination Treatment is used by the patient at home. Years of success. Hundreds of testimonials. Endorsed by physicians, ministers, etc. The local application destroys Cancerous growth, and the constitutional treatment eliminates the disease from the system preventing the return. Write for Free Book "Cancer and Its Cure." No matter how serious your case, no matter how many operations you have had, no matter what treatment you have tried do not give up hope but write at once. DR. JOHNSON REMEDY CO., 1238 Grand Ave., Suite 107, Kansas City, Mo.

Profit in Fertilizing Wheat.

With many farmers the use of commercial fertilizers in wheat seeding has become quite the rule. While, perhaps, they do not use very large quantities in any one year, they are in the habit of making use of a small amount with each annual seeding. They have found that such a course pays from a dollar-and-cents standpoint, and this is all that is required to insure a continuance of the practice.

In many sections wheat has become rather an uncertain crop, to say the least, and those who raise it year after year are finding it considerable of a lottery, unless, as intimated above, they are taking every precaution in furnishing complete cultural conditions which will reasonably assure fairly good yields and profits. Commercial fertilizer is no longer an experiment in wheat growing, and whenever it is used the farmer stands just that much more chance of realizing profitable returns from his seeding.

The past harvest presented some agreeable surprises in wheat yields, but no one has more reason to be pleased than he who had called to his aid specially-prepared plant food in the way of commercial fertilizer adapted to the needs of the wheat plants. The season has demonstrated that even in good wheat years, when fields without special treatment prove profitable, the application of fertilizer pays. If such can be said of the practice in such years as these, then how much more can be legitimately claimed for it in years when the general crop proves a failure? Then it is that the greatest benefit from its application is recognized.

One of the chief functions of the commercial fertilizer with wheat is to furnish the young plants with plenty of available plant food right at the start, enabling them to make a rapid, vigorous growth at the time when it will mean most to the later development of the plants. With such a start the roots soon reach down into the soil, where they may gather food from the less available sources, and there is no standing still of the plants just after germination, as is often the case where no fertilizer is used. The most perfectly-prepared seed-bed will not present the conditions for the most rapid growth unless there is plenty of available plant food near the surface where the first formed rootlets can readily find it.

And right here do we also find the reason for the necessity of giving special attention to the manner of application and distribution of any commercial fertilizer we may select to use. It is highly important that its distribution be such that the roots of every plant may come in contact with it at once after germination takes place. This means that it must be evenly and thinly spread at a depth equal to the seeding, a condition most satisfactorily brought about through the use of a fertilizer drill. Hand sowing and harrowing in will usually give good results, but is not as advisable where the former method can be followed. In this way small amounts of fertilizer can be used with the assurance that it will be properly distributed.

As with fertilizers for other crops, the selection of the particular mixture to use for wheat is often a quandary, especially to those farmers to whom the use of the commercial product is new. Just what is the best formula to use depends almost entirely upon the condition of the particular soil upon which the crop is to be grown. This, of course, can only be determined by a close study of the plant growth thereon, supplemented by actual experiment with various fertilizers. But for all practical purposes it is well enough to arrive at a starting point by a trial of an average grain fertilizer as recommended for ordinary soils. After making such a trial it is time enough for one to concern himself with the proposition of finding out just what is best for special soil conditions.

For ordinary good wheat lands a fertilizer having a formula of about 2-8-6 will be found to give good results when applied at the rate of from 200 to 600 pounds per acre. This, of course, is understood to mean one showing two per cent. of nitrogen, eight per cent. of available phosphoric acid and six per cent. of actual potash. A mixture of this kind furnishes the required elements in about the right proportion to be most useful to the wheat plants under average soil conditions.

There may be special cases where some other mixture would come nearer giving the best results. For instance, on soil where the straw yield is too heavy in proportion to the yield of grain, it would be better to use a fertilizer carrying no nitrogen. The excessive growth of straw in proportion to grain development indicates sufficient nitrogen in the soil but a lack of available mineral elements. The application of 200 pounds of acid phosphate and 30 pounds of muriate of potash per acre would undoubtedly prove very profitable under these conditions and would be well worth trying, as would also the complete fertilizer where the grain crops show more nearly the average soil condition.—N. E. Young.

Leading Missouri counties in the sale of wool: Audrain county, 401,862 pounds; Monroe county, 365,811 pounds; and Randolph county. 260,388 pounds. Leading in mohair: Buchanan county, 1,415 pounds; Scotland county, 800 pounds; Monroe county, 598 pounds. Harrison and Jackson counties have the most goats.

Credit Subscriptions.

Three Years For One Dollar, Payable at the End of the First Year.

The publishers of The National Farmer and Stock Grower will be glad to furnish the paper three years for One Dollar, the same to be payable at the end of the first year. This edition is a fair sample of the paper. It is interesting and instructive. Those who read it over will find that it is a help to them in the conduct of their business. All who receive a sample copy are invited to send in a subscription on the following blank form, unless they prefer to pay in advance, thereby securing a premium.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — You are hereby authorized to enter my name as a subscriber to The National Farmer and Stock Grower for three years. At the end of the first year I will pay One Dollar for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

TRY THE NEW WAY

We have a word for the people who are still buying goods the old-fashioned, hit-or-miss way, and are paying several profits for goods that may or may not be right in quality.

For nearly 40 years we have been saving money for our customers and more than that, giving them **Quality Insurance.**

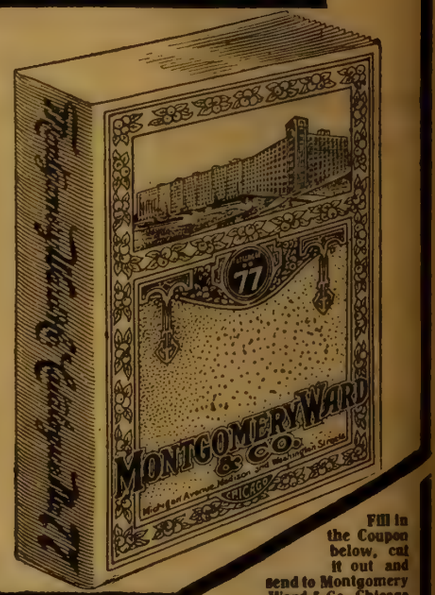
With over a hundred expert buyers devoting their lives to knowing just one line of goods, it is scarcely possible for anyone to supply us with any but the best merchandise. If it ever does happen that a mistake creeps in, we promptly make it right and you lose nothing.

Catalogue No. 77 is the Harvest of a Year's Careful Planning

Our buyers have gathered together all the high-class things from the markets of the world. They have been careful of the price but more careful of quality. All these things are shown in the 1200 pages of our new catalogue. Faithful pictures of the goods, honest descriptions and low prices are what we aimed at in getting out this encyclopaedia of values. Some of the things are pictured in color, just as they will look in your home.

You will save one-half on lots of things, one-third on others; and maybe only 15 per cent on a few items; but QUALITY is the key note. Even at no saving at all you would be the gainer because of the house that stands back of your purchases. The risks YOU used to run in purchasing an article of which you were not an expert judge WE cheerfully take, because whatever you buy from Montgomery Ward & Co. got into the catalogue because our expert decided it was good value.

The very cheapest article in this immense book is endorsed by us; we WILL NOT HANDLE TRASH. It might look nice to see some unheard of bargains in big head lines; it might increase our business a MONTH or a year, but we are growing in a different way. We have 8,000,000 customers and they RELY on our catalogue. They know our word is good and they don't bother much about quality. As a customer wrote us, "I make out the order and let YOU do the worrying". We promise to please him and that's all he cares to know. If you are willing to be shown, we earnestly suggest that you send for CATALOGUE No. 77. Millions of copies are being printed and you are entitled to one if you want it. It is a guide to proper Styles and Prices and a trial order from it will probably put you on our regular list. Any way, we will TRY to please you and feel sure enough that we will, to send you this 3 pound book free of charge, by paid mail.



Fill in the Coupon below, cut it out and send to Montgomery Ward & Co., Chicago or Kansas City

Remember, this modern method of buying will give you a satisfaction and service that you will never want to leave. Just consider for a moment what a power is behind your purchases. We stand back of every item, buying a thousand dozen where the retail merchant buys one, and you reap the benefit. All YOU have to do to get started in the new order of things is to put your name and address on the coupon, send it in an envelope addressed to us—you will receive your copy promptly.

For catalogue of Rambouillet sheep sale address Dwight Lincoln, Secretary, Milford Center, Ohio. See advertisement on page 23.

ST. LOUIS MULES AT WORK—The picture presented herewith is a scene in which the leading teams consist of four mules bought upon the St. Louis market. They were sold last January to Mr. Smith Kirk, of Oblong, Ill., at an average price of $300 each by Mr. Joseph Maxwell, of the National Stock Yards. They are 16½ hands high, and the photograph shows them to be in good condition. At the St. Louis market where these mules were sold several thousand are always kept on feed ready for sale. From the smallest pit mule to the largest draft mule St. Louis can deliver the goods. If an army is to be supplied with mule trains St. Louis can furnish the mules in the shortest time. Commission firms solicit mules for sale on consignment. It is an open-all-the-year-round competitive market. There are buyers coming and going all the time from all sections, principally the East and South. There are mule dealers, mule feeders and mule contractors, who have their barns in and around the yards. They buy and classify, feed and match mules. The loads that come in mixed, of all sizes, some of them thin and immature, go out directly to do the work of the team owner. St. Louis is the great mule market of the world.

Keep Stock Growing.

Keeping young stock on a maintenance ration is never profitable, for it is the growth that brings the profits. A friend of mine recently sold a bunch of pigs which weighed around eighty pounds each at $2.75 a head. He claimed he could not see anything in them when feeding seventy-five-cent corn. I believe one can feed seventy-five-cent corn to seven-cent hogs and make some money. When grain is high and mill-stuff is high, many are apt to short-ration young stock, and try to get them to market on the least amount of grain possible. The result is poor stuff and poor price. I firmly believe in economical feeding, but skimping on the feed I do not consider economical by any means. High-price grains will undoubtedly insure high prices for live stock, even higher than the present level. The man who has the nerve to pour his costly feed into his stock will, I believe, make money, providing he looks after the other essentials of his operations. In the first place, I should feed out to only good animals, and in the next place I should have preciseness about my feeding methods. It will hardly do to be as loose in our methods as we were when corn was selling around forty cents a bushel.—L. C. Brown.

Sowing Spring Wheat.

A correspondent in Northern Indiana writes: "On account of the very dry fall I have not been able to sow any fall wheat. Would you advise sowing spring wheat?"

Spring wheat has not been giving a satisfactory yield in Northern Indiana and Northern Illinois, and has about been abandoned. I see no change in conditions now, and I do not believe one can afford to take further chances with it as a general crop. Winter wheat acreage has been cut down this fall considerably, but I would rather put in other crops which may be sown in the spring than take chances with spring wheat. —L. C. Brown.

White Grub Damage.

Many fields of corn in Illinois have been nearly ruined by the white grubs this season, and the pest is bound to be troublesome because we have found no efficient method of getting rid of them. I have seen patches of many acres in fields so completely ruined that no ears were produced and the stalks were not worth cutting for fodder. There is not much that can be done, because the white grub is one of the hardest corn pests to handle. About the only thing to do is to grow some other crop, say clover, for two or three years; that is, grow some crop which the grubs will not bother.

I have noticed for several years that spring-plowed sod ground was more generally filled with grubs than fall-plowed ground. For this reason I believe it advisable to fall-plow sod ground. This turns the grubs and other insects out where they will be eaten by birds, or are winter killed, and, besides, the sods become more decomposed than they would by spring plowing.—L. C. Brown.

Did Your Corn Ripen?

With a very favorable ripening period from August 15 to the end of September, still there are thousands of acres of corn which are not mature and will hardly make good fodder. We seldom have just the ideal conditions for ripening of corn, as we had for the six weeks ending September 26. Those who were caught with unripe fields should at once make up their minds that something is wrong. Either they are growing later-maturing varieties than they should, or something is the matter with their cultural methods. This thing has happened now for five years, and still they may go right ahead planting the same seed and handling their fields in the same manner. We cannot lay the blame on the season this year if we have unripe corn. The trouble is somewhere else. Corn which was planted before May 25 should have been out of the way of frost by September 25; and the fact that thousands of acres were caught simply shows that these fields have been loafing all summer. I have been investigating this matter now for several years, and after talking with growers and learning in detail how their fields have been handled, I have concluded that the whole trouble may be attributed to three things:

I walked through a sixty-five-acre field with one farmer as he was picking his seed ears for next season. Did he select the thoroughly ripe ears? Not a bit of it. He picked the biggest and finest-looking ears he could find, remarking that these ears would make just as safe seed as the smaller, well-ripened ears, as he would thoroughly dry them before cold weather came on. These big, sappy ears would be hung up in some dry place for a month or so and then wintered in an attic room. Right here I believe is the principal cause of so much unripe corn. Is it not reasonable that the continued selection of these big, immense seed ears, year after year, tends towards later maturing? Is not that precisely the way we would go at it, were we working for a bigger and later-maturing variety or strain of corn? Then what is the sensible thing to do? By all means select only thoroughly ripened ears for seed. In nature's own field work it is only the well-matured, hardy seeds which survive and bring forth the first crops the next season.

Let us accept the lesson. The seed ears which we can depend upon to produce a matured crop next year, under normal conditions, must be ears which are sound and good now. This matter of field selection of big, unripe seed ears is undoubtedly the cause of three-fourths of our immature corn this season.

Late planting of late varieties always brings trouble. On account of conditions many fields were not planted this season until after June 1st, and that in a territory where the normal planting period is from May 10 to May 15. One farmer in Grundy county, Illinois, told me he would have been $2,000 better off had he thrown away his seed of a late variety which he planted on June 6, and bought some ninety-day seed. He had tried out the matter himself. He did plant a small field of early corn, but he concluded to take his chances on the big, late variety pulling through before frost. The result is, his small field of early corn is really all the salable corn he will have on the farm.

There is still another essential in getting corn along to maturity. The corn stalk roots must have ample feeding ground. If this is restricted by the mechanical condition of the soil, or by improper drainage, there is bound to be slow development, and, consequently, late maturity. Unhappily we had some heavy rains during May this year. Those fields which were well drained were not impaired; but everywhere we may see what undrained lands bring forth. These undrained fields become water-soaked; they were much slower in drying off than the drained fields, so the planting was delayed a week or ten days; and then when the dry period struck us in August, these fields were checked, and the result is either immature or chaffy corn. I cannot put too much stress upon this great essential in making the corn crop. Good drainage stops excessive evaporation and it lowers the water-table, thus giving the roots a greater area of feeding grounds.—L.C.Brown.

Securing Nitrogen From the Air.

Nitrogen is one of the very important elements of fertility and must be supplied to the crops in large quantities if good results are to be obtained.

Also, nitrogen in its various forms is constantly slipping back into the air again, and so when once secured may escape before it can be used. The smell of ammonia is well known to most people. Whenever this smell is noticeable about a manure pile, it indicates that the nitrogen is getting away in the form of a gas. A poultry house that has been shut up all night frequently is so filled with the gas that comes from the nitrogen that the eyes smart when the house is first entered in the morning. This indicates something of how readily the nitrogen gets away from us.

Nitrogen is constantly being secured from the air by various means, and some of these means have been in operation for ages. It is now known that every rain storm brings down a certain amount of ammonia from the air. That is one form of nitrogen. The amount brought down by the rain is large enough so that rain water has the reputation of being soft and is used for many purposes for which ordinary water cannot be used.

This is a factor that counts for much in humid regions over rainless regions. In the arid sections of the world, where there are no rains, no nitrogen is brought from the air in this way, and for this reason the soil is naturally deficient in nitrogen. What we call the sands of the desert are often small particles of soil that would help make up good fertilizing lands if the nitrogen and other elements were present with them.

Another way of getting nitrogen from the air is that recently invented by which fire, lime and water are utilized to draw the nitrogen out of the air and fix it with lime for a base. A new commercial product known as lime-nitrogen has thus come onto the market and is being extensively sold.

Electricity is also being used to get the nitrogen from the air for the purpose of combining it with lime and making lime nitrogen. Water power is being utilized in the generating of this electricity, and new plants are being put up. This promises to greatly reduce the cost of commercial nitrogen and to make it more available for agricultural purposes.

It is also being discovered that some plants other than the legumes have the power of getting nitrogen from the air, either by means of specialized cells or by means of the hairs that grow on the stems and leaves.

But the way of getting nitrogen from the air that is best understood by our scientists is that by way of the legumes. On the roots of leguminous plants often grow nodules made by minute forms of vegetable life penetrating the root fibers and setting up an agitation that results in the forming of a root ball, in which millions of the minute plants develop and live.

These minute plants have the power of taking the free nitrogen from the air and fixing it in a form in which it can be used by plants. In many places nitrogen from the air can be secured in this way at less cost than in any other way.

Every farmer that can should grow one or more of the leguminous crops. Clover, alfalfa, cowpeas, soybeans, field peas, vetches and common beans are included in this list of plants that the farmer should grow in his rotation of crops to keep his land supplied with nitrogen and in shape to grow all of the commercial crops.

The Telephones That Work

When a man telephones from New York to Chicago, 900 miles, he pays $5.00 for a three-minute conversation. For that sort of service only the very best apparatus and equipment will do—*telephones that work.* It is, therefore, a pretty strong argument for Western Electric Quality when you learn that every telephone message from New York to Chicago, goes over

Western Electric Apparatus and Equipment

Whether you want to telephone 900 feet or 900 miles, if you have a telephone at all, *you want a telephone that will work.* A reliable telephone is of inestimable value—a poor telephone is worse than none.

We make a specialty of rural telephone equipment, furnishing specially designed apparatus of the same high quality standard as that used by the largest operating companies of the world.

Contamination of Stock Water.

In some parts of the country rainfall is so abundant that stock water is little contaminated. In the regions of small rainfall the stock water is often badly contaminated, due to the fact that the amount of water obtainable for stock-watering purposes is small.

Most people do not realize that there are wide areas in the Middle West where the farmers have to depend on ponds for the water with which they water their stock. Even in Missouri and the states in which the rainfall is good, conditions are such that ponds have to be made and the rain water caught for use.

In several counties in Illinois the soil is of a peculiar texture and soil water is hardly obtainable. Ponds have to be depended on. Even the wells in those counties are filled with surface water and not true soil water. In Missouri are large areas where the soil is porous down for hundreds of feet, and the water-table is hundreds of feet below the surface. A sample of this kind of area is seen at Columbia, where the State University is located.

In all such locations the study of soil water must include a study of its contamination. At Columbia the ponds that supply water to the stock are carefully fenced so that the stock cannot get their feet into the drinking water. Where they can do this the contamination of the water is extreme. Where the ponds are fully protected the water becomes quite free from germs in a few days after a heavy rain.

During the rain germs from the surrounding areas are washed into ponds. But in water a war between the germs is going on and with the supply of sunshine and pure air the germs begin to notably decrease, especially in the surface water. Without doubt, nitrification takes place very rapidly, and the surface water quickly purifies itself by the destruction of the germs and the precipitation to the bottom of the ash that is left of them.

Thus, for stock watering purposes, we want the water from the surface of a pond and from the surface of a well that is filled only with surface water; but if the well is supplied with soil water, we want the drinking water from as low down in the well as we can get it, because the greater the depths at which soil water is obtained the freer it is from germs.

Stock water that is most freely contaminated is that found in tanks in barn yards and barns. This is largely because all the farm animals have access to the tanks and drink from them. They leave some saliva in the tank, and other extraneous matter gets in. It is proven beyond all contradiction that this sort of contamination is a very dangerous one.

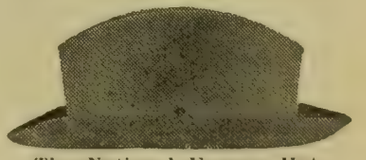
If tanks are to be used continually they should be flushed out at least once a day. On the approach of any contagion, such as anthrax, farm animals should be watered individually, for with any general watering trough contamination is certain and extensive.

Intestinal parasites are most frequently met with in the ponds that have the washings of pastures. The eggs of the intestinal worms and other parasites are thus taken by the animals in their drinking water and become the source of much trouble to the stock owner.

At the Agricultural Experiment Station at Gainesville, Fla., they produced 27,200 to 33,296 pounds of Dwarf Essex rape for winter forage—planting September 25th and harvesting December 6th. Not bad for a fall short crop.

At Kaufman, Texas, during the month of August, the rainfall was 16 inches. At Wills Point, in the next county, there was no August rainfall.

A MAGNIFICENT PREMIUM.



The National Farmer Hat.

The sizes are from 6⅝ to 7⅛. They are hats suitable for men or boys. They are of good material, well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. These hats are black and steel gray. We send black unless steel is called for. These hats wear as well and last as long as any $2.00 to $3.00 hats on this market. They will give entire satisfaction. We believe this hat will make a first-class subscription premium. The subscription price of The National Farmer and Stock Grower is one dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us one dollar to pay for two-years' subscription to The National Farmer and Stock Grower and we will send you by mail one of these fine, wool crusher National Farmer hats as a premium. Be sure to mention the size and color. A million and a half of these hats have been sold.

Are Lands "Oats Sick?"

I must again refer to the last oat crop. There are some things about this crop that we do not quite understand. We have attributed all our ill-luck with oats, now for three years, to unfavorable weather conditions, but there is nothing certain about the matter, and experiments are not giving us much help. It might seem that we are now in precisely the same condition, as regards oats, as we were a few years ago as regards spring wheat. With wheat we found the crop growing smaller each year, notwithstanding that soil and weather conditions were practically the same. We found later that we could grow winter wheat where spring-sowed wheat was a complete failure.

I have noticed this season that spring-sowed oats did not do nearly so well as fall-sown wheat on adjacent fields. If weather conditions affected one, why not the other? We have not yet found varieties of oats which we can depend upon north of parallel 41, so must get at the proposition in some other way.

Oats should be sown early. Just as soon as the frost is out two or three inches is the time to sow oats; let that be in February or March. Many sowed their oats last spring in April. Right here is one cause of so many failures in getting a decent oat crop. Then again, the man who waits to spring-plow his oats ground and then sows his oats in this loose seed-bed invites failure No. 2. Let's get back to methods which gave us our biggest and best oat crops. Stalk ground is a good place for oats. Get the stalks out of the way while the ground is hard frozen, and then early in February, or whenever the ground has thawed out two or three inches, put in your oats. With early seeding any of our tried varieties should do well, but when later seeding must be done, I should sow only the earliest sorts. This early seeding starts the crop under the most congenial conditions, and it is under headway when the general spring break-up comes. I have seen thousands of acres of oats sown, during the last three years, just after the frost had gone out. At this time ground is not in fit condition for trampling nor seeding, and I have yet to see a good crop from fields sown under these conditions. You can't mud in oats any better than you can mud in corn, so let us quit it.

I do not believe our lands are "oat sick." I believe it is up to growers to put the crops in earlier and in a firm seed-bed.—L. C. Brown.

Lime For Farm Crops.

There is not much danger in overdoing the thing when we apply manure to farm lands, but when we begin to use mineral fertilizers and lime, then there should be preciseness about the work, in order to fetch best results. These things are too expensive to allow of any guesswork. We hear about the beneficial effect of lime on some soils, especially on ground which is to be sown to clover or alfalfa, and straightway many jump to the conclusion that lime is all that is needed to bring a big crop. This haphazard work sometimes produce results, because it happens that lime was the particular element needed; but it should not necessarily follow that an application of lime, under any and all conditions, will fetch the same good results.

It is a well-known fact that our limestone soils grow abundant crops of grasses and legumes, and for this very reason many argue that such soils do not need more lime. I believe we do not yet quite thoroughly understand the value of lime; but we are coming to it, and the proper use of lime is doing mighty things for us.

The chief benefit of lime is not as a fertilizer, but on account of its direct action upon the physical condition of the soil as well as upon the texture of the soil. This action is not by any means the same on all soils, and in some cases might be injurious. For this reason I would certainly know that lime was needed before I made its application.

It was considered, only a few years ago, that lime was necessary only to correct the acidity of certain soils. We have found out now that lime has the power of bringing together the finer particles of soils into coarser particles, thus improving its texture. This is called "flocculation," and it has been found that this action is most pronounced on clay soils. Liming these clay soils no doubt makes them mellow and of much more desirable texture and allows water to move in them with much greater freedom. Then again, lime hastens the decomposition of organic matter. For this reason many lime their lands when applying barn-yard manure or turning under a green crop. The best, and perhaps the most important, use we are now making of lime is on lands to be sown to alfalfa or clover. It is believed that lime helps the growth of certain organisms which seems necessary to the growth of these crops; so, too, lime helps dissolve mineral fertilizers and renders them easy plant food.

It is a mistake to consider lime as a fertilizer, for, strictly speaking, it is not, and the application of lime to thin, worn-out soils will be money thrown away. Lime will do much good on ground that contains plenty of the essentials of plant food, because it renders this food available for plant growth; it will better the texture of certain soils and in this way put the soil in condition to take fertilizers and put them to good use. All of these things are being tried out now by farmers themselves, and it will help us get to the bottom of the matter, if we will watch carefully the methods and results of those who are liming their ground.—L. C. Brown.

CATTLE IN STALK FIELDS.

There is unusual danger this season in turning stock into the fields where corn has been husked. Water is scarce, and the husks and blades of the corn are very dry and are apt to induce trouble.

Stock should be run on pastures part of the day, before they are let into the stalk fields; or, if the pastures are played out, fill up the cattle with other feed. For the first week or two leave them in the stalk fields only ar hour or two a day. Then make sure that they have salt before them all the time, and that they are in reach of water.

Impaction, due to eating too much dry stuff, and lack of water, makes most of the serious trouble. Every animal should be brought out of the fields at night and driven to the water tank. Frequently an animal will fill itself on corn husks and blades and then lie down in some comfortable place. These are the ones which must be hunted up and looked after.—L. C. B.

If you are unable to hold your temper, get a strong man to hold you.—Columbia Star.

Winter Protection of Fruit Plants.

By the severe winters the fruit op is rendered very uncertain in any places. This comes from the equent alternation of freezing and awing rather than from extreme old, but sometimes from long connued cold. To insure crops of spberries, blackberries, grapes, rawberries and peaches every year ithout fail, they must be protected om the cold.

Raspberry plants must be covered very season, if the best results in owing them are desired. The best me to do this work is as late as posble before the ground freezes, prefbly the middle of November. hree men will do the work the best d most quickly, though two can do successfully. One man with gloves asps a mass of the canes and with pull draws them over the ground, hile the others throw soil upon the s sufficient to hold down the canes. ometimes this is all the covering eed, but in many cases more soil is t on either with the spades or a ow run on both sides of the row.

The canes should be bent to the uth, as in this position the rays of e sun during the winter strike on e tips of the canes only, while if nt to the north they would strike ong the sides of them. It is very portant that the canes are uncovred as soon as the frost is out of the vering in the spring, otherwise the at of the sun on the soil may cause em to start growing too early.

Blackberry canes may also be laid down, but the roots must be first loosened with a spading fork, so that the bending shall come upon the roots rather than on the canes, in which case many of them would be broken.

Many varieties of grapevines, such as the Brighton, Wilder, Salem, Iona, etc., are often injured, but can be protected by laying them on the ground and covering with soil. All surplus wood should be cut off and the vines laid down along the row under the trellis. A covering of one or two inches of soil over the canes will be all that is needed. This should not be put on until severe freezing weather, but before the ground freezes permanently.

A light covering of cedar or pine boughs will insure better protection than soil alone, but a covering of material that is liable to heat may cause injury.

The strawberry is injured not so much by severe cold as by the alternation of freezing and thawing. The best material I have ever found to protect the plants is good, bright straw. No covering that will heat should be used, and only enough of any covering to prevent freezing and thawing.

I note that some growers do not put on the covering until the ground is frozen so as to bear a team, but if we wait for this time the ground will often freeze at night and thaw out during the day, many times, and the plants be seriously injured before this condition arrives. I always have a sufficient quantity of covering material on hand a few days in advance of the time it is to be used.

The only feasible way of protecting peach trees so the buds will not be injured is by laying the trees over and covering with some coarse litter. This may easily be done by cutting the roots on the north side and bending the tree to the south. If the roots are cut for a year or two after planting, this is comparatively easy, but with old trees very large roots sometimes have to be cut. When laid upon the ground in this manner and covered, mice sometimes injure them, but this can be prevented by spraying the trees before covering with a lime wash into which is put a tablespoonful of Paris green to six or eight quarts.—Wm. H. Underwood.

Grand Sweepstakes Seed Corn.

We have been in doubt whether we could obtain sufficient of the L. B. Clore Grand Sweepstakes White Corn to offer a small quantity to our readers for experimental purposes. We are not in the seed business, neither has Mr. Clore sufficient of his Grand Sweepstakes Corn to conduct a seed store with it, but he has promised to furnish us the same amount that we had last year. Mr. Clore won the grand sweepstakes prize at the National Corn Show of 1908. He also won the grand prize at the St. Louis World's Fair. He has probably won more corn prizes than any individual seed grower. We regard his corn as the very best white corn one can have for experimental purposes in the moderate corn-growing zone from Ohio to Kansas.

We use this seed as a premium to encourage our readers to experiment. Whether they succeed or fail, they obtain valuable experience. We will therefore credit up one-year's subscription to The National Farmer and Stock Grower and send by mail one pound of Clore's Grand Sweepstakes White Corn for 60 cents. The extra 10 cents over the price of the paper is to pay the postage on the corn. This offer will last until the corn gives out. Address, Hale Publishing Co., 3050 Vista Ave., St. Louis, Mo.

STEVENS

New Demi-Bloc System

Here is a decided advance in the manufacture of double-barrel guns.

The features embodied are exclusive, and help make Stevens Shotguns vastly superior to all others.

By this new system, the barrel and lug are compressed and forged in one piece. This gives the strongest breech mechanism ever devised.

Then the loop, barrels and extension rib are brazed together in one operation. Observe illustration below. Thus the barrels are perfectly straight and true.

And a wall of metal of equal diameter is left around the chamber. So you can shoot as heavy a load as you like.

Also, Stevens guns have a solid Top Snap. This operating with our new rotary cross-bolt, makes the strongest fastening possible. Stevens guns can never shake loose.

If you'll send for the Stevens Catalog

you will learn all about these new and exclusive features. And all the other superiorities of Stevens firearms—Shotguns, Rifles, Pistols. 5c for postage brings it.

"Guns and Gunning," by Dan Beard—all about hunting and shooting, game, the care of a gun, etc., will be sent postpaid, for 20c paper cover, or 30c cloth cover, stamped in gilt. If your dealer doesn't sell Stevens firearms, we will supply you direct on receipt of catalog price.

J. STEVENS ARMS & TOOL CO., 390 Grove Street, Chicopee Falls, Mass., U. S. A.

IMPROVED STUMP PULLERS.

The Hercules Stump Puller is triple power and is doing wonderful service. They are all steel, easily handled and guaranteed for three years. See advertisement on page 22 and write to Hercules Mfg. Co., Dept. B 35, Centerville, Iowa, and ask for their new catalogue. Make short work of your stumps.

MONTGOMERY WARD & CO.'S NEW HOME

For nine years the celebrated Tower Building on the lake front at Chicago, of Montgomery Ward & Co., has been one of the sights of the city. It is one of the most substantial buildings and has attracted much attention from visitors. In addition to this mammoth building, Montgomery Ward & Co. have just completed a new plant at Chicago river and Chicago avenue, and there are fifty acres under the one roof. The building is built of solid concrete with steel reinforcements. There are nearly 2,000,000 square feet of floor space, and it is said to be the largest building ever constructed, occupied solely and entirely by the permanent owners. We reproduce herewith an illustration of the building, the Chicago river being in the foreground, skirting the building the entire length. The building, as will be noted, is nine stories high and railroad tracks run through the building from end to end, enabling entire freight trains of sixty-six cars to load and unload at the same time on long, covered platforms, giving wonderful shipping facilities. It not only gives the advantage of rail facilities, but also the cheap freight rates of the great lakes, vessels unloading right at the Montgomery Ward & Co.'s wharf and giving the firm direct connection with every part of the world at the minimum of freight rates. The building is thoroughly complete in all equipments, every labor-saving device known having been installed. There are automatic conveyors which transport goods mechanically everywhere within the building, saving much time. Montgomery Ward & Co. authorize The National Farmer & Stock Grower to extend its readers a cordial invitation to visit their new building when in Chicago. No firm doing a mail order business has a better reputation than Montgomery Ward & Co., and our readers should not fail to secure their large fall catalogue, as they can have same for the asking, provided they mention the paper. It lists absolutely everything that you could want to buy, from farm machinery down to the smallest household necessity, and it represents a big saving in prices which are ordinarily paid for like goods in your own town.

FOR THE FRUIT GROWER.

Someone in the family ought to be a fruit grower; and yet it is very hard to interest the stockman in fruits. We will do our best, however, by placing a good fruit book in the hands of our readers. The book entitled Amateur Fruit Growing was written by Samuel B. Green, a practical man and one of the best authorities on the subject. There are 134 pages, written with special reference to the growing of fruits for the home and the market. We will send the book entitled Amateur Fruit Growing and The National Farmer and Stock Grower one year for 55 cents. Send a money order to Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

New Law of Heredity.

Some time ago an English scientist, Mr. W. Beach Thomas, contributed to the English press an article on Mendel's great discovery concerning heredity in plant and animal life. "The scientific world," he said, "is on the point of giving full recognition to a new, strange and deep-rooted law, and it is a satisfaction to know that in a few months some of the most striking of its practical results will be published by a body of English scientists."

Briefly, the law which seems to touch the ultimate mysteries of heredity is this: When pure stock or strains are crossed, it is found that a certain list of qualities remain, so to speak, indestructible, and appear uncontaminated in a definite proportion of the offspring of all generations after the first.

Some concrete examples will best show the practical effect of the law. When the tall variety of sweet pea and the short variety of sweet pea are crossed, the first generation are all tall. Tallness is the dominant quality over shortness, which is called recessive. But in the second generation it is found that just one-quarter are dwarf, and not only are they dwarf, but they will remain pure dwarf, without any reversion, and when crossed with dwarf, will never again show signs of tallness. The other three-quarters will be tall, and of these tall again just one-quarter will be pure tall, and never again show signs of dwarfness. The remaining two-quarters will be impure, but again when crossed with their like will give both pure talls, pure dwarf, and mongrels in due proportion. So that we find in all grandchildren, so to speak, of pure strains the proportion 1:2:1 has a mystic application—that is, one-quarter of these grandchildren will be exact or pure reproduction in one quality of their grandmother, one-quarter will be pure reproductions of their grandfather, and two-quarters, though resembling one grandparent, will have latent in them the qualities of both. —November Technical World Magazine.

Cheat Becoming Common.

A correspondent in Knox county, Illinois, writes that he, himself, and neighbors have been troubled with cheat in wheat for several years. He still believes, with many others, that wheat degenerates into cheat, and says although he finds cheat in his wheat this season, as well as last season, yet he has never been able to get the cheat seeds to sprout when sown alone.

Chess, or cheat (Bromus secalinus) is becoming too common, especially in seed brought down from the north. This is one of the brome grasses, and as the seeds are rather small, they readily pass, when in wheat, without detection. Chess, or cheat, comes from its own seed. Its appearance in wheat is due to the seed being sown with the wheat, or it had been sown with some previous crop. While oats, wheat and chess belong to the grass family, yet it is improbable that the one dengenerates into the other. I advise close examination of all seed grains and grass seeds for this troublesome pest, chess or cheat.—L. C. Brown.

Wisconsin Holland seed cabbage was selling in St. Louis, October 30th, at $28 to $32 a ton, according to quality and place of delivery.

PRACTICAL BARN PLANS.

This is the name of the best book out. Every farmer needs it. No matter what kind of buildings he may have on his property, he needs it anyway. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house. ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.

A Practical Farm Barn.

Each and every plan in the book is accompanied by a lengthy written description explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

Any carpenter or builder, or even a farmer himself who is handy with tools, can take our "New $5,000 Barn Book" and put up many of the buildings.

A Valuable Work.

We hope we have impressed you with the value of this book and that the nominal price asked is nothing by which the practical value of the book should be measured. This book is 8x10½ inches, contains 156 pages, is handsomely bound in cloth, stamped in two colors, and printed on fine glossy paper. Order to-day while you are in the mood. That's what to do. **Price, $1.00, Prepaid,** including one-year's subscription to this paper.

SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Dear Sirs:—Enclosed please find $1.00, for which send to my address one copy **Book of Practical Barn Plans,** as described in your advertisement; also **The National Farmer and Stock Grower** for one year.

Care of Corn Fodder.

Corn fodder makes splendid feed, but, like all other forage crops, it should be cut at the proper stage and then properly cared for to insure the best quality of feed. Corn harvesters and corn shredders have added many millions of dollars to the wealth of corn growers by making it possible to harvest and put up ten times as much as under the old system of doing all this work by hand.

This has been an exceptionally favorable fall for cutting corn when at its best. Now some vigorous work should be done in getting it put away in the best shape possible. The hum of the shredders will now be heard throughout the land. There is nothing, in the way of dry feed, any nicer than sweet, bright, shredded fodder; and what an enormous amount of feed a few acres produce. Once in a while we see a field carefully cut and shocked, but left to weather for three or four months. Such fodder does not amount to much, for it becomes bleached and tough and most of the leaves crumble and fall off in handling. When shredding is not done, by all means haul in the fodder from the field before winter comes on. Besides losing much of its feeding value and palatability, fodder left in the field until winter is hard to handle, and really takes twice the amount of work to get it out. Save the corn fodder. Make machines help you do it, and if you are not using a low-down wagon for hauling fodder, you are missing something worth while.—L. C. Brown.

Keep the Oats Clean.

While talking with an elevator man a few days ago, a farmer drove up to the scales with a load of oats. The grain was as fine a sample of white oats as I have seen in a long while, except some dark-colored grains. These grains made a difference in the selling price of those oats of just two cents a bushel, and the farmer had about 2,000 bushels for sale. Here was a loss of $40, caused by threshing a few spoiled bundles with the rest of the grain, thus mixing the damaged kernels through the whole lot. In the field where these oats were grown there was a small patch where a straw stack had stood. Here the oats grew so rank that they lodged and then became mouldy. When the field was harvested the machine was run right through this lodged piece and in this way gathered up some of the damaged grain. A little thought would have kept these damaged bundles separate from the rest of the crop, and this really would have made a difference of $200 in the value of the crop. These oats were free from weed seeds, were heavy, and could readily have been sold for seed stock at 10 cents per bushel above market price, had it not contained the damaged grains. Buyers of all kinds of grain are cutting from one to four cents per bushel for damaged and mixed grain. This is right, and it will bring growers to their senses about sowing clean seed quicker than anything else.—L. C. Brown.

Rich Indian Lands.

Indian lands were always the pick of the country. There is nothing that outclasses these rich lands in Oklahoma which are now for sale. Never again will such lands be sold in this country. The government has just removed the restrictions which have kept them off the market. See page 22.

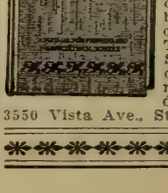
FARM BLACKSMITHING.

Here is a book for the farmer. The book was written by A. J. Drew. It is a complete treatise on blacksmithing from the farm standpoint. This book teaches how to profitably spend stormy days. Many thousands of farmers will find it to their interest to own a copy. There are 160 pages. It is nicely and clearly illustrated and bound in cloth. We credit one-year's subscription to The National Farmer and Stock Grower and send one copy of this book by mail for 65 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.



Mistakes With Soil Bacteria.

There are many things that we o not know about soil bacteria, nough within the past ten years our nowledge has been greatly in-reased. The very minuteness of the oil organisms has made progress in nowing them slow.

Some of them so resemble each ther that even experts were at first eceived as to the kinds with which ney were working. In one notable ase an Experiment Station did con-iderable work with a kind of bac-eria suppposed to be alfalfa bacteria nd found in the end that they were orking with an entirely different pecies.

Some of the poor results obtained n the inoculation of fields has come rom an ignorance of some of the haracteristics of the minute forms of fe being dealt with.

It has now been discovered that the acteria that form the tubercles on ne roots of leguminous plants are asily destroyed by the light. When field is inoculated by having dry erm-filled soil spread over it, that oil should be harrowed in at once so nat the germs may be brought elow the layer of soil that is exposed o the light.

Sunlight is a destroyer of germs, nd will destroy beneficial germs as urely as it will destroy disease erms. Seed that is soaked in inocu-ating solutions should be kept in a ark place until used. It will be asily understood that the ground nat is plowed up and allowed to ecome dry is not the suitable recep-acle for the inoculation soils or ne inoculating solutions. It may be nat this destructive work of sunlight as at the base of the failure of some the liquid inoculations of which so uch was hoped but of which so little as realized by the users.

When a soil has become fully in-ulated with the kind of bacteria esired it should not be plowed up nd allowed to dry for weeks in the ull glare of the sun. The bacteria earest the surface of the plowed ound will be destroyed to the depth e soil ground dries out.

Nor is it desirable to plow an inoc-ated soil deeply. The bacteria ultiply most in the few inches of ll just below the surface. There e few of them down eight and ten ches. If the soil is plowed deep, e inoculated soil will be buried far ow the surface and the soil turned will contain few or no germs.

This deep plowing has probably used many an inoculated field be unresponsive. It should be derstood that the minute forms of cterial life are mostly in the part the soil where they can get oisture and air. Farther down the oisture is in excess and the air is in fficient supply.

Where soil is inoculated for the rpose of getting a catch of alfalfa of red clover, it is necessary to derstand the conditions of life der which the bacteria exist. A orly-drained field is likely to be oded for days at a time and the oculation has been killed out in at way. Water is destructive of cterial life, on account of the chem-l action constantly going on, and so on account of the activities of cteria that live principally in ter.

Walks Through Corn Fields.

To one who will observe closely a lk through any good field of corn this season of the year is well rth while. A well-bred field of corn has the greatest attraction for me. The characteristics which mark the difference between a well-bred ear and a mongrel ear are as out-standing as high-bred characteristics in animals. Place one of these well-bred ears alongside of one that has no particular breeding and the contrast is startling. There is the distinct solid color, the nearly perfect confor-mation of ear and uniformity of ker-nels, all of which are results of care-ful breeding. Of course yield is the standard by which we must measure all corn crops, and right here is where a well-bred field will show its superiority. The shelling test reveals the make-up of a well-bred ear, and not unfrequently such ears shell out from 10 to 20 per cent. more corn than an ordinary sort. A big cattle feeder tells me that he is willing to allow 10 per cent. premium for "Reid's Yellow Dent" grown from his own seed, because he knows that this high-bred corn will shell out from sixty-two to sixty-three pounds for every seventy pounds in ear.

Let anyone who doubts practical corn improvement come with me. I would like to take him through the field of pure-bred corn of a farmer in Mercer county, Illinois, who has been carrying on the breeding work now for nearly ten years. The stalks are sturdy, the leaf development is ample and the way this corn stands up shows that it has a well-spread root system. This same farmer breeds Shorthorn cattle, but I believe his corn shows greatest results. There is no smut, but very few nubbins, and, as one neighbor remarked, you could tell when a mile off that this field was well-bred.

I was particularly interested in this field. When walking through it with the owner, we frequently discovered several adjacent hills of corn which bore ears of precisely the same type. The type was a very desirable one, hence we took particular pains to find out the influences which pro-duced it. In several different sec-tions of the field we found precisely the same type, same color, same depth of kernel, same indentation, and almost uniform size of ears. The soil was practically the same over the entire field.. This showed to us that there had been an unusu-ally strong, well-bred seed ear in the seed planted, and that it had been pretty well distributed with the seed stock. Wherever a grain from this ear had been deposited it produced a stalk and ear which bore a distinct family resemblance, and this was so distinct that it was quite easy to pick them out in that great field where several types were common.

Here I also noticed another well-bred characteristic—the location of the ears on the stalk. On rich ground the variety planted here in-clines to grow a very tall stalk, and ears are out of reach. This farmer has practiced for some time the selection of seed ears which grew about five feet from the ground. The result was surprising. Once in a while you would find an ear out of reach, but most of the ears were within easy husking distance. These are things which we have talked about for years, but many seem to still look upon them as "fancy points." They show, however, what may be done when master hands go at the work, and when systematic lines of breeding are carried out.—L. C. Brown.

If you are interested in rape for winter forage write to the Director of the Experi-ment Station, Gainesville, Fla., and ask for a copy of Bulletin No. 95.

Sunlight=at=night

By John E. Kennedy

LIGHT, you know, is merely a stage of Heat. And Heat is just a vibration of Atoms.

When these vibrations reach 31,000 per inch Heat exhibits "Light."

At that earliest stage Heat gives a dull *red* Light. At 61,000 vibrations per inch Heat exhibits *violet* Light.

At varying stages between 31,000 and 61,000 vibrations all *other* colors of Light are in turn produced.

But, at *one* particular stage only is *white* Light possible.

Because *white* is a perfectly *balanced* and neutral blending of all other colors.

Sunlight is a perfectly balanced, and consequently, *white* Light.

Acetylene is the only *other* perfectly balanced Light—as *white* as Sunlight itself and the *only* Artificial Light under which pale-yellow, pale-blue, or pale-pink are clearly distinguishable.

This is a very important fact to remember.

Because, *white* Sunlight is the *only* Light Human Eyesight is *naturally* adapted to.

Kerosene Light, Gasolene Light, or City Gaslight, are *red* or *yellow* or both—and therefore *unnatural* to Human Eyesight.

Electric Light also is bluish, or violet.

This is why plants won't grow naturally under any Light but Sunlight and Acetylene, which are chemically identical and *white*.

Because, all things in Nature are naturalized to Sunlight through Ages of *adaptation* to it and Acetylene is practically Sunlight.

Now, Human Eyesight is no exception to this rule of adaptation.

That is why the Eye needs *four* times as much *red* Light, and 5½ times as much *yellow* light to read by as it needs of *white* Acetylene Light.

The *kind* of Light used every night of our lives in the home has therefore much to do with Eyesight, Health, Temperament, Cheerfulness, Mental Attitude and the *natural* development of Children.

On this account it is a serious mistake to use the *unnatural* yellow or red Light of Kerosene or Gasolene, or the violet light of Electricity under the mistaken impression that they are "softer than white Light."

The splendid brilliance of white Acetylene Light can be *softened* as much as you choose without adulterating, discoloring or *denaturizing* it.

Because, Acetylene is simply *all* Light — pure and unadulterated Sunlight, the most diffusive, far-carrying and *steadiest* of Lights.

Its *intensity* therefore depends entirely upon how *much*, or how *little*, Acetylene Gas you want to use at the burners.

And, you can look a brilliant, unshaded Acetylene Light in the eye with *less* injury than would attend the looking at any *other* artificial Light of equal volume, with no *more* injury than looking at Sunlight of equal strength.

Because, the eyes are *adapted* to brilliant, *white* Sunlight, which is identical in composition and chemical action with Acetylene-Light.

But, Eyes are *not* naturally adapted to the *red*, *yellow*, *blue* nor *violet* rays of Kerosene, Gasolene, City Gas or Electric Light.

This is why Acetylene *alone* is the ideal *Home* Light for reading, sewing, or general Illumination.

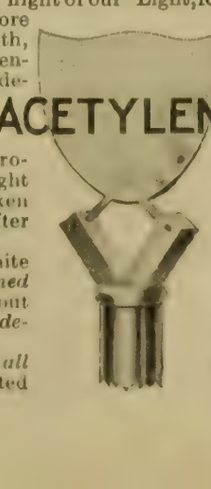
It is *natural* Light you see. It is just plain, every-day, world-old, Sunlight in fact, but muzzled so you can use it as "soft" or as brilliant as you choose, by the mere turning of a tap on the chandeliers, or by the use of plain white globes.

Moreover, Acetylene is practically *filtered* Light from which all useless or injurious color, soot, or excessive heat-producing factors are eliminated.

On this account an Acetylene flame *one-tenth* the size as that from Kerosene, Gasolene, or City Gas, gives *as much* reading Light as *ten-tenths* of other illuminants.

Which means, that Acetylene produces only a *fraction* of the Heat, Air-consumption, and Carbonic Acid Gas poisoning that *other* artificial Lights produce.

It also explains why *Acetylene* Gaslight costs a full *third less* than regular Kerosene Light, for the same identical candle-power, when once installed in a Country Home, Hotel, or Store.



About two days labor will so install it, and forever *dispense* with the disagreeable lamp-cleaning, filling, wick-snuffing, and chimney-wiping needed *365 times per year* with Kerosene Lighting.

Write us today how many rooms you've got, or how large your store.

Then we will tell you how *little* it need cost you to install a suitable Acetylene Lighting Plant, which will be good for 20-years' steady use afterward.

Address Union Carbide Co., Dept. I, 156 Michigan Ave., Chicago, Ill.

The National Farmer and Stock Grower.

Entered at Postoffice at St. Louis, Mo., as second-class matter in January, 1901.

Subscription Price in the United States, 50 cents per year, or three years for one dollar.

Office of Publication, 3550 Vista avenue, (corner of Vista avenue and Carr Lane avenue), St. Louis, Mo. Bell Telephone: Grand 400.

The Agricultural Blue Book.

We are collecting the material for the first edition of the Agricultural Blue Book. It will be issued in January, 1909, and will be a most interesting publication.

The Agricultural Blue Book will contain the pictures of about 200 of the live stock champions of the State and National Fairs of 1907 and 1908. These pictures will be made from photographs taken from life. There will also be a number of pictures of farm scenes, taken upon some of the most famous farms and ranches of this continent.

The Agricultural Blue Book will also contain a select list of not less than 5,000 live stock breeders, representing a number in each and every state, and more particularly those who are actively engaged in the business and have stock for sale. The list will be classified by states and arranged in alphabetical order.

The Agricultural Blue Book will also contain in alphabetical order and by states a list of business firms engaged in manufacturing goods for farmers' use, such as agricultural implements, dairy apparatus, poultry supplies, stock foods, veterinary implements, medicines, etc.; in fact, all those who as principals do business with the agricultural and stock-growing interests.

The Agricultural Blue Book will be a valuable directory for the use of stockmen and farmers.

We are issuing a pamphlet of sixteen pages, showing exactly what the complete Agricultural Blue Book will be. All who are interested are invited to send their names, address and occupation and ask for circulars of the Agricultural Blue Book.

Address, National Farmer and Stock Grower, 3550 Vista avenue, St. Louis, Mo.

The Lumber Trust at Work.

Chicago is a great center for the sale of live stock and all kinds of farmers' products; so is St. Louis, and so is Kansas City. These great markets are of more real value to farmers and stockmen of the West than all the other cities of the world. These are the home markets of farmers and stockmen, and where they obtain most of their money.

When people say that you ought to patronize home industry that is what they mean. You sell hundreds of millions of dollars' worth of goods in these great cities, and if you are wise you will not fail to do some part of your buying where your money comes from.

The big market centers obtain for you the highest prices for your produce and they also concentrate all the goods that are manufactured for your benefit and sell them on a basis that is called "small profits and quick returns."

On the basis of "small profits and quick returns," some of the great houses and great centers have gone into the lumber business. There was no competition in this business. There is a very cleverly-organized combination in it, however, and they have divided up territory in the same.

Some of the Chicago firms doing a mail-order business saw that the Lumber Trust was obtaining extortionate prices for lumber and mill work, and they began to include sash, doors, blinds, etc., in their catalogues; and in other cities there was something of the same kind doing also. The farmers began to build their houses cheaper and better, and then the high-priced Lumber Trust had a fit and began a series of dirty business methods.

The lumber prices in the catalogues of the mail-order houses were reasonable and legitimate. The catalogues stated exactly what a man was going to get for his money, and he got it. Then the Lumber Trust passed the word to all their agents, advising them to write to the great catalogue houses to get their catalogues and burn them up. These catalogues were sent free and some of them cost a dollar each. The Lumber Trust agents wrote for these catalogues in fictitious names, as though they wished to buy something, and when these innocent mail-order houses sent them out without charge, the lumber dealers destroyed them. Honest farmers, what do you think of that?

And then they began to trace the shipments with a view of deceiving the buyers as to the quality of the goods sent out.

We do not receive The Scout, which is published at Detroit, Mich., but we understand it to be the organ of the Michigan Retail Lumber Dealers' Association. We have it from the Chicago House Wrecking Company that in the issue of The Scout of October 15th, on page 3, on what is known as the information page, appears as follows:

"Mr. Editor:—Yesterday I received a card saying that the Chicago House Wrecking Co. has shipped some sash and doors to a man in my town. Where did this come from and what was it sent to me for?"

The Scout cannot inform you whence this card came, as we do not know anything about it, but we would suggest the following as a good plan to follow: When you receive one of these cards, look up the man to whom the mail order house has made the shipment. Then tell him that you understand he has bought some material from whomever it is. Ask him if he has received it; if it's good stuff; how cheap he got it. And then no matter if it's really going to cause you a loss to back up your statement, tell him it's too bad he bought that without consulting you, 'cause you could have sold him just what he wanted, and at even less than he paid the mail order house. In other words, make him sick of his deal. You can do it, and you must if you want to put a crimp in this mail order house competition. Remember, a dissatisfied customer is a poor advertisement for a mail order house. Make this man dissatisfied.—The Scout.

That is nice literature to be issued by the alleged organ of a business association. These are the people who thought they had control of the lumber output; these are the people who would like to destroy competition; these are the people who are afraid of the United States mail.

The National Farmer and Stock Grower is in favor of legitimate, open competition and honorable methods. The mail-order houses are a part of that competition. The lumber people who have an agent in each town have their rights also, but it is notorious that there is no competition between them. Such methods as those we have mentioned are degrading, and, sooner or later, they will recoil on the people instituting them.

Remember that the International Live Stock Exposition will be held this year from November 28th to December 10th. It is the grandest show on earth. The stockman who fails to attend denies himself that which is necessary to him in his business. Every standard of perfection in the production of live stock for market will be displayed there. Transit to the Exposition is easy and rapid. Lower railroad rates have been granted to visitors this year. Be sure to attend the International Show at Chicago.

The Youth's Companion.

Parents are under obligation to see that their young people obtain the most suitable and instructive reading matter. If they are not concerned in this subject, they will find later on that the reading matter was not the right kind. It is not easy to produce a reading combination that is just as interesting and as attractive as it is good. The Youth's Companion is one that fills all such requirements. Boys and girls, young men and young women, may not be quick to become subscribers, but when they are once interested the battle is won. The Youth's Companion is advertised on page 29. There is a free offer for the balance of the year, including the Christmas and holiday numbers, also the most beautiful thirteen-color picture "In Grandmother's Garden," in the 1909 Calendar. We earnestly advise our readers to subscribe for the Youth's Companion.

FARM AND RANCH LANDS.

Arkansas—Fine lands on the Cotton Belt Route in Texas. All very valuable, but cheap at this time. See page 28 and read the advertisement of **E. W. LaBeaume,** G. P. & T. A., 1551 Pierce Bldg., St. Louis, Mo.

Arkansas.—EXTRAORDINARY BARGAIN. 761 acres of good bottom land; 150 acres in cultivation; balance good timber. Price, $6,000, if taken soon. **D. H. Balfour,** Box 195, Warren, Ark.

Mississippi—160 acres of land; four miles north of Iuka, Miss.; three miles from the Tennessee river. This can be made a good home. Has about 20 to 25 acres cleared; balance in small timber; also pretty good farm house. A quick buyer can get it for $500. What do you think of that? **J. W. Jourdan,** Iuka, Miss.

Mississippi—320 acres, eight miles south from Iuka, Miss., and four miles from the I. C. Railroad. About half is fine bottom land and all has good growth of timber. Well adapted to corn and cotton and would make a good stock farm. Price, $1,600. It is worth $25 an acre. Address, **J. W. Jourdan,** Iuka, Miss.

Mississippi—320 acres; a great bargain; on Yellow creek, twelve miles north of Iuka, Tishomingo county, Miss., and not far from the Tennessee river. This would make a fine stock farm. It is the cheapest piece of land in Mississippi and will not be on the market long, as it can be had for $2.00 an acre. **J. W. Jourdan,** Iuka, Miss.

Mississippi.—High-grade farm lands in the famous alfalfa belt, pronounced by government experts to be the finest lands on earth. Four to five cuttings a year. Greatest chance in sight. We also handle pine and hardwood timber lands. Let us talk to you about it. **Hodges Realty Co.,** Meridian, Miss.

Mississippi—240 acres, two miles south from Iuka, Tishomingo county, Miss. About 30 acres clear land; has also 50 acres cane-brake, which can be reclaimed and made worth $50.00 per acre. This will make a fine stock and fruit farm. Price, $4.00 per acre. **J. W. Jourdan,** Iuka, Miss.

NORTHERN MISSISSIPPI. — About 1,200 acres, consisting of six quarter sections and some small pieces. This land with poor cultivation produces 25 to 30 bushels of corn per acre, also one-half bale cotton without fertilizer; also 100 bushels of either Irish or sweet potatoes. It is only two miles north of Iuka, on the Southern Railway, towards the Tennessee river; about 100 acres in cultivation and 400 acres level ground, worth $20.00 an acre. Well watered with springs and live creeks. Good farm house and outhouses; also good orchard and pecan trees. Ten thousand cross ties can be made from growing timber. This tract of land can be had with clear title at $6.00 an acre. It is a great bargain. An active man who knows his business can clear a first-class income. Near to market, at Memphis; live stock can be shipped by boat to St. Louis by driving a few miles. Two crops of sorghum, millet, peas in corn, and every known vegetable. White clover, spontaneous growth. Address, JOURDAN ESTATE, 3550 Vista Ave., St. Louis, Mo.

Mississippi.—20 Acres.—A fine gravel hill. On line of Southern Railway, two miles east from Iuka, Miss. Will mine 100,000 carloads of what is famous as the Tishomingo gravel. Will cement together and make fine ballast for railroads or public roads and streets. It is accessible to railroad with cheap rates. Cash price, a thousand dollars. Buy it quick as a bargain. **Jourdan Estate,** care National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

CENTRAL MISSOURI FARMS.—For farms and homes that will prove both satisfactory and profitable, write for new illustrated list; 100 farms described and priced. **G. W. Hamilton & Son,** Fulton, Mo.

NORTHERN MISSISSIPPI. — 410 acres. Four miles from railroad at Iuka, Mississippi, and four miles from boat landing on the Tennessee river. This tract of land is one of the most valuable in the United States. A stock farmer can take this ground, obtain free and clear and guaranteed title for $1,800 cash down. It is a splendid property, and can be used as a dairy, vegetable, stock or fruit farm. Except a fair house, improvements are not much. Splendid climate. It is an hundred times a bargain. You deal direct with the owner. Write to HARRIS ESTATE, care National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

MISSOURI.—Fine Home Ranch. 1,000 acres; eight miles from this city, and five miles to another good railroad town. A fine ranch and a model home. Good house and barn. All necessary outbuildings. Good orchard. Fenced and cross fenced. Well watered by springs and creek. 375 acres bottom. About 475 acres in grass and cultivation. Rest in timber. A snap at $16 per acre. Smaller tracts for sale. Write for list of good and cheap lands. **Wright & Waterstripe,** Marshfield, Mo.

Montana.—Thousands of acres, fine lands, for sale cheap. Government homesteads close to towns yet available. Write for description, maps, etc. Address, **Geo. B. Haynes,** Immigration Agent, 348 Marquette Bldg., Chicago, Ill. See page 18.

Oklahoma.—8,000,000 acres rich Indian lands on which restrictions have been removed. Can now be bought cheap with perfect titles. See advertisement on page 25 and write for particulars. Address nearest office, **John Sebastian,** 1768 Frisco Bldg., St. Louis, Mo., or 1768 LaSalle Station, Chicago, Illinois.

Tennessee.—Send for booklet on farming and full description and price of lands for sale in the valley of East Tennessee, the healthiest climate and best lands in the country. Address, **East Tennessee Real Estate Company,** Morristown, Tenn.

Texas.—12,000 Acre Ranch For Sale! All together or in parts, in Uvalde county, Southern Texas, nine miles from Sabinal, an up-to-date and rapidly-growing town with fine schools, 71 miles from San Antonio, on the Southern Pacific Railroad. Principal grasses, mesquite and rescue. An abundant and inexhaustible supply of pure water. The tillable soil is black hog wallow and chocolate, and produces alfalfa, wheat, cotton, corn, rye, sorghum, broom corn, vegetables, fruits, etc.

No other locality is better adapted for the successful raising and fattening of cattle, hogs, sheep, horses and mules. The land all the way from town to this ranch is under cultivation. Owner being a non-resident, price, $7.00 per acre.

Address, **A. D. Evans,** National Stock Yards, East St. Louis, Ill.

Texas.—1,107 acres in Jackson county, Southern Texas, four miles from town. A bargain at $10.00 per acre. Good for vegetables, fruits, cotton or live stock. Address, **Box 84,** National Stock Yards, Ill.

Texas.—Large and small farms for sale in the southern part of the state from $2.50 upwards. It will pay buyer of Texas land to address, **Box 84,** National Stock Yards, Ill.

VIRGINIA FARMS, $5.00 Per Acre and upwards. Easy payments. Catalogue free. Loans made on country real estate. **George E. Crawford & Co.,** 1009 East Main St., Richmond, Va. Established January, 1875.

CASH FOR YOUR FARM OR BUSINESS, No matter where you live. Write me today if you want to buy or sell any kind of Real Estate or business. **FRANK P. CLEVELAND** 1910 Adams Express Building, Chicago, Ill

Dairy Hints

To produce that high scoring butter—you must insist on cleanliness; the proper care of your herd; and that the cream be in the best possible condition.

Tubular Separators

will assist you in your enterprise because they are easy to clean, due to their simplicity; and they produce a rich velvety cream in an unwhipped and unchurned condition.

Their simplicity, durability, efficiency and originality of design are recognized everywhere, by everyone.

Catalog 232 describes them fully, sent free upon request.

THE SHARPLES SEPARATOR CO.,
West Chester, Penna.
Toronto, Can. San Francisco, Calif. Chicago, Ill.

Chicago Milk Market.

The price per eight-gallon can of andard milk at Chicago, as sug-ested by a joint conference of milk ealers and shippers, is $1.15 for ctober, $1.35 for November and De-mber, $1.30 for January and Febru-y, and $1.25 for March and April. he price is based upon delivery at nicago, the shipper paying the eight. Reduced to the price per illon this is 14.37½ cents for ctober, 16.87½ cents for November id December, 16.25 cents for Janu-y and February, and 15.6 cents for arch and April. This is from the ilk News.

gricultural Department Not a Detective Bureau.

A movement to separate the Mis-ouri Dairy Department from the ure-food Department was started n October 31st by the Missouri State airy Association. The reason for is is that the Pure-food Depart-ent, which is really a Police Depart-ent, is obscuring and retarding the structive and educational dairy ork which is of prime importance.

It is the same with the United tates Department of Agriculture. is degenerating into a Police De-artment. We attend a meeting of iry officials and we find they are lding a grand jury session behind osed doors and sending out sum-onses ordering people before them order to collect evidence for police osecutions.

In our opinion, the sooner the olice Department, the Pure-food epartment, and all branches of the epartment of Justice are separated om the Department of Agriculture e better it will be for all concerned, d especially for the Department of griculture.

FEEDING MILCH COWS.

Milch cows require different feed than beef cattle. You should not feed much fat-forming foods, as your cows would lay on fat instead of producing milk. Feed more silage or roots in the winter.

Daily feed for a thousand-pound cow: 40 pounds of silage, 7 pounds clover hay, 8 pounds of grain. The cows that are soon to freshen should be fed on succulent feed, such as silage or roots, bran, linseed meal with a little oats. Keep the bowels open and do not feed very heavy on grain just before or after calving.

After calving, give bran mashes and warm drinking water for a few days. Allow the calf to suck for about two days and then feed the mother's milk from a pail for about two weeks, about three quarts twice a day; after that reduce it with skim milk or warm water, so that at the end of the fourth week the calf will be getting all skim milk or half whole milk and half warm water, with some reliable stock tonic to aid digestion. Keep a supply of good clover or alfalfa hay within reach and also some ground oats, with a little linseed meal mixed with it.

After the calf eats the ground feed, gradually get him used to eating whole oats, as this is the best feed for him up to six months old.

The heifers should not be bred until fifteen or eighteen months old.—Dr. David Roberts, Wisconsin State Veterinarian.

DAIRY AND CREAMERY.

About 50 per cent. of the failures in dairy farming are due to underfeeding of succulent food. The dairy with a silo never fails; but the dry-hay dairies are always in trouble over the smallness of the milk checks. The dairy cow that is condemned because she has to produce milk when not fed any more than it requires to support her is often the cow that would pay a generous profit on liberal feeding.

The Chicago ordinance requiring all cows furnishing milk to that city to be tuberculin tested, and that all reacting cows be cut out from the herd, will go into effect January 1st, unless otherwise decided. If the milk is pasteurized it will be admitted, whether the herd is tested or not. The outlook then is to turn shippers into dumpers. It will be easier to accept the price at the pasteurizing station than to deal with the city of Chicago.

We are of the opinion that every dairyman should have his cows subjected to the tuberculin test by a competent veterinarian, that he may take suitable action on his own account to keep his herd free from disease. At the same time we are equally of the opinion that the tuberculin agitation is 80 per cent. rot and nonsense. Dr. Koch is of the opinion that bovine tuberculosis cannot be transmitted to human beings, and Dr. Bang says that heating the milk to 80 degrees Centigrade will kill the germs; therefore, what is all this fuss about?

An experienced dairy farmer writing to the Milk Reporter estimates that a farmer milking thirty cows will have to exchange about six cows a year to keep his dairy profitable. This of course must mean that he does not buy cows that are fresh and sell them when they are dry, because if he did he would have to exchange thirty a year, as many do who neither breed a cow nor raise a calf.

There does not appear to be any regular or systematic production of dairy cows for market. This is a misfortune, because it is a very good business for any farmer to engage in. It would be almost impossible to obtain a car-load of good milkers at the stock yards in one day, whereas there is an actual demand for a thousand cows a week from the dairymen who ship milk to St. Louis. The production of good milch cows as a separate and distinct business to sell them as springers in any stock yard in the country, would not fail to pay a good profit.

At the Oklahoma State Fair the Alva Rose Creamery co. took first prize for tub butter, with a score of 91½; the Blackwell Creamery came second, with a score of 90, and the Fairview Creamery came third, with a score of 89¾.

An Ayrshire cow, Rena Ross, owned by John R. Valentine, Highland Farm, Bryn Mawr, Pa., has just completed a record of 15,072 pounds of milk in a year, from which was made 751 pounds of butter. We have made application for a photograph, and hope to publish her picture in the next edition of the National Farmer and Stock Grower.

National Dairy Show meeting will be held at the Coliseum, Chicago, Ill., December 2d to 10th, inclusive. H. B. Gurler, president; E. Sudendorf, secretary; A. J. Glover, general manager. Offices of the company, Record-Herald Bldg., Chicago.

The most profitable producer in the dairy herd of the Wisconsin Agricultural College in the past year was a Holstein cow. Her year's production was 13,186.2 pounds of milk, average 3.62 per cent fat, a total of 478 pounds fat, and equal to 557½ pounds of butter. Her product was valued at $140.59, and the total cost of feed was $45.28, leaving $95.31 for profit and pay for labor, etc. The least profitable cow in the same herd had only $16.53 over her feed bill.

At the Wisconsin Experiment Station, where they have 27 pure bred milk cows, their average milk production was 7,135.4 pounds of milk, 4.29 per cent fat, averaging 305.98 pounds of butter fat, equal to 356.97 pounds of commercial butter. The butter fat was valued at $76.49 per cow, and the skim bilk was valued at $11.42, a total of 87.91 per cow. The cost of feed was $33.84, leaving $54.07 per cow to pay for labor and to be credited as profit. These herds are conducted for profit, but there are experimental considerations which interfere to some extent with the final result. In other words, they sometimes have to keep a cow to conduct a valuable test that on a farm could be sent to the butcher.

October 26th the Elgin butter quotation was 27½ cents, the same as the previous week; 27 cents for the corresponding week a year ago; 26 cents two years ago, and 22½ cents the corresponding week in 1905.

The average production of the 110 Holstein cows, which were being tested for the Advanced Registry, was just about 2 pounds of butter per cow per day, and made from 6¼ gallons of milk per cow per day. Sixty per cent of them were heifers with first or second calves. The tests were made between July 14 and October 12.

All milkers of cows in St. Louis territory are pretty general in their reports that the flow of milk is less than it ever was before. One man said he was shipping only 1½ gallons per day per cow, whereas the usual average was 2½. Another said he was feeding high and shipping 2 gallons a day from 3-gallon cows. The milk distributers are paying no more than they are obliged to, but they are paying 2 cents a gallon more than they expected to.

The Milk Producers' Association of Missouri and Illinois, whose proceedings are to be found in this paper, has done considerable good for the dairy interest on very little means. It is only a year ago that the association was the prime factor in stopping the proposed advance in freight rates, and it was only a month ago that one of the directors appeared before the Interstate Commerce Commission for the same purpose. The association is now short of funds. All milk producers in St. Louis territory ought to chip in $2.00 each to help along the cause, and to pay for a year's membership. Address, Wm. A. Fisher, Sec., 409 Franklin ave., St. Louis, Mo.

During the first 10 months of the year 1908, the five principal live stock markets exhibited a decrease of 210,567 sheep, as compared with 10 months of last year. Chicago decreased 117,212, St. Joseph decreased 185,954, Omaha decreased 10,057. Kansas City increased 19,213 and St. Louis increased 83,443 head. This is a great showing for St. Louis, where the market is making great gains in the sheep trade.

Mr. A. M. Shultz, of Shipman, Ill., was in St. Louis to attend the directors' meeting of the Milk Producers' Association. He said that he milked 33 cows at present, and that he usually raised about 15 female calves each year. As a rule he disposed of about 10 dry cows every twelve months. Mr. Shultz said all the dairy cattle around him are Holsteins, and that grade Holsteins cows with calves sell readily at $65.00 to $75.00 per head. There is a demand for them beyond anything in the previous history of the trade.

ALFALFA.

The Most Profitable Crop in Existence—Can Be Successfully Grown in Any State in the Union.

The man who has done more to encourage the growth of alfalfa than all the balance of the world is Coburn, of Kansas. Coburn issued a book in 1901 of which there has been a great sale. This is Coburn's Original Alfalfa. It is nicely bound in cloth; there are 163 pages; the size is 5x7½ inches; it is well illustrated. The book includes history, description, varieties, length of life and habits of growth; climate and soil best adapted; seed bed, its preparation; time and method of seeding, harvesting, etc. For 60 cents we will send The National Farmer and Stock Grower for one year and Coburn's Original Book on Alfalfa. Address, The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

U.S. CREAM SEPARATORS

Hold World's Record for clean skimming

503

CAVENDISH, VT., Sept. 8, 1908.
Since purchasing a U. S. separator one year ago, we have gained $11.37 per cow over the water separator, from our herd of seven cows, though three of these are heifers and one cow had been milked two years.
ALBERT S. EATON.

A saving of $11.37 per cow in one year amounts with 7 cows to $79.59 or within 41 cents of $80, the price of a No. 6 U. S. separator.

Stop and ask yourself, "How much am I losing?" Perhaps not as much as Mr. Eaton, yet you may be losing even more.

You perhaps will say, "The calves and pigs must have something to eat. To be sure they have, but it is not policy to feed them butter fat at 32 cents a lb. when substitutes at one and two cents a pound are just as good.

You can't afford such robbery in your dairy, therefore send for Cat. No. 125 at once.

Vermont Farm Machine Co., Bellows Falls, Vt., U.S.A.
Prompt Deliveries from 16 Warehouses in U. S. and Canada

Disinfect Stables and Pens.

The season is now approaching when the cows are put in the stables and the pigs confined to pens, and before this is done there should be a thorough cleaning and disinfection of the stables and pens. After this whitewash should be used. It costs very little and will make the stables lighter, cleaner and sweeter.

We should have our periods of barn and stable cleaning and disinfection, the same as the good woman of the house has her times of house cleaning. It is a process that can no more safely be omitted than the thorough house cleaning. One affects the health of the family, the other the health of the live stock, and the comfort and prosperity of the family as well as our pocketbook. Someone has said that "Cleanliness is next to godliness." This maxim is exceedingly true.—Wm. H. Underwood.

A Miracle in a Dairy Herd.

A letter from the Secretary of the Belmont Dairy Farm says: "Our losses were so great from this trouble (contagious abortion and failure to breed) that had we not found some remedy we would have given up the dairy business. We began feeding Kellogg's Immunizing Cure for Abortion, December 10th last; up to that time for a year over half our cows aborted. Since January 15th, out of thirty-one cows only two lost their calves, one from being hurt and another that was sick. These figures are exact, as they are taken from our Record Book. It seemed almost a miracle."

The name of the writer of this letter with full particulars are given in a booklet published by the H. W. Kellogg Company, 959 Iglehart Ave., St. Paul, Minn., which any of our readers who are troubled with contagious abortion, failure to breed, failure to come in heat, etc., are advised to send for. This treatment is effective for cattle, horses, hogs, sheep and goats, and being administered in the salt that the animals take or in bran, it is no bother to give.

Making Good Butter.

For the production of a good quality of butter two very essential things are good care and good food for the cows. The cows must be provided with clean bedding and the stables need to be kept clean, well lighted and ventilated.

Before the milking begins on my place the sides and udders of the cows are carefully brushed, thus preventing dirt and dust from falling into the milk. The milking is done with clean, dry hands; to milk with wet fingers would be an extremely filthy habit. Just as soon as the milk is drawn from the cow it is strained through a wire gauze and three thicknesses of cheese-cloth. All the milk utensils are thoroughly cleaned after being used by first washing them in lukewarm water, in hot water, and then they are scalded in boiling water. Every dish or cloth that is used in connection with the milk, after being washed, is put in a clean place where there is a circulation of pure air.

The cream is separated from the milk with a hand separator and held until there is a sufficient quantity to churn. The churning is done three times each week with a barrel churn. In preparing the churn and butter-worker for use, they are thoroughly scalded with boiling water and then rinsed with cold water before the cream is put into the churn, or the butter put on the butter-worker. A thorough scalding and cooling of the butter-worker prevents the butter from sticking to it.

The cream is strained into the churn through a hair sieve and the churn is never filled more than half full of cream. The churn is not turned very rapidly, and is stopped several times at the beginning to remove the cork so as to allow the escape of gases. When the cream begins to break, care is exercised not to gather the butter granules into one large lump. The churning ceases when the butter particles are about the size of wheat kernels. Then the churn is fastened and the buttermilk drawn off. A fine hair sieve is used for the buttermilk to pass through, which catches any granules of butter that are likely to come out with the buttermilk.

When the butter is well drained from the buttermilk, it is rinsed with a little water, and after this has drained away the cork is put in the churn and half a pailful of cold water added to every ten pounds of butter. The cover is then put on the churn and the churn revolved slowly six or eight times; the water is now drawn off and the butter left to drain for about fifteen minutes.

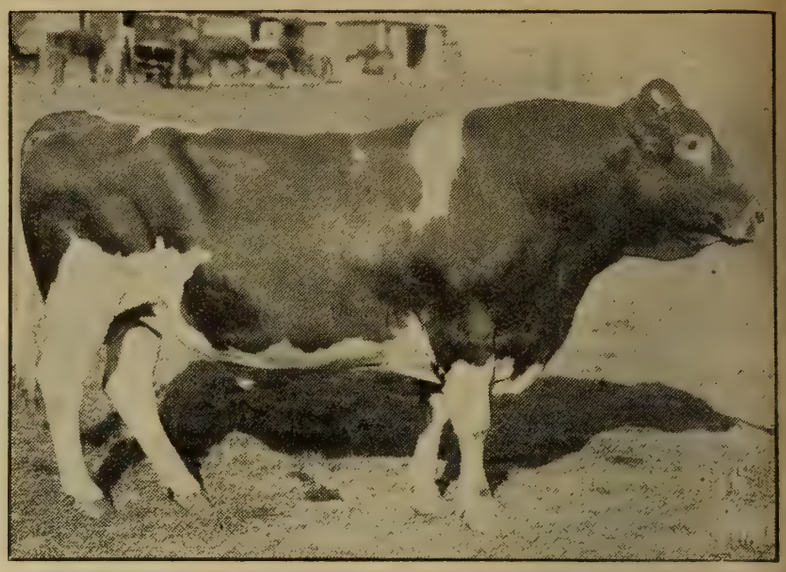
When the butter is well drained it is ready to salt, and this is done in the churn, when the butter is in granular form. Part of the salt is sprinkled on top of the small granules, and then the churn is turned enough to have the butter fall with the unsalted side up, and the rest of the salt is sifted on. Then the cover is put on the churn and it is revolved several times; after a few minutes the butter is taken out and worked.

About one and one-half ounces of salt is used for every pound of butter. This insures the right amount of salt when the butter is finished.

The butter is allowed to stand in the churn a few minutes so the salt will have a chance to dissolve; then it is taken out and put on the butter-worker.

It is a very easy matter to work butter too much and have it greasy. We never work the butter with the hands, because the warmth of the hands will make it greasy and give it a salvy appearance. We use the lever worker and press the lever on the surface, and occasionally fold the butter over with a ladle. The lever of the butter-worker or butter paddle is never allowed to slide over the surface of the butter, but it is pressed straight down when working the butter.

The butter is pressed into square one-pound prints and then carefully wrapped with parchment paper which has been soaked in salt water a few minutes before being used. The butter is sold in our local market at a good price, except what is used at home, and practically all the milk is fed to the chickens, hogs and calves. —Wm. H. Underwood.



GOLDEN BEN—Guernsey bull, six years old; weighs 1,625 pounds. The picture was taken at the Wisconsin State Fair, where he had just won the championship. GOLDEN BEN was sired by Ben Sampson, 5,480, and his dam is Nellie B., 12,305. We are informed by the owners and exhibitors, Messrs. A. W. & F. E. Fox, of Waukesha, Wis., that this great bull has a fine and gentle disposition, absolutely safe to ride, and anyone can get on and ride him. Besides winning first and championship, he stood at the head of the herd, winning championship over all other dairy breeds.

YOU SHOULD KNOW
the STRONG FEATURES of
I·H·C MANURE SPREADERS

THEY are great money-making machines.

If you will do a little figuring you will see that you could make no wiser investment.

An I. H. C. spreader will make manure go twice as far. That is proven by every user. The immediate benefit to the crop is greater and so is the permanent benefit to the land.

If you have manure to the value of $100 a year when spread by hand, it will be worth at least $200 when spread with an I. H. C. spreader.

That gain will very nearly pay for your spreader.

That is only one year's gain. Your I. H. C. spreader is good for many years. It will put the $100 of extra fertility into your soil every year.

The fertility of your land is brought up and maintained because the machine does the work so much better and makes the manure go so much further than when spread by hand.

Can you make a better investment?

Any I. H. C. spreader will be a money-maker for you.

Made in three styles:

"Cloverleaf"—Endless Apron Spreader
"Corn King"—Return Apron Spreader
"Kemp 20th Century"—Return Apron Spreader

They are all strong, durable machines, easily handled, light in draft.

You are losing money every year by not getting all the value out of your manure pile.

An I. H. C. spreader will stop this loss.

Take the matter up with the International local agent who handles any of these lines and see about buying a spreader. He will supply you with catalogs and all particulars. Or if you prefer, write direct to

International Harvester Company of America, Chicago, U. S. A.
(Incorporated)

This $10,000 Book for $2.00

This second revised edition of our Hunters' and Trappers' Guide, the acknowledged Encyclopedia of Hunting and Trapping North American Animals, contains 420 pages, handsomely bound in Leather and Gold, 250 illustrations true to nature.

Book is endorsed by sportsmen of national reputation, also by both young and old trappers. Positively the best book on the subject ever written. Thousands of testimonials. It reveals Trappers' Secrets; How to make Decoy, Bait, Traps; Lightning Method of Skinning; How to Handle Skins, but chiefly How and Where to

Hunt and Trap Successfully

It illustrates and describes all animals, their geographical locations, habits, mode of living, propagation; Game Laws; detailed description of **Skunk, Mink, Fox** and **Opossum Farms**, and how to raise them for profit, breeding, etc. Price, $2.00, express or postpaid.

We are the largest buyers of **Hides** and **Furs.** We buy one skin or a car load. Ship to us and obtain **10% to 50% more** money than by selling at home. Hides tanned into beautiful robes; also other tanning. Our Magnetic Bait and Decoy attracts animals to traps, price $1.00 per bottle, postpaid. We sell Steel and Wire Traps. Write for Hide and Fur price list; shipping tags sent free. Get copy of our Hunters' and Trappers' Guide today.

Andersch Bros., Dept. 87, Minneapolis, Minn.

MILK FARMERS TO MEET.

Annual Gathering of Milk Producers and Shippers to be Held Monday, November 23d.

A cordial invitation is extended to all milk producers and shippers to be present at the annual meeting of the Milk Producers' Protective Association of Missouri and Illinois, which is to be held at St. Louis on Monday, November 23d, at 1 p. m. The members and visitors will assemble at the office of the Secretary, Mr. Wm. A. Fischer, at 409 Franklin avenue, St. Louis, Mo., and the meeting will probably be held at the new rooms of the Produce Association.

This is the eighth annual meeting of an association which has labored faithfully in the interest of all those dairymen who look upon St. Louis as their principal market. Without producing antagonisms or friction between the buyers and sellers of milk and cream, this association has been the means of instituting beneficial reforms that have increased the value of the product on the market and by conservative and consistent negotiation the Milk Committee has exerted an influence that has enabled many members and some non-members to make advantageous contracts, and the uncontracted product has been sold month by month at a fair price, all existing conditions being considered. In addition thereto the association has contested every advance in express rates on milk and calves, and was the prime factor in preventing the railroads from putting in advanced rates after the new rate sheets were issued. It is an association which has cost the milk producers little or nothing, and it has done an immense amount of good. Conservatively stated, the association has been worth fully two cents a gallon to all its members, and almost as much to non-members.

At the informal meeting held at the secretary's office on Monday, October 26th, the President, Hon. D. I. Furbeck, representing the Milk Committee, reported that the principal dairies had agreed to pay 16 cents a gallon for uncontracted milk belonging to members of the association delivered in October, and 17 cents a gallon for November.

The Secretary reported applications for membership from Mr. F. D. Terry, of Centaur, Mo., and C. D. Boisseler, of Chesterfield, Mo., and on motion they were admitted as members of the association.

The association represents in its membership a majority of all the milk producers who are shipping milk to the city of St. Louis and a large number of those who sell at local stations. The membership dues are $2.00 a year for shippers and $1.25 for those who sell at home. All members receive The National Farmer and Stock Grower, the subscription being paid out of the funds of the association.

We hope that this meeting will be well attended, as the proceedings include the election of officers for the ensuing year. It is the duty of shippers on the different milk routes to hold meetings early in November and select their Delegate to represent them in the association during the coming year. For information between meetings address Mr. Wm. A. Fischer, Secretary, 409 Franklin avenue, St. Louis, Mo.

Ergotism.

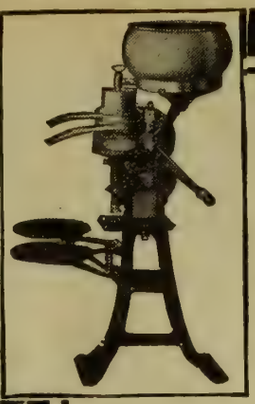
Ergot is a fungus that forms on the heads of grasses and grains. The ergotized seeds are several times larger than the natural seeds, are hard, black and slightly curved. Rye, blue grass, oats and red-top may contain the ergot. Ergot is most commonly developed in rich soils, in hot seasons, especially when considerable moisture is present.

Cattle are most susceptible to the disease. When eaten, ergot produces a contraction and finally a closing of the blood vessels in the extremities of the body—limbs, tail and ears—with the result that the parts below the line of obstruction die and later drop off. Pregnant sows may abort. It is not uncommon to see a steer or a cow with but one toe on a foot, or the absence of the entire foot.

The first symptom of ergotism is a slight lameness in one or more limbs, later a dark line forms around the limb, somewhere between the knee and the hoof. The line deepens into a crack containing pus. This crack shows the line of separation between the dead and the living tissues of the limb.

The affected animals should have a change of feed and should then be given a physic to get rid of any ergot in the intestines. Then give tannin in one-half drachm doses twice daily for a few days to destroy the ergot not absorbed. To increase the circulation in the extremities, chloral hydrate, in one-half ounce doses, twice daily, is often beneficial. Affected parts should be bathed with as hot water as the animal can stand; after this apply disinfectants to the skin, such as zenoleum (a teaspoonful to a quart of water.) When the foot has started to come off, nothing can be done for the animal, and it is best put out of misery.—C. L. Barnes, D. V. M., Colorado Agricultural College, Fort Collins.

At St. Louis, closing of the October market, small red onions were selling at 32 to 35 cents a bushel, but choice red onions were selling at 40 to 42½ cents in car-loads on track. The white onions, strictly choice, were selling at 75 to 90 cents a bushel.



TIME TO BUY CREAM SEPARATORS NOW

There never was a better time to buy the best of Cream Separators than right now.

The advantages derived from the use of the good Cream Separator are greater in the fall and winter than at any other time—when the cows are old in lactation, the loss of butter-fat is otherwise greatest, and butter prices are highest.

Likewise are the advantages of the superior DE LAVAL separators greatest over imitating separators when the milk is hard to separate and the weather cold and variable.

In every case a DE LAVAL separator, of suitable size, will surely at least save its cost between now and July 1st next, and go on returning 100% per year on the investment for twenty years to come.

The agricultural and particularly the dairying outlook was never brighter and more promising.

WHY NOT BUY NOW?

HOOD COMBINATION, 52,229—First-prize aged Jersey bull at the Wisconsin State Fair, 1908. Exhibited by E. R. Thomas & Son, Nashotah, Wis. This fine bull was bred by C. I. Hood, of Lowell, Mass., and was raised there until he was two months old. He is a half-brother to one of the noted bulls that heads the Hood Farm herd. This grand animal has headed the Glenwood Jersey herd for the past four years and has proven himself to be a great sire. The entire Jersey cattle family originated upon an island which contains less than fifty square miles. They could not ship their sweet milk to market because they were not near enough to the cities of England or France. They have about 40,000 cattle on the island, and their improvement has been towards the economical production of large quantities of first-class butter. Wherever the butter market is high and a premium is paid for quality, there the Jersey cattle are best placed. They also do well far away from market, where the butter or cream is shipped from the farm and the skim milk is fed to calves or pigs.

BREEDERS' CARDS.

KIRBY'S KIND POLAND-CHINA SWINE.

Boars ready for service sired by **On the Pike.** Write Kirby; he's got the kind.

VIEWS OF THE ST. LOUIS NATIONAL STOCK YARDS.—This snap shot was taken in order to introduce the central figure to our readers. He is Mr. T. H. Holland, recently of Kansas City, and senior member of the firm of Holland, Gilroy & Conway, now holding the Thursday horse auction at the yards. He is the auctioneer of the firm. On the right in the background is Robert Conway, mule salesman of the firm, who needs no introduction, being a veteran of the market. See statement by Mr. Gilroy on page 17.

Blooded Stock Notes.

The list of the purchasers of pure-bred Holstein cattle indicates considerable extension of this great dairy breed. Ohio seems to be filling up with Holsteins, and the Illinois list in particular is larger than it used to be.

Cattle breeding of the past few years has not been for size but rather for quality. Heavy weights could always be obtained by age and high feeding; in fact, heavy cattle were the thing fifty to a hundred years ago, but the weight was not where it ought to be and not where it now is—in the hips, back and loins, where the choice cuts are. The breeders' beef standard of the present day is weight for early age—not weight at any age. The market standard is not a big, coarse, heavy bullock, but fine cuts with just enough weight for the ideal joint, and no more.

On September 22d, at Palmyra, Iowa, Silas Igo sold Aberdeen-Angus cattle at auction. The result was an average of $197.25 for forty head. The bull calf Home Dale Kilburn sold at $400 to W. J. Miller, of Newton, Iowa, and the other two bulls sold at $100 and $140. The female top price was $500, paid by P. Leahy, of Williamsburg, Iowa, for an imported cow, Imp. Patricia of Alta, with heifer calf, and one other cow sold up to $400, which was bought by Mr. Miller.

One of the late September Shorthorn auctions was by C. T. Nelson and J. W. Dawdy & Son at Galesburg, Ill. The result was that forty-seven head averaged $158.72. There were seven bulls and the top price was $400, paid by B. A. Anderson, of Roseville, Ill., for Chief Sultan, a long two-year-old and first-class individual. A. J. Ryden, of Abingdon, Ill., bought the highest-priced female, Maud, 10, an aged cow, paying $400 for her.

The pure-bred hog is responsible for the fact that a 300-pound hog can be raised in nine to ten months. The Poland-China, the Berkshire, the Chesters, the Durocs, are seen in market, and generally at the top of it. A straight load of reds or whites always attracts the buyers, and ton loads of Berkshires and Polands are an every-day occurrence, because these breeds constitute the bulk of the good hogs on the market. Farmers who are fully convinced of their value should never be without a pure-bred boar. They are cheap enough compared with the wonderful value the boar can be in improving the farmers' stock.

Every stockman who comes to town should devote a few hours to a visit to the stock yards. During the busy hours is the right time—when there are cattle of all kinds on sale. Look for the Shorthorns, the Herefords, the Aberdeen-Angus cattle and see them go to the scales, topping the market. Look at the tops and then look at the tailings. Look at the hundred-dollar steers and then look at the twenty-dollar steers of the same age. Look at the yearling steers weighing 1,200 to 1,500 pounds. Look at the two, three and four-year-old steers weighing 900 to 1,000 pounds. Learn to distinguish strictly fat from half-fat cattle, etc. There is much to be learned at the stock yards by a personal visit.

The best herds of Shorthorn cattle are represented in the auction sale to be held at the St. Louis National Stock Yards, on November 12. All stock farmers ought to see them, even if they do not buy any. They are from the herds of N. H. Gentry, Sedalia, Mo.; J. A. Gerlaugh, Harshman, Ohio; Howard Gerlaugh, Osborn, Ohio; Thos. Huntsman & Son, Jacksonville, Mo.; F. J. Diehl, Mattoon, Ill.; Chas. W. Arnett, Carlinville, Ill.; E. W. Cockrell, Jonesboro, Ark., and Ed. H. Williams, Chandler, Ind.

Truman's Pioneer Stud Farm, Bushnell, Ill., have at the present time quite a number of imported Shire fillies, from two to four years old, which they are offering at practically their cost price. They are well up to the Truman standard. These fillies were brought over to stimulate the Shire breed of draft horses, that the future demands will increase because they thrive so well in this country.

On Tuesday, November 10, at the St. Louis National Stock Yards, the public sale of Aberdeen Angus cattle will include offerings from the good herds of D. Bradfute & Son, Cedarville, Ohio; H. W. Elliott, Estill, Mo.; J. R. & Morrison Hughes, Fayette, Mo.; I. D. Webster, Pleasant Hill, Ill.; E. T. Strubinger, El Dara, Il., and Maurer Bros., Boonville, Ind. They are all fine beef herds, every one of them.

RED POLLED DAIRY and BEEF CATTLE.

This is the oldest and best combination breed for production of fat cattle and rich milk. A farmer cannot go wrong who buys and sticks to them. I have four Bulls for sale at $100 to $125 each; good Bull Calves at $40 to $50; fair Heifer Calves at $30 to $40; and first-class yearlings, both sexes, at $50 to $100. Have the right kind of cattle on your farm that will thrive and fatten. Good milk and good beef production in the same breed.

C. M. CHAMBERS, Bartlett, Iowa.

FOR SALE: 3,000 FERRETS.
C. J. Dimick,
Rochester, Ohio.

PERCHERON AND MORGAN HORSES.

Imported Percheron stallion, ten years, black, 2,200 pounds; right every way; Percheron Stud Colt, large and bay; seven-year dark-gray Mare, 1,700 pounds, in foal and O. K. Old-styled Morgan Fillies and Stallions, various ages. All stock registered.

J. L. BUCHANAN, Sherodsville, Ohio.

MULES For Sale: Twenty-six head coming four-year-olds; twenty-seven coming threes; thirty-two coming two years old. We sell Mules either broke to harness or halter, native-bred here in the alfalfa district, making Mules 15.3 to 16½ hands high, with plenty of width and bone. Mules from healthy mares, not branded stuff, but gentle and kind; blacks, bays, browns, iron grays, in good flesh and hair. Respectfully,

Wm. Colter, Box 545, Garden City, Kansas.

100 HEAD OF PEDIGREED DUROC RED SPRING PIGS, $8.00 a head.

CHAS. DORR, Osage City, - Kansas.

TAMWORTHS FOR SALE. The bacon hog the largest and most prolific breed. Early to mature. Economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs, not akin, from best strains. None better. Prices reasonable. My herd won seven out of nine first prizes at Lexington, Ky., 1908. Have added some imported stock that won at the Royal Show, England, 1907.

CHAS. FORD, Mortonsville, Woodford County, Kentucky.

JACKS AND SADDLERS.

Imported Catalonian, Malyorca and Kentucky Mammoth Jacks, Saddle Horses, Trotting and Pacing Stallions and Tamworth Hogs. We are the largest breeders and importers of Jacks in America. Write us your wants.

J. F. COOK & CO., Lexington, Ky.

I DO—OTHERS DO SO CAN YOU MAKE MONEY Grow Mushrooms

Most pleasant highly profitable Business. In great demand at fancy prices—year round—grow anywhere, winter or summer. My Folder, how I made my first $100 growing mushrooms for a 2c stamp.
Mrs. Lina Feyrelsen, Dept. 11 2787 North Robey St., Chicago.

Blooded Stock Notes.

Sixty magnificent Herefords will be sold by W. C. McGavock, at auction at the St. Louis National Stock Yards, Wednesday, November 11. They are all from first-class herds. The following are represented: Pistauqua Stock Farm, McHenry, Ill.; H. J. Fluck, Goodenow, Ill.; George Hughes, Momence, Ill.; H. F. Mussman, Grand Park, Ill.; James Downen, Omaha, Ill.; Warren Sloan, Eldorado, Ill.; Joseph Doyle, Ridgway, Ill.; I. F. Smith, Norris City, Ill.; H. B. Wittenberg, Wellsville, Mo.; William Benner, Cuba, Mo.; D. W. Ohl, Stuttgart, Ark.

Messrs. Alvey Bros., breeders of O. I. C. swine, at Meriden, Kas., write saying that they have a fine lot of June pigs for sale—the best they ever had, also some bred gilts. They are doing finely, especially since the rains in the West improved the fall pastures.

The International Live Stock Exposition has added another educational feature by creating a competitive class in the judging of steers entered for slaughter. The contest is thrown open to the world on payment of an entry fee of one dollar. The money thus obtained will be distributed pro rata among the five contestants receiving the highest rating. The individual classes closed November 1, but the entries in the carload classes close November 21.

Mr. Chas. Ford of Mortonsville, Ky., breeder of Tamworth swine, is advertising in this paper. His stock is highly representative of this great breed. Tamworths are the large bacon hogs, not beautiful to look at, but they turn feed into meat, and if anyone will start with them they will be pleased. They were greatly admired at the St. Louis World's Fair. Mr. Ford has issued a circular concerning the history of the Tamworth swine, which it will pay to write for and read.

Mr. E. P. Oliver of Flint, Mich., is advertising Victoria and Essex swine. The Victorias are white and the Essex are black. They are fine, early-maturing hogs, and a farmer can do right by getting a start of either breed.

C. W. Chambers of Bartlett, Iowa, is advertising the Red Polled cattle as the best breed for the combination of milk and beef. He is not far from right. The Aberdeen Angus, the Galloways, and the Herefords are straight out-and-out beef cattle; the Jerseys, Ayrshires, Guernseys and Holsteins are strictly dairy cattle, and the contest for general utility, the farmer's cow, lies with the Red Poll and the Shorthorns. Two hundred and fifty years ago the Red cattle of Suffolk were furnishing most of the milk and beef for the London market.

J. P. Vissering of Godfrey, Ill., writes: If you are sick of ball-shaped, fine-boned hogs, write me about my big-boned, stretchy Poland Chinas. They are sired by such boars as "Ideal Jumbo," "Piasa Highware," "Jim Dandy," "King Mastodon," and other 1000-lb. hogs. But, while I breed for extreme size, I do not neglect short, wide heads, good ears, wide, sprung ribs, and straight, black coats with white points. If the stock on arrival is not as described, you can return it after resting five days. It is a "make-good-or-your-money-back" proposition.

The Chester White hog advertisement, with the cut on the left, represents the Jumbo strain, bred and owned by W. A. Hinkle, R. R. 7, Decatur, Ill. Mr. Hinkle issues a circular describing his boars and sows, and gives their records and winnings. Chester White hogs, when sent to market in car lots, always sell at the top price. There may be hogs of other breeds that sell as high, but none outsell them. A white load of hogs always causes the buyers to come quick for fear somebody else will get them.

Samuel Slabaugh, breeder of Hereford cattle at R. R. 2, Greentown, Ind., offers to sell some of his best cows with bull calves at side, at half value for the next thirty days, in order to make room for winter. He has cows that weigh 1,500 to 1,800 pounds; write him for prices.

Truman's Pioneer Stud Farm have made many sales recently, all of which we have not the space to refer to. A. & Chas. Waltz, of Spalding, Iowa, bought a pair of fillies, Boro Daisy and Eastern Princess, and they are show animals of the upper class. Geo. A. Metz, of Lacona, Iowa, bought one fine stallion and two fillies, all black with white markings. The Sugar Grove Percheron Horse Co., of Rushville, Ill., bought a fine imported Percheron stallion, this being the eighth stallion sold at that point by the Trumans. Remember that the address is Bushnell, Ill.

At the Hereford cattle sale, held at the American Royal Show, Kansas City, the 28 bulls averaged $190.54, and the 24 cows averaged $151.87. The top price bull was the yearling Castor, consigned by Dr. J. E. Logan, which we illustrated in our October number. He sold for $615.00 to Mr. F. L. Brown, of Sylvan Grove, Kansas. The top price female was Mildred, consigned by the Funkhouser Estate, and sold to T. F. DeWitt, Colorado Springs, Colo.

Fruits and Vegetables.

Arrangements have been completed for the Second Annual Fruit Show to be held at Purdue University during the week of the Farmers' Short Course, January 11-16, 1909. Great interest was shown by the fruit growers in the First Annual Show held last year. The exhibition this winter will be held under the joint auspices of the Indiana Horticultural Society and the Horticultural Department of the University. It is planned to make the fruit show bigger and better than ever. The society is providing generous premium list, over $200 in cash prizes being already assured. For premium list and further information apply to C. G. Woodbury, Experiment Station, Lafayette, Indiana.

There is a very fine monthly publication entitled The National Fruit Grower. It is practical and interesting for all who grow fruit for home or market. We have an advantageous offer from The National Fruit Grower, whereby we can send The National Farmer and Stock Grower and The National Fruit Grower, both papers, one year for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

The Oklahoma Agricultural Experiment Station has issued a bulletin entitled "The Twig Girdler." It appears that an insect is industriously engaged in injuring fruit and shade trees by girdling about the twigs and causing them to drop off. The injury is sometimes serious to young trees. All who are interested should write to the Agricultural Experiment Station, Stillwater, Okla., and ask for a copy.

At St. Louis closing days of the October market, small red onions were selling at 32 to 35 cents a bushel, but choice red onions were selling at 40 cents to 42½ cents in car loads on track. The white onions strictly choice were selling at 75 to 90 cents a bushel.

COME AND BUY THE CATTLE YOU NEED.

W. C. McGAVOCK, Sale Manager, Springfield, Ill.

ST. LOUIS AS A BEEF CATTLE MARKET.—The Eastern slaughterers of beef cattle prefer to buy at the St. Louis market to the fullest extent because it costs less to get the cattle home, and they arrive in better condition than if they were bought and shipped out from Kansas City. This difference in freight, time and shrinkage amounts to from 20 to 35 cents a hundred pounds. Although the Eastern buyers can afford to pay all this difference when they are obliged to, they surely endeavor to buy their cattle as cheap as they can; nevertheless it pays the shipper to send his cattle to be sold at St. Louis for the reason that there are three great interests—the butchers, the packers and the shippers—all competing for their cattle at the same time.

As an extreme example of the statement in regard to the benefits of shipping to St. Louis, Mr. T. C. Blackwell, of Jackson county, Missouri, had forty-four head of 1,232-pound steers on sale at the Kansas City market on October 28th. The best bid he could get for them was $4.40 per 100 pounds. Being dissatisfied with the bid, he decided to forward them to a better market. Fifteen years ago he would have shipped them to Chicago, whereas to-day the better market is at St. Louis, where they were sold the next day at $4.75 per 100 pounds. Mr. Blackwell estimated that his trip to St. Louis was worth a hundred dollars to him, and the buyer of the cattle did not consider them dear to him under the circumstances.

This applies to natives, Westerns or Texans. Twenty years ago Mr. E. B. Harrold, of Fort Worth, Texas, was a very active cattle shipper and feeder. He shipped cattle of the same grade and quality to Chicago, St. Louis and Kansas City. He was in a position to reach an accurate and impartial opinion, and he then said: "My shipments to St. Louis net me two dollars a head more than the cattle marketed at either Chicago or Kansas City." At that time the writer of this paragraph was receiving daily reports of every shipment from Texas, and he knew it to be the case. Since then St. Louis has increased in packing capacity ten to one, and it is now the most reliable and competitive beef cattle market on the continent.

The picture herewith represents a load of choice beef cattle that were sold early in September. They weighed 1,556 pounds, and were sold at the St. Louis National Stock Yards to the United Dressed Beef Company of New York at $7.75 per 100 pounds. The market was then a little better than it is now. The picture shows a fine load of fat cattle shipped by Heller & Akeman, of Columbia, Mo., and sold at the National Stock Yards.

THE ST. LOUIS HORSE MARKET.

A Talk With McFarlane, Whose Auction Day is Every Monday in the Year.

Mr. W. R. McFarlane is head of the McFarlane Commission Company, and in addition to holding the Monday horse auction at the St. Louis National Stock Yards the firm continues selling horses and mules at private sale every day in the week.

In response to questions asked him in regard to the market, Mr. McFarlane said as follows: "What we call plugs are badly blemished horses which have already served their time. There are many poor horses, and there are people who are obliged to use them, therefore a liberal number of plugs are sold at various prices, but mainly at $35 to $50 a head, and they are well sold at those figures. There are some culls sold for less money, but they have no business on the market, and when they sell for more, they get out of the plug class.

"Plain Southern horses recently sold in auction at $50 to $70 usually stand under 15 hands and weigh from 800 to 900 pounds. Extra Southern horses selling recently at $75 to $100 should stand 15.1 and weigh 850 to 1,000 pounds; with increased weight there is expected to be more quality and better condition. Then there are toppy Southern horses, 15.1 to 15.3 hands, fat, well broke, good ages, weighing 1,000 to 1,050 pounds, and selling at $110 to $150. All these are averages. The market changes. A light horse may outsell the heavier ones. The difference between an active and a slow market will make considerable difference in the selling price.

"Chunks are the next grade on the market. They are useful, short-coupled horses, plain grades, usually weighing 1,200 to 1,300 pounds, and should be five years old. Many such chunks, inferior and blemished, have sold at $110 to $125. A better class of plain chunks sold at $130 to $150, and good, well-finished 1,200 to 1,350-pound chunks have sold recently from $155 to $175. In the auction they sell individually upon their merits, and no hard and fast range of prices can be given. Three and four-year-old chunks are held too high on farms to be sold at a profit on the market where there is no great demand for them.

"Most of the draft horses sold here range in weight from 1,400 to 1,550 pounds. Very few of them weigh up to 1,600 pounds. At present draft horses are selling largely at $175 to $225, according to age, soundness and finish.

"Saddle horses sell here very largely at $150 to $200, but they can sell for less or more, on account of inferiority or excellence. Saddle horses may range in height from 14.2 15.3, and the ideal standard for a saddle horse is 15.2. In these days the saddler must be a combination horse; that is to say, he must be broke to drive.

"Toppy drivers should be 15.2 to 16 hands and well broke to city traffic. Business drivers, storm-buggy horses and surrey horses sell very largely at $165 to $250. There are extra individuals which bring more, but they are not many.

"In considering the horse trade it must always be remembered that it is only a few years since there was any concerted effort to concentrate the trade. We bring the horses and the buyers together, and all the expenses have to come out of the price of the horse. At St. Louis we stand nearest to the largest number of shippers and the largest number of buyers. If we went into comparisons of the cost of shipping in and the cost of shipping out, and the expenses of the market, we would find that St. Louis as a horse market economizes the transaction better than any other center.

"I believe that by the concentration and active market, the saving in time to the shipper, the ability to quickly get a car-load together, on the part of the buyer, the quick sale and small expense, the central location minimizing freights—these and other considerations make St. Louis a better market by an average of $5.00 a head than any other market in the country.

"Sometimes the shipper and the buyer have to divide this together, and at other times the shipper or buyer gets it all. Sometimes the difference is more; sometimes it is less. I am not claiming that the St. Louis market is the highest for the shipper and the lowest for the buyer at one and the same time, and do not mean anything of the kind, but I do mean and fully maintain that even in our dullest, worst and least active period we have the best clearing house for horses and mules on the continent, and, year in and year out, the money that comes out of the horse is less at St. Louis than it is at any other market.

"The horse and mule trade at the St. Louis market was enlarging all the time, until last year's panic struck us, and we are getting over that. The East is in need of horses, the army is short of horses, the foreign countries are all in need of horses, and all that is necessary is a continuance of revival of business to make things satisfactory on the range and on the farm to all who will raise a good class of horses for commercial uses.

"Our market of St. Louis has built itself up against odds until it does the largest business on record, and the market is being pushed further to the front by active and honorable solicitation and first-class service."

Mr. J. L. Buchanan, of Sherodsville, Ohio, is advertising a first-class imported Percheron stallion, a large bay stud colt and a seven-year-old dark-gray mare in foal. He also has Morgan horses. All stock is registered. See breeders' cards.

The Horse's Foot.

In considering the diseases to which horse flesh is heir, there are two things that should always be considered as of special importance: The teeth and the feet. The average period of usefulness of the horse is curtailed several years by the inadequacy of the teeth. In most horses at the age of fifteen the teeth have become rough and uneven, and from that time on the horse is a hard keeper, and the real cause is not known by the owner. In buying horses the teeth and the feet should receive most careful examination. Ordinarily, in speaking of the feet of the horse, we mean the part inclosed by the hoof wall. Looking at it from a standopint of comparative anatomy, the foot includes all below the knee and the hock. The artificial conditions under which the horse is placed and the unusual demand exacted of him result in almost every case in diseased conditions which render him incapable of doing the work he would otherwise do. Shoeing, which places him under artificial conditions, combined with the hard roads, overwork and improper feeding, soon produce inflammatory conditions which may result in side bones, ringbones, coffin-joint, lameness, cracks in the hoof wall, contracted heels, and a great many more diseases too numerous to mention. In many cases the horse must be shod; but there certainly is far too much shoeing done. It is surprising how much work the horse can do under most conditions without shoes, if he be brought gradually to the work, and a little care and judgment be exercised in this matter during the first three or four years of the colt's life. There are three things especially to be remembered if you wish to give this subject a little extra thought: First, as long as you use horses that have weak or defective feet for breeding purposes, just so long will you have horses with a predisposition to these things, and you will lose money on them accordingly; second, do less shoeing; a horse with fairly good feet will not need to be shod unless he be worked on the pavement, race track, or in mountainous districts; third, do not allow any horseshoer to use the buttress on the soles of the feet, nor the rasp on the outside; do not leave the shoes on longer than four weeks without resetting.

In substance, remember that the foot is the weakest part of the horse; that the service of the horse is worth money to you. Take good care of the horse's feet!—G. H. Glover, Colorado Agricultural College, Fort Collins.

DISTEMPER

Pinkeye, Epizootic, Catarrhal Fever, Influenza, Coughs, Colds, etc., are all positively prevented and quickly cured by Craft's Distemper and Cough Cure. Once used always used. Guaranteed to cure. 50c & $1 at druggists or direct prepaid. "Veterinary Pointers," new book, free. Wells Medicine Co., Lafayette, Ind.

THE VERY BEST MARKET, THE MOST CENTRAL HORSE MARKET ON THE FACE OF THE EARTH

—is at the—

ST. LOUIS NATIONAL STOCK YARDS,

in Illinois,

right opposite the city of St. Louis.

Auction sales of Horses are held MONDAYS, TUESDAYS, WEDNESDAYS, THURSDAYS and FRIDAYS.

Horses are also bought and sold by personal contract every day in the week.

The concentration of Horses should be where all can be assembled, sold and distributed at the least possible cost. For this reason the growth of the St. Louis Horse Market is the Marvel of the Age.

THE CENTER OF GRAVITY IN THE HORSE TRADE IS AT THE ST. LOUIS NATIONAL STOCK YARDS.

A HARD-LUCK RACE.

At Lexington, Ky., in the Tennessee stake for 2:06 pacers, there was an interesting record-breaking, hard-luck race, which did not attract so much attention as it would have done a few years ago, and yet it was full of startling incidents, and of a certainty the best horse did not win. This event, however, will always be used as an argument against the best three-in-five system, and it is well for our readers to know something about it.

In this race appeared the two sensational pacers of the year—Minor Heir, 1:59½, and The Eel, 2:02¼—and three others, five in all, and during the race no less than four of them won heats. The Eel and Minor Heir had met three times previously and in those contests the Heir had won twice and The Eel once.

First Heat, Minor Heir, 2:00½.

In the first heat as soon as the word was given, Dean shot Minor Heir into the lead at the first turn and took the pole, while The Eel was sent after him but kept slightly in the rear and still forcing the leader into a fast clip, and the quarter was made in a half minute flat, the half in 1:00½, the three-quarters in 1:30¼, and then McEwen pulled out and made a great drive, and for an instant it looked as though The Eel was gaining, but Dean went to the whip and shaking it hotly over the back of his horse, the latter responded and won by over a length in 2:00½.

In this heat the stallion record of 2:00½, made by Star Pointer at Springfield, Ill., in 1897, was equaled by Minor Heir. This is the world's record for a first heat, as the record made by Star Pointer was in the third heat.

Second Heat, Minor Heir, 2:02.

Going away in the second heat, McEwen dropped in behind Minor Heir and trailed to the stretch, where he cut loose. From there to the wire it was a great contest, both teamsters were working hard, but Dean manged to land his horse first by a head in 2:02.

Third Heat, The Eel, 2:05¾.

In the third heat it was seen that Minor Heir was not fitted for such strenuous racing, heat after heat, and he appeared much distressed when he was brought out again, and while he had been made the favorite after the first heat, the field now sold against him. However, he led the bunch to the half in 1:01½ in this heat, but was then passed by The Eel and Jerry B. about the three-quarter pole, and Dean pulled him up somewhat, while The Eel had no difficulty in winning from Jerry B. in 2:05¾.

Thus we have the finish of a race in which the fast horses exhausted themselves on the three first heats, and the slow horses reserved their energies for the final struggle.

Fourth Heat, Copa de Oro.

In the fourth heat, at the first turn, The Eel made a reeling, staggering break, then swerving into the sulky of Jerry B., tore off a tire from the latter's sulky, and then kept running. He did not lose much, and when he did regain his stride he was driven for the heat, but Copa de Oro had the speed and took the heat in 2:08½ by about four lengths. Jerry B. jogged in fresh and was given fifth place.

Winning Heats, Jerry B., 2:06½, 2:06¼, 2:07¼.

The fast horses now being tired out, the race belonged to Jerry B., whose record is 2:04¼. The driver of Minor Heir simply tried to hold what he had already gained. The Eel, however, fought for every heat and in this race showed himself to be one of the greatest race horses that ever lived. He won one heat and was second in the other six, showing that he was fighting from start to finish.

The sixth heat in 2:06¼, by Jerry B., equals the world's record for that heat; in the seventh heat he established a new record for a seventh heat, 2:07¼, and the seven heats are the fastest ever paced.

The Horseman says: "In the seven-heat race there was no true test of endurance among all the horses. The two best horses in the race were so sorely tried in this respect, the one against the other, in the first three heats, they were unable to beat horses of a slower class, which had not been raced out. The result was the best two horses were defeated. Neither was fairly beaten as to speed or endurance."

Belgium Horses at Home.

There are about 275,000 horses in Belgium.

In 1906 Belgium exported 29,000 horses, valued at $245 per head—about 25,000 going to Germany.

In 1907 Belgium imported 52,404 horses, including 25,891 for slaughtering purposes.

In 1907 the horse importations included 117 head from the United States.

In 1907 Belgium exported 571 horses to the United States.

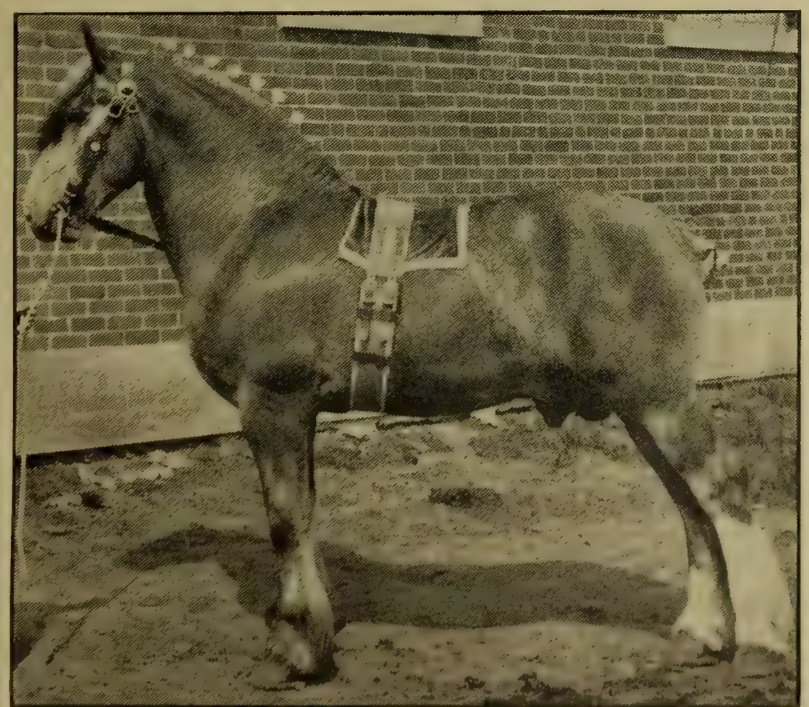
The Belgians send us draft stallions at a high price and buy an ordinary grade of American work horses at the auction market price.

The Belgian breeders are now making a point of keeping their best stallions and mares at home.

The owner refused $8,000 for the world's champion at the Vincennes Exposition of 1900. Twice as much has been refused for the champion of 1906-1908. The best mares sell or are refused sale at $3,000. Eighteen years ago the most noted of Belgian stallions sold for $1,200.

Belgium buys worn-out horses from England for slaughtering purposes and light draft and saddle horses from France and Holland.

The government of Belguim has found a way to encourage private enterprise in horse breeding.



BRADGATE BLUE JACKET—Shire stallion. Imported, owned and exhibited by Truman's Pioneer Stud Farm, Bushnell, Ill. BRADGATE BLUE JACKET is two years old; weighs 1,900 pounds; has the very best of style and action; stands on large, sound feet, with best of legs and joints. He was shown at the great London Shire Horse Show in April last, and in a class of 102 shown he stood fourteenth, which was inside the ribbons. He is a beautiful grey, and has started out well since arriving on this side, having won first at the Iowa State Fair and first at the Illinois State Fair this year. He will be seen at the Chicago International, where Messrs. Truman will show the most select and choicest exhibit of Shire horses ever seen in the United States.

Western Horse Raisers

—are invited to—

REMEMBER

that we have conducted

THE MOST SUCCESSFUL SALES of

Western Range Horses and Mules

ON RECORD.

Our sales for the season of 1908 commenced in June, and we will hold sales every other Tuesday to the end of the season.

Write for November Sale Dates.

For further information address,

CAMPBELL & REID and

WESTERN SALE STABLES CO.,

J. J. SEARCY, Secretary,

NATIONAL STOCK YARDS, ILL.

In New York City, early in October, at a special sale of draft horses, the best prices of the year were realized. The New York Herald said: "For a pair of blue roans weighing close to two tons a down-town trucking concern paid $800, the top price of the day. A pair of black geldings that tipped the beam at 3,800 pounds went to one of the big brewers for $775, while a pair of bays with a little less weight but quite as much quality brought $750, the buyer being a coal dealer who uses the best class of horses on his wagons."

Hamilton Busbey, a well-known authority on horse matters, says that on a visit to Kentucky he found that J. B. Haggin, breeder of thoroughbreds, had bred quite a number of thoroughbred jacks to mares. He also reports that others are breeding surplus thoroughbred mares to saddle stallions and to trotting horses. The fact of the matter is that all the race horses of merit will be saved for better times, and the sooner all the others are bred to raise a fine mule, a work horse or a cavalry horse, the better it will be for all concerned.

THE HORSEMAN COMBINATION.

The Horseman and Spirit of the Times is the oldest and best weekly horse paper in the United States. It is edited by the very best writers, and the Christmas edition alone is worth the subscription price. We have made arrangements whereby we can offer The Horseman for one year, The National Farmer and Stock Grower for one year, and one copy of our cloth bound, 240 page Book of Live Stock Champions, all for two dollars. This is the grandest subscription combination ever offered. We have only 1,000 copies of The Book of Live Stock Champions remaining on hand. It was published in 1905. There are 500 pictures in the book, commencing with the Chicago World's Fair and ending with the World's Fair at St. Louis, there are pictures and records of champion cattle, hogs, sheep, horses, colts, mules and jennets. Send in your two dollars before it is too late. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

BE SURE TO CONSIGN YOUR CATTLE, HOGS AND SHEEP

To Be Sold For Good Prices at the

St. Louis National Stock Yards

Where They Will Sell to the Best Possible Advantage.

The Grand Central Live Stock Market in the United States.

Total Volume of Business in the Year 1907: 1,132,740 Cattle, 2,065,145 Hogs, 564,920 Sheep, and 117,379 Horses and Mules.

Hog Receipts and Sales the Largest Ever Known Upon the Market.

Cattle, Sheep and Car Receipts Larger Than During the Year Previous, Owing to Good Sales.

Great Record Made in Resisting Declines—Holding Up Values When Competitors Were Falling.

Range Horses and Mules Averaged Higher in Price Than During Any Previous Year in the Trade.

Day Records of the Year: 12,321 Cattle, 17,496 Hogs, 8,781 Sheep, and 1,909 Horses and Mules—A Fair Indication of Market Requirements.

The Most Competitive Market, the Most Active Market, and the Best Market on the Continent.

New Buyers Are Coming Into the Market Every Month in the Year.

Ship Your Stock to Commission Firms Doing Business at the St. Louis Market.

The Best Hog Market.

Owing to the great variety of hogs, from strictly common to the strictly choice, and from 75 pounds to 300 pounds average, the price is extended wider than usual, therefore comparisons are difficult. But when they sell tops at St. Joseph at $5.85; and tops at Omaha at $5.75; and tops at Kansas City at $5.90; and tops at Chicago at $6.07½; when tops are selling at $6.10 at St. Louis, as they did on October 30th, it is easy to figure which is the best market. The fact of the matter is that the increase of over 300,000 hogs at the St. Louis market is due to the fact that St. Louis is the best average market for the hog shippers of Iowa and all of Kansas. The Western Missouri shippers should by all means ship direct to the St. Louis market.

Native Beef Cattle.

Choice cattle are scarce. During the last week in October, the top price was $7.50 per 100 pounds. They were top cattle and not many of them. Good-weight cattle to sell above $6.75 had to be choice. Sales included some 961-pound steers at $6.75, although plain 1,425-pound steers sold at $6.25, and 1,300-pound steers at $6.00. It is a market on which quality and fatness count. Steers 1,148 pounds, high quality and fat, sold at $6.75; steers 1,194 pounds, half fat and without quality, sold at $4.90 per 100 pounds.

Quarantine Cattle at St. Louis.

It is usually worth $2.00 a head more to the shipper for the quarantine cattle to be at St. Louis over the results obtained at other markets. Sometimes more, sometimes less, but, year in and year out, it amounts to the $2.00 average. Prime meal-fed cattle are now, at opening of November, quoted at $5.50 to $6.40 per 100 pounds; good to choice fed steers, $4.75 to $5.50; good to choice grassers, $4.25 to $4.75; medium to good grassers, $3.65 to $4.25; common to medium grassers, $2.75 to $3.65; good to choice cows, $3.00 to $3.50; fair, medium cows, $2.65 to $3.00; cutters, $2.40 to $2.65; canners, $1.75 to $2.40 per 100 pounds.

James H. Campbell,

Expert live stock salesman, is at the head of his own organization, with headquarters at the St. Louis market. He is one of the active men in the trade—an enthusiastic worker, knowing that he has the best market in the country to back him. Thoroughly competent and with a first-class organization, he is holding his old customers by splendid sales and making new ones all the time. Mr. Campbell issues a circular every week of his own composition containing his advice to intending shippers. Write for information to James H. Campbell personally and consign cattle, hogs and sheep to Campbell Commission Company, National Stock Yards, Ill.

OUR REFERENCE IS EVERYONE WHO HAS EVER SHIPPED US A CONSIGNMENT — OUR GOOD WORK IS OUR REFERENCE.

JAMES H. CAMPBELL,

Veteran Commission Salesman.
General Manager of the

Campbell Commission Company

NATIONAL STOCK YARDS, ILL.

Ship to the Best Market and the Best Firm on that Market. There is more competition at St. Louis for Native and Southern Cattle than at any other Market on the continent. The St. Louis Hog Market continues to grow, and is habitually 10 to 25 cents a hundred pounds higher than the Missouri River Markets. Sheep and Lambs sell at St. Louis to the advantage of the shipper.

WE KNOW THIS MARKET AND RECOMMEND IT ABOVE ALL OTHERS.

Do not forget us when you wish to know anything about either the Sheep, Hog or Cattle Market or future prospect.

Don't hesitate to write or ship to

James H. Campbell,

National Stock Yards, Ill.

EQUALLY EXPERT SERVICE IN EVERY CLASS OF STOCK—SHIP US YOUR CATTLE, HOGS AND SHEEP.

Stock Cattle Market.

The market for native stock cattle at the St. Louis National Stock Yards is active to the extent of receipts. Inferior to fair stock cows are selling at $2.00 to $2.75 per 100 pounds; fair to medium stock heifers at $2.50 to $2.95; good stock heifers at $2.80 to $3.25. Inferior and light stock steers are to be had at $2.50 to $3.20; medium to good at $3.25 to $3.50; feeding steers, 800 to 900 pounds, at $3.25 to $3.75; feeding steers, 950 to 1,000 pounds, fair to strictly good, at $3.80 to $4.00. This is the time for those who have good pasture and feed to buy stock cattle.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

The Shippers' interests ARE OUR INTERESTS, and our rapidly-increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

Try us once. We can keep you posted. We have a great and expanding Market at St. Louis.

Evans-Montague Commission Company

Box 68,
NATIONAL STOCK YARDS, ILL.
FORT WORTH, TEX., and at KANSAS CITY.

Sheep and Lamb Market.

Sheep and lamb receipts at the St. Louis National Stock Yards, in October, were 65,000 head, the largest for the month since the establishment of the market. Closing prices included good mutton sheep at $4.00 to $4.60, and the bulk around $4.25. Good to choice lambs sold at $5.25 to $5.85, but the majority of the lambs were thin and inferior; they were fair at $4.25 to $4.50, but all kinds of culls and inferior lambs sold at $3.50 to $4.00 per 100 pounds. During the last week a load of choice 108-pound Western wethers reached $4.60. Good stockers were selling from $3.25 to $3.75. Fair grades at $2.50 to $3.00, and old common skins at $1.00 to $2.00. Most of the bucks are selling at $2.50, with a few good ones up to $3.00, and common ones around $2.00—all quotations being at the price stated per 100 pounds.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their customers. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Ill.

VIEWS AT THE YARDS.—Captain Chas. D. McCoy, of Charleston, S. C., one of the principal Southern buyers on the market. He is in conversation with John K. Maxwell. They are talking about the price of mules—not about the election.

The St. Louis Live Stock Exchange held the twenty-third annual meeting on Saturday, October 31st. The officers elected were: President, W. A. Moody; Vice-President, J. W. Sanders. The Directors are T. J. Daniels, E. E. Overstreet, F. C. Pinkerton, C. M. Hanna, E. C. Gibson and C. A. McCormack. Board of Arbitration—Wm. Cassell, Joseph Berry and W. A. Long. Board of Appeals—E. E. White, D. H. Sprecher and H. W. Mann. The Board of Directors re-elected H. F. Parry, Secretary.

"WE ARE THE RING LEADERS."

Leaders in Making Sales.
Leaders and Advisers of Successful Stock Raisers and Shippers.

The GODAIR-CROWLEY COMMISSION CO. . .

solicit your consignments of Cattle, Hogs and Sheep for sale at the St. Louis National Stock Yards, where there is a splendid market and where our selling force has no superior. We are energetic and careful, that our shippers obtain the highest prices and best service on the market.

For market information; for loans to buy feeders; for all facilities and courtesies, write or call on

GODAIR-CROWLEY COMMISSION CO.,

NATIONAL STOCK YARDS, ILL.,
Fort Worth, Texas. Kansas City, Mo.

VIEWS AT THE YARDS.—Mr. Thos. H. Gilroy, recently from Kansas City, now of the horse and mule commission firm of Holland, Gilroy & Conway. This firm has been organized but two months and is now an important factor in the St. Louis horse and mule market. "Say for me and in behalf of Mr. Holland," said Mr. Gilroy, "that our short experience at the National Stock Yards has given us a feeling of satisfaction and confidence in the market. We commenced business in the midst of the uncertainty of a national election and with a drouth extending into some of the best buying territory, but we have no hesitation in saying that this is the proper business center for the concentration and sale of horses and mules. There are facilities we did not know of and we find new outlets and possibilities that tend towards the sale of greater supplies and enlarged service. We feel that there is a great future before us and we will not hesitate to ask our friends and patrons to consign their horses and mules. We congratulate ourselves that the market is full of life and energy. We find many business firms here whose names are honored in the trade by reason of their high character for commercial reliability. They have made the market favorably known to the ends of the earth, and we are proud to be associated with them. The firm of Holland, Gilroy & Conway will endeavor to live up to all standards and records of the market."

Milch Cattle at the Stock Yards.

The usual difference in the quality and condition of the milch cattle at the Stock Yards is the cause of an extreme range in price. There are common, thin cows with common, thin calves, at $15 to $25; fair milkers, at $26 to $35; good milkers at $37.50 to $50. A good string of sure-enough cows with calves would outsell the highest quotation.

The Pure-bred Stock Sale.

Mr. W. C. McGavock, of Springfield, Ill., will hold a public auction of pure-bred cattle on November 10, 11 and 12, at the St. Louis National Stock Yards. There will be one day for each breed. The Angus cattle will sell on Tuesday, November 10; the Herefords on Wednesday, November 11, and the Shorthorns on Thursday, November 12. Mr. McGavock is too clever a salesman to hold a sale on Friday, the 13th, so he left that day open. The sale ought to be attended by a good number of buyers. Without the breeding on beef lines choice cattle cannot be produced.

McFARLANE COMMISSION COMPANY...

HORSE and MULE COMMISSION SALESMEN

AUCTION EVERY **MONDAY** IN THE YEAR.

These Monday sales at the St. Louis National Stock Yards are the best attended of all sales and produce the most satisfactory results for the shipper.

We also solicit consignments of Mules to be sold by the most competent salesmen on the best market in the country.

MULE DEPT.—W. R. McFarlane, Lan. B. Morris.
HORSE DEPT.—E. L. Hawkins, S. B. Howell, Eddie O'Connell.
OFFICE—Frank Mulholland.
AUCTIONEER—Col. I. M. Howard.

YOUR CONSIGNMENTS ARE SOLICITED.

Write For Weekly Market Report.

McFarlane Commission Company,
NATIONAL STOCK YARDS, ILL.

Fancy Butcher Heifers.

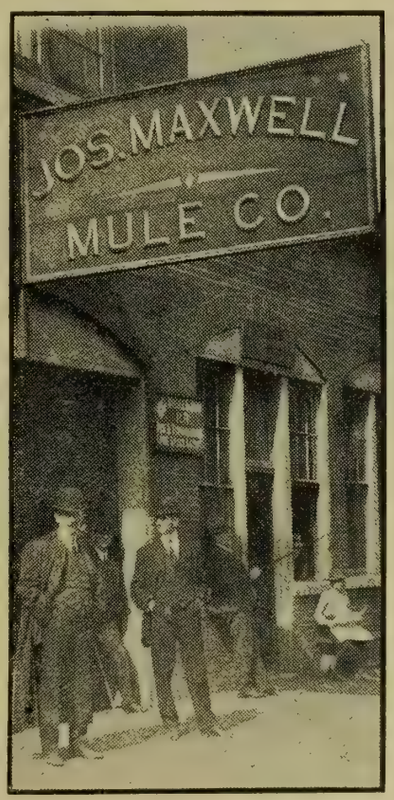
It is easy to quote fancy butcher heifers at $5.50 to $6.00 per 100 pounds, but not so easy to find them in the market. The St. Louis butchers telephone to their buyers saying: "Get us some of those fine, fat, light red heifers," and the answer comes back: "There ain't none here." The best demand on the market; the highest price paid for the weights, 800 to 950 pounds; the most profitable to raise, and none here. At the St. Louis National Stock Yards there is market for 100,000 of these heifers in a year. How to make them, breed the cows with pure-bred Shorthorn, Hereford or Aberdeen-Angus bulls, feed the cows a little besides grass just before and after calving. Feed the calf bran and corn meal while he is running with his mother, and keep him growing. He is worth $35 to $40 more as a yearling than the scrub calf will be that is running on short pasture.

Valuable Market Information.

It is the part of an active live stock commission firm to gather information for the benefit of their patrons. Some of the investigations require much original correspondence and careful arrangement. The Godair-Crowley Commission Company, with headquarters at the St. Louis National Stock Yards, have the investigation habit, and embody the results of their inquiry in their weekly circulars. They are figuring up the supplies within shipping distance of the principal markets. The advice the firm is able to give those who are preparing stock for market is well worth having. If in need of information concerning market prospects, address Godair-Crowley Commission Company, National Stock Yards, Ill. This is one of the leading firms in the yards, thoroughly equipped to do the best kind of service in all departments.

Western Range Horses.

The season of 1908 is drawing to a close. Messrs. Campbell & Reid and the Western Sale Stables Company at the St. Louis National Stock Yards have sold thousands of them every other Tuesday. The November sale is set for Tuesday, the 10th inst. It is expected to wind up the season. It will pay horsemen to attend this last sale. There are bargains to be had. Last sale, mares sold from $17 to $73.50 per head. Considerable numbers of mares sold from $30 to $45. Colts sold from $10 to $26.50, and the best two-year-olds sold up to $45. There is money to be made buying these horses and fixing them up for the domestic sale ring.



VIEW OF THE YARDS.—Front door of the mule barn of the Joseph Maxwell Mule Company at the St. Louis National Stock Yards. The foremost figure in the picture is Mr. W. J. Burroughs, of Philadelphia, buyer of horses and mules for shipment to the East. It is said that he ships more horses to the East than any other dealer on the market. Frank Maxwell, standing near Mr. Burroughs, is a son of the veteran mule dealer, Joseph A. Maxwell. Inside the door stands Mr. W. E. Jameson, manager of the horse and mule market for the Stock Yard Company, and leaning against the window is the very indistinct figure of Mr. J. H. Timmerman, live stock agent of the Mobile & Ohio Railway, who has acted in that capacity since the opening of the horse and mule market.

Horse-radish is selling in St. Louis at about $4.00 per barrel.

Hog Market at St. Louis.

On October 31st, at the St. Louis National Stock Yards, the best price for hogs was $5.90 per 100 pounds for choice butcher quality, weighing 259 pounds. The bulk of the hogs averaging 200 pounds and upward sold mostly at $5.60 to $5.80. It being Saturday, only 4,500 hogs were on sale. The highest price for hogs, 190 pounds average, was $5.65; the highest price for 150-pound hogs was $5.55. A number of lots of dry-weather pigs, 75 to 98 pounds average, sold at $3.50 to $4.75 per 100 pounds. During the month of October the hog market declined a good cent a pound. The quality is getting poorer and the average lighter.

FIVE TO TEN THOUSAND
FULL AGE MULES

—can be purchased at the—
ST. LOUIS
NATIONAL STOCK YARDS
any business day in the year.

THE ST. LOUIS MARKET
WAS ALWAYS
FIRST
IN THE MULE TRADE
AND NOW
IT IS GREATER THAN EVER.

DORSET SHEEP — First-prize winners at the Wisconsin State Fair. Dorset sheep are great favorites with all who keep them. They are noted for lamb raising. The owner of these lambs sells lambs on the Christmas market. He breeds the ewes so that the lambs come in the fall, and, when lambs are scarce, receives high prices for them. Dorsets are advocated as being the lambs for the South. They can be made to bring lambs twice a year and often bring twin lambs. We are told by the buyers of the St. Louis market that if they could obtain a supply of half-bred Dorset lambs there would be market for a million a year at the St. Louis market alone. The winter and early spring months, before grass lambs come to market, is the time when lambs bring the highest price. Anyone desiring information concerning Dorset sheep can get it by writing to the editor of this paper, and anyone having experience with Dorset sheep are invited to sent it to the editor of this paper.

INTERNATIONAL LIVE STOCK EXPOSITION, CHICAGO,

November 28 to December 10, 1908.

The organization of the International Live Stock Exposition at Chicago was one of the most important events in the history of the development of the live stock industry.

In December, 1907, there were on exhibition at this great show 7,523 of the finest meat and draft animals in the world, contributed by twenty-two states, one territory and four foreign countries.

These animals were entered in competition for more than 2,400 premiums, aggregating over $75,000.00, offered in upward of 600 classes of cattle, horses, sheep and swine, besides packing-house and other interesting exhibits, all of which were viewed by fully 400,000 visitors from nearly every state in the Union and foreign countries.

No such object lesson in everything which pertains to excellence in the breeding, feeding, marketing, manufacturing and distributing of animals and animal products was ever previously placed before the producers and consumers in this or any other country.

The success of this great annual show has awakened much interest both at home and abroad, and a marked improvement in American flocks and herds has been the result.

The object of this movement is to secure better animals for breeding, marketing and exporting, thus encouraging greater consumption of American animals at home and abroad.

The "International" has been a triumphant success from its very inception and each of its series of exhibitions has been an improvement over all previous shows.

The next grand annual exhibition will be held November 28th to December 10th, 1908, in the International Amphitheater and about twenty adjoining buildings at the Union Stock Yards, Chicago.

Official correspondence with prominent breeders and feeders throughout the country demonstrates that the next show will undoubtedly be the most magnificent and successful one of the series, with a larger foreign representation than ever before. Competition bids fair to be most spirited in all breeds, and new features and attractions will be added to the many heretofore included.

No progressive farmer, feeder or breeder can afford to miss this leading annual event.

Sheep Always Make Good.

I do not believe that any reader of this paper can go wrong in keeping a bunch of sheep. They will do well in most any locality, except on very low ground, and they are the best animals to have around to keep things cleaned up. Begin with a small flock and learn how to take care of them; learn how to produce the nicely-flavored mutton which city buyers want, and the trick of money-making is done. Many do not understand sheep; they do not take the pains to learn how to breed and handle them, and after two or three years it frequently happens that the sheep are replaced with some other stock. Those who began with a dozen sheep a few years ago have increased their flocks, until to-day we see more small flocks on general grain farms than ever before. I saw a splendid bunch of lambs on a forty-acre corn field in October. They were making good, and they were not hurting the corn one bit. They lived there for three or four weeks, and their keep was almost nominal. —L. C. Brown.

SAW WOOD EASILY.

Have you wood to saw? Posts? Poles? Have you any sawing of any kind, including the sawing down of trees of good size in the woods?

If you have, let us tell you that the Folding Sawing Machine advertised elsewhere in this paper is a mighty valuable thing for you. Leaf through this paper until you find the little advertisement and read it. Then write to the makers and give them a chance to tell you about it—what it is, what it does, how much labor it saves, how easily it is handled, how easy it is to carry about from place to place, etc.

The advertising is just started in our paper. We welcome it because the Folding Sawing Machine is something every man with wood sawing to do ought to have. Don't fail to look up the ad and then write to the Folding Sawing Machine Company, Chicago, and let them tell you all about the machine. Kindly mention this paper.

Sheep Notes and Items.

A sheep raiser in Ohio mentions ewes that bred and were healthy up to eighteen years of age. This is entirely creditable to the ewes, but the right way is to send the ewes to market at latest when they are six or seven years old.

Mr. R. C. Johnston, of Lawrence, Kas., who has advertised Angora goats in the breeders' columns of The National Farmer and Stock Grower for the past five years, won two third prizes, three first prizes and one championship at the American Royal Show of 1908. He has a fine flock of high-bred, healthy goats.

The state of Ohio is coming back into the sheep business. Ohio formerly had the lead of all states in wool production, but, in line with other states, the production was decreased. They are picking up again, and the county of Knox in Ohio has upward of 125,060 sheep. This is an example to follow. Ohio has high-priced land, and if they can raise sheep there at a profit, two profits can be made in such states as Oklahoma, Arkansas and Missouri.

In a letter to the American Stockman Mr. W. S. Cooper, of Villa Nova, Miss., writes that he is making 60 per cent. per annum out of a small flock of sheep. This is the result of two-years' experience. He concludes his letter as follows: "I would say to my brother farmers, get you some sheep, give them a fair chance and you will find them to be your best friends in your business."

It is a remarkable fact that within the past twenty-five years the sheep of the United States have changed wonderfully. Formerly two-thirds were little Merinos and were raised mainly for wool, with mutton as the incident, whereas to-day two-thirds are English mutton sheep raised for meat, and with wool as the incident. There are many Merinos on the Western ranges, but most of them are fully one-third larger than they were in 1882, when there were plenty of sheep and not enough good muttons to talk about. The change was caused by the continual reduction in the price of wool, which closed many wool growers out of business. Now that the cnange has taken place, it is very good for those who remain or intend to go into the business.

"Shoe your horses without nails" is the novel advertisement of the National Nailless Horse Shoe Company of Philadelphia. For particulars address Dept. C, Nailless Horse Shoe Company, Twentieth and Commerce streets, Philadelphia, Pa. This is surely worth investigating. See advertisement on page 14.

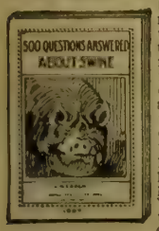
How and where to trap, and to become a successful trapper. It's a regular Encyclopedia. Price, $2. To our customers, $1.25. Hides tanned into beautiful Robes. Our Magnetic Bait and Decoy attracts animals to traps, $1.00 per bottle. Ship your Hides and Furs to us and get highest prices. **Andersch Bros., Dept. 87 Minneapolis, Minn.**

THE 500 QUESTIONS ANSWERED.

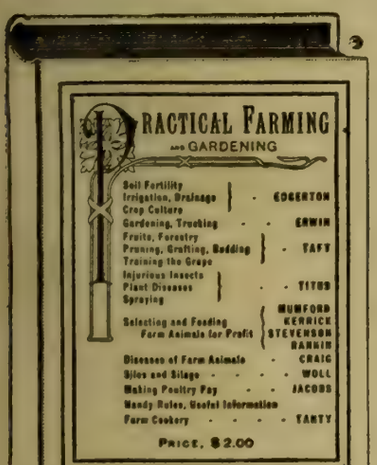
This is all about swine, and is a book by L. H. Cooch. There are 526 questions and 526 answers. They are natural questions and practical answers. The questions relate to breeding, mating, feeding, pasturing, fattening, management, diseases, etc., of swine. It is a complete veterinary authority on all swine diseases. The answers to questions on feeding alone, if properly attended to, will put enough pounds on one pig to pay for many books. We are sending The National Farmer and Stock Grower for one year and the 500 hog question book for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.



Handling Fall Pigs.

The man who raises a bunch of September pigs and gets them through the winter in good condition has something of a job on his hands. In the feed lots, following cattle, may be a good place for the pigs to run, but their sleeping quarters should be separate from the older hogs. Several years ago we had about 100 fine fall pigs, which we run in the feed lots with the rest of the hogs. Our practice, then common with other stockmen, was to run all the hogs, big and little, after the cattle, from about November 1 to April 1. After the real cold weather came on there was hardly a morning when we did not drag out two or more of those pigs. They had piled in with the big hogs and had been smothered. By spring there were about a dozen left. Fall pigs need extra care, and while they may run after cattle during the day, if you expect to save them, get them out every night and house them where not more than a dozen will bunch together.

Practical Farming and Gardening is a book that weighs thirty ounces ready for mailing. It is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmer's instruction book. The feeding chart, which is the frontispiece, is worth more to a stock farmer than any publication heretofore issued. It is worth a ten-dollar bill to any stock farmer. The



book itself is a wonderful production. Soil fertility, irrigation, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, hog, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. Eleven of the top-notch stock and agricultural experts compiled this book. They did the work so that farmers and farm boys could understand it. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. We buy large quantities at one time. We obtain this book for a very low price considering its value. Send One Dollar and we will send you **Practical Farming and Gardening**, postage paid, and The National Farmer and Stock Grower for one year. This is a grand offer. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Best Sows to Keep.

When the market offers a premium for heavy hogs, many are tempted to send off their old sows and rely upon the young sows for the next crop of pigs. I have always had best success with sows that were two years old and over. A young sow does not finish her own development of frame and muscle until she is about sixteen months old. If we breed her so that she farrows her first litter when she is twelve or fourteen months old, we can hardly expect a robust litter. Old sows should be kept as long as they are good mothers and bring fair-size litters. They bring strong pigs and will lose fewer pigs than the young sows. In our own herds I have noticed that our old sows averaged better than six pigs, while the young sows, with first litters, averaged about four. Sometimes the pigs from young sows look nicer than the pigs from older sows, but the latter invariably finish out better, and I think are of more robust constitutions.—L. C. Brown.

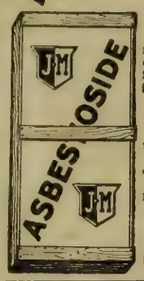
The Bushnell Horse Show.

Undoubtedly one of the most successful horse shows ever held in Illinois outside of Chicago and the Illinois State Fair was held at Bushnell, Ill., on Thursday and Friday, October 15th and 16th. This was the first annual show of the Bushnell Horse Show Association, of which Mr. J. M. Brandt is President, and Mr. J. G. Truman, the well-known Shire horse importer, is the General Manager. The show was open to the world, and when the entries closed on Wednesday previous to the show, they totaled 521. Regular classes were made for pure-bred Shire, Percheron, Hackney and Roadster horses, grade draft mares, geldings, and mules of all ages. In the driving and saddle horse classes some of the leading show horses of the country were on exhibition. One of the great attractions of the show was the special exhibit made by Truman's Pioneer Stud Farm, which contained no less than forty Shire, ten Hackney and ten Percheron stallions, together with several of their noted show Shire and Hackney mares. Queen of Diamonds in her usual form was the star of the show and looked her best. The ribbons were awarded by Cols. J. F. Meyers and Matt Biers, and it is needless to say gave the very best of satisfaction. The parade of prize winners, which took place at four o'clock on Friday, was fully three-quarters of a mile long, and the finishing touch of the show was put on when a parade of thirty-five profusely-decorated automobiles fell in behind the prize-winning horses. Notwithstanding the fact that it was only some three weeks ago that this show was first talked of, it was very gratifying to the management and to the citizens of Bushnell to see the crowd on Thursday, estimated at 5,000 to 7,000, and on Friday 12,000 to 15,000 people.

FIRE PROOF CONSTRUCTION BEATS FIRE INSURANCE

Save Money, Get Fire Protection Without Extra Cost, Increase The Life and Value of Your Buildings by Covering Them With—

J-M ASBESTOS ROOFING



No other ready roofing offers fire protection—J-M is the **only** Asbestos roofing. Others are made of wool felt, rag stock, paper, shoddy, coal tar and other highly inflammable materials. **Asbestos**, the natural mineral rock, is the foundation of J-M Roofing. That's why **its wearing life is practically unlimited.** That's why—

IT NEVER NEEDS COATING OR PAINTING

Anyone can lay it with hammer and knife. And it stays laid and watertight, in all weathers, in any climate.

USE ASBESTOSIDE for siding any farm building. Easy to apply, low in cost, durable, attractive in appearance, fire resisting, needs no painting.

Write for Free Samples and Prices and our Book No. 61 This book figures out for you how to save about half your roofing money.

H. W. Johns-Manville Co. 501-505 North Third Street, St. Louis, Mo.

WHITE MARY, 5th—Champion Large Yorkshire sow. Bred, owned and exhibited by B. F. Davidson, Menlo, Iowa. The owner says that the picture does not do her justice. She shows a trifle wrinkly on account of the position in which the picture was taken, whereas she is as smooth as an apple. This sow was farrowed March, 1905. In 1907 she was champion at the Iowa State Fair, also in 1908 champion at the Iowa, Minnesota and Wisconsin State Fairs. She weighs 640 pounds. Although it is difficult to show a white hog against a white background, we think this sow is worth studying. According to Professor Plumb, the Large Yorkshire is a superior bacon producer, and raises large litters. A sow is referred to that reared 153 pigs in 13 litters, and one of her daughters reared 33 pigs in 3 litters. A Canadian breeder raised 96 pigs in three years from an imported sow without apparent injury to her constitution.

How About That Manure Spreader?

It seems incredible, but there are still a number of farmers who continue to spread manure by the old fork method—or are letting it rot in the barn yard—which means less farm profits.

The manure spreader has come to be a farm necessity. The farm can only be made to pay by keeping the soil in the highest state of fertility. That means making the most of the manure, the best of all fertilizers, and the only one that is produced on the farm.

All agree that manure can be made to go farther and produce better results by spreading with a machine than when spread by hand. The popular estimate is that the spreader doubles the value of the manure. If this be true, or approximately true, it will be easy to arrive at the conclusion that a spreader will pay for itself in increased crops and soil benefits in one or two years.

With a view to preventing this great waste, the International Harvester Company of America is offering to the farmers of the country, through their local dealers everywhere, three most excellent machines. These are: Corn King, the Cloverleaf and the Kemp Twentieth Century Spreaders.

Write direct to the International Harvester Company of America, Chicago, Ill., for catalogues, booklets and complete information.

Described Him.

A gentleman who takes a business view of things, when recently asked respecting a person of quite a poetic temperament, replied:

"Oh, he's one of those men who have soarings after the infinite and divings after the unfathomable, but who never pays cash.'

LET US TAN YOUR HIDE,

Whether Cow, Steer, Bull, or Horse Hide, Calf, Dog, Deer, or any kind of hide or skin, soft, light, odorless and moth proof for robe, rug, coat or gloves, and make them up when so ordered.

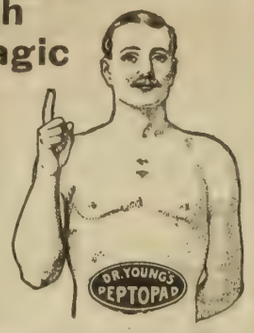
But first get our illustrated catalog, with prices, shipping tags and instructions. We are the largest custom fur tanners of large wild and domestic animal skins in the world.

Distance makes no difference whatever. Ship three or more cow or horse hides together from anywhere, and Crosby pays the freight both ways. We sell fur coats and gloves, do taxidermy and head mounting.

The Crosby Frisian Fur Company, Rochester, N. Y.

Please mention Nat. Farmer and Stock Grower.

Stomach Troubles Vanish Like Magic



FREE to Every Man or Woman

Would you like to eat all you want to, and what you want to, when you want to, without a chance for trouble in your stomach?

Would you like to say **farewell** for the rest of your life to Dyspepsia, **Indigestion**, Sour Stomach, Distress after eating, Nervousness, **Catarrh of the Stomach**, Heart Fluttering, Sick Headache and **Constipation**?

Then send me 10 cents to cover cost of packing and I will mail you absolutely free one of these wonderful Stomach Drafts. They regulate the bowels, relieve soreness, strengthen every nerve and muscle of your stomach, relieve you at once and make you feel like a new man or woman. So write today enclosing 10 cents for the postage, etc., and get one of these wonderful Stomach Drafts that **are celebrated** because they **cure** where medicines fail. Write Dr. G. C. Young, 304 National Bank Bldg., Jackson, Mich.

DIRECTIONS FOR SPRAYING.

Timely Information For Fruit Growers.

Two or three years ago spraying in the fall months was unheard of; it was confined entirely to the spring season. It is a good commentary on the rapidity with which discoveries in horticultural science are disseminated to realize that fall spraying is already well established over the country among progressive fruit growers and is not even a subject of discussion so far as its expediency and effectiveness are concerned. It is also a good testimonial to the work of our experiment stations, whose value to the nation is already beyond the estimate of words and is still increasing. It was, I believe, to a member of the New Jersey station that we owe the important discovery that fall spraying is even more effective than spring applications and there are subordinate features that add considerably to its value; one of these is the fact that the fruit grower has more time to spray in the fall than in the spring; another, that the weather is calm and settled, with a minimum of windy days, and thus offers much better opportunities than tempestuous spring for a work whose effectiveness lies largely in the thoroughness with which it is done; another, that the scale insects are young and tender, their shield covering not yet having hardened as it does during the winter, and much more sensitive to the various sprays, all of which must kill by actual contact with the bodies of these insects.

The time to begin this fall spraying is simply after the fall of the leaves, showing that the tree has become quite dormant and possesses no point of active growth which might be subject to injury by the spray. In fact, it may almost be called winter spraying. Growing leaves and buds are susceptible to damage from the sprays, both caustic and oily, so that the work for scale insects must be done between the fall of the leaf and the opening of the buds in the spring. Even if there were sprays harmless to the growing parts, the foliage offers such obstruction to the application of them that effective work could not be done anyhow.

The lime-sulphur mixture that has been in vogue so long as the cheapest and best, considering all things, is now being superseded to a large extent by mixtures whose insecticidal property is oil. Oil, as we all know, is death to all manner of insects by stopping up the pores of their bodies through which they breath and thus suffocating them; it thus differs from the caustic washes of which lime is always a leading ingredient and which kill by generating gases which suffocate or by eating through their scaly covering.

The problem was to prepare an emulsion of oil that would endure; oil alone was injurious to the foliage for the same reason it was fatal to insects: because it closed the pores through which the tree transpired and breathed in oxygen. Crude petroleum of a certain grade was found to succeed in a measure, but could not be depended on as a popular remedy. Finally man's ingenuity triumphed and almost simultaneously several preparations of what are called miscible oils were put on the market. These are a petroleum oil emulsion which will readily combine, even when cold, with water. At first it was thought that the price would be prohibitive for large orchards, but by manufacturing on a large scale the cost has been reduced until some are claimed to be as cheap as the lime-sulphur. Coutinued experiments by the stations have demonstrated that these oils are effective, and in one case even more so than the lime-sulphur; but the warning must be observed to dilute the oil as manufactured with less water than the formula sent by the company calls for. Probably the amount of water is made as large as possible so that the purchaser can figure on a cheaper rate per gallon of mixture for his orchard. This would appear to be poor policy on the part of the company, for if too much diluted the oil would not prove effective and the customer would condemn it and discard it forever.

In applying a spray this fall I should first prune back the tree as severely as I dared. This operation will get rid of most of the smallest branches and twigs and thus save much labor and spray liquid, for every side of the minutest limb must be covered in order to destroy the San Jose scale in toto. If a single pair of scales survive they will multiply into a million by the close of the next season. The work, therefore, cannot be done too thoroughly. If the trees are found to be very badly affected, they must be sprayed again in the spring at the usual time in order to doubly insure the complete destruction of the scale, though it may be admitted right here that it is practically impossible to rid a badly-infested tree in one year, especially if it be a large one; but careful work will so diminish the enemy that he will not be able to inflict any perceptible damage and allow the tree to continue to bear its usual crops.

A spray outfit for a small orchard of a few acres need not frighten anyone with its cost. A barrel pump and outfit will not cost more than $10 to $15. Be sure to get enough hose—25 feet we find about right for medium trees. Spare no pains to make the mixture according to formula and do not despise any detail as too trifling. Much also depends on the man who holds the nozzle and applies the spray. He cannot be too careful and attentive. Study out just what you need in vessels for mixing the spray and have plenty of room. Lime-sulphur is best cooked by steam in barrels. Factories will often give you connection with their boilers for a small sum or for nothing, as it doesn't take a great deal. If the sprays are caustic, protect your hands by rubbing them with axle grease.—L. R. Johnson.

FOR THE VEGETABLE GARDEN.

There is a very good book on the subject of Vegetable Gardening, written by Samuel B. Green. It is a manual that can be relied on. It is easy to grow vegetables and save them against the different diseases when at critical periods such a book can be readily referred to. There are 252 pages, nicely illustrated and practical throughout. We will send a copy of the book entitled Vegetable Gardening and The National Farmer and Stock Grower one year for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

SENT FREE—TWO PRACTICAL BOOKS THAT EVERY FARMER NEEDS.

Just Write the American Harrow Company, Detroit, Michigan, For Your Copies.

The farmer of today wants all the knowledge he can get that will increase the MONEY RETURNS from his labor.

And here are two books that are chock full of dollar-making facts and ideas.

Unless you already have the new 1909 American Manure Spreader Book and the new 1909 Detroit Tongueless Disc Harrow Book, it will be worth your while to write for them at once.

The American Spreader Book goes thoroughly into the fertilizer question—giving valuable suggestions on soil, fertilizers, the value of manures, etc.

It fully describes the famous American Manure Spreader, the machine that has stood the hardest of tests and proved its service, its soundness and dependability. It is the result of over 25 years of broad manufacturig experience, and its many exclusive features are PRACTICAL improvements, every one.

The American Spreader will pay for itself in less than one year in what it will save in labor. One man and an American will do more work than three men and two wagons spreading manure in the old way—and do it better.

The American Manure Spreader is sold direct from the American Harrow Co.'s factory to your farm on a full month's approval test, for cash or on time payments—and is fully guaranteed.

The Detroit Tongueless Disc Harrow is the greatest modern improvement in harrows. Cutting off the tongue and providing a forward truck does away with all jamming—end thrust—and whipping of horses that frets them and puts them out of commission just when you need them most. You can make the shortest turns with a Detroit Tongueless. On this harrow you can also have an extra attachment, the transport truck, which enables you to lift discs high off the ground when going over stones, sandy roads, bridges, etc.

Sold direct to you at factory prices on 30 days' free trial. Write for the free books today, mentioning this paper, to American Harrow Company, 902 Hastings Street, Detroit, Mich.

The National Corn Show.

Everybody ought to know that the National Corn Show of 1908 will be held at Omaha, December 9th to 19th.

The General Manager is Prof. J. Wilkes Jones, and his office is 607 Bee Building. Send to him for all information and catalogues.

Railroads have decided to haul exhibits for the Corn Show in baggage cars free of charge.

The first railroad to agree to furnish free transportation was the Chicago Great Western. Railroads have the right to transport exhibits for Fairs and Expositions free, but they don't always see their way clear to do it.

The plan is to have cars at all county seats in the states which will exhibit at the show in Omaha. Exhibitors need only express their corn, wheat, oats, alfalfa or other exhibits to the nearest point where the baggage car stops to have the exhibits brought to Omaha without charge.

The Exposition will furnish an attendant with each baggage car, who will be in charge from the starting place of the car until it gets to Omaha, seeing that the exhibits are properly handled. This insures the exhibits arriving in Omaha in the best possible condition and in the best time.

WHOLESALE PRICES DIRECT TO THE USER

We will sell you a **High Grade "Old Hickory"** buggy at the lowest wholesale price. We will **save** you **$25.00 on any vehicle** you buy. We have a complete line of the newest automobile seat buggies and surries **manufactured**, also **spring wagons, driving wagons, farm wagons**, carts and pony vehicles.

Every sale is made under a **written guarantee** for **two years**. "Old Hickory" vehicles are absolutely **high grade** in material, finish and workmanship.

FREE CATALOG Don't wait but **write today** for our handsome illustrated catalog of vehicles and wagons quoting wholesale prices direct to the consumer. You save all of the retailers and middlemans profit and get better quality. You are protected by our **binding guarantee** and our 30 day trial offer.

30 DAY TRIAL Every vehicle we sell is subject to 30 days trial. If you are not thoroughly satisfied after comparing it with other vehicles and examining it thoroughly we will take it back and **refund the purchase price** together with other vehicles and examining it thoroughly we will take it back and **refund the purchase price** together with all freight charges you have paid. It will not cost you one cent to see and try one of our **"Old Hickory"** vehicles.

Write for the catalog now.

JONES BROS. MERC. CO. 918 Hickory St., KANSAS CITY, MO.

SALESMEN WANTED.

All of the big employers of salesmen increase and make changes in their sales forces in the early winter and spring. Thus there are always hundreds of good openings for salesmen at that time. Most houses, however, object to breaking in a green man, and therefore prefer a trained salesman, as he secures better results. The National Salesman's Training Association, fills a long-felt want in the business world, by training men for high-class positions as expert salesmen. They take good care of their graduates and have placed hundreds of them in good positions with reliable firms. Salesmanship is the most attractive and best-paid profession in the world. A good salesman earns from $1,000 to $10,000 a year and all expenses. If you are interested in bettering your condition and earning a good salary, write today for their free book. "A Knight of The Grip" and list of good positions now open. Address Dept. 237, National Salesman's Training Association, New York, San Francisco, Minneapolis, Kansas City. Write nearest office.

RELIABLE GASOLINE ENGINE.

A very effective demonstration of the comparative value of different gasoline engines accidentally took place at the Topeka, Kas., Fair, in connection with the exhibit of the DeVore Milking Machine.

This machine is operated by a gasoline engine, and on the first day of the fair one of those being exhibited on the grounds was installed for this purpose. As it failed to do the work properly, another engine was secured from another exhibit, and this also proved unsatisfactory. The White Lily Gasoline Engine, from the exhibit of the White Lily Mfg. Co., of Davenport, Iowa, was then tried and worked perfectly during all the time that the milking machine was in operation.

This engine, which is advertised elsewhere in this paper, has always proved itself reliable and fully equal to any work which it is claimed to do. Full particulars and illustrated catalog can be obtained from the White Lily Mfg. Co., 1570 Rockingham Road, Davenport, Iowa, who will be glad to give all information, not only concerning the engine, but also as to the very many ways in which it has been and can be used.

THE STOVER GASOLINE ENGINE.

We desire to call the attention of our readers to the Stover Gasoline Engine, which is now being advertised in the columns of this publication.

The name "Stover" has come to stand as a symbol for high-grade goods and a guarantee for square dealing. Their engine seems particularly suited for all farm users. It is simple, easily controlled and economical. It can always be depended upon, and is just what a farmer, who is looking for a first-class gas engine, needs.

Their catalog will give you the reasons for its superiority that you can understand, and will be sent free to anyone who desires a copy. Address Stover Engine Works, 47 River St., Freeport, Ill.

Big Money in Poultry.

Write for my Poultry Catalogue. **Day-old Chicks, Stock and Eggs** for sale.

MRS. B. F. WILCOXON, Fort Des Moines, Iowa.

DEAFNESS CURED By New Discovery

"I have demonstrated that deafness can be cured."—Dr. Guy Clifford Powell.

The secret of how to use the mysterious and invisible nature forces for the cure of Deafness and Head Noises has at last been discovered by the famous Physician-Scientist, Dr. Guy Clifford Powell. Deafness and Head Noises disappear as if by magic under the use of this new and wonderful discovery. He will send all who suffer from Deafness and Head Noises full information how they can be cured, absolutely free, no matter how long they have been deaf, or what caused their deafness. This marvelous Treatment is so simple, natural and certain that you will wonder why it was not discovered before. Investigators are astonished and cured patients themselves marvel at the quick results. Any deaf person can have full information how to be cured quickly and cured to stay cured at home without investing a cent. Write today to Dr. Guy Clifford Powell, 3634 Bank Bldg., Peoria, Ill., and get full information of this new and wonderful discovery, absolutely free.

The regular and continued advance in the price of land is not as generally understood as it might be, but the farmers who are on the ground understand it distinctly. Many a farmer has failed to add to his farm the outlying piece of land which would make another homestead for one of the growing members of the family, and many a farmer's son has reluctantly moved away from happy homes and delightful associations because every availuable near-by farm is held above any value which a farmer who had to work it could set upon it. The day is rapidly advancing when all the farm land in the United States will be held at a premium—and that day is not far away.

Credit Subscriptions.

Three Years For One Dollar, Payable at the End of the First Year.

The publishers of The National Farmer and Stock Grower will be glad to furnish the paper three years for **One Dollar,** the same to be payable at **the end of the first year.** This edition is a fair sample of the paper. It is interesting and instructive. Those who read it over will find that it is a help to them in the conduct of their business. All who receive a sample copy are invited to send in a subscription on the following blank form, unless they prefer to pay in advance, thereby securing a premium.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — You are hereby authorized to enter my name as a subscriber to The National Farmer and Stock Grower for three years. At the end of the first year I will pay One Dollar for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

THE FEEDING SITUATION.

A banker in North Central Illinois tells me that the feeders in that section have been losing money right along now for several years; and, while high prices have prevailed for both corn and fat stock, yet those farmers who have been the biggest feeders have been gradually reducing their bank balances, while renters and grain farmers have been steadily increasing their balances.

Sheep feeders in this same section are sore. They bought high-price feeders last season and fed high-price feed, and got nothing for their trouble. This season feeding sheep are reasonably cheap, but they are eating up high-price feed, and the outlook for a favorable selling market is far from encouraging, for farmers are filling up their feed lots with sheep and leaving cattle severely alone. This thing is being done on an extensive scale in Ohio, Michigan, Indiana, Illinois and Iowa, and the natural results will surely follow when all of this stuff is dumped onto the market. Most of these feeders have the same idea in mind. Sheep will eat up the roughness and require less corn to fatten than steers, and they may be turned quick. These feeders are trying to make the best out of a discouraging situation, and while they hesitate to quit feeding altogether, they are putting in sheep really against their best judgment, with the forlorn hope that something will turn up.

Let us look at the situation square in the face. What is the sensible thing to do today? My advice is, feed cattle, and feed mighty good ones. Feed the sort that will go onto the market as "prime" stuff. My one reason for offering this advice is this: In feeding operations it never pays to follow the crowd. The essential thing is to determine which way the crowd is going, and then switch. I firmly believe the man who has the nerve to fill his feed lots now with first-class steers, and feed them out, will make more money this season than the man who sells his corn at 60 cents a bushel. And the very fact that so many have been losing money on cattle right along and will now hesitate about tackling the game again, makes the outcome surer for the men who will feed.

There is something wrong with this whole feeding business. Prices for fat stuff have ruled high, and still feeders are losing ground, and many have been forced out of the business. No wonder men who have been feeders all their lives are now sizing up the situation. They say, "What's the use of butting up against a stone wall any longer?" The result is many are going back to grain farming. The move is a disastrous one for the lasting good of these farms. However, the move may be short-lived, for when so many feed lots are kept empty, prices will be forced to a basis that will make feeding profitable.—L. C. B.

American Acetylene gas machines are used for lighting the railway cars of Australia and Tasmania. There were some serious objections raised by the Legislature because home machines were not used, but the Minister of Railways said that they adopted the best system.

At the five principal Western live stock markets there is a decrease of 856,206 cattle, as compared with the corresponding period the previous year. The St. Louis decrease is only 29,423 head.

Ten months' receipts at the St. Louis National Stock Yards were 958,976 cattle, 2,072,273 hogs, 591,071 sheep and 92,432 horses and mules.

Opening November sales at the St. Louis National Stock Yards include 100 head of Oklahoma steers, 1,224 pounds average, at $4.80 per 100 pounds.

A Coaching Competition.

A feature of the National Horse Show which is to be held at Madison Square Garden, New York, November 9th to 14th, is a coaching contest, which will certainly be very interesting. The cup, valued at $700, is donated by Ben Riley, is called the Arrowhead Challenge Cup, and it will bring out strong competition.

The route is from Arrowhead Inn, at Fort Washington avenue and Depot Lane (177th street) down the hill to the Boulevard Lafayette, to Broadway at 157th street, to 135th street, to Riverside Drive, to 120th street, to Claremont avenue, to 116th street, to Morningside Drive, to 110th street, to Central Park, through Central Park by the East Drive to Fifth avenue at Fifty-ninth street, down Fifth avenue to Twenty-sixth street, to Fourth avenue and Madison Square Garden. The teams will finish in the show ring and be judged according to their speed, road qualities, appearance and condition. It is a contest for four-in-hands, and over the familiar course of the New York Coaching Clubs.

Destruction of Trotting-bred Stallions

The New York Herald of October 25th said: "Several Eastern dealers in high-class carriage horses of the fashionable type are advertising for trotting stallions in the Spirit of the West, a horse journal which circulates extensively among breeders and farmers in Iowa and other Western States. 'Some speed and high action wanted' are words which plainly reveal the purpose of the buyers. These stallions when bought are to be withdrawn from the stud, destroyed for breeding purposes and transformed into high-acting carriage horses and show horses. Thousands of trotting-bred stallions of the heavy harness type have been 'consumed' in this way in the last fifteen years, and thus has been lost the foundation stock from which American breeders might have evolved a family of carriage horses surpassing any other in the world if they had not been so shortsighted as to 'kill the goose that laid the golden egg.'"

New Method of Icing Cars.

According to Cold Storage and Ice Trade Journal, a new method of refrigerating perishable products while in transit has been introduced by C. A. Moore, of St. Paul, Minn. It is claimed that a great saving in ice is made by the method and experiments which have been conducted bear out this claim. Mr. Moore has just landed in Springfield, Mass., a carload of 22,000 pounds of Minnesota butter, bringing it through in five days of record hot weather on an expenditure of only 2,400 pounds of ice, yet preserving a temperature of 38 inside the car, when the thermometer on the roof registered from 110 to 115.

The car, which is the first experimental one run for any such distance, is built from Mr. Moore's own patents, with double walls, divided into circulating flues, which make the car available for either refrigeration or heating, according to season, yet economizing ice, as he claims 40 to 50 per cent. over present methods. Further, he claims the space economy of the refrigerating features is such that he can pack into twenty-eight cars what now require thirty-five and keep it better cooled and ventilated and perfectly dry. He hopes to secure the co-operation of the trade for its adoption in the shipment of all perishable freight.

Coal Robbery STOPPED

A terrific blow has at last been delivered to the crushing robbery of the Coal Trust. Every man who reads this paper has the opportunity right now of defying the Coal Trust and buying his coal direct from the coal mines at a saving of from $1 to $3 on every ton of coal. The coal which every one may buy in this way is the best coal that can be mined.

To every one who writes at once to the Harman Coal Company of Chicago an opportunity will be given to get one ton of this coal absolutely free. Every person who reads this column should not lose one moment before writing. There will be found a coupon at the bottom, which should be signed and sent to the Harman Coal Company.

Full explanation will then be made of how every one may buy coal direct from the mine at the wholesale price, and how every one who writes may have the opportunity of getting one ton of coal absolutely free.

Coal Facts
COAL TRUST ROBBERY STOPPED
NO MORE TRUST PRICES FOR COAL! THE COAL PROBLEM SOLVED! THE BEST COAL—FULL WEIGHT—HONEST VALUE
THAT IS WHAT THIS BOOKLET OFFERS TO THE CONSUMER DIRECT

SEND FOR THIS FREE BOOK "COAL FACTS"

Every reader of The National Farmer and Stock Grower is asked to send for this free book today. On page 29 of this issue you will find an article by the editor of this paper about the fight being made by the Harman Coal Company against the Coal Trust. The free book tells you all about that sensational fight.

This book has aroused the whole country. The Coal Trust is preparing to spend millions of dollars to put this book out of print. But it is being circulated yet. Mr. Harman wants to send every reader of this paper a copy and every reader should tell Mr. Harman that he wants a copy.

This book tells you how you have the opportunity to throw off the shackles of the greedy Coal Trust. If you read this book you will never buy another pound of trust coal. It tells you about the terrible crushing ways of the Coal Trust. It tells you how you have been compelled to pay much more than you should pay for inferior coal. It tells you why coal prices have been going up—up—up; why you have been robbed year after year; why you have been paying enormous prices for coal hardly fit to burn. It tells you of greed, robbery, extortion, threats, blacklists, blood money and tribute. Every man who burns coal should send for this great free book and read it. All along you have known that something was wrong. This book tells you just what is wrong. Send for it today. Learn how you can buy coal direct from the mine at the wholesale price.

Whether you want coal merely for your stoves or whether you want it for a steam thresher, a steam plow, a creamery, a brick kiln, a steam plant or anything else that burns coal, you can buy direct from the mine. Everybody should find out all about this greatest coal offer. We want every reader to find out all about it. You owe it to yourself to send for this free book.

Clip Out and Sign This Coupon and Get the Free Book

Do it right now. Don't hesitate. Do it while you have the paper in your hands. If you can save $25 on your coal bill you want to do it. Sign and send the coupon now. The free book will reach you immediately. Don't buy your winter's coal supply until you read this book.

Harman Coal Co., Dept. 668,
355 Dearborn St.,
Chicago, Ill.

Without any obligations on me, please send me your free book, "Coal Facts," and explanation of your "Ton of Coal Free" offer.

LOW FARES to the Cheap Lands

Plan to go on one of these days—

Nov. 3d & 17th, Dec. 1st & 15th

The trip will not cost much. These special low-fare tickets over the Rock Island-Frisco-C. & E. I. Lines will allow you to go one way and return another, without extra cost. You will see more of the Southwest than you could in any other way, and can better decide where to locate.

Ask the ticket agent to sell you a ticket over the Rock Island-Frisco-C. & E. I. Lines, either through Chicago, St. Louis, Kansas City, St. Joseph, Memphis or Birmingham.

If you will tell me where you want to go, I will tell you the cost of a ticket and send you a map-schedule.

I will also send you some interesting books about the Southwest. They will inform you of opportunities waiting for you there, and will open your eyes to new possibilities. Write for free copies today.

JOHN SEBASTIAN, Pass. Traffic Mgr.
1937 LaSalle Station, Chicago
1937 Frisco Building, St. Louis

Rock Island SOUTHWEST FRISCO

Methods of Feeding.

Bulletin 249 of Cornell University Experiment Station gives comparison of four methods of feeding early-hatched pullets. It is by James E. Rice, and a summary of the findings which the bulletin states should not be taken as final without further experiment is as follows:

1. Forced pullets made a better profit than retarded pullets.
2. Forced pullets ate less food per hen at less cost per hen than retarded pullets.
3. Forced pullets produced more eggs of a larger size, at less cost per dozen, than retarded pullets.
4. Forced pullets produced more eggs during early winter than retarded pullets.
5. Forced pullets gave better hatching results of eggs than retarded pullets.
6. Forced pullets made a greater percentage of gain in weight than retarded pullets.
7. Forced pullets showed less broodiness than retarded pullets.
8. Forced pullets had less mortality than retarded pullets.
9. Forced pullets showed better vigor than retarded pullets.
10. Forced pullets showed the first mature molt earlier than retarded pullets.
11. Retarded pullets gave better fertility of eggs than forced pullets.
12. Hopper-fed dry mash gave better results in gain of weight, production of eggs, gain in weight of eggs, hatching power of eggs, days lost in molting, mortality, health and profit per hen, than wet mash.
13. Wet mash and grain-fed pullets consumed slightly less food at less cost, and produced eggs at slightly less cost per dozen than dry-mash and grain-fed pullets.
14. Wet-mash and grain-fed pullets produced slightly larger eggs of slightly better fertility and showed less broodiness than dry-mash and grain-fed pullets.
15. Dry-mash and grain-fed pullets laid eggs of good size at an earlier period than wet-mash and grain-fed pullets.
16. Hopper-fed pullets ate more than hand-fed pullets.
17. Pullets having whole grain ate more grit and shell than those having a proportion of ground grain.
18. Pullets fed on grain were more inclined to develop bad habits than those having a mash.
19. Earliest producers did not give as many eggs in early winter.
20. Early layers gained as rapidly in weight as those beginning later to lay.
21. Prolificacy made but slight difference in weight of hen and weight of egg.
22. The most prolific pullets did not always lay earliest.
23. Pullets did not as a rule lay while molting.

Poultry Fanciers' Mistakes.

In reviewing the result of the Australian egg-laying contests which he conducted for six years, Professor D. S. Thompson, the poultry expert of the Hawkesbury Experimental College, is very severe on the chicken fancier who is improving the different breeds of fowls the wrong way. He has no patience with those who are breeding for feather points or ear-lobe points, and who neglect the utility points; and, for the sake of being clearly understood, we will say that utility points are eggs and meat. The Professor, being more interested in eggs than in meat, naturally leans that way.

He states that originally the Black Spanish were practically the first and best European fowl, and that by breeding for a black fowl with white legs and afterwards for a white ear-lobe, the breed has become indifferent layers and a poor fowl generally. He says that the Cochins were bred for feathers until they are simply large balls of fluff; that the Brahmas have lost their winter laying and table qualities by placing feather points before utility; also that the game fowl by being bred for height has lost their table quality and what little egg-laying ability they once had.

The Minorcas he considers were injured by breeding for a large comb until it lost its egg-laying capacity of half a century ago.

The Langshans were bred for size, reach, game type and close feather until to find a good laying bird one has to go back to the original type if one can find it. In support of this he refers to the winning pen of six hens in a two-year competition were descendants of an importation from China. These produced 247 eggs per hen the first year and 167 the second, and they were not birds that would not stand well in a show competition. In fact, the fancier had no chance to spoil them.

Inasmuch as the first eleven pens out of a hundred were White Leghorns, it would appear that the fanciers had not done much to spoil them. He regards the White Leghorn as an Albino sport of the original Black Spanish, and that their structure and temperament denote the greatest precocity, and no doubt the breed can eclipse anything and everything in egg production. In America, he says that they have lost stamina in confinement through the insertion of Hamburg blood, also that the English crossed with Modern Minorca to obtain pure and that the increase in size has been at the expense of egg production. The Australian Leghorn has been crossed with both American and English birds, producing a medium bird which eclipses both.

Undoubtedly the fanciers neglect the utility points to a large degree; this can be said even by one who is not conversant with the fine show points in show effects. The exhibitions neglect the meat-production demonstrations, also the egg-laying records. Claims of laying sometimes stuck up on a show coop in a show room may be on fowls that could not lay 150 eggs even in the pullet year; and thousands of prize-winning show hens would find the tail end of an egg-laying contest, or, in meat production, a weight-for-age competition.

Big Feeders Not Wanted.

The demand for certain classes of feeding cattle is a pretty good indication of what will go into feed lots this season. Last fall the demand was for cattle weighing around 1,200 pounds. Such cattle could be finished out with a short feed and they were the kind that made the most money. The demand this fall is for light cattle, those running about 800 pounds. These cattle will be carried through the winter on an economical basis and then finished out on pasture next spring. While new corn is offered freely in the feeding districts at about 60 cents per bushel, yet feeders are cautious about filling their feed lots with high-price, heavy cattle. One must have an exceptionally good bunch of cattle to pull any profit out of sixty-cent corn and high-price roughness.—L. C. Brown.

Souvenirs For Dairy Farmers.

"The Separator News," published by The Sharples Separator Company, West Chester, Pa., is being sent out to readers.

In this issue of "The Separator News" is more than the usual variety of sound dairy counsel from many different sources.

Farm separating, of course, occupies a prominent place in the discussion, because farm separating is the policy which is most promising and most helpful towards farm improvement everywhere and practically brings more money regularly into dairymen's hands than any other branch of agricultural industry.

What forehanded and enterprising dairymen are doing is told in many ways.

The possibilities for enlarged money making in the dairy are presented in facts and figures.

A new bird's-eye view of the office and factory at West Chester is shown for the first time.

Offers of souvenirs, including a new book just being published, the words and music of over forty favorite songs, will appeal to every music lover.

Another piano offer for purchasers of Tubulars during the year July, 1908, to July, 1909, is made and a brief narration of the awarding of the first piano, in January last, is printed.

"The Separator News" will be mailed, prepaid, to those who ask for it. Write to the Sharples Separator Company, West Chester, Pa., mention The National Farmer and Stock Grower and ask for Catalogue 232.

Poultry and Pet Stock Items.

In The Standard of October 17 there appear some first-class plans of portable poultry houses, and mentions their use in the colony system of poultry raising. The Standard is a bi-weekly publication, issued by The Standard Company, Quincy, Ill., at 50 cents a year.

The Missouri Poultry Show, opening at Trenton, Mo., December 8th, pays in cash prizes on pens $10 for first, $5 second, and $2.50 third; and on single entries, cock, cockerel, hen and pullet, $5 for first; $3 second, and $1.50 third, and only charges 50 cents entry fee on singles and $2 on pens. In addition to paying the largest premiums paid in America, nearly all the specialty clubs have offered silver cups and ribbons at this show, also specials by the American Poultry Association, also many other silver cups and cash specials. The show will be cooped with uniform coops, which are furnished free to every exhibitor, and everything done to make the show as attractive as possible. For catalogue address T. E. Quisenberry, Secretary, Slater, Missouri.

Mr. J. A. Roadruck, of R. R. 6, Colburn, Ind., is advertising Buff Plymouth Rock cockerels and pullets. He can satisfy anyone, as his stock is pure and healthy. He can also furnish a start in Pekin ducks at a fair price. His advertisment is with the breeders' cards.

The Missouri State Poultry Show will be held at Trenton, Mo., opening on Tuesday, the 8th, and closing on Saturday, the 12th of December. Breeders of pure-bred poultry should not overlook this show. Trenton is the county seat of Grundy county, and on the Rock Island road, and on the Quincy, Omaha and Kansas City Route. This is the official organization of the state and receives a biennial appropriation of $4,000. For premium list address T. E. Quisenberry, Secretary, Slater, Mo.

POULTRY HOUSES, COOPS, ETC.

This is an up-to-date poultry book, written by H. A. Nourse, editor of the Poultry Herald. It was prepared during the past year and is the result of many years' study and experience. It is a book of newest plans for building poultry houses, with description of coops, fixtures and poultry utensils for the farm, village or suburban poultry keeper. It is a book of 100 pages, and is finely illustrated. It is worth its weight in gold. We are sending The National Farmer and Stock Grower for one year and the book Poultry Houses for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

The Best Egg Year.

In Australia, at the Hawkesbury Agricultural College, for six years an egg-laying contest has been conducted. The first four were simply one-year contests, and each year after the results were announced the pens were disbanded.

There being a natural desire to obtain information concerning the laying of hens one year following the other, forty pens of six hens each were carried over from the fifth to the sixth year, so that both could be compared.

In ths fifth year the layers were generally started into the contest as pullets, and in the second contest they were, of course, a year older.

The first year the pullets averaged 180 eggs per hen, and the second year the same 240 hens averaged 124 eggs per hen.

The first year the financial result was as follows: Average egg production, $4.12 per hen; cost of feed, $1.68 per hen; net profit, $2.44 per hen over cost of feed.

The second year the financial result was as follows: Average egg production, $3.01 per hen; cost of feed, $1.49 per hen, and the net profit was $1.52 per hen over cost of feed.

Many other interesting facts were brought out by the contest, but at this time we are looking only to the difference in egg laying, one year with another.

There is no getting away from the fact that the second year all the forty pens averaged 56 eggs per hen less than the first year. The twelve Langshans, which averaged 210.6 the first year, fell down to 138.5 the second. The forty-eight White Leghorns, that averaged 201.2 the first year, fell down to 144.8 the second. The six Buff Orpingtons, that averaged 182.6 the first year, produced an average of 161 eggs per hen the second year, and that was the best second-year showing made. Seventy-two Black Orpingtons averaged 187.7 eggs the first year and 115.7 eggs per hen the second year.

If we remember right, it was the Utah Experiment Station that the first time demonstrated the pullet year to be the best laying year; the next year to be the next best, and the third year to be no good at all.

From the egg-farm standpoint, the first requisite of success is a good supply of laying pullets, and the next requisite of success is to sell them before the end of the second year. The successful conduct of a poultry farm in a district where eggs are a good average price depends upon the intelligent feeding of young hens; and a failure can at any time be assured by keeping a lot of old hens.

The Twice-a-Week GLOBE-DEMOCRAT

is a magnificent newspaper, containing all the latest home, foreign and political news. It is undoubtedly the best Republican newspaper in the United States. It is published at $1.00 per year, and is worth the price.

The National Farmer and Stock Grower is a nice, clean, general farm monthly publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. It is published at 50 cents a year, or three years for one dollar.

COMBINATION OFFER.

On account of the interest in the present political campaign we are able to combine both of these papers for the price of one.

SEND US ONE DOLLAR

and we will mail to your address **The St. Louis Globe-Democrat Twice-a-Week Edition** for one year; also **The National Farmer and Stock Grower** for three years.

Address,

EVANS SUBSCRIPTION AGENCY,
3552 Vista avenue, - St. Louis, Mo.

CEMENT ON THE FARM.

This book is designed to teach anybody how to work with cement. How to mix mortar of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

The National Farmer and Stock Grower is a nice, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especiallly so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers.

For sixty cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of **The Cement Workers' Handbook.**

For one dollar we will send The National Farmer and Stock Grower for three years and a copy of the **Cement Workers' Handbook.** Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

By-products For Poultry Feed.

One of the great values of farm poultry is found in the fact that by-products can be used for feed more than with other farm stock.

The American family is notably wasteful. The American nation is charged with wasting enough to feed the French nation. We believe the charge cannot be substantiated, but it must be acknowledged that the waste from American tables would go a long way in feeding some other nations.

Naturally this waste is the first by-product to be considered in the feeding of poultry. At the presnt time much, but not all, of this waste is utilized, because many farmers have no bone mills with which to grind the bones that come from the family kitchen. With this addition, every farmer would be able to utilize all this waste.

There are thousands of cities and villages in which the hotels and restaurants pour out a steady stream of waste material that should go to the feeding of poultry. The bone content of this material is very great, and no farmer is in position to avail himself of this material till he has come into possession of a machine for cutting or grinding the bones.

Consider the number of hotels and restaurants in the United States and then consider that every one of these institutions is a producer of the waste food product. Only a few, comparatively, have an arrangement with some farmer that takes the daily waste to his farm for feeding purposes. It often goes into garbage.

No other nation has such a waste, because no other nation has such an abundance of food as has the United States. It is a pity that food once produced should not be fully utilized in some way.

A by-product that is often allowed to go to waste on Western farms is the percentage of small potatoes and scabby potatoes that are left in the field at digging time. A scabby potato is good enough for the fowls if it is cooked, and on most farms are to be found large cookers for the utilizing of such by-products.

The small potatoes should be all gathered up and cooked as soon as needed for the fowls. One farmer known to the writer has a cooker that will hold about a barrel of material. This cooker is filled with small potatoes and they are boiled. Then they are put into a barrel with bran and ground oats and mashed up. They are a great food for the big flock of poultry he owns, and in the winter time the mash can be kept for several days without spoiling.

The best by-product on the farm is the supply of skimmed milk or sour milk. If it is desired to feed a very large amount of it, the end can be attained by permitting the milk to sour enough to make a soft cottage cheese from it. This does not improve it as a feed, but it elliminates the surplus water and permits the fowls to eat more of it.

One of the best by-products for poultry feed is the small growth of clover that can be mown in the fall of the year and cured by drying. It will be mostly leaf, which is rich in protein. In the winter it can be fed dry or wilted with hot water and mixed with meal, in which case a great deal of it will be eaten.

International Live Stock Exposition,

Union Stock Yards, CHICAGO, November 28th to December 10th.

Twenty buildings filled with Pure-bred Live Stock. A liberal education in feeding and breeding of Live Stock. A Season of Entertainment and a Trip to Chicago—all in one. No Farmer or Stockman can afford to miss this splendid Show.

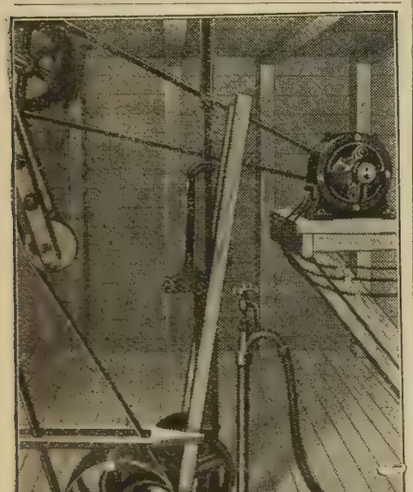
ELECTRICAL POWER ON THE FARM.

The suburban and interurban electric railways have shown such rapid growth during the past few years that the country is becoming a regular labyrinth of electric lines. When these roads first made their appearance the farmer could not see how they would ever be of any use to him. Today he realizes the advantages of such a system as a means of transportation, but so far he has overlooked the greatest advantage of all—that of obtaining power to operate electric motors.

The electric railway company is willing to supply the power at a nominal sum, the manufacturer stands ready to furnish a reliable motor, and it remains for the farmer but to express a little interest and all the advantages of modern electricity will be at his command. As the electric railways operate at 500 volts direct current, the power can be wired direct to the motor without the use of any of the auxiliary apparatus necessary on a high tension alternating current system and a motor once installed needs practically no attention.

Few people realize the varied uses to which such an electric motor can be put on the farm or dairy. A few of the many machines now being driven by electric motors are: churns, cream separators, ensilage cutters, corn shredders and shellers, grist mills, feed grinders, saws, grindstones, ice cream freezers and all kinds of pumps.

Every farmer needs water and needs it badly In the dry season and no investment pays as sure returns as a permanent, reliable water supply for the house, dairy, barn, lawn and fire protection. A farmer on a visit to the city is always strongly impressed with the advantages of running water in the house, and goes home discontented with the old method of pumping and carrying water, not realizing at what a small cost he could have a better water supply than his city friends. For what could be more simple and efficient than a motor-driven pump?



ELECTRIC MOTOR ON FARM OF A. L. FEIGHNER, MARION, IND.

Mr. A. L. Feighner, a farmer residing near Marion, Ind., has solved this problem of an adequate water supply at a low cost, in a highly satisfactory manner. He has a pumping jack and a small Western Electric Co. direct-current motor. His equipment, as shown in the illustration, makes it possible for him to have an unlimited supply of fresh water at a low cost. The pumping jack can be readily adjusted to any pump and disconnected by simply removing a single bolt. The power necessary to run the motor is supplied at a very low cost by an interurban railroad which crosses the farm. Mr. Feighner is so well pleased with his outfit that he contemplates operating some additional apparatus from the line shaft in the near future.

This application brings out clearly the many advantages of electric motor drive, namely—economy, flexibility, reliability, simplicity and availability. An engine which cannot be depended upon to start quickly and positively is of no account to the farmer whose jobs require frequent starting and stopping. An electric motor of standard manufacture once properly installed can be relied upon for instant service. Any man, woman or child can start an electric motor by simply throwing a switch. As to economy, the electric motor can be operated just as cheaply as a gasoline engine and much cheaper than the steam engine.

We find in the electric motor a power always available, right at the point of application, thus avoiding any loss of power in transmission. In other words, we find the electric motor to be a clean, cheap and reliable source of power, available at all times and so simple that even a child can operate it.

RICE ON THE COTTON BELT ROUTE.

Stuttgart, Ark., October 26, 1908.

Dear Sir:—I will say that I have grown 100 acres of rice for three successive years on the same land without any fertilizers of any kind.

The first year, 1905, I harvested 6,148 bu.
The second year, 1906, I harvested 5,500 bu.
The third year, 1907, I harvested 6,400 bu.

and sold the rice for $1.00 per bushel. The spring of 1906 was exceedingly late, cold and wet, and planting could not be done until very late in the season, after which it turned off dry and did not rain for three months. This caused the lighter yield of that year.

It costs about $25.00 per acre to grow and harvest rice, counting costs of every expense, the balance is profit. There are 4,500 acres in rice in this Arkansas county this year (1907) and will not be less than 10,000 acres sown to rice in this county in the spring.

The Stuttgart Rice Mill Company, of which I am President, has a large up-to-date mill at Stuttgart. This acts as quite a stimulus to the rice-growing industry, and I predict that within five years there will be 50,000 acres of rice grown in this and adjoining county.

Very Respectfully,

(Signed) C. W. FAGAN,
President Stuttgart Rice Mill Company.

BETTER SAUSAGE MORE LARD LESS WORK.

Probably there is no more disagreeable work connected with farming than "Hog Killing." Butchering is a disagreeable job, but the preparation of the meat for winter keeping, making sausage and trying out lard, involves downright hard work of the roughest kind. Much of this labor can be avoided by having proper tools, and nothing will prove more effective than an "Enterprise" butchering outfit, consisting of an "Enterprise" Meat and Food Chopper and an "Enterprise" Lard Press and Sausage Stuffer. These are labor-saving devices of incalculable value, but they also increase the earnings from your hogs. This outfit will pay for itself in one season.

The "Enterprise" Meat Chopper chops meat quickly, uniformly and perfectly. It cuts the meat without crushing or grinding, so that each minute piece will retain all of its natural goodness and flavor.

This increases the value of your sausage—it's better flavored—better tasted in every way and will command a better price.

The drudgery of lard rendering and the hard work of sausage stuffing are overcome by the "Enterprise" Sausage Stuffer and Lard Press. You get more lard and better lard with this machine than in any other way, with one-tenth the work.

The "Enterprise" Sausage Stuffer has a patented corrugated spout which prevents air entering the casing, thus assuring the preservation of the sausage. You can't stuff sausage skins as effectively by hand nor with any other machine.

A most practical and economical way of increasing the yield from poultry is to get an "Enterprise" Bone, Shell and Corn Mill. Put a few cents' worth of dry bone, old shells or corn into an "Enterprise" Bone Mill and it will increase its value tenfold as a poultry food.

There's no food so good for poultry as variety, nor a way to save money so easily as to grind your poultry food, using an "Enterprise" Bone Mill.

Send your name and address to The Enterprise Manufacturing Co. of Pa., 220 Dauphin Street, Philadelphia, for a copy of the "Enterprising Housekeeper." This is a cook-book containing over 200 choice recipes and other practical kitchen helps.

Horseradish is selling in St. Louis at about $4.00 per barrel.

Living Out of Doors.

A great deal of interest is now being shown in the question of how to get good ventilation. There was never a time in the world before when people appreciated as much as they do to-day the great necessity there is of having absolutely pure air to breathe. This was first appreciated in the care of live stock, but it is now being applied to human beings.

Had man and beast continued to live in the open air, it is probable that tuberculosis (consumption) would be almost wholly unknown either among people or animals. Tuberculosis is a house disease. It spreads among human beings that are shut up within four walls during a considerable part of their lives, and it spreads among live stock in proportion as they are shut up in tight barns.

Recent investigations by the United States government showed that about 10 per cent. of all the dairy cows tested had tuberculosis, while of the beef cattle investigated only about 1 per cent. were tuberculous. There is no reason to believe that dairy cattle are more subject to this disease than are beef cattle. The difference is that our dairy cattle have been coddled more than have our beef cattle, because they feel the cold more, other things being equal.

We have compelled our dairy cows to breathe the same air over and over till it contained a greatly reduced percentage of oxygen. This meant a weakening of the life functions and a letting down of the defenses raised up by nature for the keeping out of diseases. The germ-destroying elements in the blood themselves become so weak that they were unable to do succsssful battle with the enemies that got into the system.

In the close stable the warm air is breathed into the lungs again and again. The tubercular germs that one cow casts into the air are taken into the lungs of all the animals and come into contact with tissues weakened by the absence of the life-giving oxygen. The effect would be the same with any kind of living being.

In some parts of Alaska the natives live for several months each year in underground houses, as many as fifty people being found sometimes in a single house. Tuberculosis is enormously prevalent in those houses, and it is said to be the most terrible scourge known to the Esquimaux, who live a part of the year in snow houses absolutely sealed against fresh air.

If in the cold north, where there are fewer germs than elsewhere, it is not safe to shut up animals or people in close houses, how much more unsafe is it to live in too tight houses and stables in a mild climate in which disease germs abound?

We can check the terrible white scourge by living more out of doors and having our animals live more out of doors, where they will get that constant change of air required. This matter reaches even to our public assemblies and to our school houses, many of which are so tight and illy ventilated as to be a means of spreading the dreaded disease.

That the people of this country are waking up on this matter is shown by the numerous devices that are appearing on the markets to enable people to sleep out of doors or to live under canvas and screens rather than in close houses.

Already canvas houses are being put on the market and are attracting a great deal of attention. It is safe to foresee a time in the no distant future when canvas houses will be as much the rage as the automobile now is.

At the Missouri State Fair the sweepstakes prize in yellow corn was awarded to Christ Ohlendorf, of Boonville, and the sweepstakes on white corn to S. W. Howell, of Oak Grove. Earnest L. Hughes, of Glasgow, Mo., also won first prizes on yellow and white corn..

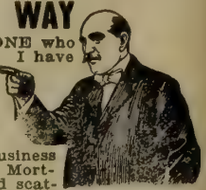
Farmers Institutes, under the auspices of the Missouri State Board of Agriculture, will be held at Doniphan, Nov. 11th and 12th; Cape Girardeau, 13th and 14th; Charleston, 23d and 24th; Marston, 25th and 26th, and Campbell, 27th and 28th.

TO WOMEN WHO DREAD MOTHERHOOD!

Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.

No women need any longer dread the pains of childbirth, or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. He has proved that all pain at childbirth may be entirely banished, and he will gladly tell you how it may be done absolutely free of charge. Send your name and address to Dr. J. H. Dye, 248 Lewis Block, Buffalo, N. Y., and he will send you, postpaid, his wonderful book which tells how to give birth to happy, healthy children, absolutely without pain; also how to cure sterility. Do not delay, but write to-day.

I POINT THE WAY



to SUCCESS to ANYONE who will follow my Course. I have shown Farmers, Laborers, School Teachers, Dressmakers and thousands of others HOW TO MAKE MONEY—I can show YOU. My Goods and Business Methods have lifted Mortgages, built Homes and scattered Prosperity everywhere. Get in line and write today for the "SAYMAN PLAN," full particulars and FREE Samples.
SAYMAN, 2404 Franklin Ave., ST. LOUIS, MO.

DROPSY Cured; quick relief; removes all swelling in 8 to 20 days; 30 to 60 days effects permanent cure. Trial treatment given free to sufferers; nothing fairer. For circular, testimonials and free trial treatment, write
Dr. H. H. Green's Sons, Box K, Atlanta, Ga.

Gold Watch AND RING FREE

We positively give both a Famous Alton Watch, Stem Wind, beautifully engraved and Gold Laid case, American movement, factory tested, guaranteed five years; also a Solid Gold Laid Ring, set with a Congo Gem, sparkling like a $50 diamond, for selling 20 pieces of handsome jewelry at 10c each. Order 20 piece and when sold send us $2.00 and we will positively send you the watch, ring and chain. **ALTON WATCH CO. Dept. 538 Chicago.**

A GENUINE 21 JEWELED $50.00 GOLD WATCH. $3.75 to

$3.75 buys an elegantly engraved DOUBLE HUNTING CASE WATCH fitted with an accurate STEM WIND and SET, high-grade RUBY JEWELED movement,
GUARANTEED FOR 25 YEARS
and a handsome "Gold" watch chain and charm. Send us this ad and write if you want Ladies or Gents Watch & watch chain, & we will send them for FREE EXAMINATION & after you examine the watch & watch chain at your express office & find it is equal to a 21 jeweled $50 Gold Watch pay $3.75 and express charges and they are yours

A MAGNIFICENT PREMIUM.

The National Farmer Hat.

The sizes are from 6⅝ to 7½. They are hats suitable for men or boys. They are of good material, well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. These hats are black and steel gray. We send black unless steel is called for. These hats wear as well and last as long as any $2.00 to $3.00 hats on this market. They will give entire satisfaction. We believe this hat will make a first-class subscription premium. The subscription price of The National Farmer and Stock Grower is one dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us one dollar to pay for two-years' subscription to The National Farmer and Stock Grower and we will send you by mail one of these fine, wool crusher National Farmer hats as a premium. Be sure to mention the size and color. A million and a half of these hats have been sold.

Address, The Hale Publishing Co., 8550 Vista Ave., St. Louis, Mo.

Barn-yard Manure.

Whenever I note an article upon this subject I always read it, for there is nothing that should interest the farmer more than the question of manure, and that of increasing the fertility of his soil, for it is upon the fertility of the soil that our success depends as a foundation. Should we not then be interested enough to keep up our land and see that it is not run down so that our children will starve?

Occasionally we see a man who says that manure hauling does not pay; but for the good of the nation it is a good thing that those men are getting less in number each day. Farmers used to move their barns away from the manure pile in order to save hauling away the manure, and we used to hear of one man who thought he had the grandest idea for the farmer that he could have—he had his barn built upon the bank of the creek, and all he had to do was to throw out his manure through the window, and that was all he had to bother with, and it was out of the way. Yes, he had it handy, but how does the owner of the farm have it to-day? Hardly making a living. We like to have things handy, but we do not want that kind around us. We like to be bothered about the manure accumulating in the way and that we have to haul it out. There is no work that we like to do better, and there is none that pays us better. I once kept account of what profit I got in hauling manure. I hauled the manure on ground that I was going to put in corn, and where I left off hauling I could see the difference, and in gathering the corn I figured it out. I knew how many loads I had put on across the field, and how many loads I had hauled away, and with the difference in the yield of the corn I could easily figure something near it. I found that the increase in the first year's corn crop gave me $2.00 per day for hauling, and I had no spreader, but used a fork to haul and scatter. This gave me good wages for the first year, and as thick as I put it on and the kind of ground, it will do as well for five years, and after that it will do some good for five years longer. It surely pays to save all the manure we can get and put back on the land, and I do not see how we can figure it out any other way.

I never haul any feed onto the farm or haul any off the farm without thinking of one profit that we get when hauling on that we cannot help but keep, and of the loss of fertility we lose when we sell feed; and you can guess that I do not sell very much; but, on the other hand, I like to buy a lot, to have a lot of manure to haul on my own land, and it pleases me more to know that a good part of it has come from the other man's soil and I have gotten it honestly. If we are compelled to buy feed at any time, there is one good thing; and that is, we are sure of one profit, no matter what the stock market will be; we get a gain in fertility if we save it.

There is no manure just like farm manure. Do not think that you can sell your hay and grain and replace it with commercial fertilizers. We can buy these and they are all right, and especially fine to use with farm manure. First, they are costly, and you do not get what you get in the farm manure. We get a fertilizer far richer in some elements, but it lacks some, too. The large amount of vegetable matter in the farm manure that adds humus to the soil is also valuable. Do not try to sell off all what is grown on the farm and try to replace it with fertilizer on the market. With judgment we can use much of this to increase the value of our manure, but we cannot do and get along very well without some of the farm manure.

It does not take an expert to note the difference in two farms, the one of which has been farmed on the grain plan for twenty years, from which all the hay and grain have been sold off, and of another farm which has been a stock farm and where all the feed raised has been fed. The one is growing better each year and the other is growing poorer.

Which way is your farm going? What kind of a farm are you planning to leave your boy to work? Better management and saving of the farm manure is the only practical hope for the farmers of the future. Hauling manure is hard work, but what makes it easier with me is that I know that from every forkful I throw on the soil I will get a return, and that at a good profit. The surest work investment.—E. J. Waterstripe, Marshfield, Mo.

Bright Lights For Farm Homes.

Again we take pleasure in calling attention to the Acetylene advertisement which appears on page 7. The article was written that people may understand the difference between one light and another. Acetylene is not any too well understood, but wherever it is started it causes others to start. Whether it be in a store, residence, in a city or on a farm, it is there to stay. The best, the brightest, the purest white, the softest to the eyes, and the cheapest light known. For full particulars address Dept. I, Union Carbide Company, 156 Michigan avenue, Chicago, Ill.

I Want to Loan You a Pair of TRUSIGHT SPECTACLES on Six Days' Trial

FREE!

NO MONEY DOWN --- No Deposit

Send Me Your Name I will send you my perfect Trusight Eye Tester with which you can test your own eyes as well as the most skilled optician. When you return the tester with your test I will send you a pair of **Genuine Trusight Spectacles** that will **fit you perfectly, in a 10-K Gold Filled Frame guaranteed for 10 years,** without a cent of money down—no deposit—not even a reference. Wear the glasses in your own home **for six days,** and if perfectly satisfactory **in every way**—if they are the best glasses you ever saw **at any price**—pay me my small price (which is less than half what your optician would charge you) and the glasses are yours. If the glasses for any reason, do not suit you—if you don't believe them to be the best bargain you ever had—return them and you are out nothing. Send no money - just your name. Address **E. O. KOCH, Pres., 1644 Friend Bldg., Kansas City, Mo.**

A ROOFING OF ASBESTOS.

Asbestos is a material with which the manufacturing world is a great deal more familiar than is the agricultural world. We are sure many of our readers would like to know more of this remarkable mineral. For it is a natural mineral and not a manufactured product, as is supposed by those who have heard of it incidentally as a fireproof material. While Asbestos is used and is a necessity in a thousand-and-one ways, yet it is Asbestos as used for roofing and siding buildings which is of greatest importance to farmers. Therefore, we wish to call attention to a book, offered free by one of our advertisers, which not only explains what Asbestos is, where it comes from, and how and where it is used, but more particularly tells of its advantages when made up into ready roofing and ready siding for farm buildings.

Asbestos Roofing has many advantages over the ordinary prepared roofing, which are summarized as follows: It costs less per year than any other; it is the only permanently durable prepared roofing; it affords the best kind of fire protection; it requires no coating or painting; it is cheaper than shingles, tin or sheet iron roofings; it is absolutely water-tight in all kinds of weather; it keeps the building warm in winter, cool in summer, comfortable always. It gives a building an attractive appearance without painting; it does not taint rain water; it can be applied by anyone, no specials tools being required. It comes ready to lay, with nails and cement in each roll.

Such are the claims made for J-M Asbestos Roofing, and the book gives sufficient reasons in proof of these claims. The roofing is made only by the H. W. Johns-Manville Co., with headquarters in New York, and branch stores in all large cities. This firm is one of the largest and most reliable concerns in the roofing business, having been established over fifty years ago and having a world-wide reputation for producing nothing but the best. The firm will be glad to mail this book to all our interested readers, whether they intend to buy roofing just now or not. Write for their book No. 61 and samples, to the nearest address, which is as follows: H. W. Johns-Manville Co., 501-505 N. Third St., St. Louis, Mo.

WHAT THE GROUND CONTAINS

Is a question which many farmers have never tried to answer. Its treasures of minerals and of pure water should be revealed by the use of "American" Drilling Machinery. Every neighborhood should organize a company and by working together and sharing the profits and advantages wherever found, great additions to the wealth of the community as well as the individual would result. Any who are interested in this question should write for the new illustrated drilling catalog of the American Well Works, Aurora, Ill.

Wisconsin Holland seed cabbage was selling in St. Louis, October 30th, at $28.00 to $32.00 a ton, according to quality and place of delivery.

Lecturers: S. M. Jordan and F. G. King, of the Missouri Board of Agriculture, will hold Farmers' Institutes, at Gibbs, 9-10; Holliday, 11-12; Marshall, 14; Houstonia, 16-17; Grain Valley, 18; Concordia, 19; Foster, 20-21; Granby, 23; Pierce City, 24-25, and Easton, 27-28.

Ten-months' receipts at the St. Louis National Stock Yards show an increase of 2,171 car-loads of stock over the previous year.

CANCER CAN BE CURED

My Mild Combination Treatment is used by the patient at home. Years of success. Hundreds of testimonials. Endorsed by physicians, ministers, etc. The local application destroys Cancerous growth, and the constitutional treatment eliminates the disease from the system, preventing its return. Write for Free Book, "Cancer and Its Cure." No matter how serious your case, no matter how many operations you have had, no matter what treatment you have tried, do not give up hope, but write at once. DR. JOHNSON REMEDY CO., 1238 Grand Ave., Suite 103, Kansas City, Mo.

CENTURY MANUFACTURING COMPANY.

The Century Manufacturing Company, of East St. Louis, Ill., are said to be the largest sellers of buggies in the United States. They sell for cash or on easy monthly payments plan, and they would be pleased to extend credit to honest people located in all parts of the world, and knowing that the readers

of The National Farmer and Stock Grower are honest, they would be pleased to extend credit to all of the readers of this paper. Write for free catalogue, and in doing so be sure and mention the fact that you saw their ad in this paper. Address, The Century Manufacturing Company, Dept. 205, East St. Louis, Ill.

DON'T BUY GASOLINE ENGINES UNTIL YOU INVESTIGATE "THE MASTER WORKMAN," a two-cylinder gasoline, kerosene or alcohol engine, superior to any one-cylinder engine; revolutionizing power. Its weight and bulk are half that of single-cylinder engines, with greater durability. Costs Less to Buy—Less to Run. Quickly, easily started. Vibration practically overcome. Cheaply mounted on any wagon. It is a combination portable, stationary or traction engine. SEND FOR CATALOGUE. THE TEMPLE PUMP CO., Mfrs., Meagher and 15th Sts., Chicago. THIS IS OUR FIFTY-FIFTH YEAR.

SELECTED POETRY.

HULLO!"

W'en you see a man in woe,
Walk right up and say: "Hullo!"
Say "Hullo," an' "How d'ye do?"
"How's the world a-usin' you?"
Slap the fellow on his back,
Bring yer han' down with a whack,
Waltz right up, an' don't go slow,
Grin an' shake an' say: "Hullo!"

Is he clothed in rags? Oh, sho!
Walk right up an' say: "Hullo!"
Rags is but a cotton roll
Jest for wrappin' up a soul;
An' a soul is worth a true
Hale an' hearty "how d'ye do!"
Don't wait for the crowd to go;
Walk right up an' say: "Hullo!"

W'en big vessels meet, they say,
They saloot an' sail away.
Jest the same are you an' me,
Lonesome ships upon a sea;
Each one sailing his own jog
For a port beyond the fog.
Let yer speakin'-trumpet blow,
Lift yer horn an' cry: "Hullo!"

Say "Hullo!" and "How d'ye do?"
Other folks are good as you.
W'en ye leave yer house of clay,
Wanderin' in the Far-Away,
W'en you travel through the strange
Country t'other side the range,
Then the souls you've cheered will know
Who ye be, and say: "Hullo!"

—S. W. Foss.

THINGS TO FORGET.

If you see a tall fellow ahead of a crowd,
A leader of men, marching fearless and proud,
And you know of a tale whose mere telling aloud
Would cause his proud head to in anguish be bowed,
It's a pretty good plan to forget it.

If you know of a skeleton hidden away
In a closet, and guarded, and kept from the day
In the dark; and whose showing, whose sudden display
Would cause grief and sorrow and lifelong dismay,
It's a pretty good plan to forget it.

If you know of a thing that will darken the joy
Of a man or a woman, a girl or a boy,
That will wipe out a smile or the least way annoy
A fellow, or cause any gladness to cloy,
It's a pretty good plan to forget it.

—Answers.

THE FRIEND OF MY HEART.

Commend me to the friend that comes
When I am sad and lone,
And makes the anguish of my heart
The suffering of his own;
Who coldly shuns the glittering throng
At pleasure's gay levee,
And comes to gild a somber hour
And gives his heart to me.

He hears me count my sorrows o'er,
And when the task is done
He freely gives me all I ask—
A sigh for every one.
He cannot wear a smiling face
When mine is touched with gloom,
But, like the violet, seeks to cheer
The midnight with perfume.

Commend me to that generous heart
Which, like the pine on high,
Uplifts the same unvarying brow
To every change of sky;
Whose friendship does not fade away
When wintry tempests blow,
But, like the winter's icy crown,
Looks greener through the snow.

He flies not with the flitting stork
That seeks a southern sky,
But lingers where the wounded bird
Hath lain him down to die.
Oh, such a friend! He is in truth,
Whate'er his lot may be,
A rainbow on the storm of life,
An anchor on its sea.

—Answers.

FRIENDS.

When a fellow's kind of wobbly and uncertain on his feet,
And has to work like sixty for to get both ends to meet—
When he's not of much account and has to take what he can get—
The people don't come flockin' to be friends of his, you bet!
They don't come saying: "Old chap, I'm the only friend you've got,"
And "Remember that we're brothers," and that kind of tommyrot,
No, indeed!
And they don't get jealous of you when friends are what you need.

If a fellow's kind of lonesome and would like a friend or two
Just to come around and jolly him when things are lookin' blue;
If the shirt that he's wearin' is the only one he's got,
And he never showed the public that he's really on the spot,
They don't come crowdin' round him, nor stick out their hands and say:
"We're your friends, old man; we love you—we've the same blood anyway"—
No, indeed!
But they watch to give the boot to you when friends are what you need.

When things have got to comin' as a fellow wants 'em to,
When his pockets are all bulgin' and his clo's are fine and new;
When he steps out proud and lordly and ain't got a thing to fear,
There's a sudden change comes over folks that used to wink and sneer;
They come runnin' then to tell you that they're all your friends, and say
That they've always been dead anxious for to help you out some way—
Yes, indeed!
Friends are always mighty plentiful when friends ain't what you need.

Tit-Bits.

EQUALITY.

Come, give me your hand, sir, my friend and my brother;
If honest, why, sure, that's enough!
One hand, if it's true, is as good as another,
No matter how brawny or rough.

Though it toil for a living at hedges or ditches
Or make for its owner a name
Or fold in its grasp all the dainties of riches—
If honest, I love it the same.

Not less in the sight of this Heavenly Maker
Is he who must toil for his bread;
Nor more in the sight of the mute undertaker
Is majesty shrouded and dead.

Let none of us jeeringly scoff at his neigbor
Or mock at his lowly birth.
We are all of us God's. Let us earnestly labor
To better this suffering earth.

—Matthias Barr.

HE'S NONE THE WORSE FOR THAT.

What though the homespun suit he wears,
Best suited to the sons of toil—
What though on coarsest food he fares,
And tends the loom, or tills the soil—
What though no gold leaf gilds the tongue,
Devoted to congenial chat—
If right prevails, and not the wrong,
The man is not the worse for that.

What though within his humble cot
No costly ornament is seen—
What though his wife possesses not
Her satin gowns of black and green—
What though the merry household band
Half-naked fly to ball and bat—
If Conscience guides the heart and hand,
The man is none the worse for that.

True worth is not a thing of dress—
Of splendor, wealth, or classic lore;
Would that these trappings we loved less,
And clung to honest worth the more!
Though pride may spurn the toiling crowd,
The faded garb, the napless hat,
Yet God and Nature cry aloud—
The man is none the worse for the.

—Exchange.

BETTER LUCK ANOTHER YEAR.

Oh never sink 'neath Fortune's frown,
But brave her with a shout of cheer,
And front her fairly—face her down—
She's only stern to those who fear!
Here's "Better luck another year!"
Another year!

Aye, better luck another year!
We'll have her smile instead of sneer—
A thousand smiles for every tear,
With home made glad and goodly cheer,
And better luck another year—
Another year!

The damsel Fortune still denies
The plea that yet delights her ear;
'Tis but our manhood that she tries—
She's coy to those who doubt and fear—
She'll grant the suit another year!
Another year!

Here's "Better luck another year!"
She now denies the golden prize;
But, spite of frown and scorn and sneer,
Be firm, and we will win and wear,
With home made glad and goodly cheer,
In better luck another year!
Another year! Another year!

—W. Gilmore Simms.

PAYING THE PIPER.

The Piper sat by the river, his tireless pipe in his hand,
But ere the sun set and the white stars met
He scratched with a stick on the sand.
"My bills are due," quoth the Piper, "and now they pay," quoth he.
"Who danced and played from the sun into shade.
Now render account to me."

"Here is one for a year," quoth the Piper; "a year of love's delight;
A heart that is dead and a soul unwed
Shall cancel a debt so trite!
I need not dun," quoth the Piper—and laughed, but nobody heard,
A chill in the air, and a shudder somewhere—
"They will render without one word.

"And this for my maddest playing"—oh, he wrote as he chuckled and laughed—
"I will make my dole an immortal soul,
They shall drain where they only quaffed!"
So, he did his sum in addition, till the rose and the star had met,
But although he ried to thrust it aside,
One name lay unchallenged yet.
Complacently, knave and sinner, apportioned he each his due,
But when it was o'er there remained one more,
And its pattern the Piper knew.
"Rascal or thief," mused the Piper, "I play for their dancing and smile,
They have their way for a little day,
I have mine after a while.

"I can score each knave," quoth the Piper, "in Life's ill-sorted school,
For they take and they take their greed to slake,
But I am no match for the Fool!
For he pays as he goes," frowned the Piper, "pain, laughter, passion of tears!
He claims no pelf from Life for himself,
But gives his all without tears.

"The rest of my dancers laugh not, and I hold each one as a tool,
But he pays as he goes, be it rapture or woes,
And I have no bill for the Fool!
He loves and he lives," frowned the Piper, "and such poor returns suffice,
For he cries: 'Voila le diable!' and gives himself as the price!"
Then, with chagrin and reluctance, as the star sank into the pool,
The Piper made claim on each separate name,
But receipted in full—for the Fool.

—Virginia Woodward Cloud.

ABOU BEN ADHEM.

Abou Ben Adhem (may his tribe increase!)
Awoke one night from a deep dream of peace,
And saw within the moonlight in his room,
Making it rich and like a lily in bloom,
An angel writing in a book of gold;
Exceeding peace had made Ben Adhem bold,
And to the presence in the room he said:
"What writest thou?" The vision raised its head,
And with a look made of all sweet accord,
Answered: "The names of those who love the Lord."
"And is mine one?" said Abou. "Nay, not so,"
Replied the angel. Abou spoke more low,
But cheerily still, and said: "I pray thee, then,
Write me as one that loves his fellow-men."
The angel wrote and vanished. The next night
It came again, with a great wakening light,
And showed the names whom love of God had blessed—
And lo! Ben Adhem's name led all the rest!

—Leigh Hunt.

PROMISES.

"Your feet shall find the roses' path,"
I said, long years ago;
And yet, for all my promises,
Your feet have found but snow.

"Your gown shall be but cloth of gold,"
I said with laughter soft;
Your garments, love, are old and thin,
And mended oft and oft.

"Your hands shall wear but rings of pearl!"
Ah, love, how vain the phrase!
Your little hands are hard and worn,
And scarred in many ways.

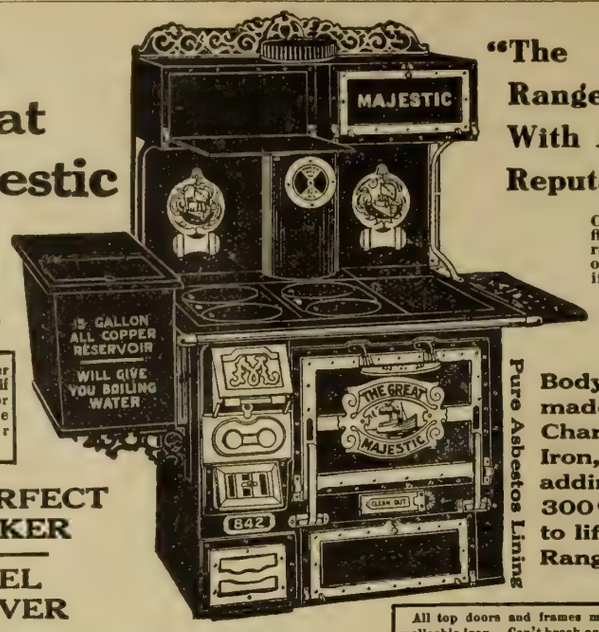
And yet, at times, when even comes,
I look across at you,
And see your silver silken hair,
Your eyes so deeply blue.

Then somehow, in your angel face,
I find content and rest;
And, though I planned so differently,
Perhaps just love was best!

—Lilla B. N. Weston, in Cavalier.

The Great Majestic

"The Range With A Reputation"



Can furnish reservoir flush with top if desired.

Can furnish flush reservoir on right if desired.

With water fronts if wanted for pressure or other boilers.

Pure Asbestos Lining

Body made of Charcoal Iron, adding 300% to life of Range

PERFECT BAKER

FUEL SAVER

All top doors and frames made of malleable iron. Can't break or crack.

You don't buy a range every year. Therefore when you *buy* one, *buy* the *best.* At first the Great Majestic may cost you a very little more than an ordinary range, but in the end it is *much cheaper.* It has *durability* and will out-last three ordinary ranges. It is scientifically built—*no heat can escape or cold air enter*—will *save half* on your *fuel bill.* A perfect baker—*not one day good—next day poor—but always uniform.* Will save you from disappointment and poorly cooked meals. Your Best Guarantee: 1st—The reputation of the plant behind the range. 2d—Hundreds of thousands in use every one giving satisfaction. We want you to see *The Great Majestic.* If no dealer near you has it, write us—we will send you free our booklet "Range Comparisons," and tell you where you can see a Majestic—the range that gives satisfaction and out-lasts all others.

THE MAJESTIC MFG. CO., St. Louis, Mo.

The Great Majestic Is For Sale In Nearly Every County In Forty States

Our Great Re-Building Sale is Now in Progress!

A GREAT OFFER.—We will give every reader of this paper an 18-months' trial subscription to that handsome farm and story magazine, **FARM LIFE**, printed in colors, for only 25 cents. Send the quarter to **FARM LIFE**, 310 Coca Cola Bldg., Chicago, Ill.

The Hunting Nuisance.

More and more each year is this getting to be a burden to the farmer who finds his gates left open, his stock terrified, if not perforated with shot; his woods set on fire from the spark of the gun, and even his own life jeopardized if he happens to step into a thicket unannounced. Not only are his best friends, the quail and grouse, all but exterminated, but not infrequently his domestic turkeys are shot through the mistake (?) of the sportsman.

Of course it is very mean and stingy in the old farmer to object to the weary city man having a little fun at his expense. It is all right for him to pay taxes on the land, doctor up his wounded stock, or give them away if he finds them not worth the doctoring, and spend a week or two of the hardest kind of work fighting a fire that this few hours of sport has cost him, perhaps to watch some of his best timber totally being destroyed despite his best efforts. Yet farmers in many parts of the country are beginning to face the matter squarely and demand their rights. Even if they do have to pay for the advertising to protect their own property from the hunter, it is being protected by newspaper and poster. The illegitimate use of other's people's property has been carried to such an extent that the owner is compelled to defend himself. Forest fires have wrought too great a havoc to be smiled at. It is high time that people were taught to respect the rights of others. Protect your insect-destroying and weed-destroying birds, your stock and your forests. It is your right, your duty. Neighbors who once scoffed now see the necessity for this, and posterity will thank you most richly.—Bessie L. Putnam.

For Washing Wool Articles.

White shawls and hoods that are made of soft wools and are only slightly soiled may be cleaned by rubbing them in several changes of flour and magnesia mixed. Rub them through this mixture as if washing in water, and when they seem clean, take out the articles and shake well out of doors, then brush every particle of the flour out with a clean, soft brush. Never try to sponge any woolen article with gasoline to clean it, for this only spreads the spots, but dip the whole garment into it and be sure it is thoroughly saturated, then rub and squeeze with the hands, and if the garment is much soiled, let it remain in the fluid for two hours; but the only safe place to use gasoline is out of doors. The temperature of the waters in which woolen articles are washed and rinsed and the atmosphere in which they are dried should be the same, for change of temperature is what shrinks them, and in no case should they be rubbed hard or twisted in wringing. A woolen waist or dress skirt or any soft white woolen articles, such as the baby's flannels, may be kept soft without shrinking by washing them through warm suds in which a teaspoonful of borax has been dissolved, as the borax softens the water, and hard water will shrink any woolen fabric and will ruin nice flannels. Clean the articles by pressing and squeezing between the hands and rinse through two waters with a little of the borax in each, and if the articles are very soiled, more borax should be used in all the changes of water. Much, however, of the success depends upon the drying process, as the shawls, hoods or garments must be thoroughly stretched while wet, then they should be kept pulled into perfect shape while drying. The best way to dry knitted or crocheted articles is to squeeze the rinsing water out, then put them on a clean, large dish and place near the stove, and shake and turn them often so they will dry evenly.—M. A. T.

Three generations of Simpsons have made

Ask your dealer for
Simpson-Eddystone
Fast Hazel Brown
The fastest and most beautiful Brown on the market.

You think it impossible to get brown that will not fade in cotton dress-goods. We make it—a beautiful rich shade that perspiration, sunlight or washing cannot budge. This color, combined with superior quality and beautiful designs, makes these calicoes ideal for stylish dresses.

Beware of all imitation Browns. They are *not* "just as good." If your dealer hasn't Simpson-Eddystone Fast Hazel Brown, write us his name. We'll help him supply you.

The Eddystone Mfg Co Phila, Pa.
Established by Wm. Simpson, Sr.

AN EXCELLENT ATLAS.

The subscription price of The National Farmer and Stock Grower is fifty cents a year, or one dollar for three years. We are glad to obtain subscriptions on credit, payable at the end of the first year, but we are better satisfied if the dollar is paid in advance; therefore we offer premiums to induce advance payments.

Our Most Valuable Premium.

Our very best premium is Hammond's Handy Atlas of the World, and it is remarkable what this wonderful book contains.

Hammond's Handy Atlas of the World consists of 107 pages, 6x8 inches; is printed in colors and is bound in a durable red-cloth cover. It contains seventy full-page maps of every state and territory, with new railroads and towns.

Every country in the world is shown by maps from the latest plates.

All maps are carefully printed in colors on best cream-laid paper, boundaries distinct, names of towns in graded type, indicating their size. A work of rare beauty and usefulness.

This Atlas contains arranged lists of cities, giving the latest census figures of all states and territories and foreign countries, and a vast amount of interesting information.

OUR SUBSCRIPTION OFFER.

We will send you The National Farmer and Stock Grower for three years and send you absolutely free, prepaid, Hammond's 1908 Handy Atlas of the World, all for One Dollar.

SUBSCRIPTION BLANK.

National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.:

I enclose One Dollar to pay for my subscription to your paper for three years in advance, on condition that you send me, **free** and **prepaid**, one copy of **Hammond's 1908 Handy Atlas of the World**, as per your guarantee above.

Poultry Pays on Dry Farms.

Prof. H. M. Cottrell, of the Colorado Agricultural College, says that he has found in widely different sections of the state, skilled poultrymen on dry land farms are making a net profit of $2.00 per hen a year above cost of feed. Four hundred hens can be kept on a 160-acre farm.

The most money is in eggs, and a special egg-producing strain and breed should be selected.

Not over fifty hens should be kept in one house, and the best house for the plains is a well-built sod house with canvas windows. This is cheap, warm and dry, and gives thorough ventilation without draughts.

The hens should be cared for by the farmer and not by his overworked wife. They should be fed and cared for three times daily, kept free from vermin and the houses cleaned daily. Under these conditions 400 hens will give a yearly income of from $500 to $800.

DON'T STAY FAT

Obesity Quickly and Safely Cured. No Charge to Try the NEW KRESSLIN TREATMENT.

Just Send Your Address and a Supply Will Be Sent You FREE—Do It To-Day.

Fat people need no longer despair, for there is a home remedy to be had that will quickly and safely reduce their weight, and, in order to prove that it does take off superfluous flesh rapidly and without harm, a trial treatment will be sent, free of charge,

This represents the effect the Kresslin Treatment has had in hundreds of cases.

to those who apply for it by simply sending name and address. It is called the KRESSLIN TREATMENT, and many people who have used it have been reduced as much as a pound a day, often forty pounds a month when large quantities of fat were to be taken off. No person is so fat but what it will have the desired effect, and no matter where the excess fat is located—stomach, bust, hips, cheeks, neck—it will quickly vanish without exercising, dieting, or in any way interfering with your customary habits. Rheumatism, Asthma, Kidney and Heart Troubles leave as fat is reduced. It does it in an ABSOLUTELY HARMLESS way, for there is not an atom in the treatment that is not beneficial to all the organs. So send name and address to the Dr. Bromley Co., Dept. 156 E, 41 West 25th St., New York City, and you will receive a large trial treatment free, together with an illustrated book on the subject and letters of indorsement from those who have taken the treatment at home and reduced themselves to normal. All this will be sent without one cent to pay in any shape or form. Let them hear from you promptly.

STOP SELLING YOUNG STOCK.

Young, immature hogs are being rushed to market all over the West.

Farmers have made up their minds that the most money lies in sacrificing all their young stuff and selling their corn. It seems now that the only thing that will check this movement is a wide break in the price of corn. The situation is perplexing, yet if feeders will analyze it they will see they are losing out by marketing the young stuff and are likely to lose out on their corn. Eliminate the feeding demand for corn and prices will go down the toboggan slide faster than hogs have been going the last month.

Keep the young hogs back. It looks now that the feeders who will make their hogs fat by February will be well paid for their corn. Big lard hogs will be wanted mighty bad by that time.

THE LANGUAGE OF FLOWERS.

This is a beautiful study, and it is elegantly explained by the most satisfactory methods. There are twenty-four post cards, and each post card shows a different flower, grouped in such a way that the sentiment that each flower represents is spelled out by the flowers. For example, the violets of the violet card spell "Faithfulness;" the roses "Love;" clover, "Be Mine," etc. Each post card is different, finished in many colors and glossed.

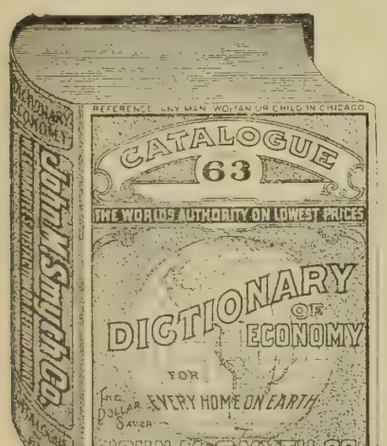
THE UNIVERSAL MAGAZINE

is a nice, bright, cheerful, illustrated monthly magazine, published at 25 cents a year, and the post cards can be selected as a free premium by anyone who sends in cash in advance. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

First prize at Missouri State Fair was awarded on white winter wheat to Chris Smith, Bunceton; on red winter wheat to Christ Ohlendorf, Boonville; on rye to Chas. Romig, Sedalia; on white oats to Simon Baumgartner, Pierce City, Mo.; on black oats the same; on red oats to Wm. Romig, Sedalia; on winter oats to C. M. Shepard, Lamonte; on barley to Simon Baumgartner, and on speltz to Wm. Romig.

YOU CAN SAVE AT LEAST $25.00

On every hundred dollars' werth of goods you buy from this book. It is the great Fall and Winter Catalogue. Contains all the 1909 styles of goods at wonder cut prices.



Don't pay retail prices for anything to anyone. This catalogue represents enormous stocks of merchandise. There are 1,200 pages. It costs 21 cents to pay postage upon it. It costs us $1.00 to print it. Free to you if you send 15 cents towards paying postage, and we give you a coupon so as to refund the money on first purchase.

BATTLES WITH COAL TRUST.

Chicago Dealer Stands Alone and Fights the Giant Combination.

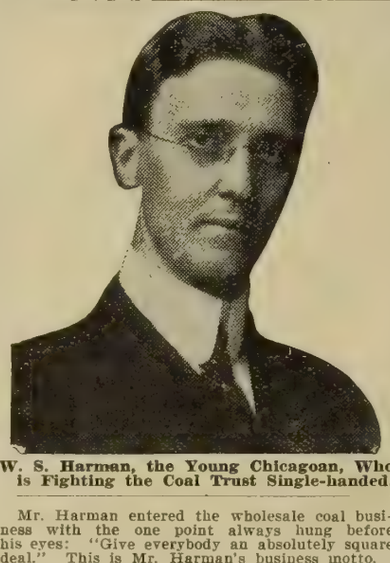
Mr. W. S. Harman, whose picture is shown herewith, is the president of the W. S. Harman Coal Company of Chicago, which is selling coal direct from the mines at the wholesale price, thus defying the coal trust and bringing down the wrath of that organization on his head.

Mr. Harman is probably carrying on a more vogorous fight against the coal trust than was ever before carried on by any individual, single-handed, against any other combination so supremely powerful.

Mr. Harman is in possession of the innermost secrets of the coal trust. These he has had printed in a booklet which he calls "Coal Facts," and which he is willing to send to those who may wish to read it and learn just how the coal trust has managed to go on stripping the pockets of the people for so many years.

Mr. Harman has for some time past been carrying on a heavy advertising campaign in the columns of farm papers. He advertises to save from $1 to $3 a ton on coal, and in addition he advertises to give a ton of coal free with each car.

The people have been quick to respond to the offers made by Mr. Harman, and the indications are that he will have hundreds of customers throughout the country in a short time.



W. S. Harman, the Young Chicagoan, Who is Fighting the Coal Trust Single-handed.

Mr. Harman entered the wholesale coal business with the one point always hung before his eyes: "Give everybody an absolutely square deal." This is Mr. Harman's business motto.

One of the things which Mr. Harman does, and does in every case, is to make good any shortage which occurs in a car of coal from any reason whatsoever. If the coal is stolen in transit Mr. Harman sends the consumer a check for the entire amount which is missing. If the weight of the coal shrinks from the mine to the place of destination a check is sent in full for the amount of coal which the car is short. This one feature probably has done as much to build up his business as any other, although it is only one of the many things which Mr. Harman does to satisfy each customer. Mr. Harman believes that a satisfied customer is better than all the advertising he can do.

Mr. Harman is still a very young man, but he is old in experience as far as the coal business is concerned. Despite his comparative youth he has given the coal trust a harder jolt than it ever received before, and, naturally, that organization has done everything in its power to put him out of business.

Mr. Harman's place of business is 355 Dearborn St., Chicago. He has a column advertisement and a blank to be signed on page 21.

THE MASTER WORKMAN ENGINE.

The Temple Pump Company, of Chicago, is the pioneer in the manufacture of the Multiple Cylinder Gasoline Engine. The Master Workman, a double-cylinder gasoline engine was the first in the field. Now the whole course of progress in the making of gas engines is towards the multiple cylinder type, engines of two, four, six and eight cylinders being made. The Temple Pump Company are now manufacturing two and four cylinder engines for general farm use.

The advantages of the two and four cylinder engines for the farm are: Economy in the use of fuel, greater certainty of continuous running, quick and easy starting, less cumbersomeness and adaptation, not only for stationary use, but for portable and traction use. Sooner or later the need of an engine for traction purposes as well as for stationary will be felt by every agriculturist. This is the 55th year of the Temple Pump Company.

WHY CORN SPOILS IN CRIBS.

Grain buyers complain that too much spoiled or damaged corn has been dumped onto them during the past two or three years, and they are now trying to get at the real causes of so much poor stuff.

In the first place, many are planting varieties which are too big to ripen. Corn to keep well and come out of the crib in good condition should be thoroughly mature before it is husked.

We have got to rushing things too fast; we are husking corn too soon. I saw huskers in the fields of Northern Illinois this season the first of October. That is three weeks too soon even for the earliest varieties. The ears will dry out better on the stalks than they will in the cribs.

Then, poor cribs often are the cause of much spoiled corn. Cribs should be built on solid foundations, and at least 18 inches from the ground. Put on a water-proof roof, and leave ample space for ventilation. Cribs should not be boarded up solid, nor should they be made too wide. Double cribs are all right, providing the driveway is not filled up with corn. Leave the doors open and give all the ventilation possible until freezing weather comes.

Throw out rotten ears when the wagons are unloaded, and insist upon the corn going into the cribs as clean as possible. There is too much dirty husking. These husks prevent free access of air and the result is mouldy corn. With men husking at 3 cents per bushel, they are bound to do dirty work, leaving much silk and husk on the ears. Insist upon cleaner work, give the corn free ventilation from all sides, and you will not have to take a crowbar to pry your corn loose next Spring.—L. C. B.

Farming Without Live Stock.

The biggest mistake that many farmers are making is trying to farm without keeping live stock. We are up to a point now in Indiana and Illinois where it is simply impossible to produce profitable crops on many farms held in the market at about $150 per acre. It is high time we were undeceiving ourselves as to the actual value of these lands as we are now handling them, and get down to the hard, solid facts about the soil condition. Not many are willing to confess that they have been soil robbers for twenty years or more, and they go right on planning one grain crop after another, and spend two months each season hauling their grain to market.

The older these farms become the greater the need of live stock to keep up fertility. It seems very strange that so many never give this matter any consideration. With object lessons in every township, yet thousands shut their eyes and are planning another raid on their worn-out fields. I wish that every man who doubts the efficiency of live stock could walk with me for a half day over two adjoining farms in Du Page county, Illinois. On one, cattle, hogs and sheep consume every bushel of corn raised. On the other, the live stock consists of the work teams, a Collie dog and some chickens. This man could not or would not understand why his corn was caught by frost and would yield only about half as much as his neighbor's across the road. I asked another near-by farmer what made the difference. He said: "That farm is all run down. There has not been a load of manure hauled upon it in years, while the other farm has always been a stock farm."—L. C. Brown.

Opening November sales at the St. Louis National Stock Yards include sixty-two head good, fat, 1,579-pound steers, sold at $7.00 per 100 pounds. Shipped by Fennewald Bros., Audrain county, Missouri.

Total receipts of hogs at the St. Louis National Stock Yards in ten months of the year 1908 were 2,072,233 head, the largest number ever received at the market.

Sherman Jeffords of Elgin, Okla., won highest honors at the State Fair on white corn.

Do you want a fine farm for little money

—a farm that is bigger than you can afford to own where you live now?
—a farm that will grow bigger crops than you can grow on your present farm?
—a farm that will make you a good living and leave you some profit besides?
—a farm that will grow more valuable each year?
You can get such a farm

in the Southwest

along the Cotton Belt Route in Southeast Missouri, Arkansas, Louisiana and Texas.
Some of the finest land in the Southwest lies along this line. It can be bought on easy terms for $5 to $25 an acre.
The low rates offered by the Cotton Belt each month would make a trip of investigation very cheap and profitable.

COTTON BELT ROUTE

MAY MANTON PATTERNS.

Very Elegant Fashion Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Every pattern is new and original.

Misses' Kimono.

No. 6102.—The kimono that is made with sleeves and body portion in one is one of the newest and prettiest that has appeared, also is so simple to make that it involves almost no labor, consequently allows of variety with the minimum of cost as well as effort. The material illustrated is one of the pretty new figured cotton crepes, trimmed with bands of wash silk, but those that are available for kimonos are almost without limit. Oriental crepe and oriental silks are always charming, but the inexpensive printed wash fabrics are always obtainable and always pretty and can be trimmed with any contrasting bands, while later the model will be found a good one for cashmere, albatross, wash flannel and the like.

The quantity of material required for the sixteen-year size is 6 yards 24, 32 or 44 inches wide, with 1 yard of silk for bands for the long kimono; 3 yards 24, 32 or 44 inches wide for the short kimono.

The Pattern 6102 is cut in sizes for girls fourteen and sixteen years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Boy's Russian Suit.

No. 6106.—The suit made with the real Russian coat that buttons up to the left shoulder is always a favorite one for the small boy, and this model is simple as well as smart. In the illustration it is made of serge and worn with a leather belt, but there are various other light weight wool materials that are appropriate, while a great many mothers use the heavy washable fabrics throughout the entire autumn, and this model suits all equally well. Galatea, khaki, heavy linen, soft finished pique and viyella are admirable for hard usage throughout the cooler months. Among the wool fabrics serge and mohair are especially well liked, and for very dressy occasions white is a favorite.

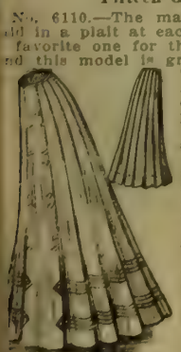
The suit consists of the coat and the knickerbockers. The coat is made simply with seams and back and closes with buttons and button-holes, while the sleeves are laid in tucks at the wrists. The knickerbockers are of the regulation sort, drawn up by means of elastic at the knees.

The quantity of material required for the medium size (four years) is 4⅛ yards 24, 4¼ yards 27, 2½ yards 36, or 2 yards 44 inches wide.

The Pattern 6106 is cut in sizes for boys of two, four and six years of age, and will be mailed to any address by the FashionDepartment of this paper on receipt of 10 cents.

Fifteen Gored Skirt.

No. 6110.—The many-gored skirt that is laid in a plait at each seam promises to be a favorite one for the autumn and winter, and this model is graceful in the extreme. The front gore is arranged to give the effect of a tapering box plait, which is exceedingly becoming, and allows effective use of buttons as trimming, although these last are not obligatory. Broadcloth trimmed with soutache braid is the material illustrated, but all the suitings and all skirtings of the season can be utilized for the design with trimming braid, or bands of the same or contrasting material, as liked, or there can be a finish of a stitched hem only, as



ain skirts will be exceedingly fashionable. The skirt is cut in fifteen gores and is laid plaits that conceal all the seams. The ldditional fullness at the back is laid in inrted plaits and all are stitched flat well low the hips and pressed into position low, so that they give the fashionable ng lines

The quantity of material required for the edium size is 11¼ yards 24 or 27, 6¼ rds 44, or 5½ yards 52 inches wide. If material has figure or nap; 9½ yards 24, 9 yards 27, 5 yards 44, or 4⅞ yards 52 inches wide if material has neither figure nor nap.

The Pattern 6110 is cut in sizes for a 22, 24, 26, 28 and 30-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Surplice Over Waist.

No. 6103.—Surplice styles are always pretty and feminine in effect and are also among the most fashionable of the incoming season. This over-blouse is simple, graceful and novel in one and is adapted to a great variety of materials. All satin-finished fabrics are promised great vogue for the autumn, however, and the model is made of messaline satin with trimming of chiffon velvet and soutache. The softly-draped girdle is attached to the lower edge and the closing is made at the left of the front. Side and front closings make notable features of the season, both for blouses and skirts, and the over-blouse, in addition to being attractive in itself, can be combined

with one of those new skirts to give a semi-princesse effect without the least difficulty whatever.

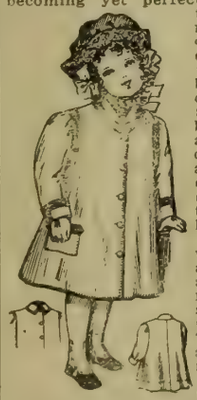
The sleeves and body portion of the over-blouse are cut in one and are joined to a foundation girdle over which the full one is arranged. The right front is lapped over the left and the closing is made invisibly.

The quantity of material required for the medium size is 2 yards 21, 24 or 27, or 1 yard 44 inches wide, with 1 yard 27 inches wide for the trimming and girdle.

The Pattern 6103 is cut in three sizes—small, 32 or 34; medium, 36 or 38; large, 40 or 42 inches bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Child's Coat.

No. 6107.—The coat that completely covers the frock is the most desirable one for small children, and this model is pretty and becoming yet perfectly simple withal. In the illustration it is made of broadcloth in one of the new peacock shades trimmed with black silk braid, but all seasonable cloaking materials are appropriate. White broadcloth finished with a scalloped edge is dainty and charming, and the darker broadcloths and the plain cheviots and the mixtures are admirable for hard usage.



The coat is made with fronts and backs and can be made high at the neck with a rolled-over collar, or slightly open with the shawl collar, as liked. The sleeves also allow a choice of plain or rolled-over cuffs.

The quantity of material required for the medium size (six years) is 3¾ yards 27, 2½ yards 44, or 2 yards 52 inches wide, with 4 yards of braid.

The Pattern 6107 is cut in sizes for children of two, four, six and eight years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Circular Skirt.

No. 6098.—Every variation of the skirt that is close-fitting and gives long lines is to be noted among incoming styles. This one is exceptionally graceful, but quite simple. It is circular in cut, yet has inverted plaits at the front and back, so doing away with overseverity and making a comfortable flare at the lower portion. It is adapted to all seasonable materials, and can be utilized both for the street and the house, inasmuch as it can be made to either round or walking length. When the material is close woven and is not likely to sag, the skirt can be cut in two pieces, which are joined at front and back; but should the fabric be of the sort which is likely to stretch, it is better to make each circular portion in two pieces with seams over the hips. The trimming can be arranged as indicated, or in any way that may be preferred.

The skirt consists of two circular portions. There are extensions on the front edges that extend to about the depth of the trimming indicated and which form the inverted plaits, but the plaits at the back are also laid for the entire length. When the seams over the hips are used the back portion is so cut as to bring the straight edge at the front.

The quantity of material required for the medium size is 6½ yards 24, 5¾ yards 27, 4 yards 44, or 3¼ yards 52 inches wide, without seams over the hips; 5½ yards either 44 or 52 inches wide with seams over the hips, with 3 yards of braid to trim as illustrated.

The Pattern 6098 is cut in sizes for a 22, 24, 26, 28 and 30-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Please be sure to give size of pattern ordered and write your own name and address clearly that no mistake can be made to cause delay.

Please address all pattern orders to **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

THE YOUTH'S COMPANION

THE NATIONAL FAMILY PAPER

Then The Youth's Companion for the fifty-two weeks of 1909—a library of the best reading for every member of the family.

THE YOUTH'S COMPANION, BOSTON, MASS.

HE CAUGHT IT ALL AROUND.

I just caught the train with the young lady in it,
In spite of the crush and the crowd that was there.
But was down on my luck the very next minute,
I just caught the train with the young lady in it;
For a rip and a cry and scream rent the air,
And the dancers all stopped—'twas rent past repair.
I just caught the train with the young lady in it.

—Puck

THE UNIVERSAL MAGAZINE.

This is a nice, thirty-two-page, three-column magazine, issued monthly. It contains illustrated reading matter of interest to all the family. There are nice stories, historical sketches, selected poetry, a splendid line of patterns and a number of original household articles. The subscription price is 25 cents a year, or five subscriptions for one dollar. Anyone sending in a subscription can select as a free gift a Mascot Mirror. These are circular mirrors, 2¼ inches in diameter, and are said to bring good luck, fame and fortune. They are also of fine glass and will last a lifetime. Five subscriptions for a dollar, including five mirrors. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

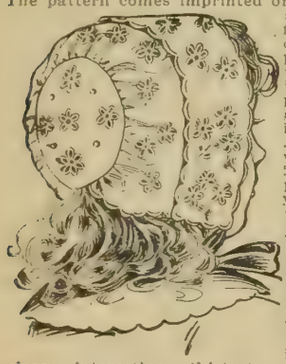
SHIRT WAIST EMBROIDERY PATTERN.

This embroidery pattern is No. 513, made by the Paris Modes Company. It is a wheat design in shadow and outline embroidery for shirt waist. It comes imprinted on light paper and is transferred to the cloth by pressing it with a hot iron. The pattern is good for two impressions.

We are sending out this pattern as a circulation premium in connection with the **Universal Magazine**. Anyone who will send 25 cents to pay for the **Universal Magazine** for one year can select Embroidery Pattern No. 513 as a free premium. The **Universal Magazine** is thirty-two pages, published monthly, and contains a large amount of interesting reading matter. Address, The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

CHILD'S LINGERIE HAT.

This embroidery pattern is No. 526, made by the Paris Modes Company. It is for eyelet embroidery and D. M. C. embroidery cotton. The pattern comes imprinted on light paper and is transferred to the cloth by pressing it with a hot iron. The pattern is good for two impressions. Anyone who will send us 25 cents to pay for one year's subscription to the **Universal Magazine** can select Embroidery Pattern No. 526 as a free premium. The **Universal Magazine** is a nice, clean, interesting, thirty-two-page, three-column monthly paper, and it will please everyone. Address, The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.



The Moth Pest.

The malodorous moth ball, indispensable in many homes, is really not a cure but a preventive, and if the pest is present it will get in its work. But if clothing is put into tight sacks of paper it is safe. And if the remedy is placed in the closet, the pest will not be so ready to enter. But do not shut your insects, balls and goods together and expect no harm to come.

There are two kinds of old-fashioned moths—the naked and the case-bearing; the latter chew flannel or silk and convert it into a covering, the mantle naturally assuming the hue of the cloth from which it was made; and if it must be enlarged later, the added gore may be of another color, in case a new garment is attacked.

In many places the buffalo moth is now a recognized pest, working not only upon wool and silk, but delighting equally in cotton goods or piles of papers. Unlike the case-bearer, it moves quickly when disturbed, sliding along in a very peculiar manner. The larva is shaped like a pumpkin seed, with a large head, and covered with black fur. When crushed, it reduces to a dark powder. The beetle is smaller than a lady-bug, being often mistaken for this friend among insects. But while the lady-bug is bright red with black dots, the buffalo bug is a mingling of black and white with a narrow stripe of dull brick red along each side. It is frequent on windows of infested houses in the spring, and can be easily killed.

Many remedies have been suggested, some effective for the time, but all requiring the follow-up system. Gasolene, benzine and similar remedies will destroy the insects, but care must be taken not to enter the room with a light until all the fumes are dissipated. Carbon bisulphide is a still more potent power, being fatal to all insect life in a closed room, and as fatal to human life; hence it must be used with great caution.

Our grandmothers prided themselves on their lavender-scented linen; and those who still adhere to this dainty perfume will find it the easiest way of keeping the moth pest in check. It is more successful than the odious mothballs, and most people enjoy the fragrance.

Lavender seed can be obtained of any leading florist and the plants raised in the garden. Gather and dry before they commence to bloom. Or, for fifteen cents enough oil of lavender can be purchased at the drug store to last the entire season. Used in this form it is not so permanent as the leaves, but must be renewed every week or two. If you have an atomizer, use it; if not, invert the bottle and then remove the cork and touch it here and there about the places likely to become infested. It will also tend to drive away flies and mosquitoes.

The fish-moth, readily recognized by its fish-like form, silvery hue and rapid movements, is not quite so easily disturbed by the lavender, but may still be kept at bay. It delights in flour and paste, hence infests flour bins and book shelves, attracted to the latter by the paste in book bindings.—Bessie L. Putnam.

Daintiness Counts.

The dainty girl has learned that it not only adds to her own self-respect and pleases her friends for her to dress tastefully and becomingly, but that it actually pays from a financial point of view, as clothes that are well cared for will last twice as long as those that are carelessly treated.

Neglected clothing is always unattractive and repulsing; and hats and dresses cannot long be thrown around carelessly without giving strong evidence of such lack of care. Every girl should learn to mend and darn neatly, if she is to keep her wardrobe in order. A ripped glove or a wrinkled skirt will spoil an otherwise perfect toilet and mark the wearer as a careless woman.

After purchasing a pair of gloves, select a spool of cotton thread of the same shade for darning the gloves, as silk cuts the kid and is always more noticeable than cotton thread. Sometimes a rent in a woolen garment can be easily darned with ravelings of the same material. Thread an embroidery needle with the ravelings and carefully darn the place, then dampen and press on the wrong side.

By being careful with her hats, the dainty girl can often make her summer hats for two or three seasons, and any good straw hat can be brought up to date by changing the shape or style of trimming. A white straw hat may be cleaned beautifully with oxalic acid, and five cents' worth will clean two or three hats. Dissolve in warm water and allow it to stand for two hours, then brush the hat vigorously with a soft brush dipped in the oxalic solution, and when the hat seems clean, rinse with clear water, put into shape and dry in the house, and if the work is carefully done the hat will be as nice as new.

Pretty neckwear often makes a plainly-dressed girl look well dressed, and with a little patience and ingenuity most of one's neckwear may be made at home from all bits of silk, linen or lace, and every girl who wants to economize should learn to take proper care of her small belongings, and such articles need frequent cleaning to keep them clean and fresh looking.

The small white collars, neckties and laces may be kept beautifully clean by washing them through a warm Pearline suls, and if nice handkerchiefs are put to soak over night in the suds they will need very little rubbing, and these bits of linen are short-lived if sent out to be laundered.

Veils, ribbons and laces should all be kept smooth by winding over a roller instead of folding, as they will look daintier and wear longer without creasing. By being careful with her clothes, the girl who is dainty and neat is enabled to buy many little extras to replenish her wardrobe, for articles of wearing apparel often become soiled and shabby more from neglect than from real use, and the careful girl often appears as well dressed as her neighbor who spends twice the amount of money on her outfit of clothing, because one cares for her clothes, while the other neglects them, and a fine garment that is soiled and wrinkled looks far worse than a cheap one that is fresh and dainty looking.—A. M. H.

For Children's Wash Dresses.

Patience P., of Kansas, writes: "What is a good kind of material for children's wash dresses?" In answer we desire to say that one of the most beautiful, practical and inexpensive wash goods is Simpson-Eddystone Prints. There are so many pretty patterns and the fabric is so substantial. It stands the frequent washing that children's dresses must have, and it doesn't fade. Make them up simply. They are so pretty themselves that they do not need elaborate trimming. The Shepherd Checks are particularly good for children's dresses.

SEARS, ROEBUCK & CO., CHICAGO, ILL.

A GRAPEVINE PREMIUM.

Every farmer or owner of a suburban home will find it pleasant and profitable to grow a few grapes. To enable our friends and patrons to make a favorable introduction to grape growing we will furnish them a collection of grapevines which will grow nicely on a trellis of which the diameter is fourteen feet.

The trellis is not necessary, however, the first or second year, as stakes can be driven to each vine. The trellis can be constructed when it becomes necessary.

Twelve grapevines: The **Concord**, black; the **Niagara**, white; **Catawba**, red; **Moore's Early**, black; **Elvira**, white; **Massalla**, red; **Ives**, black; **Moore's Diamond**, white; **Perkins**, red; **Norton's Virginia Seedling**, black; **Martha**, white; and **Aroma**, red; constituting the best possible collection of grapevines.

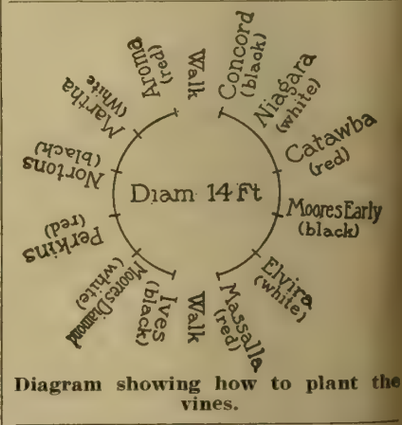

Diagram showing how to plant the vines.

Send us one dollar and fifty cents and we will credit you with two-years' subscription to this paper, The National Farmer and Stock Grower. We will also send you the twelve grapevines. Anyone having a small yard can grow these vines to excellent advantage. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

MOST BEAUTIFUL PICTURES.

Combination Subscription Premium With The National Farmer and Stock Grower and the Universal Magazine.

We have five thousand sets of beautiful pictures. They are called the Asti-Heads, being reproductions from paintings by the famous artist, A. Asti. These pictures are 8½x11 inches and reproduced in the richest and most delightful colors. When properly framed, they constitute beautiful adornments to any room in the finest houses. They represent four types of womanly beauty. This is the most elegant supplement or subscription premium we have ever offered.

Send us 25 cents in one-cent postage stamps and we will send you the four beautiful Asti-Head pictures, and we will also send you the nice, new **Universal Magazine** for one year. This is a good publication, containing many new and interesting stories, selected poetry, etc. It is our own publication and will surely please you.

Address, **The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

THE UNIVERSAL MAGAZINE A TREAT.

The **Universal Magazine** is published monthly, and is an elegant thirty-two-page, three-column publication. During this month we will issue to every new subscriber who selects no other premium a set of the famous colored 6x8-inch pictures entitled the Sun-bonnet Twins. These pictures are most interesting and pleasing. Not less than a million sets have been issued by the publisher and the demand is still growing. The

Universal Magazine is fine. There are nice illustrated articles and interesting stories. The subscription price is 25 cents a year, including the twelve Sun-bonnet Twins color supplements. Be sure you ask for the right supplements. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo. Club raisers' rate, five sets and five yearly subscriptions for one dollar.

SALESMEN WANTED to introduce our new **Commercial and Statistical State Charts** for office and general use. The work congenial and profitable, the earnings big according to your ability. **A thorough training is given** before the work is started. **Rand, McNally & Co., Chicago, Ill.**

To Drive Away Rats.

A band of rats will eat and destroy more in a night than your large family would consume in a day. Think twice before you ignore their presence. They are cunning, and one must often try many means to thwart them; but there is usually some way if we but persevere. Concentrated lye and molasses, or soft soap smeared about their haunts will often drive them away. Traps of various kinds, it may be conceded, will decimate their numbers. A good cat or ferret is often effective. Copperas sprinkled in their runs will frequently cause them to leave.

All Around the Farm.

The farmer is fast learning the necessity of spotting both the bug and the humbug.

It matters not which was created first—the hen or the egg. We have found out that first-class eggs can lots of them can not be expected from poorly-fed hens; neither can first-class hens be grown out of anything but first-class eggs.

The farmer who leaves his calves out in the first snow storms because they are less valuable than the grown stock, will in a couple of years find this stock grown up less valuable than first-rate calves should be.

The "green pastures" are as alluring to the modern city dweller as to the psalmist of old. The trend of life is countryward. The grand panorama of nature is a perpetual delight to the true ruralist. The more he stops to admire its phases the more of an enthusiast he will become. His home will be a truer home.

Better winter well half the stock you handle and sell the rest, even though prices are low, than half-winter the whole of it.

Cull out the poor sheep that are problems as to getting through the winter. Even if they go at small price, it is better to save the feed and time. The rest of the flock will more than make amends for the absence of these questionable members.

Once in a while we see a bit of refuse dumped on the premises of a neighbor, evidently to get rid of it. If you have any brush or trash of any sort that you do not want on your own land, just imagine that the other fellow is equally fastidious. At least it is hardly fair to poke it into his field, even if it does happen to be a back field and on the other side of the place from his house. Passers-by will detect the source and score it up against you, even if he does not.

A kicking horse is not a profitable investment, especially if there are children around.

The farm is a great school, with lessons for us every day of the year.

"Farming on paper" has proved itself no joke, whether it be in the form of the printed sheet or the memorandum which the careful culturist finds it profitable to always keep with him.

People object to farm life because of the lack of social advantages; yet there is more true sociability on the farm than anywhere else in the world.

All business optimists have on their banner the words: "Crops Excellent." Surely the farm is the hub of the commercial world.

Scales and separator both prove that guesswork is unprofitable.

Poor fences, especially line fences, make poor neighbors.

Large Family Size. No. 10—Price $2.50.

No. 25. 4 Quart Japanned. Price $5.50. 4 sizes. Tinned and Japanned.

No. 750 Price $8.50 For Dry Bones only.

It is really better to own an "Enterprise" Meat Chopper and cut your sausage meat easily, quickly and well, than to trust to a borrowed machine to "grind" it. The

Half the work at butchering time is spent in lard and sausage making. You can increase your products and lessen the time and labor of Sausage Stuffing and Lard Pressing if you use an

Cracked corn, ground bone, oyster and other shells, etc., are important items of egg-making material and *must* be furnished in winter to secure an abundance of high-priced eggs. They *can* be furnished at lowest cost by the use of an

ENTERPRISE

Meat and Food Chopper

is made in standard family sizes, and not only saves half the work at butchering time, but is useful in the kitchen every day in the year. "Enterprise" Meat Choppers *cut* the meat with a revolving steel knife against a perforated steel cutting plate without crushing, and make tough meat tender. Easily cleaned, practically unbreakable, and will last for years.

Made in 45 sizes and styles; for Hand, Steam and Electric power. No. 5, Small Family size, $1.75; No. 10, Large Family Size, $2.50. Sold direct if not to be had from your dealer.

Sausage Stuffer and Lard Press

Stuffs sausage quickly and uniformly. Patented Corrugated Spout prevents air entering the casing, thus assuring the preservation of the sausage. Cylinder is bored absolutely true. Meat cannot rise above the plate.

Can be changed into a Lard Press in a jiffy. Machine is strongly made and will last for years.

Other famous "Enterprise" household specialties are Coffee Mills; Raisin Seeders; Fruit, Wine and Jelly Presses; Cherry Stoners; Cold Handle Sad Irons, etc., etc.

Look for the name "Enterprise" on the machine you buy.

Bone, Shell and Corn Mill

Order one early in the season, and the hens will surely pay for it. The mill shown in cut costs only $8.50. Will grind corn, *dry* bones, oyster and other shells, etc., making valuable poultry food. May be used for making bone meal fertilizer.

A good all-round mill for farmers and poultrymen, and for strength and durability is unexcelled. Weight, 60 lbs. Capacity, 1¼ bushels of corn per hour. Look for the name "*Enterprise*" on the machine you buy. Sold by Hardware and General Stores, etc.

FREE—The "Enterprising Housekeeper"—a book containing over 200 choice recipes and kitchen helps. Sent on request.

THE ENTERPRISE MFG. CO. OF PA., 220 Dauphin Street, Philadelphia, Pa.

Don't employ the same rules for judging dairy stock that you do for beef.

The little potatoes, nubbins of corn, small apples and various other culls in the line of fruit and vegetables will come handy in making up the poultry ration before spring.—Bessie L. Putnam.

Feathers.

So few who have an abundance of them about realize the many uses to which feathers—even chicken feathers—can be put. While during the moulting season they are not worth the work of sorting and curing, when the pin feathers are grown they may serve in various ways. As porch cushions one can scarcely have too many, and if there is a surplus, one may find ready sale for them. Do not attempt to palm them off for anything but what they are. It is impossible to have them as light as goose feathers, yet for cushions they serve the purpose nearly as well.

The wings make such admirable dusters, easily cleaning out the cracks and corners. If one wants to wash a window and have it free from lint, the wing is a most convenient cleaner, getting into the corners much better than a sponge. If one has no plant sprayer, a very good substitute is a wing dipped in water and the spray tapped off with the hand.

Turkey wings are much better than those of the chicken on account of their larger size and more velvety texture. The tail feathers may be fastened together into admirable dusters. Some of the wings and tail feathers are quite as handsome for millinery goods as those in the shops. If not originally of the right color, white ones may be tinted any color fancied. City cousins will appreciate the feathers, whether they come in the form of pillow or duster. And if you would fully appreciate the good they may accomplish, just use them for making Christmas presents.—Bessie L. Putnam.

Flower Language Post Cards, a Set of 12 FREE.

Do you know the "Language of Flowers?" If you will send 10c. for a six-months' trial subscription to our large family paper, The Epitomist, we will send to you, free, a set of twelve beautiful flower postcards. Each card is different and represents the natural colors of the flowers and every card has the language of the flowers portrayed in verse. These cards are strictly HIGH-CLASS and are not like any you have seen, for they are entirely new.

Write us to-day and we will lose no time in sending them to you. Ask about the surprise which we are sure will interest you. We have only a limited supply of these beautiful cards, so send to-day if you want them. Address,

THE EPITOMIST,
237 Barnes Block, Spencer, Ind.

(From the Chicago Inter-Ocean.)

All readers of The National Farmer and Stock Grower who have sick friends, suffering from rheumatism or kidney trouble, will be interested:

FINDS NEW KIDNEY CURE

Dr. T. Frank Lynott, New York Specialist, discovers remarkable remedy.

At last a perfectly harmless and positive cure appears to have been found. Dr. T. Frank Lynott, formerly of the New York University, New York, later of the famous Bellevue hospital, and now a celebrated specialist in Chicago, has a very quick acting formula which has been approved by the best doctors.

The editor of The National Farmer and Stock Grower saw the above clipping from the Inter-Ocean and wanted to know of this new formula for curing kidney trouble.

Arrangements were then made by which Dr. Lynott offers National Farmer and Stock Grower readers a **free treatment.** Dr. Lynott, however, says that he proposes to give the free treatment only for a limited time to convince the public in every part of the United States of the positive wonderful efficacy of his treatment.

Furthermore, Dr. Lynott wants to make it clear that he has no "cure-all." He is a specialist in kidney and bladder diseases and rheumatism, so please do not write to him unless you have one of these diseases. If you write at once, both the medical advice and the medicine are entirely free.

The editor of this paper, The National Farmer and Stock Grower, feels that with such a free offer, anybody who stays sick with kidney trouble or rheumatism deserves to be sick.

I know that a good many free offers have been advertised where the public had to send money, **but this free offer really IS A FREE OFFER.** And remember that instead of getting an ordinary physician, you get the medical advice free direct from America's greatest of all specialists on these diseases. See Free treatment certificate at bottom of this page and get relief **right now.**

STOP!

Stop that back breaking, twisting, terrible, terrible unbearable agony! Oh, that awful, awful digging soreness—the back all bent—the joints stiff, the heart-wringing pain—*stop that pain RIGHT NOW!*

Yes, Write For the Free Treatment—

a REAL Free Treatment that will give you relief—relief at once—not next week, not tomorrow, but relief AT ONCE—**immediately** after starting the treatment. It is so **simple,** so mild, yet so scientific and so **sure**—this treatment for rheumatism, kidney and bladder trouble. Write now, today.

See the Free Treatment Certificate below—sign it and send it today. **No money—no obligation. At last you** can get relief and, if you write at once, you get the treatment absolutely free. Just think—a genuine **free** treatment by America's and Europe's **leading** specialist—absolutely free—really and genuinely free **to convince the public.**

If you have Kidney or Bladder Trouble or Rheumatism (the cause of those pains), then **it's your loss** if you suffer any longer. When Dr. Lynott says free, he means free—not one cent to pay; and it is "up to you" whether you want the best medical advice and medicine all without a cent of cost. Don't miss this wonderful liberal offer. See the Free Trial Certificate at the bottom of this page.

Look at these poor sufferers all bent with nerve-racking pain—they are victims of kidney trouble; they think it is a rheumatic twitch. Friends say they grumble, but considering their awful pain, they bear it most bravely.

Oh, it is terrible that there should be such suffering, when you can be relieved so quickly, so surely, so simply, and right **now, free of charge.**

Writing of Dr. T. Frank Lynott, who gives the medical advice free, a brother specialist writes as follows:

"I have for years been considered an authority on urinary diseases, but I must confess my respect, my profound sense of esteem, for Dr. Lynott, whose wonderful success in treating urinary diseases has surprised us all. Dr. Lynott, by the way, is making a most remarkable free offer—the most genuine and generous offer ever made by a high grade physician. It seems to me the medical world ought not to be jealous of his success, but should praise him for what he has done and is doing for humanity."

Dr. T. Frank Lynott

whose photo is printed here, is, as you perhaps know, the world's greatest authority on kidney and bladder trouble and rheumatism. Never before has a physician of such high standing offered to treat patients by mail. But Dr. Lynott *wants* the people to get the benefit of this free treatment.

His cures have stirred America and Europe. In fact, Dr. Lynott received a special diploma on urinary diseases from the great New York University—of which the famous Bellevue Hospital, NewYork is now an honored part.

WATCH These Symptoms!

Trouble in the kidneys begins slowly, slowly. It creeps upon the unsuspecting patient like a thief in the night. Slowly, slowly, those stinging, racking pains foist themselves upon the sufferer; gradually, gradually the pains increase into a daily, nightly, constant, endless torture. Watch the symptoms, and cure yourself. Here are the principal symptoms of uric acid disease:

The Symptoms

1—Pain in the back.
2—Too frequent desire to urinate.
3—Burning or obstruction of urine.
4—Pain or soreness in the bladder.
5—Prostatic Trouble.
6—Gas or pain in the stomach.
7—General debility, weakness, dizziness.
8—Constipation or liver trouble.
9—Pain or soreness under right ribs.
10—Swelling in any part of the body.
11—Palpitation or pain around the heart.
12—Pain in the hip joint.
13—Pain in the neck or head.
14—Pain or soreness in the kidneys.
15—Pain or swelling of the joints.
16—Pain and swelling of the muscles.
17—Pain and soreness in nerves.
18—Acute or chronic rheumatism.

NOW THEN, This Certificate is FREE

You get the treatment, the medicine and Dr. Lynott's personal attention absolutely free, if you write at once. **Instant Relief** for those terrorizing pains!

Send no money—read the certificate, note that it puts you under no obligation. Dr. Lynott is **glad** to see a sufferer cured—write at once and get the free treatment.

JUST Your Name and Address and the Symptoms

of your disease given by number. That is all Dr. Lynott wants. Read the free treatment **certificate;** read how it puts you under **no obligations** whatever, how it says specially and distinctly that you are not now nor later under any obligations whatever.

SEND NO MONEY—just write for the free treatment

REMEMBER:—This free treatment offer is LIMITED. Only a certain number will be taken, all under Dr. Lynott's personal care. If you answer this offer the first time you see it you are GUARANTEED the FREE treatment. So better send the free treatment certificate today, at once, and remember, you need INSTANT, IMMEDIATE relief from those awful pains.

DR. T. FRANK LYNOTT, 2192 Occidental Bldg. CHICAGO

If you have a friend suffering with kidney or bladder trouble or other uric acid disease, such as rheumatism, don't you feel that you owe it to your friend to tell him or her of this free offer?

Free Treatment Certificate

What is Your Name?.....
State plainly, Mr., Mrs. or Miss.

Your Address?.....

What Symptoms Have You?.....
Give numbers from table above—that is all

What is Your Age?..... *Married?*.....

Just fill out the above—nothing to sign, you see. Just answer the questions and be sure to give your name and address. You are under no obligations whatever. The **FREE** treatment will then be sent **at once, prepaid.** Cut out this certificate (or write a letter describing your symptoms) and **get INSTANT relief from those racking, rocking pains.** Address personally

WHAT COMPETITION HAS DONE FOR THE ST. LOUIS MARKET.

The great eleven-months' record of the St. Louis Live Stock Market: Cattle receipts, 1,067,742 head, the largest total ever received—other markets falling off. Hogs, 2,301,297 head, an increase of 400,000 head. Sheep, 630,789 head, nearly—100,000 over the previous year. Horse and mule receipts, 100,406 head, the largest at any market.

PRIME LAD, 9th—Hereford bull. A champion at many important Fairs and one of the best, if not the very best, bull of the Hereford breed. PRIME LAD is son of the St. Louis World's Fair Grand Champion, and was bred by W. S. Van Natta & Son, of Fowler, Ind. This picture is published for a purpose. Beef cattle are now sold on their condition, weight and quality. Heavy weight is no longer necessary to top the market. The steers must have fat and be of the beef type. This is the beef type. No better picture was ever presented to show the beef-type bull. When a load of yearlings in the St. Louis market outsells inferior steers of the same weight by two cents a pound or from $20 to $30 per head, it often happens that they are Hereford grades. They may be Shorthorns or Aberdeen-Angus cattle. The breed furnishes the quality; the feed furnishes the fatness. The St. Louis market is in need of 500,000 more fat high-quality beef steers every year. It is easy to raise them. Pure-bred bulls, recorded, that will produce the right kind can be bought at $100 to $150. Such bulls are each good to sire a thousand calves. If you feed the calves right they are thousand-pound steers as yearlings. On November 3d, Clark & Bledsoe, Missouri stockmen, marketed two loads, forty-eight head, 998-pound yearling steers at $7.10 per 100 pounds. On the same day, other plain, under-bred and under-fed cattle twice as old sold at $4.15 per 100 pounds, a difference of $29.44 per head in favor of the best cattle. On November 10th, C. W. White, another Missouri stockman, marketed twenty-five fine 826-pound steers and heifers at $7.25 per 100 pounds. They were Shorthorns, fed from birth, finished on corn, about 400 days old. They sold for $59.88. On the same day, many steers without quality, not fat, sold at $3.50 per 100 pounds, a difference of $28.90 per head in favor of the right kind over the wrong kind. The country to raise these fat young cattle is directly tributary to St. Louis, the best market for handy fat cattle in the world. Watch the St. Louis market. Your good fortune is there.

and Stock GROWER

Late Planted Corn.

In my observations of corn-field results in Bureau county, Illinois, I find much additional evidence supporting my contention that results, in yield of sound corn, are measured more by field management than by climatic conditions. And another thing: That every farmer who grows corn has a proposition of his own, and he must work it out under his own land conditions. He may get some help, in a general way, from Experiment Station work, and from work of other corn growers, yet the measure of his own success, in producing bushels of corn, depends upon how well he grasps his own proposition and how well he works it out. I speak of these things so frequently because I believe it is high time that we were casting aside any fast rules or practices in the production of the corn crop. While it is all well enough in theory to say that corn should be planted, say, between May 1 and May 10, and then cultivated four or five times, yet the essential thing is to know how to handle the crop when other conditions are met with.

A thorough-going farmer in Bureau county tells me he never considers it too late to plant corn up to July 25, and in thirty years of corn growing he has never failed in getting a good crop. Last spring continued rain prevented planting a piece of fall-plowed ground until the 18th of June, and the field was not finished until June 24th. This ground became very weedy, but nothing was done on it until the top soil had dried off so that it would turn nicely. Then six horses were put upon a disc, which was followed with a smoothing horrow. The disc was set to cut deep, and was lapped one-half. This was slow work, but it cleaned the field of weeds, and the planter following right upon the heels of the smoothing harrow, put the seed in as nice a seed-bed as one could wish for. Within four days that corn was showing in the rows and it prospered so that only two cultivations were necessary. That field overtook and passed other fields planted two weeks earlier and at husking time turned out 75 bushels per acre of good, sound corn. The thing learned here is, it does not pay to work ground out of condition; a delay of two weeks, or even four weeks, may be offset by vigorous handling of the ground whenever it is in a fit condition to be worked.—L. C. Brown.

Restrictions in Farm Leases.

When much live stock was kept upon leased farms it was not a difficult matter to so arrange leases that each farm produced its own fertilizing material. But with a tendency nowadays towards grain farming land owners are seeking to restrict leases so as to conserve every bit of stuff which will make fertilizers and which may easily be returned to and kept upon the land. Many Illinois farm leases do not allow any straw or corn fodder to be hauled from the land. This has worked a hardship this season in those sections where renters were caught with soft corn, which was fit only for fodder. These renters were not in a position to buy stock to consume the feed, and they could not sell it off the farm to neighboring dairymen or stock feeders. It seems that land owners are inclined to put the burden of keeping up the fertility of $150-acre land on the tenant. The restrictions as to what crops must be grown in rotation and what must be fed upon the farm and what may be sold, are driving the best renters from Illionis farms.—L. C. Brown.

Keeping Potatoes in Pits.

A correspondent wants to know how I keep potatoes in a pit. Locate the pit on any well-drained piece of ground and trench around so that rain or melting snow will not run into the pit. The success of keeping potatoes or other vegetables in this manner lies in keeping the temperature just above the freezing point. If they are covered too deeply the temperature becomes too warm and decay sets in. Cover the potatoes with a layer of clean straw, say four or five inches deep. This neutralizes the heat coming from the ground beneath the potatoes. Then keep just enough dirt thrown over the straw to keep frost out of the pit. There is no hard and fast rule as to the amount of dirt to use, and one must be guided by experience as well as the character of the weather. I should not cover with coarse manure, and really it is not necessary. When straw is used liberally over the potatoes, there is no further need of ventilation. Other vegetables, such as cabbage, turnips, parsnips and carrots, may be kept in these pits in good condition, providing they are covered just enough to keep out frost, and no more.—L. C. Brown.

National Corn Show.

Our sister republic, Mexico, is very much interested in the National Corn Exposition which will be held in Omaha, December 9 to 19. The Honorable Zeferine Dominguez is having a special trophy made, a bust reproduction of President Dias, cast from solid silver, which will be awarded on corn in the students' judging contest. This bust will be mounted on an onyx base. And now comes the report that the Department of Agriculture of the Republic of Mexico has appointed the following gentlemen as Commissioners to the National Corn Exposition:

Sr. Felix Foex, 7a, Guillermo Prieto 121, Mexico City.

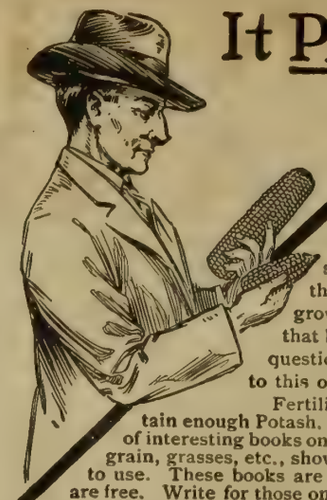
Sr. Ramon Garcia Oses, Estacion Agricola, San Luis Potosi.

Sr. Javier Espinosa Cuevas, San Luis Potosi.

Mexico has wonderful agricultural possibilities, and these announcements are evidence of a keen interest in agricultural advancement.

Yield Per Acre.

While the present corn crop is fifty million bushels more than last year, and is of much better quality, yet the yield per acre in some of the great corn-growing states is below last year and really below the ten-year average. Illinois this year has a yield of only 31.6 bushels per acre, as against 36 bushels last year. Indiana has only 30.3 bushels per acre, as against 36 bushels last year. Missouri is also below the average. While unfavorable weather conditions no doubt had much to do in reducing yields, yet almost precisely the same conditions were met with in Ohio, Iowa, Nebraska and Pennsylvania, where rate yields were materially increased over last year. This matter is significant, because clover growing and stock feeding have been waning in Indiana and Illinois, and consequently these corn fields may not have had the rich nutrition they were formerly used to. All of these things receive only scant attention during the growing season, but between now and the next planting season is a good time to hunt out the factors which produce results in the greatest number of bushels per acre.



It PAYS

Find Out How Fertilizers Pay

If fertilizers pay, if their use results in bigger, sounder crops, then whether or not they are absolutely "necessary" is of little importance.

So, when you attend the Farmer's Institute this winter, don't bother about whether the soil *needs* fertilizers, but find out how *profitable* their use is, how they produce more vigorous growth, bigger yields, and crops of better quality, that bring more on the market. When you ask questions, pin the answers down to this one point—*profit.*

Fertilizers always pay, if they contain enough Potash. We have published a series of interesting books on the various crops. On fruit, grain, grasses, etc., showing just how much Potash to use. These books are prepared by experts, and are free. Write for those on the crops in which you are interested.

When the Corn Will Go.

With the splendid corn crop safe in crib, growers are now turning their attention to the most profitable means of marketing it. The substantial advance in prices of fat cattle has given feeders more confidence in the situation, and more corn is going to finish out cattle than was counted upon sixty days ago. Then there is also more inquiry for heavy feeders, which indicates that more cattle are being sent into feed yards. There is also something doing in hogs. The more confident feeders are picking up young hogs at rather low prices, with the intention of giving them a four or five-months' feed. Packers are keen buyers now every day, and that would look like they expected higher prices after the first of the year. Commission men and other close observers all talk high prices for both cattle and hogs during the spring months. But while considerable feeding may be done, it will not be on anything near the scale of former years. This leaves the bulk of the crop to market or to be held. So confident are many in seventy-cent corn again that new cribs have been built, and the corn has gone in to stay for higher prices. After a careful survey I do not look for much higher prices.—L. C. Brown.

Get Our Factory Price Direct to You

On 30 Days Approval Test—Cash or Time—Freight Allowed

It costs you nothing—at our risk—to test the Detroit Tongueless on your work for a month.

Getting Alfalfa Started.

A Mercer county, Illinois, farmer tells me he has tried out every suggestion which might be helpful in getting a catch of alfalfa, but has never been able to get a spear to grow. His land is a rich loam, just the quality that will produce good crops of corn, and it grows clover without any trouble. He has limed his soil and has tried to inoculate it by fetching in soil from a distant alfalfa field. But one failure follows another, until now he has about made up his mind that he is out of the alfalfa belt.

He is in the alfalfa belt all right, so we must look deeper for the cause of the failure to secure a stand. Let him go over into Putnam county, near Granville, and take a look at as fine a field of alfalfa as one would see anywhere. The field now stands about six inches high and as thick as hair on a dog's back. This stand was secured in this way: The ground was plowed last fall. This spring it was thoroughly disced and then it was cultivated and harrowed all through the season up to the 10th of August, when twenty pounds of alfalfa seed per acre was sown. There was hardly a weed in sight when the alfalfa seed was sown, and the seed-bed was in almost perfect condition to give quick germination. That alfalfa field seemed to defy the drouth. There were no weeds to hinder growth by sucking up the moisture. The tiny alfalfa plants began to grow under comfortable conditions, and that growth has been steady and continuous all the fall. The necessity of this thorough preparation is nothing new, yet most of us do everything else first before we get down to the real essentials. It takes nearly a year to make a nice alfalfa seed-bed, and the price of success is thorough work.—L. C. Brown.

Immunization of Animals.

During the past ten years we have heard a great deal about the immunization of farm animals against diseases of a contagious and infectious nature. The men that have been carrying on the work have accomplished much, but not so much as they themselves believe. It is natural that an enthusiast should see things in their rosiest colors.

There are two methods of rendering aniamls immune to diseases. One of these consists in vaccinating with the product of a process. The other consists in exposing the animals to the disease till they are so permeated with it that they become resistent, though some animals must be sacrificed to the disease in attaining this immunization.

One of the most prominent veterinarians in this country told the writer that he had immunized all the hogs at his station by keeping hog cholera constantly among them. The trouble was, he said, to keep the disease from dying out, as it seemed to destroy itself. He declared that after the disease had been absent from the premises for some months the hogs would again take the disease and die. He at first advocated keeping hog cholera on every farm, but in a year or two changed his mind and said that it was impractical. It became evident to him in time that it was better to keep the disease away altogether than to try to keep it perennially present.

Some years ago a man in the Middle West devised an immunizing process and sold his secret to men who were in turn under pledge to keep the secret and not try to make money by selling it to others. It had a great run for a time, but finally resulted in spreading hog cholera over many farms where it had not been previously known. It was reported that whole herds had been wiped out by the disease thus introduced. The secret came into posession of the writer. The process consisted in burying the carcass of a hog that had died of hog cholera and leaving it in the ground till it had partly decayed. Then it was dug up and fed to well hogs for immunizing purposes. It was believed that sows that ate this immunizing morsel would produce pigs immune to hog cholera.

The process seems to have died out but may be looked for to appear again in another form. It must be said, however, that the theory was in part correct. It is, however, such a dangerous thing to deal with that most men will not experiment with it and do not like to have a neighbor experiment with it. Immunizing product as mentioned, when introduced into a locality in which there had been no hog cholera, might become a cause for much apprehension on the part of other farmers, if they knew what was going on. It is doubtful if a man has a moral right to so jeopardize th live stock interests of a community.

That animals do become immune to disease is well known, and this principle is demonstrated in the case of the dreaded Texas fever. Animals takn from the North into the territory infested with the cattle tick soon die with the disease, while Southern animals infested with ticks from calfhood live and thrive. Nevertheless, the government is rightly trying to exterminate the disease rather than trying to get all of our cattle immunized to it.

Tongueless Disc Harrow.

It costs you nothing to test it. It is sent on thirty-days' trial. You can obtain the original invention direct from the manufacturer. You can first obtain the catalogue and further study the subject from a practical standpoint before ordering. This implement is only sold direct from the factory. Write for price proposition to-day. Address, American Harrow Company, 902 Hastings street, Detroit, Mich.

Push the Drainage.

It takes a season like the one just passed to show the benefit of thorough drainage. Lands which were well drained took care of the excess water during the earlier part of the season, and their reservoirs were full when the drouth came on later in the fall. On the undrained fields it seemed that cultivation was a detriment to the growing crop, for the ground turned up wet and cloddy and became badly baked. Each successive cultivation released the water from the subsoil, until by August 1st growth of the crop had been severely checked from lack of moisture. Many who had undrained fields gave their corn only one or two cultivations and then stopped. It became apparent that they were injuring the crop. Land covered with an efficient system of tile drains prevented the soil from becoming excessively wet when rains were pouring down daily, and at the same time they conserved sufficient moisture to carry the crop through the dry fall months. The loss of crops this year on undrained fields will emphasize the importance of drainage, and more are tiling this fall than we have seen before in many years.—L. C. Brown

The Auto-Fedan Hay Press Company, formerly of Topeka, Kas., but now located at Kansas City, Mo., report a very encouraging increase in business in their new quarters. Their office at 1521 West Twelfth street is in a very handy location for most of their customers, being on the route from the Union Depot to the Stock Yards, near the largest implement section of Kansas City. Their new factory is a large concrete building, four times the size of their former building, equipped with new up-to-date machinery for turning out the three-stroke self-feed hay press which is proving to be very popular with practical hay men. For further particulars, address Auto-Fedan Hay Press Company, 1521 West Twelfth street, Kansas City, Mo., and ask for Catalogue No. 6.

Rural Telephones

Do you realize that rural telephones, more than anything else, tend to increase the earning power of every farm and farmer? Do you realize that

ALL of the material needed to build the very best rural telephone line—exactly the same as the Bell Company puts up—will cost you and your neighbors less than 20 bushels of wheat each.

Over 4,000,000 Western Electric Telephones

are in use in the United States to-day. We made the first telephones and we have made the most—in fact, we have made more than all other manufacturers combined.

We have brought the rural telephone within the reach of every farmer, and with our Free Bulletins before him a boy can install and operate the system. Our telephones are guaranteed.

Cut out this advertisement, write your name and address on the margin and mail it *to-day* so that the Free Bulletins, which describe the entire plan in detail, may be sent to you immediately.

Bee Keeping and Fruit Growing.

Three years ago, with considerable misgiving as to my future experience, I bought one colony of bees from a neighbor, a gentleman of over seventy, who was caring for forty stands. For some years past I had been feeling that I was not doing my full duty as a horticulturist in being without bees, but I was in total ignorance of their management and felt no natural predilection for their company that would assist me in learning how to work with them. My friend, however, seemed to take pleasure in answering my numerous questions and I felt much more confidence in feeling assured of his advice on any occasion.

The first swarm that issued in the spring was prepared for with much trepidation; my costume when ready for the fray resembled the armor of some mediaeval knight, but I had carefully considered my course of procedure, and to my great delight I succeeded far beyond my hopes. The result was an immediate accession of confidence that greatly assisted me on the next emergency. I venture to say that the most fearful and timid soul will soon be reassured if he will faithfully try to accustom himself to the company of the honey bee; of course I mean the Italian bee, which is gentle and peaceably inclined; the wild bee, which is smaller and darker, has a much more hasty temper, and even my experienced friend told me that he had destroyed several swarms whose vicious temper and off color revealed the intermixture of wild blood.

Later in the season, when bees were supposed to have laid up a good store of honey, we made our first attempt to rob them. I did not consult my friend on this occasion, and, reasoning from general experience, we decided that night must be the most propitious time, for we knew that the bees always retired early and presumably were totally unable to move about in the darkness. Here, however, we discovered that reasoning from analogy could not be depended upon in the apiary, for the bees did come out when they found that robbers were trying to plunder their stores, and, flying blindly about, lit upon our clothes, and straightway proceeded to search for a vulnerable opening in the armor of these depredators. It was not long until sundry exclamations, quite irrelevant to the work in hand, were heard from the members of our party, and in a very short time we were following the lantern in ignominious retreat. My old friend laughed heartily when I ruefully related our experience as midnight robbers, and told me that bees should never be molested in the night; the best time was on some fine day when the workers were busy in the fields; at such time there were many less bees at home and those that were would be found in the best of bee humor.

Thus little by little we gained knowledge of these wonderful insects and gained more confidence in the handling of them until the capturing of a swarm became enjoyable sport. As I gain experience, however, and begin to dip into the voluminous literature on the bee, I begin to realize that in magnitude and variety of knowledge, scientific bee keeping is well entitled to be called one of the professions, and that as yet I am only a simple novice at the business.

I realize, too, that I cannot forever go on in this easy fashion by which I welcome every new swarm as a valuable addition to the apiary and make no advancement toward penetrating into the interior life of each colony and acquainting myself with its condition. There must be a limit fixed for the expansion of the apiary, and a speedy one, or else in a few seasons the increase is excessive and the keeper overwhelmed with work that he cannot possibly cope with in a profitable way. There will also be inevitable degeneracy of the Italian stock, for there is no way to prevent the crossing that is certain to take place to some extent with the wild bees. This means that pure-bred queens will have to be scientifically reared, which only masters of the art are capable of doing, or bought from some specialist for from one to ten dollars. The capturing and destruction of the old queens when new ones are to be introduced is no easy task in itself. Finding a queen in a populous colony is a nerve-racking job with me and something like finding the proverbial needle in a haystack. First the brood sections have to be taken out, which means tearing a colony all to pieces, and then each section has to be taken up in your hands and the queen looked for among a mass of bees an inch deep. Both sides of every one of the eight sections have to be scrutinized and the bees stirred up with a smoker so as to reveal the queen who tries to hide. Standing thus, peering into a crawling myriad, with myriads of others at your feet and a number in the air, it is necessary to move slowly and circumspectly and to show no nervousness.

Now as the result of three-years' experience, I have twenty-one colonies that up to this date have just paid all expenses for material, which amounted in the gross to about $100. The improved hives, which are indispensable, are costly, and an addition of a few colonies means a considerable cash outlay. The character of the season as it bears on the honey flow has much to do with profit and loss. The character of the queen is a factor of equal importance. To illustrate the difference in the ability of colonies to make honey, will say that one of mine made seventy-five pounds, while the next best yield was only twenty-six pounds. Why this one did so much better than the rest I am unable to say unless it was due to the queen. There was nothing externally to distinguish it from the others. The insurance of the perfect pollenization of the fruit blossoms on a fruit farm, so far as the bees are capable of doing it, also has a cash value, which should be taken into the final accounting with the apiary.—L. R. Johnson.

Only a Lack of Facilities.

Clara's aunty took her for a visit to Niagara Falls. After viewing the great waterfall for some time, and the little girl failing to make any remarks, aunty tried to draw some expression from her as to what she thought of the spectacle. Finally she said:

"Clara, don't you think the falls are beautiful, wonderful?" and was amazed at the child's nonchalent reply:

"Oh, yes, I s'pose so; but I fink our creek at home could do it if it had a place."—Woman's Home Companion.

You might just as well make up your mind to stand for what Fate hands you, whether you like it or not.

You will get relief from pain when Dr. Miles' Anti-Pain Pills are taken.

Wealth of the Corn Crop.

The business atmosphere has cleared up and the outlook is brighter since the bringing in of the golden corn crop. The influence of "King Corn" has spread all over this great land and has assured doubtful ones that wealth, beyond measure, has again been poured into our almost empty granaries. This stream of golden corn started in September and steadily increased in volume each day until tens of thousands of extra wagons were pressed into service to bring in the great crop. Now that the old cribs have been refilled and many new ones built, and they filled to utmost capacity, corn growers and all other business men are going forward with other affairs with the confidence that sufficient has been gathered to supply all home needs and spare some to other people. Harvest time has never failed him who plants and tills wisely. The corn grower himself has the utmost confidence in his own ability to do his work right, and Mother Earth richly rewards him, commensurate with his skill and toil.

We little realize how much depends upon the outcome of the corn crop. The eyes of the business world are kept upon the corn fields from planting time until harvest time. Every shower of rain is looked upon as a blessing, or otherwise, as it affects the growing crop. Even hot, sultry days are gladly borne with patience by city people, because "it is good corn weather." And when October came with great, sturdy stalks carrying a burden of golden ears, ripe to maturity, no wonder the toil of the whole year was forgotten, and we voluntarily give thanks to Mother Earth for dealing so richly to us out of her vast resources.

With a corn crop of over two and a half billion bushels, all practically secured, a feeling of security has settled upon us. It has revived timid industries, and farmers are planning improvements in farm homes and other buildings, which would not have been undertaken under less favorable conditions. What does this great corn crop mean? Over twelve hundred millions of dollars added to the nation's wealth by the crop alone. Surely we have reason to be glad of the year's outputs. What gold mine has ever approached this stupendous production of wealth? There is nothing fictitious about the value of corn. It can be cashed in most any market of the civilized world.

The Crop Started With a Handicap.

Never have I seen a corn crop started with such a handicap as we had last spring. There were continual and beating rains all through May and part of June over most of the corn belt. This was the most critical time of the year, for unless the seed could be planted near the normal period the chances of a crop would be alarmingly reduced. The general use of strong, hardy, tested seed helped matters. This seed had the vigor to withstand all sorts of punishments and then mature the ears. Most of the crop was planted between showers, which of course was a hindrance. After the seed was in the ground, then the real problem of making the crop began. It called for skilled work and experience to combat with the unusual conditions. The pounding rains beat the ground until it baked almost as hard as the road. The problem now was to break this crust gently, so as not to disturb the young plants which were doing their best to get to daylight. This was not an easy matter, for one rain quickly followed another, and it was not until along in July that much help was given the crop. When the rains finally ceased it was a nice piece of work to handle the field with the double purpose of keeping down weeds and get rid of excess moisture. On fields well drained so that they had not become waterlogged this was not difficult, as the tiles quickly carried off all excess moisture and the ground became workable. But on fields that lacked proper drainage there was a problem hard to contend with. Right here was the great damage done to many fields. Something had to be done towards cultivating these fields, with the result that by August 1st all soil moisture had been dissipated, and the corn right up to the stage when it most needed moisture. We all know the result. The wide range in yields of almost adjacent fields this year may be largely attributed to different methods of cultivation. However, notwithstanding this severe handicap, the temperature of the summer and fall months was extremely favorable and really was the making of a larger and sounder crop than we had last year.

Good Time to Sow Clover.

Clover seed is cheap now and it is the best quality we have had for several years. Don't be stingy with it next spring. Clover seed at $5.00 a bushel is mighty cheap fertilizer if sowed merely for that purpose alone. We have not been sowing enough clover; and last spring, on account of very high price of seed, an unusually small acreage was sown. Get it right back now into the farm system. Don't get out of the clover habit. Next spring early will be a good time to fix up the meadows and pastures which have been seriously injured by the dry fall. It will require good work now to bring these fields back without a loss of one season's crop or feed. We take it that stock has been kept off these stricken pastures. Keep the stock off. Let the pastures have the benefit of all growth made by the late rains. Then next spring, just as soon as the frost is out a few inches, go on with a disc drill and sow plenty of clover and timothy seed. Look around for good places to sow some of this low-price clover seed.—L. C. Brown.

Shipping Timothy Hay.

A correspondent at Burlington, Wis., writes: "For several years I have been shipping timothy hay to Chicago, but no matter how good a quality I send, I have never been able to get top prices. I can't understand it.

There is not much timothy hay that will grade choice, and when it grades No. 1 or 2 there is quite a spread in the prices. As a rule, hay and grain sell for all they are worth, when consigned to reliable houses, for they are inspected and graded by disinterested men, and they are usually graded high. The trouble, no doubt, in the case of our correspondent, is, he does not know what constitutes the best grade of hay. One should send for grading rules and post up on the various grades. If hay is clean of weeds it will help the grading; in fact, if one ships hay, he had best ship his best, for that quality is really the only kind worth while to ship.—L. C. Brown.

Get Our Three Little Books On "More Corn" and the NEW DEERE Corn No. 9 Planter

Just write a postal with your name and address so we can put you on the "Deere" Free Mailing List. Then you'll keep informed on all the latest improvements and values in farm implements.

Right here is the New Deere No. 9 Edge Drop Corn Planter. You ought to know all about it. It's the most famous double-row combination check-row planter or drill of today.

Most Progressive Farmers and Planters won't have any other. Best informed dealers refuse to consider handling any other. Investigate the time-saving and profitable reasons why.

Checks Corn or Beans In Rows Both Ways—Or Drills

Deere genuine edge selection of corn gives highest accuracy of drop attainable and it has been repeatedly proven that accuracy of planting means big increase in yield. Main seed shaft driven directly by traction wheels instead of by check-row wire like many others. That does away with all side draft and besides saves wire and machine. Change from hill to drill made instantly without leaving seat.

Comes Complete Ready to Plant With

We make plates for all kinds of corn and furnish any five sets wanted without extra charge. Eighty rods annealed steel check wire with automatic reel. Any distance between buttons from 8 ft. to 4 ft. if so ordered. All these and many other points fully explained and shown in our free booklets. Ask for "More Corn Book" No. 97.

FARM BLACKSMITHING.

Here is a book for the farmer. The book was written by A. J. Drew. It is a complete treatise on blacksmithing from the farm standpoint. This book teaches how to profitably spend stormy days. Many thousands of farmers will find it to their interest to own a copy. There are 100 pages. It is nicely and clearly illustrated and bound in cloth. We credit one-year's subscription to The National Farmer and Stock Grower and send one copy of this book by mail for 65 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Insects Stored in Corn, Wheat, Etc.

A number of letters have recently been received in regard to various insects infesting corn and wheat while stored, either in the field, cribs or bins. There are two insects which are responsible for the great majority of these injuries. One of them, known as the Angoumois grain moth, is, as a rule, responsible for the bulk of this work.

This is a minute moth, of a grayish brown color, and about one-half inch across its expanded wings. The adults hatch out in the spring, usually in the stored corn or wheat, whether it be in the field, crib or bin, and, leaving such situation, fly to the wheat, where they deposit their eggs upon the heads when the wheat is in the milk stage. The young larvae hatching from these eggs are extremely small, and they enter the kernels of wheat and feed within, passing all through their transformations inside of the kernels. When the adults appear, most of them leave the wheat, if they can escape from where it is stored, and deposit their eggs on ears of corn, which are far enough advanced at this time, and the larvae then, on hatching, enter the kernels of corn, feeding upon the substance within and pass through all of their stages of growth or transformations inside the kernels of corn.

If the corn be left in the field, either standing or cut and stacked in shocks, the insects will multiply there. If the corn be carried into the crib or stored in a building, the insects are carried with it and they there, on emerging, lay eggs for another brood, always of greatly increased numbers, and hence do a great deal of injury. The same is true of wheat, the corn and wheat becoming originally infested while in the field. When the wheat is threshed these insects are in it, and when put into the bin they multiply, causing increased damage, just the same as is the case with the corn stored in similar situations.

If the winter be a mild one, or the wheat or corn be in a room where the temperature does not keep sufficiently low to prevent their increasing, they will multiply very rapidly indeed, so much so that in the spring when the wheat or corn is removed a large part of it will be eaten out and rendered unfit for germinating purposes. It is very doubtful indeed if corn infested with these insects is particularly injurious to stock fed upon it, but whether this be true or not, the corn is greatly injured, and, in the case of wheat, rendered less valuable for milling purposes; and for germinating purposes both corn and wheat are greatly damaged.

Another insect, known as the grain weevil, is a small beetle, about one-seventh of an inch in length, and of a glossy, chestnut brown color. This weevil, however, does not infest the wheat and corn out in the field while standing, but gets into the granary and other places where the corn or wheat is stored, and there deposits eggs, the young entering the kernel and feeding upon the inside the same as the Angoumois grain moth, passing through all its transformations there, and on emerging depositing eggs for a greatly-increased brood.

These weevils, if left to themselves, will do more damage to stored wheat and corn than the moth, because of the fact that they are stronger and can reinfest the kernels deeper in the pile.

Both of thse insects are to be combated in the same way. In neither case can they be successfully fought out in the field or in open cribs or open bins, and in neither case can they be fought unless the wheat be thrashed and the corn be husked.

After the wheat is thrashed and put in a closed, tight room or bin, and the corn is husked and put in a similar closed room or bin, it becomes a very simple matter to kill these insects and prevent any further damage. This is accomplished by the use of bisulphide of carbon, the fumes of which are poisonous not only to those insects but to all other insects as well. The first requisite then is to have the corn husked and the wheat thrashed, and the room in which these are placed, if not already tight, should have all cracks and crevices stopped up as much as possible either with batting or rags or other material, so as to render the room as nearly air-tight as can be conveniently done.

The bisulphide of carbon is then put in shallow dishes and placed on top of the grain. It is of vital importance that this substance be placed on top, because the fumes are much heavier than the air and settle rapidly. If it be placed near the bottom, the fumes will not rise, and hence the wheat or corn will not be fumigated. Use two pounds of bisulphide of carbon for every five hundred cubic feet of room space, regardless of the amount of grain in it.

As soon as the bisulphide of carbon is properly placed, the room or bin should be closed tightly and not opened for at least three days. It may then be opened and air out. Incidentally, this fumigation will kill not only all the insects that are reached, but will also kill rats and mice.

In about six weeks it might be advisable to fumigate again, so as to kill what insects might have escaped the fumes by being within the kernels and have later matured and escaped into the room. All wheat and corn should be fumigated in the fall or early winter, and it is always advisable to fumigate again in the spring before warm weather, otherwise some of the insects may escape and reinfest the wheat and corn out in the field.

Bisulphide of carbon is perfectly harmless to use. It will not injure the grain, either for feeding purposes or for germinating purposes, and a person will not stay in the room long enough to be injured by the fumes. The only precaution in its use is not to have a lighted lantern or pipe or other light in the room where the fumes are present.

Bisulphide of carbon can be obtained from the manufacturer in fifty-pound drums for ten cents a pound. It is therefore a very cheap as well as the most effectual method we have for the ordinary agriculturist to use in combating insects in similar situations.

These directions apply not only for wheat and corn, but also for insects infesting cowpeas, beans and similar seeds, and also dried fruit. With very little expense and with very little trouble one can prevent any appreciable injury from insects infesting stored corn, wheat, oats, beans, peas, dried fruit, and the like.

No one should attempt to try and fight these insects in anything but a closed or practically air-tight room. Most of the letters received this fall in regard to these insects complain of the injury in cribs or out in the field, either in shocks or in standing corn. Obviously, there is nothing we can do to fight these insects in these situations. Husk your corn and put it in a tight bin or room and then fumigate it.—J. M. Stedman, Entomologist, Missouri Agricultural College and Experiment Station.

Farmers' Week at Columbia.

We are requested to announce that Farmers' Week Convention in the Agricultural College, to be held under the auspices of the Missouri State Board of Agriculture, will convene January 5, 6, 7 and 8, in Columbia. A number of leading speakers from the Department of Agriculture at Washington, and from the leading Agricultural Colleges of the United States, have been invited, and some of the best men of Missouri will also take part in the proceedings.

The programme this year will contain more demonstration work than heretofore, and will be more interesting than usual. The Secretary of the State Board of Agriculture invites our readers, one and all, to attend these meetings, and he would like to hear from them in regard to the subjects they desire to have discussed.

Practical Farming and Gardening is a book that weighs thirty ounces ready for mailing. It is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmer's instruction book. The feeding chart, which is the frontispiece, is worth more to a stock farmer than any publication heretofore issued. It is worth a ten-dollar bill to any stock farmer. The

book itself is a wonderful production. Soil fertility, irrigation, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, hog, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. Eleven of the top-notch stock and agricultural experts compiled this book. They did the work so that farmers and farm boys could understand it. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. We buy large quantities at one time. We obtain this book for a very low price considering its value. Send One Dollar and we will send you **Practical Farming and Gardening**, postage paid, and The National Farmer and Stock Grower for one year. This is a grand offer. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Spread of Disease on Farms.

The farm is so naturally protected from disease by its separation from the great mass of human habitations that if it were not for the carelessness of farmers the country homes would seldom be invaded by deadly disease of a contagious nature. The one very great means of contagion is the drinking water in the cities and towns to which farm people are continually making trips.

In many of the cities the water is so bad all the time, so contaminated with sewage, and thus with disease germs, that the boiling of all drinking water is practiced quite largely, while others filter the water they drink. Also in the cities there has sprung up a great trade in the sale of pure water for drinking purposes. In such ways the people of the cities try to protect themselves from sources of contamination.

But when the country person goes to the city he takes no such precautions, but drinks freely of the unboiled water as it comes from the pipes. In many cases he goes back to the farm and comes down with typhoid or some other disease, whose beginning was in the water of the city. The increasing populations of the cities are making their drinking water ever worse, in spite of the great movements on foot to improve the water supply. This fact should be kept in mind by every farmer going to the city, and he should drink as little as possible of the water coming fresh from the mains, unless the city has a good supply of pure water. Reference is had not only to the big cities, but also to the small ones, some of which are very poorly supplied with water.

The next step in the spread of disease on the farms is from the persons that have the diseases, through the lack of sanitation on most farms. The old-fashioned outhouse is the most common means of spreading diseases. Two ways are adjuncts; the percolation of the liquids through the soil into the well when it is too near to the outhouse, and flies, which carry the germs of disease onto the table of the farmer's family. Probably, taking all things and all seasons of the year together, flies are the most common carriers of disease. This can be easily prevented by making the outhouses so tight that it will not be possible for flies to have access to the under portions of such houses, and then by the further use of dust, lime or ground plaster. Lime is less advisable than the others on account of its tendency to let loose the ammonia.

By the use of dry earth and proper construction of the outhouses almost perfect conditions can be obtained. The organic matter of excreta is completely destroyed by dry earth or dust, and this of course prevents the flies from getting at the disease germs or the disease germs from being washed through the soil to the neighboring well. The best place to prevent the washings getting out of the closet is in the closet itself, by the absorption of the liquids.

A third way of spreading diseases is by the interuse of milk, but this is not great, as farmers do not buy milk from each other in any large amount, and the skim milk that comes back from the creamery is fed to stock, and but little is used for human consumption. However, it is best to make sure that the milk is not contaminated through the medium of milk vessels that have been washed in contaminated well water.

More Barley Will Be Sown.

In many sections where the dry fall prevented sowing wheat and rye, farmers are talking barley again. This crop used to be grown quite extensively, but of late years not much has been sown in Indiana and Illinois. Barley makes a first-rate nurse for spring grass or clover seeding, and barley prices have been fairly remunerative of late years. The demand, however, for barley is limited, and a large acreage with an ordinary yield would no doubt depress prices below the profit line. Wisconsin barley growers are having a taste of it this season. The crop of 1907 sold at 90 cents to $1.00 a bushel. The crop this year is now going at 60 to 65 cents per bushel. With so much ground left over for spring seeding, many no doubt will be tempted to try some new crops. Go slow on barley, except what is sown as nurse.—L. C. Brown.

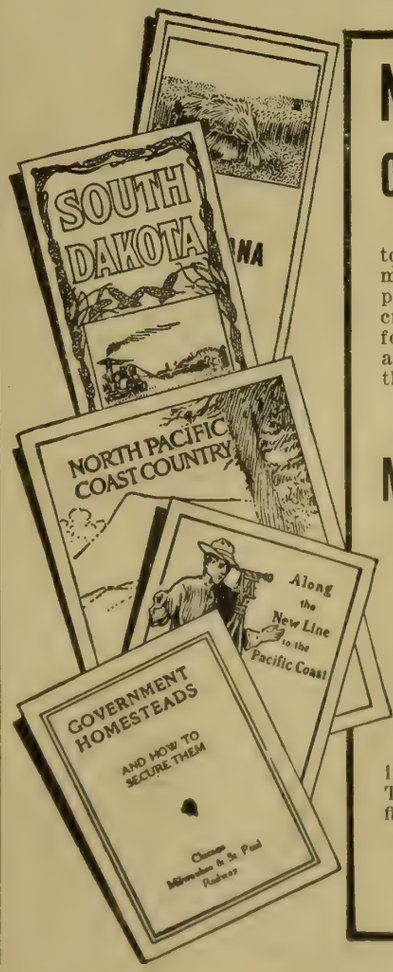
A Four-paper Combination.

For one dollar, paid in advance, we will send the National Fruit Grower, the Reliable Poultry Journal, the Universal Magazine and The National Farmer and Stock Grower, each a first-class monthly paper, for one year. This is half price. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo. In this connection we desire to say that we find the National Fruit Grower and the Reliable Poultry Journal to be magnificent publications.



SOUTH DAKOTA
NORTH PACIFIC COAST COUNTRY
Along the New Line to the Pacific Coast
GOVERNMENT HOMESTEADS
AND HOW TO SECURE THEM
Chicago Milwaukee & St. Paul Railway

New Country of Opportunities

All of the advantages which tend to make a prosperous rural community—fertile land at reasonable prices, a mild and healthful climate, crops of excellent quality and markets for them, transportation facilities—are found in the new country along the **Pacific Coast Extension** of the

Chicago

Milwaukee & St. Paul

Railway

There are splendid opportunities along this new line in the Dakotas, Montana, Idaho and Washington—for the farmer, fruit-grower, dairyman, poultry raiser, business man, professional man—for you.

It will pay you to investigate the opportunities.

Books describing this new country in detail are free for the asking. They also contain letters from satisfied settlers.

Entered at Postoffice at St. Louis, Mo., as second-class matter in January, 1901.

Subscription Price in the United States, 50 cents per year, or three years for one dollar.

Office of Publication, 3550 Vista avenue, (corner of Vista avenue and Carr Lane avenue), St. Louis, Mo. Bell Telephone: Grand 400.

The Agricultural Blue Book.

We are collecting the material for the first edition of the Agricultural Blue Book. It will be issued in January, 1909, and will be a most interesting publication.

The Agricultural Blue Book will contain the pictures of about 200 of the live stock champions of the State and National Fairs of 1907 and 1908. These pictures will be made from photographs taken from life. There will also be a number of pictures of farm scenes, taken upon some of the most famous farms and ranches of this continent.

The Agricultural Blue Book will also contain a select list of not less than 5,000 live stock breeders, representing a number in each and every state, and more particularly those who are actively engaged in the business and have stock for sale. The list will be classified by states and arranged in alphabetical order.

The Agricultural Blue Book will also contain in alphabetical order and by states a list of business firms engaged in manufacturing goods for farmers' use, such as agricultural implements, dairy apparatus, poultry supplies, stock foods, veterinary implements, medicines, etc.; in fact, all those who as principals do business with the agricultural and stock-growing interests.

The Agricultural Blue Book will be a valuable directory for the use of stockmen and farmers.

We are issuing a pamphlet of sixteen pages, showing exactly what the complete Agricultural Blue Book will be. All who are interested are invited to send their names, address and occupation and ask for circulars of the Agricultural Blue Book.

Address, National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

Give the Boys a Chance.

I want to take my hat off to the five thousand Indiana boys who belong to county corn clubs in that state. These boys show the mettle which makes the sort of farmers who do things. No one questions the value and importance of the work of these five thousand boys; and when such sturdy, manly fellows, without any scientific training, can go out, plant and cultivate corn and get a yield from 75 to 80 bushels per acre, we need have no fear of the permanency of agriculture in Indiana. While college experimenters and scientific farmers are doing their utmost to get increased yields, these untrained boys are showing us how to do things and get results.

These boys have the capacity to absorb practical knowledge. They are capable of growth along lines which mean the most good for the agricultural interests of the state, and for this reason they should be given every opportunity to mingle and work with progressive men. Not all farmer boys will have an opportunity to take a four-year course at college, yet many of them can attend the "Short Course," and most of them no doubt can attend Institutes and Corn Shows and hear what other men and boys are doing. Indiana, Illinois and Missouri boys have the energy and they have the temperament to do great things. Now give them the opportunity. Let them work out these hard-crop problems in a practical way. Give them a chance to show their worth.

Here is what the "Short Course" at Madison, Wis., did for a bright German boy. While at Madison he learned how to raise oats so that it would make good seed. So when he went back home he told his father that it would pay to clean their seed thoroughly and keep their fields clean. The weed seeds were cleaned out of their seed oats and shocked carefully and carefully graded before they were offered for sale. The whole crop of 1,400 bushels was sold at 75 cents a bushel for seed. That was three years ago. That boy set the pace for boys in his county, and now many of them are growing seed crops, which they are selling at from 10 cents to 25 cents above the market prices.—L. C. Brown.

The Safest Investment.

While farmers have been prosperous now for several years and have had a neat surplus at the end of each year, yet too few have used even a part of their surplus to improve the home and home farm. The craze has been for more land, and when additional farms could not be bought near-by, thousands have gone Southwest, and many more thousands have gone North and Northwest. We do not question the safeness of land investments; in fact, we do not believe that anyone can go wrong in buying new, good lands at reasonable prices. But there is another form of investment that will pay big. How about the barns and other buildings? Are they kept well painted and in good repair, so that they are not depreciating in value every year? Are the machines and tools so housed that they give the maximum amount of service? Are the barns and sheds fitted out with modern labor-saving devices for handling feed and manure? If any of these things are lacking, right here is the best place to invest some money this season.

Then it is not just to pass the home by. If it has not been painted for several years, set that down as one item for next spring. Perhaps a new rug is needed or a new kitchen cabinet. These are things which will make the home life more cheerful, and a hundred dollars or so invested here will yield the biggest kind of returns. Mother and the boys and girls have all helped, so let them all have some of the good things.—L. C. Brown.

FARM AND RANCH LANDS.

ALABAMA COAL LANDS—Fifteen thousand acres of mineral land. Right in the heart of the Warren coal lands of Alabama. These lands were purchased direct from the state under the land act of 1892. Lands in this section have yielded over $1,000 per acre on royalties of five cents per ton on coal.

The Illinois Central Railway has a survey completed through this body from Jasper, Ala., to Birmingham, which is expected to be built in the near future. The reason why the present owner is influenced to part with it is the need of ready money. No one need apply who has not the cash. Such a purchaser can get a bargain if taken up at once. Deed to this body of land will give purchaser title to over 6,000 acres good coal land, worth when opened $100 per acre or more. This is an opportunity for a capitalist who can wait a few years to multiply his money. It takes fifty thousand dollars to buy and carry this proposition. Address, JOURDAN ESTATE, care National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

Arkansas.—Want To Borrow $2,000, first mortgage on 730-acre farm with good improvements; well worth $8,000. Write **D. H. Balfour,** Box 195, Warren, Ark.

Arkansas.—Fine lands on the Cotton Belt Route in Texas. All very valuable but cheap at this time. See page 21 and read the advertisement of **E. W. LaBeaume,** G. P. & T. A., 1551 Pierce Bldg., St. Louis, Mo.

Idaho.—Cheap lands on the line of the most progressive and liberal railroad sytem. For the farmer, the dairyman, the fruit grower, stockman and poultry raiser. Get maps and particulars by writing to **F. A. Miller,** G. P. A., Chicago, Ill., and kindly mention this paper.

Michigan.—I sell Farms in Oceana, the best county in Michigan. Fruit, Grain, Poultry and Stock Farms. Write for list. **J. D. S. Hanson,** Hart, Mich.

Mississippi—160 acres of land; four miles north of Iuka, Miss.; three miles from the Tennessee river. This can be made a good home. Has about 20 to 25 acres cleared; balance in small timber; also pretty good farm house. A quick buyer can get it for $500. What do you think of that? **J. W. Jourdan,** Iuka, Miss.

Mississippi—320 acres, eight miles south from Iuka, Miss., and four miles from the I. C. Railroad. About half is fine bottom land and all has good growth of timber. Well adapted to corn and cotton and would make a good stock farm. Price, $1,600. It is worth $25 an acre. Address, **J. W. Jourdan,** Iuka, Miss.

Mississippi—320 acres; a great bargain; on Yellow creek, twelve miles north of Iuka, Tishomingo county, Miss., and not far from the Tennessee river. This would make a fine stock farm. It is the cheapest piece of land in Mississippi and will not be on the market long, as it can be had for $2.00 an acre. **J. W. Jourdan,** Iuka, Miss.

Mississippi—240 acres, two miles south from Iuka, Tishomingo county, Miss. About 30 acres clear land; has also 50 acres canebrake, which can be reclaimed and made worth $50.00 per acre. This will make a fine stock and fruit farm. Price, $4.00 per acre. **J. W. Jourdan,** Iuka, Miss.

WATER POWER AND BUILDING STONE in Northern Mississippi—120 acres—which includes a fine water power where a successful cotton mill was run until destroyed by fire. Water can be had in abundance with good fall and short dam between solid stone bluffs. The entire 120 acres are covered with fine building stone in quantities to quarry for the next century. Millions of tons of the finest building stone can be quarried in any size or shape. Owner would take some stock in company to develop this property. A spur can be put in from the new Illinois Central Line between Corinth and Birmingham to haul this stone. Prices and terms easy to the right party. Address, JOURDAN ESTATE, care National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

Missouri.—One hundred acres good land, less than thirty miles of southern limits of Kansas City, Mo. Eighty acres in cultivation; twenty in young timber; near railroad; some saw timber; no dwelling; large hay barn of sufficient size for housing all products; never-failing water. For particulars, address, **Mrs. H. P. Karnes,** 1017 North 20th street, St. Joseph, Mo.

MISSOURI. 800-Acre Farm. MISSOURI. Note what I say: It is a great bargain; it adjoins railroad station; it will grow 60 to 80 bushels of corn to the acre; it is underlaid with coal; it is in fine locality; it is about two hours from Kansas City, six hours from St. Louis, and twelve hours from Chicago. Price, $75 per acre; easy terms. Other farms for sale. **J. H. Lipscomb,** 306 Fidelity Trust Bldg., Kansas City, Mo.

Missouri.—560-Acre Home, eight miles from this city and five miles to another railroad town. 350 acres in cultivation. Level land and mostly free from rock. Good fences. Good five-room house; two tenant houses. Barn, 36x50; three other barns. All necessary outbuildings. Wells and spring. 10 acres young bearing apple orchard. Various other fruit. 70 acres meadow. 100 acres pasture. Close to school, churches and store. Free mail. Phone. Covered stock scales. Price, $20.00 per acre. Have also larger and smaller tracts for sale. Write your wants. Send for lists and descriptions of the county. **Wright & Waterstripe,** Marshfield, Mo.

Montana.—Thousands of acres, fine lands, for sale cheap. Government homesteads close to towns yet available. Write for description, maps, etc. Address, **F. A. Miller,** G. P. A., Chicago, Ill., and kindly mention this paper.

CENTRAL MISSOURI FARMS.—For farms and homes that will prove both satisfactory and profitable, write for new illustrated list; 100 farms described and priced. **G. W. Hamilton & Son,** Fulton, Mo.

Oklahoma.—Land Auction. Farms and lots will be sold to highest bidder December 17, 1908. Write for particulars. **Illinois Trust & Inv. Co.,** Morris, Okla.

Missouri.—The Ozark Country. For raising fat cattle, sheep especially, hogs par excellence, and the land of the Big Red Apple. Cheap lands now, but rapidly advancing. Write for maps and particulars. Address, **John Sebastian,** 1768 Frisco Building, St. Louis, Mo.

Tennessee.—Send for booklet on farming and full description and price of lands for sale in the valley of East Tennessee, the healthiest climate and best lands in the country. Address, **East Tennessee Real Estate Company,** Morristown, Tenn.

Texas.—12,000 Acre Ranch For Sale! All together or in parts, in Uvalde county, Southern Texas, nine miles from Sabinal, an up-to-date and rapidly-growing town with fine schools, 71 miles from San Antonio, on the Southern Pacific Railroad. Principal grasses, **mesquite and rescue.** An abundant and **inexhaustible supply of pure** water. The tillable soil is **black hog wallow** and chocolate, and produces alfalfa, wheat, cotton, corn, rye, sorghum, broom corn, **vegetables,** fruits, etc.

No other locality is better adapted for the successful raising and fattening of cattle, hogs, sheep, horses and mules. The land all the way from town to this ranch is under cultivation. Owner being a non-resident, price, $7.00 per acre.

Address, **A. D. Evans,** National Stock Yards, East St. Louis, Ill.

Texas.—1,107 acres in Jackson county, Southern Texas, four miles from town. A bargain at $10.00 per acre. Good for vegetables, fruits, cotton or live stock. Address, **Box 84,** National Stock Yards, Ill.

Texas.—Large and small farms for sale in the southern part of the state from $2.50 upwards. It will pay buyer of Texas land to address, **Box 84,** National Stock Yards, Ill.

Texas.—Farm lands; rich soil; nearness to market; mild and healthy climate. Two crops a year. Green pastures all the year round. See page 21 and write for free literature concerning lands which are valuable and cheap on the line of the Cotton Belt in Texas and Arkansas. Address, **E. W. LaBeaume,** G. P. & T. A., 1551 Pierce Bldg., St. Louis, Mo.

Texas.—Buy cheap Texas School Land. $1.00 to $3.00 acre. Forty-years' time. Any size tracts. Send your name to-day. **Box 709,** Houston, Texas.

VIRGINIA FARMS, $5.00 Per Acre and upwards. Easy payments. Catalogue free. Loans made on country real estate. **George E. Crawford & Co.,** 1009 East Main St., Richmond, Va. Established January, 1875.

CASH FOR YOUR FARM OR BUSINESS, No matter where you live. Write me today if you want to buy or sell any kind of Real Estate or business. **FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago, Ill.**

WESTERN CANADA

More Big Crops in 1908

60,000 settlers from the United States in 1908. New Districts opened for settlement. 320 acres of land to EACH SETTLER—160 free homestead and 160 acres at only $3 per acre.

"A vast, rich country and a contented, prosperous people." Extract from correspondence of a Kansas Editor, whose visit to Western Canada in August, 1908, was an inspiration.

Many have paid the entire cost of their farms and had a balance of from $10 to $20 per acre as a result of one crop.

Spring and Winter Wheat, Oats, Barley, Flax and Peas are the principal crops, while the wild grasses bring to perfection the best cattle that have ever been sold on the Chicago market.

Splendid Climate, Schools and Churches in all localities. Railways touch most of the settled districts, and prices for produce are always good. Lands may also be purchased from Railway and Land Companies.

For pamphlets, maps and information regarding low Railway Rates, apply to **Sup't of Immigration, Ottawa, Can.,** or to the authorized Canadian Government Agent.

J. S. Crawford, 125 W. 9th St., Kansas City, Mo.; C. J. Broughton, 412 Merchants Loan & Trust Bldg., Chicago, Ill.

A Michigan Cow Test.

The Cow-testing Association at Freemont, during its first year, contained in all thirty herds of cows scattered promiscuously about the vicinity near Freemont, Mich. These herds contained a total of 239 cows. Now this is just an ordinary dairy community. Of course, more cows are kept on an average than in many communities in the state, but no more on the average than in many dairy communities. While the farmers are fairly good farmers, I do not think they are above the average of the ordinary dairy community. These 239 cows were charged with all the feed they consumed, at market prices, just what the farmer could get, had he sold this feed in the open market and hauled it to town. Then they were credited with the milk which they produced, or, rather, the butter-fat which they produced, not at fancy prices, but at the regular price at the creamery.

All of this milk, practically, went to co-operative creameries in the vicinity of Freemont, and the cow was credited with the butter-fat at the price paid at the local creamery. Now, on the average for the 239 cows, the farmer received $1.71 worth of milk for each $1.00 worth of feed. Doesn't that prove that dairying is profitable?

The farmer raised a large part of the feed on his own farm. He bought some at market prices, but figuring all at what he could sell it for, instead of drawing it off his farm and selling it in the open market, he sold it to his cows, and at those prices, by feeding it to his cows, he got $1.71 for every $1.00 worth of feed. He not only received more for his feed by feeding it to his cows, but he saved the expense of hauling this feed to market. Not only that, but he saves all the vegetable matter that would have been taken off the farm in the manure, and puts that back to keep up the fertility of the farm.—Colon C. Lillie, in Michigan Farmer.

ALFALFA.
The Most Profitable Crop in Existence—Can Be Successfully Grown in Any State in the Union.
The man who has done more to encourage the growth of alfalfa than all the balance of the world is Coburn, of Kansas. Coburn issued a book in 1901 of which there has been a great sale. This is Coburn's Original Alfalfa. It is nicely bound in cloth; there are 163 pages; the size is 5x7½ inches; it is well illustrated. The book includes history, description, varieties, length of life and habits of growth; climate and soil best adapted; seed bed, its preparation; time and method of seeding, harvesting, etc. For 60 cents we will send The National Farmer and Stock Grower for one year and Coburn's Original Book on Alfalfa. Address, The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Keep Live Stock Comfortable.

As we are entering upon the winter season of the year, we dread it in some respects, knowing that much of the live stock will suffer for want of proper shelter and feed. More possibly from the want of a little shelter than from want of food. We had better cut down the feed a little if really necessary and have a protection from the rough weather than to have an oversupply of feed and have nothing but a barb-wire fence to protect them.

The stock that make gains have to be kept comfortable, and stock will not make gains at all, to say nothing about profitable gains, when they are not comfortable, for when stock of any kind are putting on the pounds it is when they can go and eat and then have a comfortable place to lay down. If they have plenty to eat, and ice water to drink, and then have no protection and have to stand in the cold mud and shiver, they are shaking off more pounds of flesh than they are putting on. I like to use bedding material liberally for the stock, and give them a good place to lay down, and it is then that they are putting on the weight that will count in market.

There are some who say I am wasteful for using so much bedding, but I know it pays me well. The material which is used is worth little or nothing for feed, and what better can we do with it than to give the stock a good, dry bed? Make use of the straw stack in this way, and of course let the stock eat some of the straw, but on every farm there is some spoiled hay or leaves or anything that will add to the comfort of the animal, and will pay to use for the purpose, and later you have the increase of the manure of the material that you use, and so I claim that we have a double profit.

The main object is to keep the stock comfortable, just as we want to be kept comfortable. Have the sheds tight, so that there will be no draft. Many times it will only take a few minutes to close up the cracks in the barn, which will give the stock comfort all winter and in what better way could you employ your time?

A comfortable barn need not be an expensive one, for a straw shed can be made comfortable, and it is all the same to the stock, though a better-built barn is more convenient, and of course we all want them as soon as we can have them. However, until we can get them, we ought to give ample shelter and protection to our live stock, both for the sake of humanity and for the sake of profit.

I have heard one man say, and he lived farther north than this is, that he could turn his horses out on the meadows with nothing but the barb wire for shelter, and they would get tough and used to it, and come through the winter as well as any horse! I do not believe it, and if it will work so well on a horse, and make him strong and give him good health, why not try living that way himself? Not this plan for me; it is cruel, and, I claim, unprofitable.

One thing that hurts stock as well as people is the sleeping in draft with the cold blowing over them when warm, and this should be avoided in all things. You can specially notice this in the chicken house, for if you allow the hens to roost in a draft in the winter you need not count on many eggs.

Let us plan to have our buildings comfortable, so that it will be more pleasant for ourselves while out feeding the stock, for if we can do the feeding in comfortable barns we will not be in such a hurry to get back to the stove and will take more interest and do it right. I know this to be true, for I fed in all kinds of ways before I was able to have a barn, and was always in a hurry to get back to the stove. I consider it a waste of feed to keep stock and feed them on high-priced feed in winter and allow them to suffer from the cold, and we had better not keep any more than we can properly take good care of. It will pay us best in the end.—E. J. Waterstripe.

JOHN DEERE
Light Draft Plows
Standard For Two Generations
TRADE MARK

JOHN DEERE invented the steel plow. His plows have been the world's standard for seventy years.
It takes the largest steel-plow factory in the world to build enough of these high-grade plows to supply the demand.
A Plow for You
No matter where you may live, or what crops you grow, there is a John Deere plow made specially for your kind of work. 1000 different styles and shapes.
Buy a John Deere and get the highest quality put in a plow. By actual tests the lightest draft plows made. Finest finish, longest life.
Write for Free Booklet No. 11.
Beautifully illustrated. Shows photos of plowing scenes from all countries. Lots of valuable information. Give No. of booklet and mention this paper.
DEERE & COMPANY, Moline, Illinois

What Are Your Seeding Conditions?

Have you any peculiar seeding conditions confronting you? Are there any particular seeds that you want to plant? Here is a chance for our readers to get, free of all cost, any special information they may desire.

The American Seeding Machine Company, incorporated, Richmond, Indiana, manufacturers of the Hoosier Grain Drill, will be pleased to furnish any special information along this line to any farmer who will write and ask for it. If it is a matter of sowing fertilizers, or grain, or style of furrow opener best adapted to your needs, they will tell you frankly and honestly what they have found out by years of practical experience. This information places you under no obligations whatever. The Hoosier Drill is manufactured in many different styles and sizes, and the farmer can get a Hoosier Drill that will do his work as it should be done. Write them and ask for a free copy of their Hoosier Drill catalogue, then go to your local dealer and insist on seeing the Hoosier Drill before you purchase any other make. Every Hoosier Drill carries with it a guarantee that is of vital and protecting importance to the purchaser. Therefore no farmer takes chances on buying the Hoosier, because it must, and will, do all that any reasonable man could ask. This is fair and honest and absolutely protects the purchaser.

Feeding Cows Profitably.

The kind and amount of feed that should be given to a cow depends upon what kind of a cow she is and what she is doing. The less feed given a scrub cow the less will be the loss in keeping her at the end of the year. The more feed given a good cow up to a certain limit and providing the food is of the right kind, the greater will be the profits.

The nutrients an animal uses in rebuilding the tissues of the body as they break down from day to day are known as the food of maintenance or support. The amount of food an animal needs for this purpose depends upon its size, disposition and surroundings.

The beef animal uses the food it consumes for bodily support and the laying on of flesh, first meeting all the requirements of the former demand. The dairy cow supplies this demand and converts all excess into milk. The larger the cow, other things being equal, the more food is needed for support, although the small cow requires relatively more food for this purpose than does the large one. The timid, discontented cow will need more than the docile, contented cow.

The cow should at all times have enough food to satisfy the appetite, and the more palatable the food the more she will consume. The proportion of rough feeds to grain must be adjusted to her actual needs. A dry cow, or one that is giving very little milk, does not require very much grain, and it is not economical to feed more. If she is doing just medium work, about one-third of the nutrients necessary for milk production should be supplied in the grain feed and two-thirds in the roughage. If she is in full flow, the proportions should be about equal.

A cow will give better returns if she relishes her food. It is very important that the food reach her in a palatable condition. The rough feed too often reaches the cow in a condition unfit for food.

The daily ration should be composed of a reasonable number of feed stuffs, since a mixture is relished better by the cow than a single kind of grain or roughage, although all changes should be gradual.—Wm. H. Underwood.

SEVENTEEN CENTS A GALLON

The Price Set For November Milk and Agreed to by Dairy Companies — Annual Meeting — Reports of Progress and Election of Officers.

The annual meeting of the Milk Producers' Protective Association of Missouri and Illinois was held at St. Louis on Monday, November 23d. Most of the officers and Directors were present, but visitors were few.

This was the eighth annual meeting of the association. It was organized at a time when 9 or 10 cents a gallon represented summer prices and 13 to 14 cents a gallon represented the best winter prices. The association has been the principal agency in bringing about a better state of affairs. Quite recently summer prices have been advanced to 12 and 13 cents and winter prices have reached 16 to 17 cents. Without any friction, disturbance or strike, without anything but persistent and reasonable negotiations, the condition of the milk shipper has been materially improved and the Milk Committee has been able to place St. Louis prices in full accord or even at a slightly better range than at New York or Chicago.

In addition to the beneficial influence in the matter of bringing about better prices the association has done active work whenever necessary to prevent imposition in the matter of advancing transportation rates. When the railroads issued new advanced rate schedules for both milk and cream, affecting all territory from Illinois to the Rocky Mountains, this association took the lead and furnished the evidence which threw the case out of court, and in the recent contest before the Interstate Commerce Commission the association was one of the first to appoint and send a Delegate to appear before the Commission and to testify impartially as to actual facts and conditions.

The most that any milk shipper has paid towards the work of the association is two dollars a year, and those who sell at the home stations pay less. Furthermore, in addition to giving their time freely, the officers have had to pay expenses out of their own pockets until by slow collections the members have paid in their dues and so liquidated the debt. It has been the constant study of the officers of the association to keep the organization out of debt and yet be on hand to guard the interests of the producer.

In opening the annual meeting the President, Hon. D. I. Furbeck, congratulated the members that they were in good commercial standing with the distributing agencies. The fact that the certified dairies had organized city distributing facilities and after successfully conducting city operations for a year or more had thought fit to sell out their wagon equipments and contract their own product, was sufficient evidence that a good market for the producer was easier, if not better, than the farmer taking upon himself the conduct of a highly-competitive city business in addition to the cares and troubles of a milking outfit on the farm. He was glad to say that between the creameries, the condensaries, the dump stations and the city distributors there was hope for the farm dairyman, and with a united organization assisting the shippers to find buyers, and the buyers to find shippers, and the milk producers standing by the elected officials and all producing pure and honest milk and cream, he saw no reason to despair of the milk farmer getting his rights.

The members of the Milk Committee, consisting of the President and Mr. L. S. Dorsey, reported that they had seen most of the city dairymen, and that the price of uncontracted milk delivered by members of the association in the month of November would be 17 cents a gallon, the shipper paying the freight.

A discussion for the good of the association was on the subject of buying concentrated feeds, the Secretary being empowered to make purchases for association members and to give them the benefit of any rates obtained.

Before the election for officers took place it was decided by resolution in the interest of efficiency and economy that for the ensuing year the President-elect should act as Executive of the Milk Committee with power to call upon any Delegate when in his opinion assistance became necessary.

At the instance of Mr. F. X. Speidel, of Knorpp, Mo., representing milk shippers on the Mississippi River and Bonne Terre Railroad, a committee was appointed to make an effort to have milk trains on this road run at a better time to suit the shipping interests. Although this is considered difficult of accomplishment, it was done on other roads upon similar representations.

Mr. Wm. Nolle, of R. R. 4, St. Charles, Mo., reported that a meeting of shippers had been held upon his route, and that he had been reappointed Delegate for the shippers on the Burlington System. The dues for the said membership would be forthcoming at the expiration of the time already paid for.

Mr. A. M. Shultz, of Shipman, Ill., on the C. & A., and L. S. Dorsey, on the New York Central, stated that the meetings on their routes had not yet been held, but they would endeavor to make good reports at the next meeting. Other routes were not represented by Delegates at the meeting.

Messrs. J. H. Harms and Wm. Niemeyer, of Lebanon, Ill., and Mr. Chas. D. Boisselier, of Chesterfield, Mo., being in attendance at the meeting, paid their annual dues to the Secretary.

Mr. F. X. Speidel then submitted report of a meeting held at Flucom, Mo., on November 18th, with Mr. J. H. Morse presiding, and Adolph Schmidt, Secretary. The milk producers upon the Mississippi River and Bonne Terre Railroad agreed to give their full and hearty support to the association for the ensuing year and re-elected Mr. F. X. Speidel as Delegate by acclamation. The following paid their dues for the year ending next November: J. H. Morse, Valles Mines, Wm. Matthes, Wm. Gretchel, C. F. Knorpp, Joseph Bellville, A. Schmidt, Fred Mathes and Wesley Knorpp, all of Knorpp, Mo.; and J. J. Schmidt and Ed Kleinschmidt, of Flucom, Mo. The dues were paid over to the Secretary of the association.

A vote of thanks was then tendered to the shippers on the Bonne Terre Route for their prompt and considerate action.

The election of officers being next in order, Hon. D. I. Furbeck was placed in nomination by Mr. L. S. Dorsey, seconded by Mr. Wm. Nolle, and unanimously elected; also Mr. F. X. Speidel, Vice-President; and Mr. Wm. A. Fischer re-elected Secretary and Treasurer. A vote of thanks was tendered to Mr. Ben Shomaker, of Carlyle, Ill., the retiring Vice-President, for his great and valued services to the association.

Before adjournment, by vote of the meeting, it was decided to make a strong effort to extend the organization, and it was decided that whenever and wherever a number of milk producers can be brought together the President of the association will endeavor to be present to address them. He will of necessity be given due and timely notice.

The financial affairs of the association are not in bad condition, although there are some few back payments to be made up on account of printing, postage, the representation before the Interstate Commerce Commission, etc.

It was decided that no meeting be held in December, owing to Christmas festivities, but that the Milk Committee will make the usual report through the columns of The National Farmer and Stock Grower. The January meeting will be held on the fourth Monday, at 1 o'clock p. m.

During intervals between meetings the Secretary, Mr. Wm. A. Fischer, 409 Frankiln avenue, St. Louis, Mo., will be glad to receive applications for membership. Those who ship to St. Louis pay annual dues amounting to $2.00 a year, and those who sell at home pay $1.25 a year. The National Farmer and Stock Grower, the official paper of the association, containing report of proceedings, is paid for out of funds of the association. On routes where there are many shippers the dues should be paid to the Delegates; but where shippers are few, individual dues should be sent direct to the Secretary.

DAIRY AND CREAMERY.

The Alvin Creamery in Southern Texas turned out 84,680 pounds of butter in the month of September and distributed $3,000 in cash among its patrons. Alvin is near to Galveston and Houston, and is in a good vegetable country also.

In Jamteland, Sweden, ten cheese factories have formed an association with a central management, whereby the milk is paid for alike, the manufacturing carried out on the same system and the sales are made jointly. The factories are represented by a delegate in all the e matters and these choose five as Directors, but all other matters are kept separate for each factory. In business circles this is called a Trust, and in farming it is called co-operation.

The hired man of to-day—if he is any account—is the farm owner of to-morrow; that is, if he is any account. This country has no generation of farm laborers. It is doubtful if one full-grown man raised as a farm laborer can be found whose father was also raised as a farm laborer before him.

HOLDS WORLD'S RECORD FOR CLEAN SKIMMING.

U.S.

THE WORLD'S BEST CREAM SEPARATORS KING OF THEM ALL

Are built more thoroughly, skim more cream, run with less power and have more practical improvements than all other makes combined.

U. S. Cream Separators have been built for the past 17 years by a company having

Forty Years' Experience

in the manufacture of dairy appliances and nothing but the best material obtainable and highest class of workmanship possible are contained in their construction.

No dairyman can afford to be without our beautifully illustrated, large catalogue No. 125. Send for it to-day.

RENA ROSS, 14,539—Champion cow of the Ayrshire breed of dairy cattle for milk and butter. Owned by John R. Valentine, of Highland Farm, Bryn Mawr, Pa. See article giving her year's record of expense, production and profit.

CHAMPION AYRSHIRE COW.

Rena Ross, 14,539, a Cow That Gave 196 Gallons of Milk in Thirty Days, and 1,884 Gallons in a Year. Butter Production, 751 Pounds.

The grand cow, Rena Ross, No. 14,539, is owned by Mr. John R. Valentine, of Highland Farm, Delaware county, Pa. The postoffice address is Bryn Mawr, Pa., which is a suburb of the city of Philadelphia. Dr. Philip C. Palmer, V. S., is Manager of the herd, and has brought it to a high state of perfection.

Rena Ross made her record under the official direction of the Pennsylvania Experiment Station and the Ayrshire Breeders' Association, and has been admitted to advanced registry with a year's record of 15,072 pounds of milk and 751 pounds of butter. This is the highest official record, both in milk and butter, of any Ayrshire cow, either in the United States, Canada or Scotland. She is a strong, rugged cow, of great constitution, weighing about 1,100 pounds. She is, as one can readily see from her picture, a good type of a business cow.

Rena Ross was sired by Major Ayer, 5,533, who has seven daughters in the Advanced Registry, including two world's champions and two home dairy test winners. Her dam, Rena Webb, 12,479, has an official record of 9,366 pounds of milk and 425 pounds of butter. She is also dam of Rena Ayer, 21,247, with a two-year-old record of 6,929 pounds of milk and 357 pounds of butter.

Rena Ross is half sister to Colonel Ayer, 7,168, the present stock bull of Highland Farm, with eleven daughters in the Advanced Registry. She traces back twice to the old imported cow, Queen of Ayer, 1,766, a cow that gave 10,632 pounds of milk at sixteen years of age.

Rena Ross is descended from the famous imported cow, White Lily, 811, a cow that gave 75 pounds of milk in one day, and is, in fact, one of the very best bred cows of the Ayrshire breed in addition to being the champion performer.

Being close to the city of Philadelphia, Rena Ross is near one of the best butter markets in the country. Her butter sold at an average of 32 cents a pound, and there being 751 pounds, the returns for same amounted to $240.32; then there were 1,790 gallons of skim milk, which, at 2 cents a gallon, amounts to $35.80. The total production for the year is valued at $276.12.

During seven winter months Rena Ross consumed 12 pounds of concentrates a day or 2,520 pounds, at $32 per ton; 40 pounds of ensilage a day, which is 8,400 pounds, at $1.50 per ton; and 10 pounds clover hay a day, or 2,100 pounds, at $20 per ton.

During five summer months concentrates were fed to the extent of 8 pounds a day, and she is charged up with five-months' pasture at $3.00 per month. She is also charged up with $40 for proportion of labor, care and marketing the product, making a total expense of $141.67. After deducting $141.67 from $276.12 there remains a clear net profit of $134.45 for the year's production of this great cow. She also contributed a fine heifer calf for which a large sum of money has been offered and refused.

The best day's milk production was 7⅛ gallons; the best thirty-days' milk production was 196 gallons, or a little better than 6½ gallons a day; the year's production was 1,884 gallons, which is an average of about 5 1-6 gallons of milk for every day in the year.

A picture of this magnificent cow is presented herewith, and we are indebted to Dr. P. C. Palmer for the particulars here given.

Milk Preservatives.

When milk is intended for human consumption, milk preservatives ought not to be used in any case. This is a hard theory to impress on many of the producers of milk, for the reason that they are much closer to some of the sellers of milk preservatives than they are to the people who make a study of the effects of milk preservatives on human stomachs.

Many milk producers have gotten into the habit of using preservatives and have followed the practice so long that they have come to look upon the use of preservatives as harmless. This is one of the most formidable obstacles in the way of inducing them to abandon the habit of using such chemicals in that way.

Oftentimes the farmer is credulous and believes the statements that are made on the wrappers. He is told that he is using not some of the chemicals known to be harmless, but a newly-discovered something which is perfectly harmless but preserves the milk perfectly. The package of chemicals is often represented as a newly-devised combination which is to prove a boon to the human race. Many a farmer that would not knowingly buy formalin for use in his milk will buy these concoctions with high-sounding names.

Many of our state pure-food commissions have investigated these mysterious combinations and have found them to consist of the well-known poisonous chemicals compounded often with some harmless ingredients to disguise them. There are only about so many germicidal agents among the chemicals and these have to be drawn upon when a milk preservative is produced. The farmer should understand that no matter what the wrapper of a package says, or what the agent of a milk preservative may claim for his product, poison is contained in it, in some quantity or other.

The claim of the agents as to harmlessness is more dangerous than the mere fact of the preservative being used. The convincing of the farmer that the preservative is harmless makes it all the more likely that he will use more than the required amount, and often several times the required amount. If the wrapper said plainly: "This package contains a harmful drug when used in more than the prescribed quantity," the farmers would be likely to confine themselves to using only the amount necessary to the preservation of the milk. But in this case little of the stuff could be sold, for the truth would condemn it. It is safe to say that practically all preservatives are sold on the claim of being harmless.

It has been concluded by some of our experimental workers that if formaldehyde is used in milk to the amount of one part of the preservative to forty thousand of milk, the fermentation of the milk will be delayed for many hours and no injury come to the stomach taking it. This conclusion is probably correct, but it would take a chemist to compound with such accuracy. The ordinary mortal soon swings off entirely from all rules and puts in his chemical by guess work.

The use of chemicals in milk becomes all the more dangerous when the milk passes from the hands of the milk producer, not directly to the consumer, but indirectly reaches the consumer by way of wholesalers and retailers, especially the shop retailers. It then stands a chance of being "doctored" by three persons, the producer, the wholesaler and the distributor. Milk so poisoned may be very harmful to the stomach.

The only preservatives used should be cold and cleanliness. These two in combination make for healthiness and not for harmfulness of the milk.

Milk and Cream Contest.

At the National Dairy Show to be held at Chicago, December 2d to 10th, the Dairy Division of the United States Department of Agriculture will conduct a milk and cream contest which will be open to all producers of market milk in the United States. Space has been allotted for the use of the Dairy Division in making the exhibit. Since the first national contest several states have had similar exhibits, including New Hampshire, Ohio, Connecticut, Illinois, Missouri, Massachusetts, Pennsylvania and Michigan. The object of this contest is educational and for the benefit of all interested in pure milk. The milk and cream will be carefully analyzed and scored by experts from the Department of Agriculture. Forty points will be allowed for flavor, 25 for composition, 20 for bacteria, 5 for acidity, and 10 for appearance of package and cleanliness of milk. The quality of the milk will be clearly shown by the score. A comparison of methods employed and results obtained should prove helpful. After being examined by the judges, the product will be placed on exhibition accompanied by the score. Dairymen producing milk or cream for city consumption are invited to exhibit in accordance with the conditions prescribed in the entry blank.

SO WOULD OTHERS.

Little Freddie was told by the nurse one morning that the stork had visted the house during the night and left him a little baby sister, and asked if he would like to see her.

"I don't care nothing about the baby," said Freddie, "but I'd like to see the stork."—The Delineator.

In England the milch goat is being advocated as being the poor man's cow. The day will come when there will be as many milch goats as there are milch cows.

THE 500 QUESTIONS ANSWERED.

This is all about swine, and is a book by L. H. Cooch. There are 526 questions and 526 answers. They are natural questions and practical answers. The questions relate to breeding, mating, feeding, pasturing, fattening, management, diseases, etc., of swine. It is a complete veterinary authority on all swine diseases. The answers to questions on feeding alone, if properly attended to, will put enough pounds on one pig to pay for many books. We are sending The National Farmer and Stock Grower for one year and the 500 hog question book for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

BREEDERS' CARDS.

ALVEY FARM O. I. C. HOGS, where the progressive kind are bred. We have twenty head of June Pigs; they are bred right; are right, and will be priced right. Can furnish them not akin. They are strictly pure O.I.C. that are white and breed right. **ALVEY BROS., Meriden, Kansas.**

O.I.C.

Blooded Stock.

Andrew Johns, of Rosendale, Mo., sold Poland-Chinas on November 24th. The top of the sale was $40, paid by M. G. Mohler, of Hamilton, Mo., for Black Chief's Lady, 3d, a two-year-old sow by Missouri Dude. The next highest price was $38, paid by W. J. Wright, of Rosendale, Mo., for Missouri's Novelty, a sow by Missouri's Black Chief I Am.

Farmers had best get busy raising good hogs. There is a surprising shortage of hogs to develop in the year 1909. Canada is short, and, owing to the drouth, many young hogs have been marketed in the fall of 1908 that would otherwise be held over. At this time a pure-bred boar is an especial good investment. Start right in breeding and give the young stock the advantage of quality; then at the right time finish them on corn. The market will furnish the money.

At Kansas City, Friday, November 27th, T. J. Wornall & Sons, of Liberty, Mo., sold forty head of Shorthorns at an average of $200.52. The seventeen bulls averaged $182.35, and the thirty-one females averaged $210.48. The bull sales included the yearling May King by Choice Goods, sold for $875 to Dr. H. K. Givens, of Fayette, Mo., and the females included the yearling Rosette of Grassland by Imp. Conqueror, sold to Carpetner & Ross, Mansfield, Ohio, for $505. W. K. Burgess, Fort Worth Texas, paid $500 for Floral King, also sired by Imp. Conqueror.

On November 16th, at Jeromeville, Ohio, E. L. Metcalf sold forty-seven head of Poland-Chinas at auction, averaging $61.76 per head. A boar, Impudent by Perfection E. L., sold to Silas Pyers & Son, Nashville, Ohio, for $490, and a sow by Impudent sold to John McCulloh of Mt. Victory, Ohio. This was the first of a series of sales in which 273 Ohio Polands averaged $55.57 per head.

At Pattonsburg, Mo., R. E. Maupin sold Poland-Chinas at auction. The boar average was $27.87; the female average was $22.26; and the general average for fifty-seven head was $25.11. The top price for a boar was $100 in two places—one bought by J. Walter Garvey, of Auburn, Ill.; the other by C. E. Tennant, of New Hampton, Mo. The top price for a sow was $65, paid by J. M. Kemp, of Kenney, Ill.

Early in November, at Montrose, Mo., forty head of Poland-Chinas were sold by Chas. A. Lash at an average of $26.50 per head. The top-price boar sold to G. W. Wilson, of Montrose, Mo., for $68; and the top-price sow sold to Fred Richards, of Montrose, Mo., for $100.

Wm. Mincer, of Spencer, Iowa, disposed of his Aberdeen-Angus cattle at auction on November 11th and realized an average of $126.61 for forty-six head. His eight young bulls averaged $75.31, and thirty-eight females averaged $137. The top price was $400 for the two-year-old heifer Blackbird of Spencer, sold to J. R. Horswell, of Estherville, Iowa.

At a sale of Duroc-Jersey swine held by S. R. Murphy, of Savannah, Mo., a famous brood sow, Savannah Belle, sold to Ernest Pancake, of Ransom, Ill., for $525. Her litter of nine sired by Proud Chief sold in the sale for $605. The general average for fifty-one head was $50.51.

At Mexico, Mo., November 13th, in a sale conducted by S. P. Emmons, forty head of Shorthorn cattle averaged $118.20. Secret Goods, a son of White Goods, and grandson of Choice Goods, weighing 1,500 pounds as a long yearling, sold for $500 to C. W. Daugherty, of Sedalia, Mo. Lavender's Diamond, a calf of 1904, by Bapton Diamond, out of Imp. Lavender Lily, topped the sale at $525, going to J. D. Morgan, of San Benito county, California. The females included Fernwood Sybil, 2d, sold to C. Pitzer, of Louisiana, Mo.

At the Pabst Stock Farm, Oconomowoc, Wis., November 9th, thirty-eight head of Percheron stallions and mares sold at auction for an average of $309. The top-price stallion was the black two-year-old Holocaust, sold to H. H. Fields, Osseo, Wis., and the mare Pet, a daughter of Baccarat, a black four-year-old, sold to S. F. Guttenstein, of Milwaukee, Wis., for $585. Ten Hackney mares were in the sale and averaged $186.50, the top price being $315, paid by Geo. McKerrow & Son, Pewaukee, Wis., for the mare Southorpe Bentley.

I. N. Chase, at Brandon, Vermont, sold the Forest Park Farm herd of Ayrshire cattle at auction, October 26th. The average for ninety-five head was $95.05. The top price was $310 for the cow Lady Beppo.

The twelfth annual sale of Percheron horses by H. G. McMillan, of Sioux City, Iowa, held November 17th and 18th, resulted in a general average of $460 for eighty head. The thirty-three stallions averaged $498, and forty-seven mares $435. The top price was $1,000 for the black two-year-old stallion Viborg, which sold to George Holmes, of Wibaux, Montana. W. H. Kerr, of Bennington, Neb., paid $830 for the gray mare Zambea, a four-year-old, and topped the females.

At Worthington, Minn., on October 28th, Messrs. Patterson & Erickson sold a fine lot of Percheron horses at auction. Twelve stallions averaged $515.40 per head, including the two-year-old black Lyceen, which sold to John Martins, Belvidere, Minn., for $1,015. The female average for twenty-seven head was $421.50, and the top price was $900, paid for Her Majesty, a gray matron, foaled in 1903, and bought by E. C. O'Dell, Fargo, N. D.

Colonel Geo. P. Bellows, of Maryville, Mo., live stock breeder and auctioneer, has just returned from a trip to England and Scotland. He says that over there all farmers use pure-bred bulls. All the grades are raised as steers and sent to the butcher, where they bring good prices. Mr. Bellows considers it a good example to follow in this country.

Land Items and Sales.

Quality being equal, the most important item influencing land values is the nearness or accessibility to market. Peter Henderson said: "I would rather pay $50 per acre per annum rent for land where I want it than have inaccessible land as a free gift."

Messrs. Geo. E. Crawford & Co., of Richmond, Va., issue a very attractive list of Virginia properties. Some of them are illustrated, and every property is fully described. Virginia is a grand state, and it contains opportunities which are surprising. Address, Geo. E. Crawford & Co., 1009 East Main street, Richmond, Va.

In the whole of Europe to-day it is not possible to purchase a piece of land at a price an industrious farmer can afford to pay for the purpose of making a living upon it. The same condition is rapidly arriving in this country. Most of the lands in Illinois, Indiana, Ohio, Pennsylvania and New York are held far above what they are actually worth. All the lands that are worth the money are in the West, and even in the West there are some lands that have advanced to the limit. Sensible men who wish to own farms and conduct them for the purpose of supporting their families cannot find a permanent home too soon. Ten years from now unoccupied Western lands will sell 50 per cent. higher than they do to-day, and to-day these Western lands are very much higher than they were ten years ago.

MULES For Sale: Twenty-six head coming four-year-olds; twenty-seven coming threes; thirty-two coming two years old. We sell Mules either broke to harness or halter, native-bred here in the alfalfa district, making Mules 15.3 to 16½ hands high, with plenty of width and bone. Mules from healthy mares, not branded stuff, but gentle and kind; blacks, bays, browns, iron grays, in good flesh and hair. Respectfully, **Wm. Colter,** Box 545, Garden City, Kansas.

TAMWORTHS FOR SALE. The bacon hog the largest and most prolific breed. Early to mature. Economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs, not akin, from best strains. None better. Prices reasonable. My herd won seven out of nine first prizes at Lexington, Ky., 1908. Have added some imported stock that won at the Royal Show, England, 1907. **CHAS. FORD,**
Mortonsville, Woodford County, Kentucky.

4,000 FERRETS for sale. Write for price list and catalog; it's free. **De Kleine Bros.,** Jamestown, Michigan, Box 13.

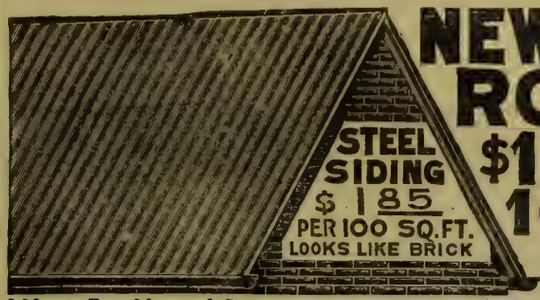
Eighty Bushels of Corn Per Acre.

While eighty bushels per acre may not be an extraordinary yield, yet when so much good, merchantable corn is produced over a considerable acreage, under conditions which most any good farmer can duplicate, it is well worth some study. I am referring to a field in Bureau county, Illinois. This field is outstanding, because this crop was produced under precisely the same weather conditions as surrounding fields which produced only from thirty-five to fifty bushels per acre. The seed planted on two of these fields came from the same source, so that they had practically an equal chance at the start. It was nip and tuck between the two fields clear through the season up to August, when the drouth became severest; then the field first mentioned never slacked growth, while the other soon began to show effects of the lack of moisture. These fields were watched and commented upon by passers-by all through the summer and fall season, and of course the management of the field which produced the eighty bushels per acre came in for considerable discussion. This field was sod ground. The fall previous to planting to corn it was covered with a thin coating of manure. It was worked down this spring, so that the seed-bed was in ideal condition, and was planted between the 16th and 20th of May. There was a vigorous start and the humus in the soil kept the ground from baking after the heavy rains during the spring months, and it conserved moisture to promote steady growth right up to the ripening period. Stock had never trodden upon this field when it was soft and there was no time during the season when it showed the least tendency to bake. The other field especially referred to was also sod ground. It was not manured. It seemed it could not stand the dry weather. It baked and worked hard all season. It showed faulty plowing and cultivation. Each cultivation seemed to do more harm than good, and this became so apparent that cultivation was stopped altlogether on a part of the field after it had been gone over twice. The yield here was about forty-five bushels per acre. We cannot attribute the eighty-bushel yield wholly to the manure, for both of the fields were strong enough to produce such a crop. After knowing the details of the management and observing the physical condition of the ground, I unhesitatingly give the man who secured the eighty-bushel yield the credit of producing his fine crop by better handling of his ground. both in seed-bed preparation and in subsequent cultivations.—L.C.Brown.

Getting Winter Eggs.

With eggs now worth more than oranges, it stands us in hand to coax Biddy to do her best for the next three months. It is surprising what good care and proper feeding will do in producing eggs; and, on the other hand, no other branch of farming will show quicker losses than carelessness in handling the winter layers. Start with comfortable quarters. The layers want plenty of room, plenty of sunlight and ample ventilation. One cannot be too careful about the ventilation. A cold draft during one night will check egg production and likely leave several ailing hens. Keep the hen house clean and dry, and then feed properly and you will get eggs. Feed egg-making foods. On farms feed a variety of grains, with clover, alfalfa and other green stuff, and let the midday meal be a mash made of bran and corn meal, with some green cut bone. Surprise the hens with a tempting variety of mixtures of foods; keep pure water before them, and keep the hen house so clean that any part of it may be used as a scratching floor.—L. C. Brown.



NEW STEEL ROOFING $1.60 PER 100 SQ. FEET

Most Durable and Economical Known

Easy to put on, requires no tools but a hatchet or a hammer. With ordinary care will outlast any other kind. Thousands of satisfied customers everywhere have proven its virtues. Suitable for covering any building. Also best for ceiling and siding. **FIRE-PROOF AND LIGHTNING PROOF.** Cheaper and more lasting than shingles. Will not taint rain water. Makes your building cooler in summer and warmer in winter. Absolutely perfect. Brand new. **$1.60** is our price for our No. 10 grade of Flat Semi-Hardened Steel Roofing and Siding, each sheet 24 in. wide and 6 or 8 ft. long. Our price on the Corrugated, like illustration, sheets 22 in. wide and 6 or 8 ft. long, **$1.85.** Steel Pressed Brick Siding. **PER SQUARE, $1.85.** Fine Steel Beaded Ceiling, **PER SQUARE, $1.85.** Also furnish Standing Seam and "V" Crimped Roofing. ST. LOUIS THE GREATEST HORSE AND MULE MARKET IN THE WORLD—A rest at the noon hour. From left to right: James Kirk, horse dealer, whose life has been devoted to the market; Harry Gillen, President of the Gillen-Heiman Mule Company, the first firm of mule dealers to be established at the St. Louis National Stock Yards; Robert Conway, expert mule salesman of the commission firm of Holland, Gilroy & Conway; Isaac Morris, pioneer horse and mule buyer. Representing different interests—each man an artist in his line.

Economical Handling of Manure.

A correspondent in Benton county, Indiana, raises a question about the proper handling of manure in order to make it go the farthest and at the same time give the maximum results. Not many farmers have sufficient barn yard manure to dress all of their fields, so the question naturally arises whether it is better to haul out the fresh manure as it is made or leave it to accumulate in the yards and haul it out after it has become well rotted. It has been shown by actual tests that manure piled in heaps in the field or in the yard loses practically from one-fourth to one-third of its bulk within six months after it is deposited. So if one has a certain area to cover it would seem best to scatter the manure when it had the greatest bulk possible. Aside from the question of bulk, fresh manure has lost nothing from weathering, while manure piled in heaps in the field or left about the yards is bound to shrink and lose some of its best plant food. Many still cling to the old system of keeping the manure about the yards and stables until it is well-rotted and then hauling it to the fields and depositing it in heaps. This makes double work; it reduces the area which may be covered, and hand-spreading is not nearly so even as machine work. Then aside from all of these things, the well-rotted manure piled up in these heaps is liable to greater loss from rain, because it contains so much larger amount of soluble matter than fresh-made manure.

This question of applying the manure fresh or well-rotted has another bearing; that is, the character of the soil upon which this manure is applied. It is well known that light soils should be manured thinly and often, because of its leaching tendency; whereas clay soils may well be treated more heavily and as frequently as the physical condition of the soil requires. I believe it is now becoming pretty well understood that we must depend upon farm-made manure and green crops to improve the mechanical condition of our fields and then supplement these home-made supplies with artificial fertilizers. Here then is another reason why it is best to apply manure to land when it is of the greatest bulk. —L. C. Brown.

FIVE TO TEN THOUSAND FULL AGE MULES

—can be purchased at the—
ST. LOUIS NATIONAL STOCK YARDS
any business day in the year.

Many, immense, substantial, well ventilated barns contain every commercial or military grade of Mules, which can be purchased and shipped on short notice.

THE ST. LOUIS MARKET WAS ALWAYS FIRST IN THE MULE TRADE AND NOW IT IS GREATER THAN EVER.

The Farm Horse.

In these days of suburban trolley and telephone it is not necessary for a farm horse to be a great trotter, but it should be a great walker. Some horses that will get over a long distance in a day, if allowed to take their own gait, will go at a snail's pace when required to walk. Remember that you do not want a trotter in the plow. When testing the draught horse, make its walking gait an important item.

No wonder the old jockey always looked at the teeth of the animal for which he proposed to trade. This was presumably to tell the age, but it approximated a more vital point. This is the weak point with many horses, and if the veterinarian's skill could be extended to dentistry and worn-out teeth replaced by an artificial set, the period of usefulness might in many instances be prolonged many years. When the teeth get uneven and do not do their work properly, the system begins at once to run down, and, while filing may retard the process, it is one of sure decay.

If you have a family pet thus afflicted, favor it by giving ground grain. This pension is its right. Justice demands it as a reward for faithful service.—Bessie L. Putnam.

Keeping the teams on the farm busy is one of the secrets of success not only in farming for profit but as well for the benefit of the horses. Spasmodic work for horses is injurious. Steady employment, with good care, contributes more to the good condition of a team than anything else, and its days of usefulness are often lengthened by constant use. A day off does not do an animal much good. —Spirit of the West.

HORSE AND MULE NOTES.

In a pamphlet issued by the Bureau of Animal Industry Dr. Geo. M. Rommel invites attention to the fact that Denmark, the foundation sire of the breed of American saddle horses, was foaled in 1839, and Hambletonian, 10, the foundation sire of the standard-bred trotting horse, was foaled just ten years later. Many people imagine that the saddle horse came from the trotter.

We would advise all horsemen to write to the Secretary of Agriculture and obtain a copy of Circular No. 137 issued by the Bureau of Animal Industry. It is by Dr. Geo. M. Rommel, who has charge of the United States horse breeding experiments, and is entitled "The Preservation of Our Native Types of Horses."

According to the Spirit of the West, there have been 270 horses driven to records of 2:10 or better in the last twenty-four years.

The Farmers' Home Journal says that at a sale held at Carter's Creek, Ky., by Isaac Wooldridge, a span of horse mules sold for $256 and a span of mare mules for $369.

Spirit of the West says: "When a horse meets an object which excites his fear, by all means leave the whip alone. A firm hand, cool head and soothing word will accomplish far more than punishment in such cases. Common sense and some drivers have been thoroughly divorced, if they were ever companions."

Allen Winter, 2:06½, winner of the great American trotting handicap Derby, has been sold to Louis W. Winans, of Brighton, England. This horse has trotted a half mile in 1:01½ and a quarter in 29¾ seconds. Mr. Winans is an American, who is living in England, and is making a showing for the American trotter and harness horse.

J. F. Cook & Co., of Lexington, Ky., have shipped to their branch barn at Wichita, Kas., one of the finest loads of jacks and stallions that have ever went West. There were fourteen jacks and four stallions. Among them were: Greatland, 1,470, their premium six-year-old jack; King of Giants, 1,836, a 15¾ hands, two-year-old; four imported Malyorca's, and the other Kentucky jacks, three to seven years old. The stallions were all three years old, one by Jay Bird, one by Liberty Chimes, one by Prodigal, and a saddle stallion by Jarvis, out of a Black Squirrel mare. They were in charge of Mr. J. C. Kerr, who has been the manager of Cook & Co.'s Western Department for the last five years.

ST. LOUIS THE GREATEST HORSE AND MULE MARKET IN THE WORLD. Adolph Heiman, one of the men who has helped to make it so. For the first six months at the opening of the market at the St. Louis National Stock Yards he bought all the mules that arrived. The Gillen-Heiman Mule Company buy and sell mules and will fill orders satisfactorily. Address, National Stock Yards, Ill.

Exceeded Omaha by.....73,000

THE CENTER OF GRAVITY IN THE HORSE TRADE IS AT THE ST. LOUIS NATIONAL STOCK YARDS.

Colic Due to Corn.

When corn chop alone is fed to a horse it often produces stomach indigestion and bloating, which in the horse is a very serious form of indigestion or colic.

The reason that corn chop produces this condition is owing to the fact that it lies compactly in the stomach. The stomach juices cannot thoroughly permeate it to digest the nutrients, and as a result unnatural fermentation takes place. The gas causes distention of the stomach wall, and stomach or gastric colic is the result.

This is a serious form of colic because of the peculiar arrangement of the stomach. The horse cannot vomit or belch gas unless the walls be so greatly distended that there is a modification or stretching of the part of the stomach at the point where the esophagus enters it, and consequently there is great danger of rupturing the walls of the stomach with a fatal termination.

During the past summer oats have been very high and many horse owners have resorted to corn chop as a more economical feed. If the corn chop be fed with bran or cut hay, then there will usually be no ill effects, because the material will not lie compactly in the stomach, and as a result the stomach juices can get at all parts of the feed and digest it thoroughly. Many will not feed wheat bran, claiming that it is of poor feed value. The fact is that it contains more protein or muscle-building substance than oats, and when mixed with corn or corn chop, in proper proportions, makes a well-balanced, heavy feed.

The frequency of gastric colic among horses has increased with the feeding of corn chop since the high price of oats.—B. F. Kaupp, Colorado Agricultural College, Fort Collins.

Oats vs. Corn For Horses.

For a long time there has been a notion among horsemen that oats are superior to corn for feeding, either driving horses or farm teams. Oats contain an excitant, which brightens up the animal, and, as we say, makes him show his mettle. For this reason oats are fed almost exclusively to driving horses, race horses; in fact, to all horses where action and spirit are wanted. But observing farmers have learned that the farm teams do equally as well when fed on corn, and by many it is thought that corn-fed teams have greater endurance than the oat-fed ones. I have fed hard-worked horses right through the severest work of the whole year on corn. They kept up in good flesh and were well-hardened, but after a month's feeding of new oats they became so weak that they were scarcely fit to do the fall plowing.—L. C. Brown.

He is a Wonder.

From a compilation of Minor Heir's starts the past season it is learned that this son of Heir-at-Law started in eight regular races, winning six, was second in one and third once. He also started in ten special events, making eighteen times that he started in public. Minor Heir went twenty-nine miles in standard time, twenty-six of that number being faster than 2:10, eighteen in 2:05 or faster, and thirteen in 2:02 or faster. What other horse, starting green in any season, established such a claim to greatness? What other horse, his first season out, ever gained so many world's records? No other horse, in his first season's racing, has stepped a half-mile track as fast as 2:05, yet this is what Minor Heir did. No other horse ever paced a mile in 2:02 in a race during his first season's racing, yet Minor Heir paced thirteen in 2:02 or better, nine being in 2:01 or better. Only four horses have ever won heats in 2:01 or better in actual races, match races or exhibitions between two horses. Star Pointer paced one mile in 2:00⅛; Prince Alert and Bolivar pacing one each in 2:00¾. Star Pointer's mile was gained in a special race, that of Prince Alert was made in the second and final heat of a regular class event, while Bolivar's was made in the first heat of a regular race. At the time Star Pointer paced his mile in 2:00½ he was a seasoned campaigner and had a previous record of 1:59¼, gained in an effort to beat 2:00½, the record of John R. Gentry. Prince Alert was likewise a horse with long racing experience and possessed of a record of 2:02. Bolivar was far from being a green horse being nine years old, having raced four previous seasons.—Spirit of the West.

EVERY BOY wants a STEVENS for Christmas

The love of a gun is born in a boy. Nothing will delight him more than a good gun of his own.

Why not let him have his long-wanted gun and learn how to shoot? It will please him immensely.

Moreover, that's by far the best way to insure his safety. For most boys will handle a gun every chance they get, whether you know about it or not.

Give him a Stevens Rifle for Christmas and see how happy it makes him. Then see how he'll take to outdoors—how he'll tramp the woods and fields—how manly and sturdy and healthy he'll grow out in the open air. See how keen of sight he becomes, how quick to think and to act. It's a good way to develop character in a boy.

Stevens Rifles are the safest of all guns and they're steady and true to the aim—straight-shooting, hard-hitting. And a Stevens Demi-Bloc Double-Barrel Gun, or any Stevens Shotgun, will please a man just as much as a Stevens Rifle will please a boy.

Send for the Stevens Catalog and learn how thoroughly well-made, how moderate in price these guns are. Tells how to choose and care for a gun. 5c for postage brings it.

Then, Dan Beard's book, **"Guns and Gunning."** A book boys revel in. Full of the lore of the woods and the camp—about birds and small game—hunting and shooting—and all that a boy wants to know about guns. Sent postpaid for 20c, paper cover, or 30c, cloth cover.

Your dealer can show you Stevens Rifles, Pistols, Shotguns, or if not, we supply you direct on receipt of catalog price.

J. STEVENS ARMS & TOOL COMPANY
390 Grove Street
CHICOPEE FALLS, MASS., U.S.A.

Good For the Goats.

An item from Lawrenceburg, Ind., is to the effect that a load of goats have cleared the brush off ten small farms in five years. As soon as their owner discovers that there is nothing left for the goats to feed on but tame grass they are loaned or sold to another farmer for a similar purpose. This is a good recommendation for goats, especially as the farmers kill and eat as many goats as they buy before pasing them on.

THE ONLY FOOT-POWER GRINDER.

The Luther Foot-Power Grinder, as advertised on another page of this issue, is a simple, effective, durable and inexpensive device. Every farm ought to have a rapid grinder. Nothing on the market approaches the carborundum wheel, according to the opinion of hundreds of users. The old-fashioned grindstone is too slow. A carborundum wheel will do better work and grinds twenty times faster. Luther Bros., of Milwaukee, are making a special introductory offer. Write them for particulars. Address, Luther Bros. Co., 101 James st., Milwaukee, Wis.

THE HORSEMAN COMBINATION.

The Horseman and Spirit of the Times is the oldest and best weekly horse paper in the United States. It is edited by the very best writers, and the Christmas edition alone is worth the subscription price. We have made arrangements whereby we can offer The Horseman for one year, The National Farmer and Stock Grower for one year, and one copy of our cloth-bound, 240-page Book of Live Stock Champions, all for two dollars. This is the grandest subscription combination ever offered. We have only 1,000 copies of The Book of Live Stock Champions remaining on hand. It was published in 1905. There are 500 pictures in the book, commencing with the Chicago World's Fair and ending with the World's Fair at St. Louis, there are pictures and records of champion cattle, hogs, sheep, horses, goats, jacks and jennets. Send in your two dollars before it is too late. Address, **Hale Publishing Co., 3050 Vista Ave., St. Louis, Mo.**

Makes the Reliable Market.

ACTIVE COMPETITION FROM MANY AND DIVERSE PURCHASING INTERESTS.

The Superior Location and the Push and Energy of the Market Firms Have Made the

St. Louis National Stock Yards

THE GREAT CENTRAL LIVE STOCK MARKET OF THE UNITED STATES.

This Applies to Cattle, Hogs, Sheep, Horses and Mules.

During the First Eleven Months of the Year 1908 the St. Louis National Stock Yards Have Made A BETTER SHOWING Compared With Former Records, Than Any Other Live Stock Market in the Country.

SHIP YOUR STOCK

To the Best Market, Where Business is on the Up-grade; Where There is the Greatest Competition.

St. Louis Market Receipts.

Receipts for the first eleven months of 1908 at the St. Louis National Stock Yards were 1,067,742 cattle, 2,301,297 hogs, 630,789 sheep, and 100,406 horses and mules. Compared with former records, this is the best showing of any market in the country.

Heavy Native Beef Steers.

Fancy beef steers, 1,300 to 1,550 pounds, were quoted at $7.25 to $7.75 per 100 pounds at the St. Louis market at the opening of December. During the previous week, in car lots, 1,300 to 1,450-pound steers sold at $5.75 to $7.60 per 100 pounds; 1,200 to 1,290-pound steers at $5.20 to $6.00 per 100 pounds; 1,100 to 1,190-pound steers at $4.65 to $6.30 per 100 pounds; 1,000 to 1,090 pound steers at $3.85 to $5.35 per 100 pounds.

Heavy Native Steers at $7.60.

At the St. Louis National Stock Yards, November 24th, seventeen head of 1,395-pound steers sold at $7.60 per 100 pounds. These were high-bred cattle, Hereford and Shorthorn blood, had been fed all summer and came near classing as Christmas beef. They were shipped by Dennis Bros., of Saline county, Missouri. They were the highest-priced cattle sold on the market since the middle of July.

James H. Campbell,

Expert live stock salesman, is at the head of his own organization, with headquarters at the St. Louis market. He is one of the active men in the trade—an enthusiastic worker, knowing that he has the best market in the country to back him. Thoroughly competent and with a first-class organization, he is holding his old customers by splendid sales and making new ones all the time. Mr. Campbell issues a circular every week of his own composition containing his advice to intending shippers. Write for information to James H. Campbell personally and consign cattle, hogs and sheep to Campbell Commission Company, National Stock Yards, Ill.

Cows and Heifers in Market.

A wide range in price and an equally wide range in quality. A thin cow can sell for 1½ cents a pound and a fat one at 4½ cents. By the hundred pounds on November 30th, cows and heifers were selling to butchers as follows: Common, thin cows, classed as canners, $1.50 to $2.25; a little better, classed as cutters, $2.40 to $3.10; medium to good cows, $3.15 to $3.75; good cows, $3.80 to $4.25; choice fat cows, $4.30 to $4.75. Heifers, common to fair, $3.00 to $3.75; medium grades, $3.80 to $4.25; good heifers, $4.30 to $5.00; choice heifers, $5.10 to $5.70; fancy tops, $5.75 to $6.25.

Montgomery County, Illinois, Lambs.

Montgomery county, Illinois, topped the St. Louis lamb market on November 6th with seventy-five head of lambs, 81 pounds average, that brought $6.25 per 100 pounds. This was the highest price paid for more than a month, but lambs like these three months earlier sold much higher. Montgomery county has about 16,000 good sheep, and there is room for 25,000 more in the county.

Campbell Commission Company

NATIONAL STOCK YARDS, ILL.

Ship to the Best Market and the Best Firm on that Market. There is more competition at St. Louis for Native and Southern Cattle than at any other Market on the continent. The St. Louis Hog Market continues to grow, and is habitually 10 to 25 cents a hundred pounds higher than the Missouri River Markets. Sheep and Lambs sell at St. Louis to the advantage of the shipper.

WE KNOW THIS MARKET AND RECOMMEND IT ABOVE ALL OTHERS.

Do not forget us when you wish to know anything about either the Sheep, Hog or Cattle Market or future prospect.

Don't hesitate to write or ship to

James H. Campbell,

National Stock Yards, Ill.

EQUALLY EXPERT SERVICE IN EVERY CLASS OF STOCK—SHIP US YOUR CATTLE, HOGS AND SHEEP.

Stock Cattle and Feeders.

Since the rain the stock cattle trade has improved. At the St. Louis National Stock Yards, December 1st, good to choice feeding steers were selling at $4.10 to $4.40 per 100 pounds; medium to good feeders, $3.50 to $4.00; good to choice stock steers, $3.40 to $3.75; common to good stockers,, $2.75 to $3.40; good stock heifers, $2.75 to $3.25; stock cows, $2.00 to $2.75; medium stock heifers, $2.50 to $2.60.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' interests ARE OUR INTERESTS, and our rapidly-increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

Try us once. We can keep you posted. We have a great and expanding Market at St. Louis.

Evans-Montague Commission Company

Box 68, NATIONAL STOCK YARDS, ILL. FORT WORTH, TEX., and at KANSAS CITY.

Good Lambs at $6.35.

On the last day of November, G. D. Gilliland, shipping from Saline county, Missouri, marketed 100 head of 66-pound lambs, which sold at the St. Louis National Stock Yards at $6.35 per 100 pounds. In this connection it is well to say that Saline county always markets good sheep and lambs, but not enough of them, there being about 5,000 sheep in a county that is well able to support 100,000 sheep without detracting from any other interest.

A Great Hog Market at St. Louis.

On the last day of November, at the St. Louis National Stock Yards, a load of 199-pound hogs from Monroe county, Missouri; a load of 211-pound hogs from Cooper county, Missouri; a load of 200-pound hogs from Nodaway county, Missouri; a load of 266-pound hogs from Mills county, Iowa; and a load of 203-pound hogs from Daviess county, Missouri, all topped the market at 6 cents a pound. A load of 232-pound hogs from Stone county, Missouri, were sold at $5.95. In fact, there was not a good-quality load of 200-pound hogs that did not sell above $5.80. At Kansas City the top of 10,000 hogs was $5.90; at St. Joseph, $5.85; and at Omaha, $5.80.

Southwest Steers at $6.00.

Laclede county, Missouri, was repsented on the St. Louis market on November 27th with twenty steers, 1,304 pounds average, sold at $6.00 per 100 pounds. These were very creditable cattle and nothing in the market that day outsold them. They were shipped by Shantz & Warner, well-known stockmen.

Sheep and Lamb Prices.

At St. Louis, during the last few days in November, sheep and lambs were quotable by the hundred pounds as follows: Good to choice lambs at $6.00 to $6.50; medium grades, $5.25 to $5.85; fair, $4.50 to $5.00; culls at $3.50 to $4.00, with the little common kinds selling from $2.00 to $3.00. Good mutton sheep from $4.25 to $4.50; stockers, $2.50 to $3.50, and bucks, $2.25 to $3.25. On Monday, November 30th, several hundred Western yearlings fed in Missouri averaged 95 pounds and sold at $5.25 per 100 pounds; and 100 lambs, 66 pounds average, sold at $6.35.

Valuable Market Information.

It is the part of an active live stock commission firm to gather information for the benefit of their patrons. Some of the investigations require much original correspondence and careful arrangement. The Godair-Crowley Commission Company, with headquarters at the St. Louis National Stock Yards, have the investigation habit, and embody the results of their inquiry in their weekly circulars. They are figuring up the supplies within shipping distance of the principal markets. The advice the firm is able to give those who are preparing stock for market is well worth having. If in need of information concerning market prospects, address Godair-Crowley Commission Company, National Stock Yards, Ill. This is one of the leading firms in the yards, thoroughly equipped to do the best kind of service in all departments.

"WE ARE THE RING LEADERS."

ST. LOUIS THE GREATEST HORSE AND MULE MARKET IN THE WORLD! Three of the men have helped to make it so. From left to right—J. J. Searcy, Secretary of the firm of Campbell & Reid and Western Sale Stables Co.; Joseph A. Maxwell, mule dealer; and Frank Sloan, dealer in driving and work horses. In the development of the horse and mule market these three have done great work—well worth recording in history.

Southern Cattle Quotations.

The St. Louis market on November 30th was selling common grass steers at $3.30 to $3.55 per 100 pounds, and prime meal-fed steers of the first class were quotable at $5.50 to $6.40. The fair to good grassers were selling at $4.15 to $4.55. Official quotations were as follows: Prime meal-fed steers, $5.50 to $6.40; good to choice fed steers, $4.75 to $5.30; good to choice grassers, $4.35 to $4.95; medium to good grassers, $3.75 to $4.35; common to medium grassers, $2.75 to $3.75; good to choice cows, $3.25 to $3.75; fair to medium cows,$2.75 to $3.25; cutters, $2.50 to $2.75; canners, $1.75 to $2.40; bulls, 2,25 to $3.00; fair to choice vealers, $4.75 to $5.50; fair to choice heavy calves, $3.25 to $4.25; yearlings, $1.75 to $2.75—all quotations being at the price stated per 100 pounds.

Oklahoma Steers at $6.50.

On November 9th, at the St. Louis National Stock Yards, M. D. Proctor, shipping from Welch, Oklahoma, marketed fifty-six head of 1,338-pound steers, which sold to the St. Louis Dressed Beef Company at $6.50 per 100 pounds. They outsold any other quarantine cattle on sale that day, and all the natives, except a fine lot of 1,204-pound steers, which sold at $7.10. There were 9,000 cattle on sale that day, which shows good for the Oklahoma cattle.

The Right Kind of Cattle.

On November 3d, Clark & Bledsoe, Missouri stock raisers, gave an exhibition of baby-beef cattle at the St. Louis National Stock Yards, showing how to top the market. There were forty-eight head of yearling steers, 998 pounds average, which sold at $7.10 per 100 pounds, which is a total of $70.86 per head. These cattle were highly bred and almost perfectly fed. They outsold any other cattle on the St. Louis market by 55 cents per 100 pounds. They outsold the tops on the Chicago market on the same day by 35 cents per 100 pounds. These are the cattle that Missouri, Arkansas, Oklahoma and Southern Illinois can raise by the hundreds of thousands. The St. Louis market is in need of all that can be raised.

McFARLANE COMMISSION COMPANY...

HORSE and MULE COMMISSION SALESMEN

AUCTION EVERY MONDAY IN THE YEAR.

These Monday sales at the St. Louis National Stock Yards are the best attended of all sales and produce the most satisfactory results for the shipper.

We also solicit consignments of Mules to be sold by the most competent salesmen on the best market in the country.

MULE DEPT.—W. R. McFarlane, Lan. B. Morris.
HORSE DEPT.—E. L. Hawkins, S. B. Howell, Eddie O'Connell.
OFFICE—Frank Mulholland.
AUCTIONEER—Col. I. M. Howard.

YOUR CONSIGNMENTS ARE SOLICITED.

Write For Weekly Market Report.

McFarlane Commission Company,
NATIONAL STOCK YARDS, ILL.
Fancy Butcher Heifers.

The Horse-market Situation.

The McFarlane Commission Company held the usual Monday horse auction at the St. Louis National Stock Yards on November 30th. After the sale Mr. McFarlane said: "There were more buyers, but no more money. It was a quiet trade and the purchasers were taking no chances. People who buy horses for shipment South or East to sell again are up against ordinary conditions and they are working on small margins. Trade may develop a stronger basis after the holidays, but we hardly expect it before. We hold auction every Monday in the year. We get the cream of the buyers and will be glad to advise shippers by letter or wire. In quick times and in dull times St. Louis outclasses any other horse market on the continent."

Illinois Lambs in Market.

On November 5th, at the St. Louis National Stock Yards, J. T. Rigsby, of Greene county, Illinois, marketed ninety head of 71-pound lambs at 6 cents a pound. Greene is a splendid sheep-raising county, and there are about 12,000 sheep in it. On the same day, Smith & Mills, of White county, Illinois, marketed ninety-five head, 75 pounds average, which also sold at 6 cents a pound. White county—one of the best in Illinois for sheep growing—has about 7,000 sheep. Had these been marketed earlier in the season and weighing the same, they would have brought 7 to 9 cents a pound. It is the early lamb that takes the cream of the prices.

High Prices For Hogs at St. Louis.

On December 1st, at the St. Louis National Stock Yards, several loads of 237 to 277-pound hogs sold at $6.20 per 100 pounds, and the bulk sold at $5.60 to $5.90. Chicago did not sell any hogs above $6.10, and the bulk sold at $5.50 to $6.00. Kansas City sold tops at $5.90, and the bulk at $5.30 to $5.80. St.Louis, as usual, was a good shipping and profit margin above Kansas City.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their customers. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Ill.

Yearling Steers at $7.50.

There were only a few of them, but they were a fine sample of what Audrain county, Missouri, can do. It was November 11th, at the St. Louis National Stock Yards, when C. Anderson sold six steer yearlings, 1,006 pounds average, at $7.50 per 100 pounds. His other cattle were cows, that topped the market at $4.75. His full-blood yearlings outsold 1,447-pound steers that were well sold at $7.15 per 100 pounds. It is a pretty good market where 1,000-pound steers can sell at $75 per head.

Yearling Steers and Heifers at $7.25.

C. W. White, of Wellsville, Montgomery county, Missouri, set an example to stockmen by shipping twenty-five head of strictly fat steers and heifers to the St. Louis market, where they sold at $7.25 per 100 pounds on November 10th. They were pretty near pure-blood Shorthorns. They were raised by Ben Graham, in the same county. They were short yearlings, strictly corn fed, and averaged only 826 pounds. These cattle outsold the next best native cattle of the same weight 40 cents per 100 pounds; they outsold some of the native cattle of the same weight $3.75 per 100 pounds; they outsold Mississippi steers of the same weight 4 cents a pound. There is a fashion for light-weight cattle, and Mississippi is a great state to raise them.

Record-breaking Hog Receipts.

At the St. Louis National Stock Yards, November 6th, hog receipts were 16,027 head, the largest Friday run ever received at the market. Notwithstanding the big run, the top price was $6.20 and the bulk sold at $5.70 to $5.90. Kansas City, with 5,000 less hogs, sold tops at $6.05, and sold the bulk at $5.40 to $5.95. Whenever all markets receive a big run of stock, then St. Louis looms up as the best market.

Angus Steers at $7.20.

On December 1st, at the St. Louis National Stock Yards, W. S. Cotton, of Pettis county, Missouri, marketed two cars grade Polled Angus steers, 1,329 pounds average, at $7.20, the top price paid on that day.

Light Oklahoma Steers at $5.25.

The best price for Oklahoma steers on December 1st was $5.25 for steers weighing 1,048 pounds. In the same lot were some 748-pound steers sold at $3.90 per 100 pounds.

Choice Yearling Sheep.

On December 1st, at St. Louis, Wm. Redshaw, of Scott county, Illinois, marketed a load of 113-pound sheep that sold at $5.50 per 100 pounds. He bought these at St. Louis last July, when they weighed 71 pounds.

P. O., National Stock Yards, Ill.

Light Native Steer Cattle.

At the St. Louis National Stock Yards, November 30th, the light steers in the native division were quoted as follows: Yearling steers, common to fair, $3.00 to $3.75 per 100 pounds. These are neither well bred or fleshy, not good enough quality to be sold as stockers and hardly fit to kill; fair to medium, a little heavier and slightly better quality, $4.00 to $4.50; medium to good yearling steers, $4.75 to $5.25; good, light, fat steers, 900 to 1,000 pounds, $5.25 to $6.00; choice steers, $6.10 to $6.50; fancy steers, highly bred, strictly fat, $6.75 to $7.25—all quotations being at the price stated per 100 pounds. In this class there is a difference of 4¼ cents between the top and bottom of the market.

The Thursday Horse Auction.

The firm of Holland, Gilroy & Conway hold the Thursday horse auction at the St. Louis National Stock Yards, and sell mules and horses at private sale every day in the week. It is a new organization of experienced men and is rapidly coming to the front. "We like this market," said Mr. T. M. Holland, "and every day brings us new evidence of the great economical advantages afforded here. It does not take all the money the horse brings to pay transportation and other expenses. We are closer than we have ever been before to the Eastern and Southern trade, and we can let a shipper know what he has to expect. The highest aim a commission firm can have is to serve its patrons well and faithfully. To do this we now have a first-class distributing center. It is the natural meeting house for the horse and mule seller and buyer, and we make no mistake when we ask our friends and patrons to send their consignments to this market, or when we invite buyers to attend our auction."

CHAMPION SHROPSHIRE RAM at Sioux City and other Shows. Exhibited by Binnie & Son, of Alta, Iowa.

A Sheep Market Interview.

Mr. H. C. Brigham makes a business of buying stock sheep at the St. Louis National Stock Yards and sorting them up for sale to farmers who desire to buy and breed them. He also selects thin wethers which farmers buy and fatten for market. The Stock Yard receipts are mostly bought by butchers, packers and shippers for slaughtering purposes, but there is always a percentage of the total which are classed as stock lambs, stock ewes and feeders, because they are not fat enough for slaughter. Mr. Brigham has sent out many loads of stock ewes that were bought for breeding purposes, and has seen the lambs marketed which the ewes have raised and he has seen the ewes come back and be sold to the butcher. He is therefore an authority upon sheep raising and sheep marketing.

Mr. S. A. Hughes, General Immigration Agent of the Rock Island-Frisco Railway System, and Mr. Philip H. Hale, editor of the National Farmer and Stock Grower, were at the Stock Yards during the last week in October, looking over the sheep that were for sale and investigating the subject generally.

Mr. Brigham, being interviewed, said: "There never was a car-load of stock sheep to leave these yards that did not double the money in eight months. These ewes," he said, pointing to a pen, "are for sale at 3½ cents a pound. I have sold many loads like them. They will average about 90 pounds and cost the buyer $3.50 a head on his farm. They are good and healthy and are bred to lamb from February to April. These ewes will easily shear a dollar a head in wool at shearing time next spring; they are good to raise lambs such as averaged $4.80 per head in market this year. After the lambs are weaned next year the farmer can fatten the ewes to weigh 100 pounds and if he is inclined to send them back to market to be sold to the butcher, a fair price to figure them is 4½ cents a pound. Here we have ewes that cost $3.50 each with a reasonable probability of selling at $10.30 for lamb, wool and herself. From this amount $1.30 can be deducted for feed through the winter and for return freight and market expenses. This leaves $3.50 to repay the cost of the ewes, $3.50 for the 100 per cent. profit, and two dollars per head margin to spare. These are ordinary, every-day market figures and for nothing extraordinary in sheep or lambs. From almost any shipping point in Southwest Missouri sheep and lambs can be shipped to market for 25 cents a head and 10 cents will pay yardage and commission charges.

"What do you think about sheep from the Ozark country?" said Mr. Hughes. "This much I know," said Mr. Brigham, "that there are many points where they raise strong, healthy sheep which are a credit to themselves and the market. Wherever they use good black-face, pure-bred bucks they send in lambs that sell up to the best from Tennessee, Kentucky or North Missouri. The best lambs from the Ozarks have sold here from 6 to 9 cents a pound. We see common sheep from the Ozarks because they are not improved and are not fat, but they are always bright and healthy, and we can see that they are improving in quality every year. Most of the Kentucky and Tennessee lambs that come here every year are from stock ewes that were shipped in here from Southwest Missouri and sold to Tennessee buyers, but the Missouri farmer does best when he sends in the lamb first and the ewe afterward. You need not hesitate to exploit the Ozarks as a sheep-raising country. We can prove that any day in the year on this market, because this market receives and sells nearly all the sheep raised on the lands traversed by the Frisco System, and the best authorities here consider the Ozarks superior to any other country in the Southwest for sheep raising."

Sheep Notes and Items.

In regard to the spring-lamb proposition, Mr. F. W. Harding, of Waukesha, Wis., Secretary of the American Cotswold Registry Association, says as follows: "Referring to article on the raising of early lambs, will say that the proposition as outlined is working out all right and is really no experiment. I would only suggest that the class of ewes purchased for this purpose should have a predominance of English blood; that is, sired by rams of English breeds. By taking this precaution one will get ewes that will fatten more readily after their lambs are weaned than ewes of Merino blood. They will also give more milk and raise their lambs better."

Anyone in Missouri and Arkansas can raise grass lambs to be marketed in June, but the market calls for them in February, March, April and May. That is what the butchers say: "Get us early lambs, when we can buy them high and sell them high."

In April and May, because of the scarcity, butchers will buy spring lambs averaging 40 to 50 pounds, but they are really too light, and spring lambs should weigh 60 to 75 pounds to bring the top price on the market.

The period of pregnancy in sheep is 21 weeks, which is 147 days. The breeding tables usually allow the ewes 150 days; thus, a 1st-of-January lamb would arrive from August 5th breeding. A 1st-of-January lamb ought easily to weigh 60 pounds by the 1st of May.

Dwarf Essex rape is yearly growing in favor as a fall pasture crop for sheep and lambs. At the Wisconsin Agricultural Experiment Station, which is pretty far north, lambs gained 2½ pounds per week per head. In one test 48 lambs gained 501 pounds on rape, against 325 pounds gained by another lot on blue grass.

At the Iowa Experiment Station they wintered ewes of different breeds at an average cost for feed of one cent and a tenth of a cent a day. This is on a basis of sufficient hay and grain to keep them in good winter condition and paying out cash money for the feed. On a Missouri farm ewes can easily be wintered in good condition for 50 cents a head or less.

George Keiffer, of Bexar county, Texas, who is profitably running a small bunch of sheep, is producing lambs which at six months old outweigh the grown native sheep. This is because he is breeding with rams of the mutton breeds and taking good care of the lambs.

At the Michigan Experiment Station 125 grade Shropshire lambs made a gain of three pounds per week for 7½ weeks on a pasture of Dwarf Essex rape.

At the New York Agricultural Experiment Station Shropshire lambs averaged about 12 pounds at birth and in nine weeks later they averaged 42¾ pounds. The Dorset lambs averaged about 11 pounds at birth and weighed 53½ pounds at nine weeks old. Dorset lambs gained as much as 4½ pounds a week for twelve weeks. This would make 67-pound Dorset lambs in three months.

Many a man who joins in the anvil chorus would be ashamed to play second fiddle.

THE DIFFERENCE—

IN ARKANSAS	IN YOUR STATE
Farm Lands cost $5 to $10 an acre	Farm Lands cost $50 to $75 an acre
Yield 500 to 1000 per cent on investment	Yield 10 to 25 per cent on investment
Crop Growing season nine months	Crop Growing Season six months
Products include grain, grass, fruits, truck, cotton, and live stock.	Products Limited to grain, grass and Live Stock.
Short Feeding Season	Long Hard Winters
Cost of Fuel and Clothing 10 per cent of Earnings	Cost of Fuel and Clothing 25 per cent of Earnings

WHO HAS THE ADVANTAGE?

The Railroad Company desires only to see you pleasantly located in this prosperous State. It makes no difference from whom you buy your land, but for your information, attention is called to the fact that the Missouri Pacific-Iron Mountain has 750,000 acres of the best farm and fruit land that it will sell you on easy terms.

THE HOMEBUILDER IN ARKANSAS

Thousands of acres of unoccupied lands await the settler in Arkansas at prices and on terms which make it possible for any man, who has the will, to build a home and secure independence upon the rich soil of one of the greatest general farming and fruit growing States of the mid-continent. These lands are now made available by the cutting up into small tracts of the large farms and plantations and the rapid clearing of timbered lands. Diversified methods are succeeding the one-crop system and room is being made for the new comer.

YOU WILL FEEL AT HOME IN ARKANSAS.

The same crops are grown in this State and the same methods of cultivation are used as in Illinois, or Iowa, Indiana, Ohio or Michigan. You can raise corn, wheat and clover, breed your thoroughbred cattle, hogs and horses, but more than that, you can raise two crops of potatoes, five crops of alfalfa, and grow sorghum, Bermuda grass, fruits and vegetables, which are not on the list of the northern farmer. You have the advantage of a long grazing season, a mild winter and the best of markets. Arkansas is in the heart of the rich Mississippi Valley; Its neighbors are Missouri, Kentucky, Tennessee and Kansas.

The coupon below with your name written in, will bring you our handsome 88-page book, "The Homebuilder in Arkansas." Send for it to-day.

B. H. PAYNE, General Passenger and Ticket Agent,
Room 1560, Missouri Pacific Building,
ST. LOUIS, MO.

Send me Arkansas book, map, list of lands for sale and information regarding cost of trip.

THE DOMESTIC SHEEP.

There is one modern writer on Sheep industry who has made his mark. It is Dr. Henry Stewart. He has written a book entitled **The Domestic Sheep.**

It is up-to-date in every particular. There are 384 pages, and besides going into the subject in a practical way there are illustrations of every breed and every subject belonging to the industry. For $1.50 we will send **The National Farmer and Stock Grower** for one year and one copy of **The Domestic Sheep.** This is the time to study the sheep business. There is money in it. Address,

HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

Additional Sheep Notes.

Mr. Albert D. Evans, of the Evans-Montague Commission Company at the St. Louis National Stock Yards, said: "We can sell another million sheep a year at St. Louis to the advantage of all concerned. The market is growing and will continue to grow in strength and importance. Most of our sheep shippers are doing finely, especially when they bring in lambs for the early spring market. The Southwest country in particular produces them so cheaply that there is good margin of profit for the sheep raiser. I look for the Ozark region to make a great reputation for raising early lambs."

Mr. F. A. Hunter, Manager of the St. Louis house of Swift & Company, was very busy when called upon to say something in regard to sheep, but he said: "We would be glad to buy more sheep at St. Louis, because we need them. It is our business and duty to buy our live stock as cheap as we can; therefore the market has to take care of itself, but there is so much competition here that we are on a strain all the time, and the shippers of sheep get the benefit of it. We like to buy two to three hundred thousand fat sheep and lambs every year, and we have to send to other markets for some of them, notwithstanding we are paying very strong prices at St. Louis."

The Godair Commission Company at the St. Louis National Stock Yards sell a good many sheep and lambs, and in their operations have been able to demonstrate that St. Louis is the best market of all. The quality is improving, the number is greater than formerly, and the market is better because the people have learned to eat mutton. "You can say for us," said Mr. Godair, "that the best market and the best sheep-raising country are very close together. If the farmers of the Southwest will raise more and better sheep they can cash them to advantage at St. Louis.

Mr. Robt. Conway, Manager of the St. Louis house of Armour & Co., says that, although they have bought more sheep on the market than usual this year, they have been unable to fill all their mutton and lamb orders. They have many car-loads to ship and they often have to send to other markets for sheep. The farmers of Missouri, Arkansas and Oklahoma may just as well have the money, as they have the best country in the world for sheep raising."

Ernest Krause, who came to Pulaski county, Missouri, from Wisconsin, says that his 100 sheep will clear him $400 this year. His lambs averaged $4.00 per head, and the wool from the sheep pays their keep.

Mr. James H. Campbell, live stock commission salesman at the St. Louis National Stock Yards, being interviewed in regard to the sheep market, said: "The St. Louis market receives more sheep and lambs now than used to arrive, for the reason that farmers have discovered that Missouri and Arkansas are splendid sheep-raising states, but we can sell a million sheep a year more than we have ever received. We are constantly turning away buyers who would like to make regular purchases here, and that is because we cannot guarantee to fill their orders. Although we have sold the local packers 100,000 more sheep this year than last, they have had to go to other markets and buy 40,000 more to fill their regular orders. This is a great and growing sheep market center, and people who contemplate opening farms in Missouri can be assured that they will always have a splendid market for their cattle, hogs and sheep."

Mr. Thos. J. Honey, whose farm is 1½ miles from Salem, Mo., on the Frisco System, reports that it does not cost him over 25 cents a head to winter his sheep in good condition. He keeps them on pasture except when there is snow and ice, when he keeps them up and feeds them.

In marketing sheep at the St. Louis National Stock Yards the expenses on account of selling and transportation are very light. The freight amounts to about 25 cents a head and the selling charges, including yardage, amount to about 10 cents a head. These figures represent the average of a large number of shipments from Southwest Missouri, which is a first-class sheep-raising section.

At St. Louis, on April 23, 1908, a small lot of 40-pound spring lambs sold at 12½ cents a pound. They were not over 2½ months old and came direct from the mother ewes. They had not been fed any grain, although they may have nipped a little grass.

In the spring of 1908 the state of Tennessee shipped many lambs to the St. Louis market, where in the month of May all the good ones sold at $7.00 to $8.40 per 100 pounds. The first lot arrived on May 11th, and they came freely after that date. These lambs weighed from 61 to 72 pounds and the prices ranged from $4.25 to $5.90 per head. All of them were 1908 lambs, raised by their mother ewes on grass.

Many thousands of native spring lambs were sold at the St. Louis market in April and May of the spring of 1908 at 8 to 8½ cents a pound. This price was paid for 50 to 68-pound lambs. Later on the came kind of lamb sold at 7 to 7½ cents a pound. It is the early lamb that brings the most money.

In the year 1908, E. A. Van Slicken, of Weiser, Idaho, marketed half-breed Shropshire lambs, 4 to 4½ months old, weighing 75 to 77 pounds on the scales at the Stock Yards. These are the kind of lambs to raise in Missouri for sale on the St. Louis market.

Mr. Frank S. Springer, of Springfield, Ill., Secretary of the American Southdown Breeders' Association, states that the article on ewes and lambs for market is very clear and practical and will work out just as we say. The Southdown ram is a splendid sheep to use to produce the very best of lambs.

New York City begins to receive fall lambs about Christmas and then they follow on until spring lambs come in. At first a lamb that dresses 28 pounds is just the thing, but later on the butchers like them to dress 33 pounds. The New York butchers will be very glad to buy such lambs on the St. Louis market.

On April 15th, 1908, at the St. Louis National Stock Yards, ninety-two head of Tennessee lambs averaged ninety pounds and sold at $7.75 per 100 pounds, or $6.97½ per head. These were late lambs of the year before and strictly grass raised.

Twenty car-loads of New Mexico lambs were shipped in November from Albuquerque, New Mexico, to Colorado, and the average weight was 68 pounds. These were grass lambs in good range condition and will be fattened on peas and alfalfa. Such lambs sell this season in New Mexico for 3¼ to 3½ cents a pound. In Missouri, Arkansas and Oklahoma the farmers can raise 68-pound lambs and market them on the St. Louis market from May to July at fat-lamb prices.

HAMPSHIRE DOWN RAM—Champion of the breed at the Iowa State Fair, 1908, and other shows. Exhibited by F. W. Harding, Waukesha, Wis. In our articles setting forth the great business opportunity for farmers to raise early spring lambs for sale on the St. Louis market we mentioned that Mr. Harding said that to carry out the programme successfully, all that was necessary to start was to secure good, thrifty ewes, and to breed them to rams of the English mutton breeds. The Hampshire Down is one of the English breeds, and this particular ram is one of the best of the breed. In England, rams weigh 250 pounds and ewes about 190 pounds. Ten-months' lambs weigh 100 to 115 pounds. Professor Plumb, of Ohio, says that the lambs mature early and fatten easily.

Winter Care of Sheep.

Sheep do not require much care in the summer season. The more liberty they can have the better; but in the winter season they may be kept in a shed, open on the sunny side if necessary. It is usually better to arrange so that it can be closed in case of storm. If possible, sheep should have the liberty to range on dry and firmly sodded pastures in the winter when these are not covered so deeply with snow as to make it impossible for them to get food by scraping for it with their feet.

It is not necessary that they should be kept on anything else than an earth floor, provided the same is dry and kept well bedded. Fresh bedding should be added every two or three days. Confining the sheep in a small and ill-ventilated building would soon prove fatal.

Sheep are fond of a change in diet; consequetnly the greater the variety of feed, fine in character, the better the results. While they are in winter quarters they should be given a small quantity of grain, in the absence of roots. Usually one pound per head before the season for lambs will be enough. No grain is better adaped for such feed than oats. A little bran added will make an improvement. After the lambing season the flock may be safely given about all the grain that will be eaten up clean. No kind of hay is better for sheep than clover or alfalfa.

The sheep has the most delicate sense of smell of any domestic animal, and the racks and troughs from which they eat will offend more or less if not kept perfectly clean. They will not eat unclean food nor drink unclean water, unless compelled by hunger and thirst to do so. Cleanliness is a matter of necessity and must be kept in force, if the best results to be attained are desired.

Another very important feature is to keep the animals as quiet as possible. They are very timid, and dogs and boisterous men and boys should not be permitted to go about them.—Wm. H. Underwood.

LET US TAN YOUR HIDE,

Whether Cow, Steer, Bull, or Horse Hide, Calf, Dog, Deer, or any kind of hide or skin, soft, light, odorless and moth-proof for robe, rug, coat or gloves, and make them up when so ordered.

But first get our illustrated catalog, with prices, shipping tags and instructions. We are the largest custom fur tanners of large wild and domestic animal skins in the world.

Distance makes no difference whatever. Ship three or more cow or horse hides together from anywhere and Crosby pays the freight both ways. We sell fur coats and gloves, do taxidermy and head mounting.

The Crosby Frisian Fur Company, Rochester, N. Y.

MARK YOUR STOCK

and save trouble. It is very easy to do so with ear tag or button label. F. S. Burch & Co., of Chicago, can supply you.

FOR THE VEGETABLE GARDEN.

There is a very good book on the subject of Vegetable Gardening, written by Samuel B. Green. It is a manual that can be relied on. It is easy to grow vegetables and save them against the different diseases when at critical periods such a book can be readily referred to. There are 252 pages, nicely illustrated and practical throughout. We will send a copy of the book entitled Vegetable Gardening and The National Farmer and Stock Grower one year for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Where the Roses Come From.

In a little town, some thirty miles up the Hudson, along the Albany post road, there is a little principality known as the Rose Kingdom. If one can imagine the ground between Fifth avenue and Eighth avenue, from Twenty-third street to Thirty-fourth street, New York, covered with nothing but greenhouses, and these filled with nothing but American Beauty roses, one will have some idea of the glory of this domain. The ruler of this flowery land is Paul M. Pierson, who for the last twenty years has raised nothing but this one variety of rose. How great this output is may well be judged from the fact that last June he supplied three-quarters of a million of roses to New York, Boston, and Philadelphia alone. About seven millions are sent away each year. Mr. Pierson tells of his subjects as follows in the New York Press:

"In the open air American Beauties cannot be raised successfully. One thing that means their death is the heavy dew. 'Unusual condensation' is the technical term that describes this. Too much moisture on the leaves causes the 'black spots' to appear, and when this comes it is all over with the roses affected, and they have to be dug up and destroyed. Too much moisture about the roots is the cause of another of the American Beauty roses' deadliest menaces. The roots begin to rot almost in a day, and the work has to be done all over again.

"Sunlight is our capital. If we didn't have plenty of that, rose-growing would be out of the question. June is the month of the year in which the conditions for rose culture are the most favorable—the ideal month. June is the month, too, when most roses are used; it far leads all the others, even the winter months, when entertaining in the big cities is at its height. You see, there are more weddings in June than at any other time of the year. Then there are the commencement exercises, that take a vast number of roses. Aside from these the increase is principally due to the number of people embarking for Europe at that time.

"Yes, during June we frequently send away 20,000 beauties, and even more, in a single day. Another reason why these roses are used so largely in June is that they cost less to raise then and are cheaper than in any other month of the year. They touch the top price about Christmas time, and we generally get a dollar and a half apiece for them from the big florists in the great cities. How much they sell them for I don't know.

"Did you ever know that a rose needs sleep? It needs sleep just the same as a person. But less of it, curiously enough, in the summer than in the winter. We have been making some experiments with some of the new artificial lights to see if we cannot fool the roses during the winter into thinking that the days are twelve or fourteen hours long. I do not think it would be practicable to try to force American Beauties or any other roses by attempting to grow them under a combination of artificial light and sunshine without giving them any rest at all.

"American Beauties are divided into six grades: 'Specials,' 'Fancies,' 'Extras,' 'Firsts,' 'Seconds,' and 'Thirds.' These terms are used to designate the degrees of perfection in the blooms that are hardly apparent to anyone not an expert. Each has a different price from the 'Specials,' which are most perfect in every detail, down to the cheapest, the 'Thirds,' which have the most defects. This is the way they are bought by the dealers. When they are bought by the general public the grading is not used. As a general thing, the biggest dealers buy only 'Specials,' the magnificent long-stemmed varieties. The others go to the grades down the line.

"No attempts have been made to change the color of the American Beauty. It can be made a little brighter by keeping the temperature of the greenhouse a little lower than is customary, but this hardly pays on account of the risk. If the temperature gets a shade too low it starts all sorts of things."

OBSERVATIONS BY UNCLE PIPER.

The Subscription Editor is Allowed to Say a Few Words Because Christmas is Coming, With New Year's to Follow.

Your Uncle Piper, subscription editor of The National Farmer and Stock Grower, has done pretty well, thank you, during the past year, and without difficulty has been able to hold up his end of the business. Here is Christmas come again, and the boss editor says there is room for congratulations. The boss editor has a good time congratulating himself that all the subscriptions are attracted by his writings. When he has cut up an Experiment Station bulletin and stuck it together again with all the "milk in the cocoanut" left out, he imagines that he has done all that is necessary to cause the farmers to rush in by the car-load to plank down their wealth of subscriptions, and he has a private opinion of his own that the business manager and the subscription editor conspire to do him out of the credit for the success of the paper. All the boss editors feel that way, and our boss editor is no exception.

Uncle Piper.

Your Uncle Piper would like the boss editor to hear what is said when the subscription solicitor has talked to thirty farmers in one day and taken subscriptions from two of them. The editor always expects eighty bushels of subscriptions to the acre, but the subscription editor is thankful to get the Missouri wheat average—thirteen bushells.

However, as subscription editor of The National Farmer and Stock Grower, it is my duty to invite attention to a little book entitled "Poultry Houses, Coops, Etc." We are offering a copy of this book and the paper for one year, all for 60 cents. There are 96 pages and 80 illustrations in the book, and the first ten pages are worth all the money. Don't think that an architect is necessary in order to build a chicken coop. Some of the coops designed in this book can be made out of dry goods boxes. See page 22.

Down in the left-hand corner of page 6 will be found a short advertisement of a book enttled "Farm Blacksmithing." A farmer does not have to be a blacksmith unless he has an inclination that way, because a little iron work which the farmer cannot do on the farm furnishes a good excuse for going to town—and going to town sometimes needs an excuse, even for the boss farmer. On a little blacksmithing job one can start early and stay late, and nothing can be said by the good wife when the old man returns home. However, your Uncle Piper will furnish a good book entitled "Farm Blacksmithing" and a year's subscription to The National Farmer and Stock Grower for 65 cents. The book says: "There is no good reason why every farmer who has any mechanical ability cannot do nine-tenths of the work which he usually hires done by the blacksmith."

Now comes another useful work which your Uncle Piper discovered. Many of the subscriptions which the boss editor congratulates himself upon getting came to us because the people must have this book. The boss editor explains it this way: "We sell the paper and throw in the book." The subscription solicitor says: "We sell the book and throw in the paper." It makes no difference so long as the people are satisfied. I refer to the Cement Workers' Handbook. The price is 60 cents, including the paper for one year. When President Roosevelt's Commission wrote to a farmer, asking what he needed to make him happy, the answer was: "We don't require anything, now that we have the Cement Workers' Handbook." This is a sure cure for town fever. A farmer only needs a little sand and a little cement and he can build a town of his own.

"Practical Farming and Gardening" is another book that keeps the postoffice busy. Sixteen cents' postage on each book soon mounts up, and Uncle Sam gives no credit. There are 500 pages, and the colored feeding chart is worth a ten-dollar bill to a stock feeder. A copy of the book and the paper for one year, both for a dollar. We ought to sell ten thousand books and throw in ten thousand papers. Read about this book on page 7.

The sale of the "Book of Practical Barn Plans," which we advertise on page 30, indicates that many buildings are going up. It is an architect's book, and a good one. The people who publish it claim that the first copy cost $5,000. Well, we will take their word for it, because we have sold many, and the book gives excellent satisfaction. All we charge is $1.00 for the book and one-year's subscription to the paper.

We wish also to invite attention to a clubbing arrangement with two great newspapers—one is the Semi-Weekly St. Louis Globe-Democrat, a Republican paper, and the other is the Semi-Weekly St. Louis Republic, a Democratic paper. Anyone who will send us one dollar in advance for a three-year subscription to The National Farmer and Stock Grower can select either of these papers for one year as a free premium.

We had a great time with a subscriber to the Globe-Democrat, who, before subscribing, thought it was a Democratic paper, and for seven months he read the Republican dope in it, until he could stand it no longer. He tried to get the Globe-Democrat to let up on William Jennings Bryan, but it was no good, neither could we get them to refund the money. In subscribing, be sure which paper you wish to have; then go ahead and send in your dollar.

We are not allowed sufficient space to say what we need or we would have a page about our new book, "Five Hundred Questions Answered About Swine." This book is advertised on page 11. It is a book that gives good measure. The questions were all asked, and the answers "hit the spot." There are 83 questions about breeding, 150 about feeding, 51 about pastures, 143 about diseases, 29 on comparison of different breeds, and 78 are miscellaneous questions, about all kinds of subjects. We sell the paper for one year and a copy of the book for 60 cents.

In conclusion, we wish our readers to believe that all of our premiums are selected with the view of serving our patrons well and faithfully. We give good value for the money. It is a case of "small profits and quick returns." In conclusion, we wish our readers a Merry Christmas and a Happy New Year.

Uncle Piper, the Subscription Editor.

FREE PRESCRIPTIONS
For Liquor and Tobacco Habits.

Officers of Anti-Saloon Leagues of several states have endorsed a plan of mailing out free prescriptions for the relief of the liquor and Tobacco Habits, that is being carried out by F. Gray, 725 New Ridge Bldg., Kansas City, Mo. Either prescription can be given secretly, and filled by local druggist. The only request made is that you enclose stamp when writing for them and do not sell the recipes but give free copies to your friends.

Washing Machine $1.95

Slightly damaged by smoke, but satisfaction guaranteed or money refunded. Positively the best, and washes anything in half time required with others. Guaranteed 5 years. Just 500 washers at this price to get acquainted. We are the cheapest supply house in the world. Send today for full description and big bargain catalogue of everything for Home, Farm and Factory, save two-thirds.
CENTRAL MACHINERY & SUPPLY CO.
Cat. No. 162. 578 State Street, Chicago

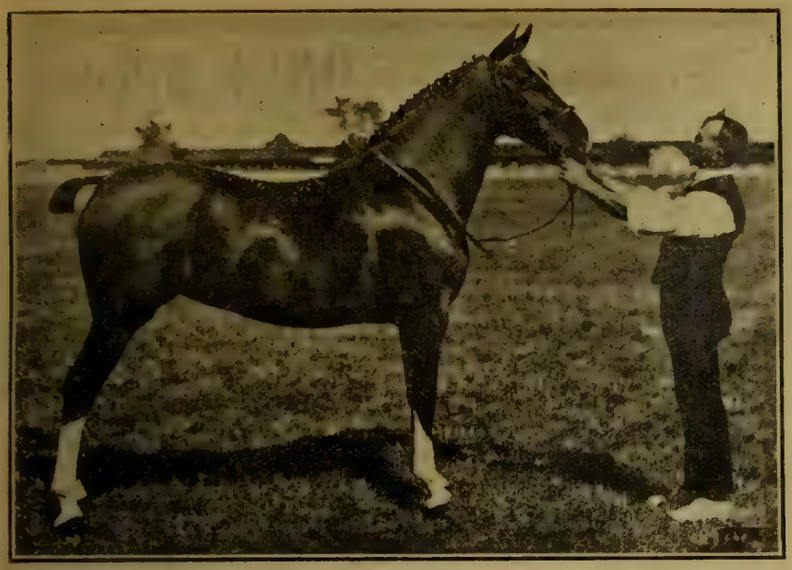
I DO—OTHERS DO SO CAN YOU MAKE MONEY Grow Mushrooms

Most pleasant highly profitable Business. In great demand at fancy prices—year round—grow anywhere, winter or summer. My Folder, how I made my first $100 growing mushrooms for a 2c stamp.
Mrs. Lina Feyreisen, Dept. 11 2787 North Robey St., Chicago.

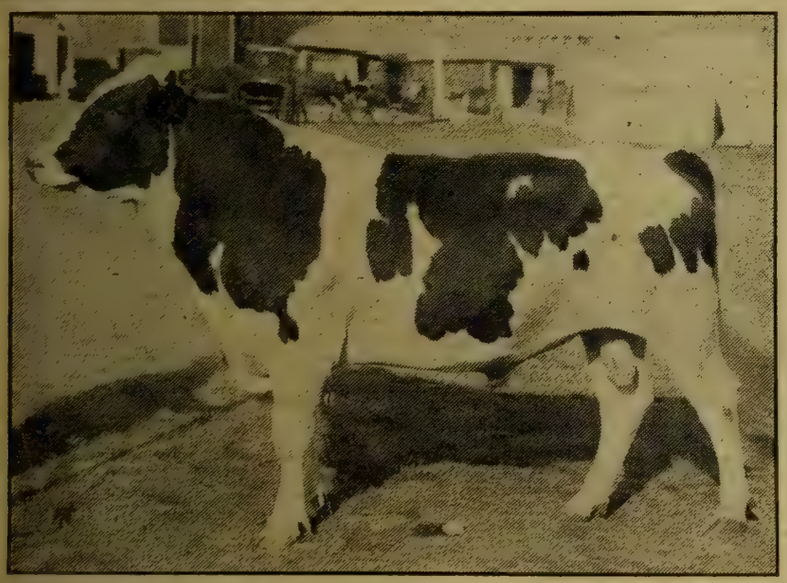
How Mike Backed a Horse.

"Did you ever back a horse in your life, Mike?" "Yes; once and only once." "Did you win anything?" "No, begorra; that I didn't. You see, I backed the blessed hoss through a shop windy and I had to pay $10."—Breeders' Special.

Dr. Miles' Anti-Pain Pills relieve pain.



QUEEN OF DIAMONDS—Famous Hackney mare. Sired by Forest King, the first-prize winner and champion in high-stepping classes at the New York Show for three years, a record held by no other horse. QUEEN OF DIAMONDS has won first and champion at the Horse Show in Chicago two years; first and champion at Kansas City; first and champion at Illinois, Indiana and Iowa State Fairs. She was also a winner at the great London Hackney Show prior to importation. This great mare is owned by Trumans' Pioneer Stud Farm. This is the great firm engaged in importing Shire and Hackney horses, bringing to this country the best in England. Send for catalogue of imported Shire mares and fillies to be sold December 17th. Address, Trumans' Pioneer Stud Farm, Bushnell, Ill.



JOHANNA PONTIAC DE KOL—A Holstein champion bull. He was calved February 25, 1908, and now in ordinary condition weighs 1,700 pounds. He has a very good disposition. This picture was taken at the Wisconsin State Fair, where he was champion bull of the breed. JOHANNA PONTIAC DE KOL is out of a cow which has a butter record as a two-year-old of 16.07 pounds in a week. He is descendant from cows with records from 22 to 26.67 pounds of butter per week. He is a grandson of Sarcastic Lad, the St. Louis World's Fair champion. This bull is in the herd of Rust Bros., of West Allis, Wis., who have a herd of eighty pure-bred Holsteins, run as a butter dairy, and all of it is sold to private custom in Milwaukee, Wis. We present this picture to show the herd bull of a Holstein herd that dates back twenty-six years.

GRAND SWEEPSTAKES CORN.

We have been in doubt whether we could obtain sufficient of the L. B. Clore Grand Sweepstakes White Corn to offer a small quantity to our readers for experimental purposes. We are not in the seed business, neither has Mr. Clore sufficient of his Grand Sweepstakes Corn to conduct a seed store with it, but he has promised to furnish us the same amount that we had last year. Mr. Clore won the grand sweepstakes prize at the National Corn Show of 1908. He also won the grand prize at the St. Louis World's Fair. He has probably won more corn prizes than any individual seed grower. We regard his corn as the very best white corn one can have for experimental purposes in the moderate corn-growing zone from Ohio to Kansas.

We use this seed as a premium to encourage our readers to experiment. Whether they succeed or fail, they obtain valuable experience. We will therefore credit up one-year's subscription to The National Farmer and Stock Grower and send by mail one pound of Clore's Grand Sweepstakes White Corn for 60 cents. The extra 10 cents over the price of the paper is to pay the postage on the corn. This offer will last until the corn gives out. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Soil Pores Stopped Up.

A correspondent from La Porte county, Indiana, writes: "I have a forty-acre field which was in corn this season and made about thirty-eight bushels per acre. This ground is well drained and has always been quite easy to keep in good condition until this season. After the heavy spring rains it seemed to dry out slowly, and there was never a time during the whole summer when I could get it back into even moderate tilth. Can you suggest the trouble?"

It is rather unsatisfactory to reply to this inquiry without knowing more of the details of how the field was managed; that is, character of the soil, when it was plowed and how it was managed up to planting time. I am inclined to think the trouble came from early spring plowing, followed by two or three weeks of beating rains. This had the effect of sealing up the surface soil, and this hindered the free movement of water when it was most needed later on. This happened last spring even on thoroughly drained fields. The surface soil became so compacted that proper aeration was impossible and capillarity was almost suspended.—L. C. Brown.

AN EXCELLENT ATLAS.

Free Premium and the Best Farm Paper For Three Years For One Dollar.

The subscription price of The National Farmer and Stock Grower is 50 cents a year, or $1.00 for three years. We are glad to obtain subscriptions on credit, payable at the end of the first year, but we are better satisfied if the dollar is paid in advance; therefore we offer premiums to induce advance payments.

Our very best premium is Hammond's Handy Atlas of the World, and it is remarkable what this wonderful book contains.

Hammond's Handy Atlas of the World consists of 107 pages, 6x8 inches; is printed in colors and is bound in a durable red-cloth cover. It contains seventy full-page maps of every state and territory, with new railroads and towns.

Every country in the world is shown by maps of the latest plates.

All maps are carefully printed in colors on best cream-laid paper, boundaries distinct, names of towns in graded type, indicating their size. A work of rare beauty and usefulness.

This Atlas contains arranged lists of cities, giving the latest census figures of all states and territories and foreign countries, and a vast amount of interesting information.

Our Subscription Offer.

We will send you The National Farmer and Stock Grower for three years and send you absolutely free, prepaid, Hammond's 1908 Handy Atlas of the World, all for One Dollar.

SUBSCRIPTION BLANK.

National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.:

I enclose One Dollar to pay for my subscription to your paper for three years in advance, on condition that you send me, free and prepaid, one copy of Hammond's 1908 Handy Atlas of the World, as per your guarantee above.

Do you want a fine farm for little money

—a farm that is bigger than you can afford to own where you live now?

—a farm that will grow bigger crops than you can grow on your present farm?

—a farm that will make you a good living and leave you some profit besides?

—a farm that will grow more valuable each year?

You can get such a farm

in the Southwest

along the Cotton Belt Route in Southeast Missouri, Arkansas, Louisiana and Texas.

Some of the finest land in the Southwest lies along this line. It can be bought on easy terms for $5 to $25 an acre.

The low rates offered by the Cotton Belt each month would make a trip of investigation very cheap and profitable.

Do you want to know more about this land? Write me for free copies of beautifully illustrated books about this great country. It will pay you to read them. Write today.

COTTON BELT ROUTE

E. W. LaBEAUME,
Gen. Pass. and Ticket Agent,
1551 Pierce Bldg., St. Louis, Mo.

No farmer should be without a pure-bred boar of his favorite breed, and he should change his boar every year or two. At R. E. Maupin's annual sale held at Pattonsburg, Mo., in November, the average for twenty-nine boars was $27.87 per head, and the sow average was $22.26 for twenty-eight head. These are good pure-bred Poland-Chinas.

At Cameron, Mo., early in November, Wheeler & Miller sold at auction forty head of pure-bred Duroc-Jersey swine at an average of $22.50 per head.

Credit Subscriptions.

Three Years For One Dollar, Payable at the End of the First Year.

The publishers of The National Farmer and Stock Grower will be glad to furnish the paper three years for **One Dollar**, the same to be payable at the **end of the first year.** This edition is a fair sample of the paper. It is interesting and instructive. Those who read it over will find that it is a help to them in the conduct of their business. All who receive a sample copy are invited to send in a subscription on the following blank form, unless they prefer to pay in advance, thereby securing a premium.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — You are hereby authorized to enter my name as a subscriber to The National Farmer and Stock Grower for three years. Duck Laying Contest.

The first annual duck laying competition organized by the Australian Hen, conducted at the Reliable Poultry Farm, Blackwall, terminated with the month of June. Twelve Buff Orpington ducks laid a few more than one hundred and sixty-three eggs each during the twelve months. Fifty-four Indian Runner ducks produced a little more than one hundred and sixty-one eggs each. Six Blue Japanese produced one hundred and forty-nine; twelve Pekin, ninety-five each; and twenty-four Muscovys, seventy-one each. The profit obtained from the Indian Runner and Buff Orpington is very marked. Nineteen pens competed, six ducks to the pen. The winning pen's total, 1,326. This, divided by six, gives 221, which was obtained by a pen of Buff Orpington ducks belonging to Mr. Ahern. The average per duck of the entire lot was 133 each. This shows the possibility of growing ducks to an egg production equal to that obtained from the best hens of the world. We have illustrated and told frequently in the columns of our paper of the value of the Australian-bred Indian Runner duck and the Buff Orpington for producing eggs.—The Feather.

Railroad Rates to the International.

There will be excursion rates to the Chicago International Show from all adjacent territory which it will pay stockmen and visitors to look out for.

There will also be fare-and-one-half round-trip tickets on sale November 29 and 30; December 1, 2, 7 and 8, from all Missouri river points, and intermediate territory east of the river. All tickets will be good to return until December 12.

The Central Passenger Association, including all railroads entering Chicago from the east, have made a flat fare-and-a-half rate, and tickets are to be on sale November 28, 29, and December 1, 2, 3 and 4, also good to return until December 12.

Every progressive farmer, breeder and feeder should avail himself of these exceptionally low rates, and improve the grand opportunity which they give for a visit to Chicago and to the greatest and best live stock exhibition ever held in this or any other country; also to attend the magnificent "Chicago International Horse Show," to be held at the International Amphitheater during the last four nights of the International Live Stock Show.

Remember the dates of the show, November 28 to December 10, inclusive, also the dates for sale of tickets at the greatly reduced rates as above stated.

Telephones For Farmers.

It is a significant fact that the farmers of the South have been somewhat slow to recognize the importance of the rural telephone, and we have wondered a good deal as to the cause of the failure of our people to more readily adopt this means of increasing the earning power of their farms, and increasing the safety of their homes.

From what we can learn, the cause of so comparatively few rural telephone lines lines in the South is due largely to the belief that the cost of a system is out of the reach of the average farmer.

We have been aware of the enormous use made of the rural telephone in the Western States, and not believing that such a development as has been secured there could be possible with an expensive system, we have lookd into the subject somewhat, and what we have found will be of interest.

The total cost of material (less poles) required to build a ten-mile line with fifteen telephones installed, ready for service, is but $332.40, or an average of $22.16 for each subscriber.

Additional subscribers could be added, and the line lengthened at the same average cost per subscriber, provided there continued to be an average of two telephones for every three miles of line.

The average life of a properly-built telephone line is about ten years. The line usually requires rebuilding in from nine to twelve years, but good telephones (the most expensive part of the system) will last for a longer period, if properly cared for.

We have given the cost of the most expensive rural system. This system is required on long and heavily-loaded lines, and frequently lines forty miles long are found having as many as thirty telephones installed thereon.

Lines can be built for less money—for instance, material for a six-mile line with ten telephones on it, could be purchased for $182.44, or an average of $18.24 per each subscriber.

Farmers find no trouble in putting these lines up, and free bulletins "showing how" are furnished by the dealers. Each subscriber furnishes a like number of poles or the equivalent in money, and the labor of setting the poles and stringing the wire is an easy matter.

Just think of it—for an investment ranging from $18.24 to $22.16 per family, our rural homes can be put into direct communication with each other, and with their nearest market centers. How could a similar investment be made that would bring greater economy, greater enjoyment, greater safety, greater general advantages to the Southern farmer?

Poultry-fattening Rations.

The Agricultural Experiment Station of the Pennsylvania State College suggests the following grain rations for fattening poultry as having been used with success by them:

Where yellow flesh is wanted for market, a ration made as Ration 1 will give good results. Ration 2 will produce a whiter flesh.

Ration 1—Corn meal, 5 parts; ground oats (hulls removed), 1 part; animal meat, 1 part. Mixed with sour milk.

Ration 2—Corn meal, 2 parts; ground buckwheat, 2 parts; ground oats, 2 parts. Mixed with sour milk.

Ration 3—Barley meal, 2 parts; middlings, 2 parts; buckwheat, 2 parts; corn meal, 1 part. Mixed with sour milk.

Ration 4—The refuse from shredded wheat and sour milk.

When birds are confined for fattening, sour milk aids digestion and keeps the system from getting feverish. If no milk is available, some form of animal or green food must be supplied to make the best gains. Should a chicken for any reason go off its feed, a good plan is to turn it out in the yard. It will usually recover in a short time.

Water should be given once a day in warm weather and grit twice a week. The rations should be fed rather soft, about like porridge. The food should never remain before them from one meal to the other. Take it away twenty minutes after feeding.

RELATIVE STRENGTH OF CAST IRON, MALLEABLE IRON, WROUGHT IRON, STEEL

HERCULES STEEL STUMP PULLER

Absolutely the first Triple Power and only genuine Steel Stump Puller. 60 per cent lighter, 400 per cent stronger than any other. Guaranteed for **three** years. Catalog free. Address

HERCULES MANUFACTURING CO., Dept. B 35 Centerville, Iowa, U. S. A.

An exchange says that a new celebrity has joined the ranks of poultry women. Mrs. Jane Dowie, widow of the late "Apostle" Dowie, has established a poultry plant on Ben MacDhui, Dowie's costly farm at Muskegon, Mich. Dowie expended immense sums of money on his farm, which was one of his pet projects.

POULTRY AND PET STOCK.

Miller Purvis, editor of Poultry, published at Peotone, Ill., says that he will pay $50 each for twelve hens that will lay 200 eggs per hen per year; and he means what he says.

We desire to say that for one dollar, paid in advance, we will send the National Fruit Grower, the Reliable Poultry Journal, the Universal Magazine and The National Farmer and Stock Grower, each a first-class monthly paper, for one year. This is half price. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

People who talk about the wonderful production of the American poultry yards should not forget the vast benefits of cold storage. Take away the cold-storage influence from the great markets and the wonderful hen productions could not be held to be sold. Cold storage takes off the surplus and saves the glutted market from demoralization. Later on cold storage lets out eggs when there is need of them and supplies the market when fresh deliveries are scarce.

We are often asked how many eggs a hen ought to lay in a year, and the answer is that after starting as a pullet, the first year 144 eggs, the second year 120, and the third year 100, would be a good record.

If you wish to obtain an up-to-date catalogue of poultry appliances, including the famous Mother Hen Brooder and the Automatic Non-freezing Drinking Fountain, address Automatic Hatching Company, Box 25, Flint, Michigan.

Learn Music By Mail

This FREE BOOK Tells How

By our wonderful Simplex System—one of the greatest inventions of the age—anyone of ordinary education can learn by mail to play piano or organ.

IN 20 EASY LESSONS

You need not know the first principles of music. By this wonderful system you can in 20 lessons become a capable musician. The work is easy and fascinating—you will be wonderfully surprised at the progress you will make. In a few weeks, by this method, you can play popular, sacred or classical music. Considered better than a 3-year conservatory course as a time and money-saver—teaches the practical and usable in music and does away with all unnecessary theory. You should have this course of lessons. The cost is a mere trifle compared to the real worth. Send for our **Free Book** today. State whether you have piano or organ.

SIMPLEX SCHOOL OF MUSIC
Conservatory 153,
Kansas City, Missouri

VETERINARY COURSE AT HOME.

$1200 year and upwards can be made taking our Veterinary Course at home during spare time; taught in simplest English; Diploma granted positions obtained for successful students; cost within reach of all; satisfaction guaranteed; particulars free. **Ontario Veterinary Correspondence School, London, Can.**

Feed the Brood Sows Hay.

I have raised a good many thousands of pigs, but if anyone had suggested to me ten years ago the feeding of alfalfa or clover hay to brood sows I should have considered him crazy. But we learn by experience. If any man has reached a point where he will not profit by the work of others, he has passed the stage where further growth is impossible. December 1 is none too early to sort out the sows which will be bred for the next pig crop. Get these sows out of the feed lot and out of the fattening pens. In fact, get them out now where they will have ample range. Let them out into the pastures or stalk field. Feed sparingly of corn, but give them a good feed of clover or alfalfa daily. Some merely toss in the hay to the sows and allow them to work it over. A more economical way is to cut the hay up fine and feed it with a warm mash. Hay-fed sows are thrifty, and they bring thrifty litters. If you really want to save corn, cut down this part of the ration of the brood sows and feed plenty of alfalfa or clover hay. —L. C. Brown.

Feeding Out Young Hogs.

There is too much grass pork marketed nowadays. With corn hovering around 60 cents a bushel feeders are reluctant about feeding any of it to their young hogs, but it is a big mistake. While these young hogs, which practically are nothing but grass pigs, have brought fairly good prices, simply because packers could not get other supplies, yet consumers are finding fault with the qualtiy of the young stuff, and this in time will tell in the lessened demand for pork products. These young pigs, weighing from 75 to 150 pounds, are marketed because they have been carried up to this time at very little cost, and feeders consider it safer to flood the market and accept any price rather than feed them.

Feed out these young hogs, make them weigh 250 to 300 pounds, or even more. Fat lard hogs will bring good money after a while. The demand for pork products has been built up on the superior flavor and texture of grain-fed hogs, and consumers are losing their good opinion of pork simply because they must eat this immature stuff. Give us more of the good, big fellows that run around 300 pounds.—L. C. Brown.

The Twice-a-Week GLOBE-DEMOCRAT

is a magnificent newspaper, containing all the latest home, foreign and political news. It is undoubtedly the best Republican newspaper in the United States. It is published at $1.00 per year, and is worth the price.

The National Farmer and Stock Grower is a nice, clean, general farm monthly publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. It is published at 50 cents a year, or three years for one dollar.

COMBINATION OFFER.

On account of the interest in the present political campaign we are able to combine both of these papers for the price of one.

SEND US ONE DOLLAR

and we will mail to your address **The St. Louis Globe-Democrat Twice-a-Week Edition** for one year; also **The National Farmer and Stock Grower** for three years.

Address,

"Save Your Threshing Expenses

And make every cent of profit that your crops possibly can produce." This is the message that the J. L. Owens Co., of Minneapolis, Minn., send to every farmer in the country. They make a line of threshers—The "Owens Bean and Pea Threshers"—that they offer to send on a six-days' approval test to every farmer in need of such a machine.

While the Owens Threshers are built especially for pea and bean threshing, they will also thresh, as regularly equipped, corn, buckwheat and Kaffir corn, and all kinds of cane, and, when equipped with extra pulleys, all kinds of small grain.

The Owens Threshers are built in four different sizes, so as to suit the need of both the small and large grower as well as the job thresherman. The Owens is guaranteed to thresh any and all varieties of peas and beans directly from the rankest-growing vines without splitting the seed. The "Owens" will separate and clean the pea and bean seed in absolutely first-class shape for market, demanding highest market prices, and it will shred the vines, making the fodder much more valuable, whether fed or sold, than as taken from the field; because the cattle will relish it much more.

The J. L. Owens Company have published a book giving some valuable information on bean and pea culture, besides describing in detail the different sizes of the "Owens" Threshers. This book they will gladly send free to every farmer writing for it.

You can not get all the profits from pea and bean growing without proper threshing. Send for the "Owens" free book and learn their special proposition direct from the factory.

Write them to-day. Address, J. L. Owens Company, 680 Superior street, S. E., Minneapolis, Minn.

Time to Oil the Gun.

Hunting days are here and it's time to oil up the gun. Inside the barrel the burnished steel must be made to dazzle the eye that looks through it at the light. Then over fields in the bracing autumn air and through the woods where the hunter's eye must be keen indeed to separate his quarry from the riot of turning foliage.

The day of the aforetime universally popular double gun, by the way, is passing. The superior accuracy, speed and ease of handling of the single-barreled repeating or autoloading shot gun is crowding out the heavy two-barreled arm. Remington autoloading shot guns were used by the winner of the Grand American Handicaps of 1907 and 1908—America's greatest shooting honors. The Remington repeating shot gun, called by sportsmen the "pump," was used by the winners of the Southern and Eastern Handicaps—the big shooting tournaments of these sections.

International Live Stock Exposition,

Union Stock Yards, CHICAGO, November 28th to December 10th.

Twenty buildings filled with Pure-bred Live Stock. A liberal education in feeding and breeding of Live Stock. A Season of Entertainment and a Trip to Chicago—all in one. No Farmer or Stockman can afford to miss this splendid Show.

LOWEST SPECIAL FARES ON ALL RAILROADS.

fields were making a too rank growth, for the pasturing retards the growth sufficient to prevent lodging. I believe it is much safer to keep this idea foremost, rather than pasturing merely for the sake of the green feed obtained. But in a season like the present, when moisture is scant and seeding was done late, I should keep off all stock and allow the young plants to make the most out of an unfavorable season. I noticed a bunch of sheep on a patch of fall rye the other day. Sheep are the worst of all animals to graze on these fields, and I would not give much for the rye crop from that field if sheep are allowed to eat it down this fall.—L. C. Brown.

Pasturing Fall-sown Grain.

In seasons when grain is sown early and it makes a luxurious growth, it may do good to feed it off with cattle during the fall, or even in the early spring. The value of this practice has been tested out where

The Automatic Non-freezing Drinking Fountain advertised by the Automatic Hatching Company is well worth investigating. It furnishes fresh warm water during the cold weather. This firm also make the famous Mother Hen Brooder. Send for catalogue and address Automatic Hatching Company, Box 25, Flint, Michigan.

SPECIFY "FRAZIER'S"

When buying a remedy from your druggist for the prevention or cure of distemper, influenza, shipping fever, catarrhal fever, pinkeye, colds, and other nose and throat troubles. You will receive a liquid of the highest obtainable purity which enjoys the confidence of 90 per cent. of the owners, handlers and breeders of horses. "Frazier's" has been the standard distemper remedy in this country for the last quarter century. Insist upon Frazier's, the guaranteed remedy. The $1.00 bottle holds three 50-cent bottles. All first-class druggists sell Frazier's, or direct prepaid. Binkley Medical Company, sole owners, Nappanee, Ind.

Of 101,470 barrels of apples shipped from Atlantic ports in one week, the United States sent out 30 per cent and Canada 70 per cent. This is not because Canada grows more apples than the United States, but because the Canadian population does not consume so large a proportion of the home crop as we do

Selection of Breeding Hogs.

In this section of country several breeds of hogs, such as the Poland-China, Duroc-Jersey, Chester White and Berkshire, are bred, but only one market type is produced—the fat hog. True, all grades from half-grown pigs to old sows and stags go to market, but the real standard market hog at the Central West live stock markets is the fat hog weighing from 250 pounds to 350 pounds. Pure-breds or grades of any of the above breeds are expected to and will develop into 300-pound hogs under one year if well fed and cared for. Taken as a whole, there is no marked difference between the early-maturing qualities of these breeds of hogs. Neither has it been proven that one has any marked superiority over the other as to the rate at which flesh may be laid on or the cheapness of gains. The characteristics of these breeds are well marked, and there are special points of excellence that one breed may possess to a greater degree than the others; still, considering the factors which determine almost entirely the profit or loss in hog raising, namely, fecundity, rate and cheapness of gains, a more marked difference will be found between individuals of the same breed than between any of the above breeds taken collectively. It is therefore necessary whether breeding pure-bred hogs or grades to consider the individual carefully when selecting breeding animals.

Fecundity.—The fecundity of sows always appeals to hog raisers. The size of litters varies with breeds to some extent, but still more with individuals. Statistics compiled by the Indiana Experiment Station show that the average size of several hundred Poland-China, Berkshire and Chester White litters were: Poland-China, 6.8 pigs to the litter; Berkshire, 7 pigs to the litter; and Chester White, 7.5 pigs to the litter. However, litters of these breeds will vary from 3 or 4 to 10 or more to the litter. Confinement and over-fattening tend to reduce fecundity. Again, sows that are sluggish or over-refined in type are usually indifferent breeders. So far as known, the sow controls the size of litters, and since fecundity is largely an individual or family characteristic, it is good policy to select brood sows only from litters of which at least seven pigs have been successfully raised.

Type.—In selecting breeding hogs, either male or female, the following points should receive consideration: Form, size for age, quality, and feet and legs.

To thoroughly inspect a hog, it is necessary to view it from the side, front and rear, both standing and in motion. From the side the hog should show a rather short head, full jowl and neck, a strong rather arched back without any depression back of the shoulders or at the loin, a deep body of good length and a deep, well-rounded ham. From front and rear the side lines of the body should be straight and parallel, and this will be true if the development of shoulder, spring of rib and ham are uniform.

Good quality is indicated by fine hair, medium bone, absence of wrinkles and general coarseness. Hogs coarse in type mature slowly and fatten indifferently. Those possessing harsh hair and skin and showing wrinkles will produce inferior pork.

Breeding hogs should have short, strong legs and strong, upright pasterns.

Common Defects.—Lack of sufficient bone, as shown by weak, broken-down pasterns, is a common defect noticeable in brood sows, especially those that have been fed largely on corn. In fact, feed has much to do with development and strength of bone. A low, weak back indicates weakness, and no young sow showing such a defect should be saved for breeding. These two defects—weak pasterns and backs—may be readily noticed when the pig is moved and often when standing. Other common faults are coarse shoulders open on top, poorly sprung, short ribs and narrow loin.

Selection of Boar.—None but pure-bred boars of good form should be used, and only those possessing early-maturing qualities. By selecting vigorous, well-formed sows of prolific families and pure-bred, early-maturing boars of good quality, the best combination is secured. This combination of good qualities may be secured in one breed, but more often hog raisers attempt to secure them by selecting sows of one breed and boars of another. There is nothing radically wrong with this plan if market stock is the object, still equally good or better results can be obtained by sticking to one breed and making a careful selection of all breeding stock.—Press bulletin issued by the Oklahoma Agricultural Experiment Station.

Barley and Rye as Hog Feed.

A correspondent asks whether barley and rye are as good for feeding hogs as corn, and wants to know how these grains should be fed.

There is not much difference in the feeding value of barley as compared with corn, although the value of barley-fed pork is said to be much better than corn-fed. Barley when fed with alfalfa produces pork of the finest quality. Rye has practically the same nutritive ratio as corn, and it can be best made use of when fed with skim milk. Hogs will not take greedily to rye, neither does it produce as nicely-flavored meat as either corn or barley. Both barley and rye had best be ground before feeding.—L. C. Brown.

Feeding Young Dairy Calves.

In the raising of dairy calves much good judgment must be used if good dairy cows are expected to develop out of them. It is one thing to raise a calf for beef making; it is another to raise a calf that is to go into the dairy and become not only a good producer of milk but a good producer of other calves to grow into other cows.

The writer has in mind a wonderful dairy cow that was famous for the amount of butter-fat and milk she produced but never had stamina sufficient to enable her to make a record as a breeder. From calfhood she had been subject to stomach disorders, and we doubt not these had been induced in the first place by improper feeding. A calf being raised by hand can be so fed that will have a perfect digestion, and she can be so fed that she will have a disordered digestion.

The calf that is allowed to run with her mother till she is weaned naturally will have the right kind of a digestion, for nature has arranged a method of feeding that is perfect. The nearer the human being comes to imitating the process of nature the greater will be the success attained in the raising of calves.

In the first place, the milk given by the cow to her calf is always warm. Without doubt much damage has been done by feeding calves cold milk. Young calves especially are injured by cold milk, even milk cooled to fifty degrees. What then is to be thought of the practice of giving calves milk that is almost ice-cold?

The writer has many times seen calves as old as a month injured by being given milk at low temperatures, and always found that warming the milk had a curative effect. On many of our farms the milk that comes back from the creamery is very cold, especially in winter, and from creameries where pasteurization is not practiced, which would result in at least heating it up after separating. In cases where the milk comes back cold no effort is generally made to keep it from remaining cold. This is an argument in favor of the hand separator, by the use of which milk may be rendered fit for feeding immediately after being drawn. Even then the milk is sometimes permitted to become cold before feeding.

The most important factor in the feeding of the dairy calf is the quantity of milk that is given at any one time. The writer has seen many calves brought to a bad condition of scouring by the feeding of milk in large quantities. Milk so fed is gulped down without being mixed with saliva and goes through the calf but imperfectly digested. This is what induces scouring, more often than any germ.

The calf that is able to take and digest a great quantity of milk fed in such a way is more likely to form the fattening habit than the habit of building a large sparse frame, which is desired in the calf going towards a dairy cow. For this reason the ration should be one inducing growth rather than flesh making. Skim milk is good if it is fed in small quantities and more than twice a day.

The slower the dairy calf is compelled to drink the better will it be, as in that case more saliva will be worked into the ration than would otherwise be the case, and this saliva is needed for the digestion of the food.

How He Got Rid Of Consumption

Remarkable Rescue of Prominent Indiana Man A Matter of Life-and-Death Interest To All Throat and Lung Sufferers.

For Benefit of National Farmer and Stock Grower Readers, He Tells How He Cured Himself at Home—Costs Nothing to Try.

"I think I owe it to all sufferers of lung and throat trouble and consumption to tell them some mighty good news, a sure way to cure themselves right at home with little trouble," said E. S. Stroh, of Angola, Ind., yesterday, as he passed through.

"Coming from me, probably, some people might doubt this, but let me tell you," he said, as his 66-year-old face flushed with a resurrected, youthful smile, "over two years ago I was a weazened-up wreck, a consumptive at 63. Three lung specialists passed me up. Every day I would cough up about a pint. I had chills and fever every afternoon. I could hardly eat, even the plainest food, coughed nearly all night, and was down to 137 pounds when I hit on the cure. Well, you see me now. I weigh 166 pounds, frisky as a boy at 66, can do a big day's work, and eat like a prince.

"Now, I am not trying to boost anybody, but I must give credit where credit is due. Dr. J. Lawrence Hill, 139 Hill Building, Jackson, Mich., the well-known lung specialist of America and probably so far the only successful one, cured me. That was two years ago. I have just had my lungs examined again and there is no trace of consumption nor danger of its returning. Dr. Hill makes a specialty of treating throat and lung sufferers at a distance who have not the means of visiting his office personally. That's the way he cured me, and I know of many others who had one foot in the grave almost brought back to life by what he calls his Rational treatment. It certainly is a wonder.

"I wish every reader of your paper who has weak lungs, catarrh of the bronchial tubes or catarrh in any form, chronic bronchitis, asthma, chronic hacking cough, loss of flesh, night sweats, hemorrhages, soreness or pain in the chest or under the shoulder blades or any other deadly symptom of consumption, to send to Dr. Hill for his free package. This treatment checks at once further progress of the disease, develops atrophied cell tissues and brings on new resisting power, appetite, flesh and good health." Fill out free coupon below and mail today.

Free Package Treatment Coupon

Dr. J. Lawrence Hill, 139 Hill Building, Jackson, Mich.

I am suffering from throat and lung trouble, so please send me your large free package in plain, sealed wrapper, that I may try it and see for myself if it will do what you claim it will. I enclose 10c. to help pay for packing, etc., and as an evidence that I am not sending for the free package out of idle curiosity.

NAME.....

ADDRESS.....

Fires From Spontaneous Combustion.

Those people that have had no experience with fires from spontaneous combustion seldom realize how common they are or that they exist at all. The hired girl and the hired man that have not been impressed with the danger of fires from such a source are very likely to be sometime the innocent cause of loss from such fires. Therefore, all should be instructed relative to this matter.

The writer's first experience with this cause of fires came in a great factory in which starch and paper pails were manufactured. One day the oiler put too much oil on one of the "bearings" of the shaft that ran through the factory, and some of the surplus oil dripped down into the dust coming from the scouring machines. That night the watchman swept up the dust and put it in a pail. The next morning there was a smell of fire and the workmen went hunting for it. Its source was a mystery till one of the men kicked over the pail of dust, which burst into flame. A year or two later dust and oil accumulated in an out-of-the-way place near the roof, and one night this pile of dust and oil burst into flame in the very face of the watchman. Two watchmen could not extinguish the flames, and the whole factory, worth a hundred thousand dollars, went up in smoke. So much for spontaneous combustion under such conditions, which is recognized as one of the most common sources of fires in factories.

Three times the writer has had narrow escapes from having his house burned down from fires coming from the spontaneous combustion of oily rags left in a dish or in a dark corner after the floors were oiled. In a hot day in summer, rags thrown by the hired girl under the sink were ignited in a few hours, and in another case the same thing occurred in moderately cold weather, but the rags were in the house.

Green clover hay has more than once been destroyed by spontaneous combustion. Even clover hay stacked out of doors has been found to be all charred on the inside of the stack without any fire being seen on the outside. One farmer tells about having such a stack and falling into it when he tried to walk over it. He first learned that green clover hay will sometimes thus char when he tumbled into it. Another farmer that has had experience says that this is caused by the hay having outside moisture on it at the time it was put up. He says that if the hay has in it only its original moisture it will not undergo incineration. This is a point asserted but not proved.

Many barns are burned through the ignorance of men regarding what oily rags will do when rolled up into a wad and thrown into a place where they may be pressed down under other obstacles. In the case of oily rags being left about, they should be spread out to the air, in which condition they will do no harm.

In Germany, experiments were made with moist hay stored in a mow, and chemical processes were engendered that raised the temperature to 374 degrees. While fire was not produced in these tests, so far as reports are at hand, it is asserted that clover hay is likely to ignite at any temperature over 302 degrees, if air is kept away and the temperature is kept up, and after the temperature reaches 392 degrees it is regarded as certain that clover hay will ignite. This explains some of the cases in this country, in which clover hay in mows has taken fire, notably the fire occurring at the Pennsylvania Station.

I Want to Loan You a Pair of TRUSIGHT SPECTACLES on Six Days' Trial

FREE!

NO MONEY DOWN --- No Deposit

Send Me Your Name I will send you my perfect Trusight Eye Tester with which you can test your own eyes as well as the most skilled optician. When you return the tester with your test I will send you a pair of **Genuine Trusight Spectacles** that will **fit you perfectly, in a 10-K Gold Filled Frame guaranteed for 10 years,** without a cent of money down—no deposit—not even a reference. Wear the glasses in your own home **for six days,** and if perfectly satisfactory **in every way**—if they are the best glasses you ever saw **at any price**—pay me my small price (which is less than half what your optician would charge you) and the glasses are yours. If the glasses for any reason, do not suit you—if you don't believe them to be the best bargain you ever had—return them and you are out nothing. Send no money - just your name. Address **E. O. KOCH, Pres., 1644 Friend Bldg., Kansas City, Mo.**

Care of the Orchard in Winter.

Every year during the early part of winter I remove from my orchard all dead and decaying limbs and trees, pile them outside the orchard and burn them. In this way a large number of injurious insects are destroyed and the orchard is given a better appearance by the removal of these useless limbs and trees. I then plant a young tree, of some good variety, in the center of the spot from which the old tree was taken. I then build up a mound of earth around the young tree and carefully wrap the body with screen wire or other similar material, to keep the rabbits and mice from gnawing the bark during the winter. The mound of earth around the tree keeps the wind from blowing it back and forth and causing it to lean too far in one direction, which would otherwise be the case. The tree is also better protected from the cold.

As the orchard must have plant food, I give it a good coat of well-rotted manure. This is not placed closer to the trees than two and one-half or three feet, as it would likely injure the trees if placed close up around the trunks. I apply the manure during the early winter and in the spring turn it under. I believe the trees receive the greatest amount of fertilizing elments when the manure is thus used.

My orchard pays well and I put forth every effort to keep it in a thrifty condition. There are a large number of orchards, especially small ones, that are seldom pruned, cultivated or given any care at all. Not long since I passed a farm and was greatly impressed with the lack of care and attention of a small orchard which was composed of not more than fifty trees. The orchard is at an age when it should be producing its best crops of fruit. It stood in a hard-packed sod ground, and large bushes, which almost reached the top of the trees, grew in abundance. Some of the trees had begun to die. Those large bushes had robbed them of practically all the plant food. The orchard had not been pruned for years, as the trees were covered with large, useless water-sprouts. If that orchard had been given the proper care and attention it would have produced enough fruit to supply the needs of the family for many years. —Wm. H. Underwood.

A SUCCESSFUL STOCK FARM.

H. G. McMillan, proprietor of Lakewood Farm, Cedar Rapids, Iowa, under date of October 29, 1907, writes: "To Whom It May Concern: For several years we have used Absorbine at Lakewood Farm with splendid results. It is one of the very best remedies we have ever used to reduce any kind of a bunch or bruise on the ankle, stifle or hock. In many cases we have entirely cured valuable horses that had received serious injuries to the joints. At Lakewood Farm, Absorbine is always kept in the medicine chest." Absorbine penetrates to the seat of the trouble promptly and effectually, without blistering or removing the hair. Does not require the horse to be laid up. Mild in its action but positive in its results. It will give you satisfaction. $2.00 a bottle at druggists or express paid. W. F. Young, P. D. F., 196 Monmouth street, Springfield, Mass.
